Mrs. Chalker: We all live in hope that the GLC will stop spreading false rumours. However, LRT believes in answering propaganda with the facts, which is absolutely right. LRT has stringent conditions on the acceptance of advertising. It does not accept advertisements such as those which were accepted when the GLC removed the ban on political advertising for a while to suit its purposes. I assure my hon. Friend that any misinformation published by the GLC will be answered by LRT with the facts.

Mrs. Dunwoody: Does the Minister realise that one way in which LRT can advertise its services is to ensure that everyone knows that they are safe? Therefore, will she make public the report on the £2·5 million fire at Oxford Circus last year, when about 1,000 passengers were trapped underground? There is some evidence to suggest that the report will not be published. Why not?

Mrs. Chalker: I understand that the inquiry into that fire—both LRT and the emergency services are to be congratulated on the way in which they got people out of that situation—was not a formal inquiry. I shall look at what the hon. Lady said, but there is no question of anything being hidden away, as her question might imply.

Road Safety (Research)

10. **Mr. Knowles** asked the Secretary of State for Transport if he will make a statement about his Department's programme of research to improve road safety.

Mrs. Chalker: We have an active programme of research into a variety of road safety issues, including vehicle and highway design, as well as road user behaviour. I am currently reviewing our priorities for the next few years.

Mr. Knowles: Will my hon. Friend confirm that part of the plan covers highway engineering, which is of importance to all constituencies and to all hon. Members who represent constituencies close to the M1?

Mrs. Chalker: This is a matter of concern to everybody, wherever they live or do their constituency work. In addition to the £1·6 million out of the total of general highway engineering research, other research is going on in the Transport and Road Research Laboratory. We are carrying out extramural research with various universities and others because we want to keep the position that we have achieved of having some of the best highway engineering in the world.

Mr. Meadowcroft: Is the Minister examining the safety of public service vehicles in the light of recent coach accidents? For instance, is it possible to consider whether anti-roll bars should be insisted on? If so, what possibility is there of legislation that might bring them into effect as soon as possible?

Mrs. Chalker: I understand the hon. Gentleman's concern, because I share it. He will know that we have been discussing coach safety with the working group in Europe, because not just British coaches but coaches from all over Europe and beyond are involved. We are progressing on two fronts: first, the provision of anti-roll bar equipment; and, secondly, seats against which any passenger might be thrown and the provision of belts in the front. There is also the provision for drivers. So far we have not reached agreement, but we are pressing on as fast as we can.

Mr. Churchill: In view of the success of the introduction of compulsory seat belts in private motor vehicles, how long will it be before there will be at least the provision of seat belts in public transport vehicles?

Mrs. Chalker: There is nothing to stop an operator putting at least a lap belt in a public service vehicle. However, the problem is that there is no central gangway support to which one could attach a shoulder belt, which is the safest belt of all. That is why we have been actively pursuing rsearch on the seat strengths to hold passengers in. I cannot give my hon. Friend an exact time, but we are discussing this in the high-level working group.

Mr. Leadbitter: Has the Minister considered the considerable contribution to road safety that can come from the construction of concrete barriers? Has her Department examined that possibility; and, if so, have any recommendations been made to the local authorities which may be concerned with the problem?

Mrs. Chalker: I think that the hon. Gentleman is referring to central reservation barriers. The laboratory at Crowthorne has looked at these, but they have not been found to be as safe as we believed. I shall write to the hon. Gentleman about the latest position on road safety barriers.

Mr. Ward: Is my hon. Friend aware that road safety between London and east Dorset has been considerably improved by the opening of the extension of the M3? Is she further aware that those who use that road regularly congratulate both her and my right hon. Friend the Secretary of State on their persistence in getting this important section of road opened at last?

Mrs. Chalker: I am grateful to my hon. Friend for his remarks, but I can only repeat that any road can only be

as safe as the drivers upon it. They have to drive within the limitation of their vehicles and the road and weather conditions of the day.

Mr. Stott: What steps is the Minister prepared to take to enforce the reduction of spray from heavy lorries? She will be aware of products on the market that are specifically designed as spray suppressant units. A number of them are very good. They substantially reduce the levels of spray generated by lorries on the motorway. Is it not time that she brought forward construction and use regulations to compel manufacturers and owners of lorries to fix spray suppressant units to their tractors and trailers to cut down the amount of spray that is generated on our motorways?

Mrs. Chalker: In the past 12 months I have brought in construction and use regulations to require the need to fit spray suppression equipment. As time passes and greater experience of such equipment is gained, I am sure that there will be a case for tightening up those regulations and possibly for extending the fitting of this equipment to other types of vehicles, which is not required at present.

British Rail (Equal Employment Opportunities)

12. **Mr. Cohen** asked the Secretary of State for Transport if, when he next meets the chairman of British Rail, he will raise with him the issue of equal employment opportunities.

The Parliamentary Under-Secretary of State for Transport (Mr. David Mitchell): It is the duty of the board to adhere to statutory requirements and within that to develop its own employment policies.

Mr. Cohen: The recent Equal Opportunities Commission report shows that there is widespread sexual discrimination in British Rail's recruitment and employment policies. Of the total work force, only 7 per cent. are women. They are very few women drivers and guards and very few women in management. Indeed, British Rail sometimes punishes men by making them work with women in some of the heaviest jobs, an example of which is carriage cleaning. Will the Minister take prompt action on the report to ensure that the management of British Rail works towards equal opportunities?

Mr. Mitchell: The British Railways Board is keen to co-operate with the Equal Opportunities Commission. However, the report is only a draft. We in the Department have not seen it. Therefore, I am in no position to comment on its contents.

ATTORNEY-GENERAL

Community Law Centres

40. **Mr. Nicholas Brown** asked the Attorney-General if he will make a statement regarding the Government's policy on the future of community law centres.

The Attorney-General (Sir Michael Havers): The Government have acknowledged that law centres may have a part to play, where this suits local circumstances, in the provision of legal services. Central Government support for law centres continues to be provided primarily under the urban programme, in accordance with its general principles and procedures. Such centres are seen as essentially matters for local decision and initiative, depending on the value which local authorities and communities place on them, according to local circumstances.

Mr. Brown: I am grateful to the Attorney-General for accepting that law centres provide a valuable public service. Given the variety of funding sources, would it not be of considerable assistance if the Lord Chancellor accepted responsibility for at least co-ordinating and overseeing the centres in a supportive way? Is the difficulty really that the Lord Chancellor lacks statutory authority to do this, or is it that the Department of the Environment and the Lord Chancellor's Department are passing the issue back and forth from one to the other?

The Attorney-General: There is no question of their passing the buck from one to the other, as has been suggested on a number of occasions. The Lord Chancellor does not have statutory power. He has taken over the seven law centres which his predecessor funded without authority and has maintained their funding. The rest are funded through the Department of the Environment. The Government's view is that circumstances vary so much from area to area that it is much better that a centre should be initiated and maintained by the local area. However, not only local authority money is involved. The centres are also maintained partly by charitable assistance and voluntary subscriptions.

Mr. Franks: Does my right hon. and learned Friend accept that the provision of law centres is at the discretion of the appropriate local authority, that many law centres are provided by Left-wing authorities, and that it ill becomes the Opposition to criticise when the remedy lies in the hands of those self-same local authorities?

The Attorney-General: My hon. Friend is quite right about one specific case. Because Lambeth has not yet made a rate, it has said that it is unable to assist its law centre. There is no doubt that law centres have provided a necessary degree of assistance.

Mr. Foster: Will the Attorney-General admit that there are very wide gaps in the availability of legal advice on benefits issues or on some aspects of housing, for example? In Newton Aycliffe, in my constituency, hundreds of new owner-occupiers cannot get the advice that they require about the Housing Defects Act, and local lawyers do not seem to have a clue. Could not problems of this sort be more properly handled with a system of law centres up and down the country?

The Attorney-General: Law centres, which were created largely as a result of local initiative, have been able to assist where legal aid is not available in non-contentious matters. The question overlooks the benefit of the help given by citizens advice bureaux, which are often able to provide the kind of information to which the hon. Gentleman referred.

Mr. Coombs: Does my right hon. and learned Friend agree that the present piecemeal method of funding community law centres gives the impression to many people that the Government are not wholly committed to their value?

The Attorney-General Community law centres have been funded largely out of Government money, but the initiative should lie with local people — the local authorities, charities and other voluntary bodies.

Mr. Eastham: Is the Attorney- General aware that people will be grateful for his acknowledgement of the value of law centres? However, does he agree that it is unsatisfactory that the law centres do not know from year to year whether they will be able to continue in existence because they have to await a decision on the urban aid programme?

The Attorney-General: The funding of community law centres depends not only upon the urban aid programme, but upon whether local authorities are prepared to state their future plans for their law centres. However, in respect of those law centres which have been given a guarantee of only two years, I can give the House an undertaking that a decision will be taken before the end of the financial year.

Mr. Neale: Does my right hon. and learned Friend agree that although law centres may be necessary to fill gaps in some areas, in areas where local provision is already made by other organisations, either professional or voluntary, it would be ridiculous for that advice to be duplicated, and even more ridiculous for a national blanket provision to be made for it by the Government? Is it not far better for local authorities in each area to decide whether there is a gap to be filled?

The Attorney-General: My hon. Friend has set out exactly the reason which caused us to take this decision.

Mr. John Morris: As the Attorney-General has stated that the Lord Chancellor lacks statutory authority over law centres, will he look sympathetically at an amendment to provide such authority during the proceedings on the Administration of Justice Bill?

The Attorney-General: I am sure that the right hon. and learned Gentleman knows that on this matter I am simply the agent of my noble and learned Friend. Therefore, I should have to consult him about it.

Circuit Judges

41. **Mr. Alex Carlile** asked the Attorney-General how many circuit judges there were in June 1982, 1983 and 1984, respectively; what is the present establishment of circuit judges; and if he will make a statement.

The Attorney-General: The numbers of circuit judges were: 1 June 1982, 335; 1 June 1983, 346; 1 June 1984, 353; and 1 June 1985, 374.

Mr. Carlile: I welcome the increase in the number of circuit judges. However, does the Attorney-General agree that there are still intolerable delays in the trials of serious cases in the Crown courts? Is there not still a considerable need for the appointment of more circuit judges? Does he also agree that it is the judges who carry much of the responsibility for speeding up the terrible delays which sometimes occur in the police force and in the DPP's Department over the processing of cases quickly for trial?

The Attorney-General: I can give the lie to that question. Between 1979 and 1984 the number of committals for trial to the Crown court increased by over 50 per cent. Despite this surge, the average waiting time, because of the appointment of additional judges and the provision of extra court rooms, has been reduced from 17·3 weeks in 1979 to 14·2 weeks in 1983, and in 1984 it was held at 14·3 weeks. By the appointment of extra judges—those appointments will have to continue and we expect there to be 440 circuit judges by the end of this decade—the waiting time figures have been reduced. I agree with the hon. and learned Gentleman that the delays are still far too long and that we must continue to do everything that we can to reduce them.

Mr. Ashby: Does my right hon. and learned Friend agree that the increase in the number of cases coming to trial may be because the magistrates' courts—not the circuit courts or the Crown courts—cannot devote the time that is necessary to deal with the kind of defended cases that can be dealt with in the circuit courts?

The Attorney-General: The problem goes even further than that. The percentage of acquittals ordered by judges was, I think, 40 per cent. of all those who pleaded not guilty in the circuit courts. There must be something wrong, and that something is that some cases that should never have been sent to trial were so sent. In the Metropolitan police area, a large percentage—I believe about 40 per cent.—of cases are committed for trial without a solicitor of the Metropolitan solicitors' department seeing them. To some extent, that is why I issued the guidelines about prosecutions. When we have the new national prosecuting service, we should have much more control. I hope that there will not then be so much wasted time, which causes agony to the defendant, especially when he should never have been sitting in the dock in the first place.

Mr. John Morris: During the process of the legislation that first designated circuit judges, I believe that the Lord Chancellor said that there would, from time to time, be promotions from the circuit to the High Court bench. Am I right in thinking that in the past couple of years there has been only one such promotion? Does the Lord Chancellor still hold to that policy?

The Attorney-General: I am afraid that I do not know the answer. I think that the right hon. and learned Gentleman is right, in that most of the promotions to the High Court Bench have involved members of the Bar.

OVERSEAS DEVELOPMENT

Ethiopia

43. **Mr. Bowen Wells** asked the Secretary of State for Foreign and Commonwealth Affairs if he will make a further statement on the delivery of food aid to Ethiopia.

The Minister for Overseas Development (Mr. Timothy Raison): Total food aid deliveries to Ethiopia so far this year are 680,000 tonnes. The European Community and its member states have delivered 204,000 tonnes since the European Council in Dublin last December, the Community share of which is 124,000 tonnes. We stand ready to provide up to 10,000 tonnes more bilateral food aid when we are satisfied about the arrangements to be made for its transport and distribution in Ethiopia.

Mr. Wells: Is my right hon. Friend aware of how frustrating it is when one tries to find out exactly what is happening from the European Commission? In the past month I have tabled several written questions, only to receive equivocal answers. Those answers are given in both committed and delivered terms, but we never find out

what has been delivered to the people who need it and to those who are starving in the Sudan, Ethiopia and southern Saharan countries. Has not the problem of delivery been exacerbated by the fact that, despite my right hon. Friend's urgings, the European Commission waited nearly three months before getting started on the railway which could deliver food to the western Sudan and Darfur? The quantities that the European Commission has delivered are far short of what is needed and what it undertook to deliver at Dublin and before then.

Mr. Raison: With respect to my hon. Friend, the figures that I gave are delivery figures. I am not saying that in every case they relate to what has been delivered to individuals. My hon. Friend will understand that it is remarkably difficult to give accurate figures for that. Nevertheless, I have given delivery figures.

My hon. Friend's point about the railway refers to the Sudan rather than to Ethiopia, which is the subject of the question. However, I think that he will know that progress is now being made towards getting the railway line to western Sudan working effectively.

Mr. Beith: Are not the revelations of the Select Committee on Foreign Affairs about the double counting of EEC aid and the Department's budget pressures so important and urgent that they cannot await the normal process of Government response and debate in the House before something is done?

Mr. Raison: Hon. Members will have a chance tomorrow to debate all these matters. However, it is only right that we should reply to the Select Committee in the usual way, and we certainly intend to do so before the House rises for the recess.

Mr. Baldry: Does the assistant secretary-general in Addis Ababa, who has responsibility for co-ordinating activity, send the Government details of what aid has been delivered and whether it is getting through to those who need it? If so, how often are they sent to the Government? Is my right hon. satisfied with their detail?

Mr. Raison: We have the closest contact with Mr. Jansson through our embassy in Addis Ababa. I cannot say exactly how often such reports come, but from reading the telegrams I know how much detail there is and how regularly the whole question is discussed.

Dame Judith Hart: Has the Minister heard, perhaps on the radio this morning, the appeal of United Nations officers in the area for more vehicles to expedite deliveries in Ethiopia and, particularly, in Sudan? What response is he likely to make to that appeal? One's impression is that the right hon. Gentleman has a certain complacency towards the provision of vehicles.

Mr. Raison: The next question on the Order Paper is specifically about vehicles, and I shall give some information then. In Ethiopia, which is the subject of the question, there are, I believe, a large number of road vehicles available. I have been pressing the Ethiopian Government to make available the substantial number of trucks that they have available but which are not being used.

Ethiopia

44. **Mr. Chapman** asked the Secretary of State for Foreign and Commonwealth Affairs if he will make a statement about vehicles available for relief and rescue operations in Ethiopia.

48. **Mr. Forman** asked the Secretary of State for Foreign and Commonwealth Affairs what assistance the Government are providing for transport of relief supplies within Ethiopia.

Mr. Raison: About 3,000 long and short haul trucks are needed in all. Of these, about 1,300 are currently deployed, including 350 recently made available by the Ethiopians. A further 450 trucks pledged by donors should arrive soon and we hoped that the Ethiopians will provide more. We shall now provide further assistance of £750,000 for transport needs in Ethiopia, including semi-trailers and truck hire costs. In addition, and provided it can operate effectively during the rains, we have decided to extend the British airlift until 30 September. It will then be withdrawn after 11 months' magnificent work.

Mr. Chapman: I welcome the latter part of my right hon. Friend's statement, but does he agree that it is an absolute disgrace that the Ethiopian Government have failed to carry out the commitment that they gave some months ago—which was both practicable and reasonable — to provide 4,000 vehicles for the much needed distribution of aid in parts of Ethiopia? Has my right hon. Friend made any estimate of the additional suffering caused to the Ethiopian people by that oppressive non-commitment of their Government?

Mr. Raison: I cannot give any such estimate, but for some months we and other Western donors have been pressing the Ethiopians to fulfil their earlier promises to provide vehicles. They have at last undertaken to deploy military vehicles and all other available transport to increase the daily take-off from the port of Assab from 1,200 tonnes to 4,000 tonnes a day to clear congestion there. I hope that that exercise will be carried out successfully.

Mr. Forman: I agree with my hon. Friend the Member for Chipping Barnett (Mr. Chapman). Do the 350 vehicles that the Ethiopians have already made available represent a significant part of total transport needs? If not, will my right hon. Friend put on record the number of vehicles that the Ethiopians could use if they were minded to do so?

Mr. Raison: The 350 vehicles are a valuable and significant contribution. I believe that the Ethopians have about 4,000 military trucks. The more trucks that are made available, the sooner the task of transporting food across the country will be able to proceed.

Mr. Maclennan: Why has the Minister announced the proposal to discontinue our valuable transport service after 11 months? Does he believe that the service is complete?

Mr. Raison: I believe that by the end of September there should be sufficient road transport available. It already accounts for 90 per cent. of the distribution of food and other relief supplies. Moreover, the roads should be usable after the rainy season.

Famine Prevention

46. **Mr. Spearing** asked the Secretary of State for Foreign and Commonwealth Affairs if he will make a

statement concerning initiatives of Her Majesty's Government designed to prevent the recurrence of famine disasters.

Mr. Raison: Under our regular aid programme, we shall seek any new opportunities to anticipate and to cope more effectively with famine. At the Bonn economic summit we agreed with our partners that the expert group established to prepare proposals for follow-up measures in relation to the African drought and famine should report to Foreign Ministers by September 1985. We are also supporting moves by the United Nations Food and Agriculture Organisation to improve its early warning mechanisms.

Mr. Spearing: Is not the regular aid programme a bit askew? Have not the Government reduced by up to 25 per cent. the personnel of the Tropical Development Research Institute who are concerned with preventing the sort of disasters that we have seen? Will the Minister review that disastrous decision and make an announcement on this important matter even before he replies to the Select Committee's report, which advocated restaffing those important units of the ODA?

Mr. Raison: As the hon. Gentleman says, we have made cuts in the personnel of the TDRI, but it is still a highly effective unit which is appreciated across the world, and it is doing extremely valuable work in Africa and elsewhere.

Mr. Nicholls: Does my right hon. Friend agree that when we are discussing famine relief and aid generally there is a danger of our overlooking the point that *The Times* leader made today—that Africa is now virtually the only continent which is unable to provide sufficient crops for the relief of its own citizens? Does my right hon. Friend also agree that as long as there are regimes, such as those in Sudan and Ethiopia, which are a great deal more concerned about their political ideologies than about the care of their citizens, no end to the problems is in sight?

Mr. Raison: I agree that Africa's food problems are very much complicated by political factors, but we must recognise that there is a strong need for resources and expertise. We play a substantial part in providing both.

Questions to Ministers

3.30 pm

Mr. Robert Adley (Christchurch): On a point of order, Mr. Speaker. You will be aware of the anxiety expressed by right hon. and hon. Members on both sides of the House today about coach safety. When I have tabled questions on the matter, I seem to recall being informed by the Table Office, or by the Department of Transport, that central statistics are not kept and are therefore not available in so far as they relate to coach accidents. My hon. Friend the Minister's announcement today appears to contradict that earlier evidence, however, so could could you ensure that, if information is available to the Department of Transport, it is also made available to hon. Members?

Mr. Speaker: I cannot give that undertaking, but if the Table Office is responsible for not allowing the hon. Gentleman to put down a question, I shall look into it.

Mr. Rajab

3.31 pm

Mr. Michael Latham (Rutland and Melton): On a point of order, Mr. Speaker. Have you received any request from the Foreign Office to make a statement on the deplorable incident relating to the Syrian diplomat Mr. Rajab? This is a matter of the gravest importance, about which there are full reports on the radio and in newspapers to the effect that the diplomat is to be expelled by Friday if the matter is not resolved satisfactorily. I put it to you, Mr. Speaker, that hon. Members should not be the last people to know.

Mr. Speaker: I have sympathy for the hon. Gentleman's latter comment, but I have received no request for such a statement.

WILDLIFE AND COUNTRYSIDE (AMENDMENT) (No. 2) BILL

Dr. David Clark supported by Mr. Andrew F. Bennett, Mr. Jim Callaghan, Mr. D. N. Campbell-Savours, Mr. Ron Davies, Mr. Peter Hardy and Dr. Mark Hughes presented a Bill to amend the Wildlife and Countryside Act 1981 to improve and clarify certain procedures under section 28 of that Act relating to notification of proposed sites of special scientific interest: And the same was read the First time; and ordered to be read a Second time upon Friday 5 July and to be printed. [Bill 156.]

STATUTORY INSTRUMENTS, &c.

Mr. Speaker: By leave of the House, I shall put together the two questions on statutory instruments.

Ordered,

That the Value Added Tax (Hiring of Goods) Order 1985 (S.I., 1985, No. 799), dated 22nd May 1985, be referred to a Standing Committee on Statutory Instruments, &c.

That the draft Deer (Firearms, etc.) (Scotland) Order 1985, be referred to a Standing Committee on Statutory Instruments, &c.—*[Mr. Lennox-Boyd.]*

Opposition Day

[8TH ALLOTTED DAY]

[SECOND PART]

Chronically Sick and Disabled Persons Act

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Lennox-Boyd.]*

3.32 pm

Mr. Alfred Morris (Manchester, Wythenshawe): I welcome the decision to mark, by this debate, the 15th anniversary of the Royal Assent to my Chronically Sick and Disabled Persons Bill.

The House of Commons was never more constructive in its concern for people in special need than it was in its attitude to the Bill in the parliamentary Session 1969-70. There was no party animus in our proceedings. Everyone who spoke, whether here on the Floor of the House or upstairs in Committee, seemed to know the value of things as well as their cost.

It was a rare parliamentary moment when unity of purpose, in an important cause, triumphed over every other consideration. In a television programme on the Bill's enactment and effect, the presenter said:

"It is difficult now for anyone to remember what life was like for disabled people before the passing of the Chronically Sick and Disabled Persons Act."

Her statement to a huge national audience was a reminder of how far we have come, since the Act became law, along the road to full public recognition of the problems and needs of disabled people and of their now undoubted right to equal citizenship.

As the television presenter went on to say, we have seen a vast number of improvements in provision since the Act received the Royal Assent 15 years ago. Far more money is spent on cash benefits and services alike. Quantum leaps have been recorded in the numbers of people identified as disabled by their local authorities and millions of people with disabilities have had their lives made better by the provision of aids and by adaptations to their homes, as by the Act's wholly new emphasis on improving access to public and social buildings.

In the entirely new climate which the measure created, spending on benefits and services for chronically sick and disabled people went up in the Act's first decade, and under successive Governments, from £330 million in 1971-72 to £3,030 million in 1981-82. In my own five years as Minister with responsibility for the disabled, the increase in spending was from £590 million in 1973-74 to £1,830 million in 1978-79.

I do not wish today to catalogue every improvement or to analyse at length all the effort that has gone into the implementation of the Act since 1970. That has been done in a number of important books, notably "Disability: Legislation and Practice" by Duncan Guthrie and others, and "Charter for the Disabled" by my hon. Friend the Member for Dagenham (Mr. Gould) and Eda Topliss. I must, however, stress again in this debate that the enactment of my legislation was the work of a very wide

fellowship of people. What brought them together, when I won first place in the private Members' ballot in November 1969, was a long-awaited opportunity to try to achieve social justice for disabled people.

My supporters included all the individuals and groups to whom my friend Maureen Oswin paid tribute in another important book when she spoke of

"the many unknown people who work for reform . . . professionals who put their careers in jeopardy in order to speak out against injustices to handicapped people . . . parents who campaign for years in order to bring about changes which sometimes take so long to come into effect that their own children do not benefit from them . . . researchers and writers who produce papers and books which help to change attitudes and bring about reform . . . and the voluntary organisations and pressure groups which do so much to create changes at local and national level."

Among countless others, they were the kind of people and groups who provided the impetus for the Bill's enactment. In their thousands they helped to transform the climate of parliamentary and public opinion from one of, at best, benign charity to one of acceptance that disabled people are entitled to live independent and dignified lives as full members of the community.

It must seem incredible and outrageous to many people now, but between 1945 and 1960 there was no mention in the manifestos of either of the main political parties of anything that might be done specifically to help disabled people. Between 1959 and 1964 there was not one debate in the House of Commons on disability. Notwithstanding all the advances in medicine, technology and communications, official attitudes to the claims of disabled people were both deadpan and dismissive.

It was through knocking on the doors of disabled constituents and trying to help those who knocked on my door, as well as from experience twice over of disability in my own family, that I became strongly convinced of the need for legislation to improve the well-being and status of disabled people. In Manchester alone, I knew of cases galore of disabled people who had every kind of moral justice on their side but no statutory right whatever to the help that they so vitally needed. If I was able to assist, more often than not it was as a guide through the maze of local charitable organisations or by asking a more than usually helpful local authority to stretch its permissive powers to breaking point. Even then, the beneficiaries were left with the feeling that they had been awarded a privilege for which they should be most truly thankful.

Every advocate of change knew that the permissive powers given to local authorities to help disabled people under the National Assistance Act 1948 were of only token value and that there was no likelihood of the law being changed by ministerial initiative. That applied even to the insistent claims for more humane provision for the many thousands of severely disabled young people whose appalling fate at that time was to be incarcerated in geriatric wards. I was much involved in campaigns to expose the treatment that those young people received, and heavy and protracted correspndence with DHSS Ministers left me deeply aware of the hopeless divisions in departmental responsibility for those and other disabled people and of strongly entrenched official opposition to legislation.

I was left with a fixed determination to change the law myself, if ever I had the opportunity to do so. The presenter of the television programme that I mentioned went on to recall

"just how close the Act came to not being passed."

This may now be news to most people, even to the vast majority of disabled people who have ben helped by the Act's provisions. But for the Back Benchers who worked with me on the unlikely enterprise that we launched in 1969 — notably my right hon. Friend the Member for Stoke-on-Trent, South (Mr. Ashley), the Honourable John Astor, my hon. Friend the Member for Eccles (Mr. Carter-Jones), Sir Neil Marten and my hon. Friend the Member for Brent, South (Mr. Pavitt) — the memory of how frequently close we came to disaster is abidingly clear. As the Act reaches its 15th anniversary, it is therefore appropriate for me warmly to acknowledge the unfailing help which they and other hon. Members on both sides of the House gave in enacting my private Member's Bill.

Our Bill became an Act of 29 sections. It affected 12 Departments of State and was a model for legislation in many other countries. We amended 39 existing Acts of Parliament, including such major statutes as the Public Health Act 1936, the Education Act 1944, the National Health Service Act 1946, the National Assistance Act 1948 and the Housing Act 1957. We also made provisions, including those on access for disabled people to the built environment, where previously there was no legislation of any kind to amend.

At first I was not at all optimistic about the Bill reaching the statute book. As my hon. Friend the Member for Dagenham has shown in the book "Charter for the Disabled", there was strong resistance behind the scenes from the late Richard Crossman, then Secretary of State for Social Services, to many of the Bill's provisions. There was also the problem of finding enough parliamentary time to complete all stages in both Houses of Parliament of what had become a very wide-ranging Bill.

To make matters worse, the parliamentary Session was cut short by the announcement in May 1970 of a general election. Lobby journalists then reported that the Bill was irretrievably doomed, but a very strange thing happened. My Bill had won strong all-party support, and was given precedence over most of the Government's own legislation in the few remaining days before Dissolution. It became law on the final day of the 1966-70 Parliament.

Conservative leaders, including the right hon. Member for Old Bexley and Sidcup (Mr. Heath), who became Prime Minister after the election, had made a strong commitment to the Act's philosophy and provisions. In fact, just before the general election was announced, they became pledged to enact my Bill themselves should it fall through lack of parliamentary time. Not for the first time, however, there was a gulf between political commitment in opposition and positive action in government, and the Act undoubtedly lost some momentum due to the change of Government in June 1970.

Through lack of clear ministerial guidance, many people were unaware of the Act or that the Act applied, where appropriate, as much to the mentally ill and mentally handicapped as to people with physical and sensory disabilities. Others thought that, as the Act had originated as a private Member's Bill, its provisions did not have the same force as Government legislation. There is, of course, no such thing, but the new legislation was even referred to by some local authorities as a private Member's Act. This was responsible for slow reactions in some parts of the country, as was the myth that the Act had no financial backing.

Most unusually for a private Member's Bill, the Treasury had moved in the House of Commons and had

[Mr. Alfred Morris]

carried, without a division, a money resolution in support of my Bill. Had that resolution not been approved, the Bill could not have made any further progress and would have fallen on procedural grounds. Therefore, the many anguished reports about the cost of the Bill having to be met by local authorities were as baseless as its description as a private Member's Act.

Mr. Laurie Pavitt (Brent, South): While my right hon. Friend is recounting the near miracle of getting the Bill on to the statute book, will he remind us that it was Lord Peart who at the time enabled the money resolution to be got through the House and that had it not been for his action the Bill would never have reached the statute book?

Mr. Morris: My hon. Friend, who himself played an important part throughout the Bill's proceedings, has anticipated my next remarks. Lord Peart was extremely helpful at all times. Without his help, and that of many right hon. and hon. Members on both sides of the House, the Bill could not have become law.

In 1970 it was said that the Bill was an extremely ambitious measure for any private Member to introduce. Looking back, I regret that it was not even more wide-ranging and that some of its provisions were not made stronger. The five sections on improving access to the built environment, for example, could have gone further. The legislation as a whole could have been applied to Scotland and Northern Ireland sooner. Again, I regret that the Bill did not make it illegal to discriminate against disabled people.

No legislation is ever the last word, and I am happy to say that the Chronically Sick and Disabled Persons Act has been more widely applied and made stonger in recent years. Its access provisions now extend to places of employment and have been strengthened in their effect. The Act as a whole today applies to Scotland and Northern Ireland and has thus become United Kingdom legislation.

The most pressing problem now is not naming an early date for any major new advance, but of doing all that we can to defend the services which the Act provides. Powerful voices are asking for more flexibility in applying the Act, by which they mean the right to dilute the provisions. Some local authorities protest that they now have to choose not only which of their discretionary powers to use, but even which of their legal duties to fulfil. Rate-capping and further cuts in rate support grant have made their dilemma even more cruel. "Must we break one law to stay within another law?" is how some council leaders sum up the agonising choice which they face.

It is not only Labour-controlled councils which protest. The Minister should read the extremely bitter comments on the Government's assessment of his borough's needs in a letter to *The Times* by Norman Hawkins, the Conservative leader of Hillingdon.

One official study after another makes it plain that local authorities now find it more and more difficult to fulfil their statutory duties to disabled people. Let us consider home helps. The number of people aged over 75 continues to increase, but the home help service is rapidly declining in terms of cases served and hours of service. Yet the over-75s need the home help service most, and the provisions of section 2 of the Act are clearly not reaching many of them in the way intended by the House when enacting my Bill.

The Secretary of State for Social Services uses the slogans of community care, but the Secretary of State for the Environment punishes every local attempt to make it a humane reality. For the city of Manchester, the capital allocation for social services for 1985-86 has been cut by a despicable 69·5 per cent. compared with last year. How does that help my city in trying to cope with its duties under the Act towards mentally handicapped people? Many other hard-pressed authorities fare little better, and yet we are told by the Secretary of State for Social Services of his total commitment to community care.

Essex county council has imposed a minimum £2 charge, regardless of income, on everyone using the home help service. Many desperate people on supplementary benefit in the county are unable to pay and no longer have a home help. They have lost a service which their county council has a legal duty to provide under section 2 of the Act. The legal advice to the present Minister, as it was to me when I was Minister between 1974 and 1979, is that a local authority cannot lawfully withdraw a service without diminution in need on the part of the disabled person.

The Prime Minister and her colleagues gave a pledge to disabled people that they would be "singled out" for special help. Yet in Essex, which includes the constituency of the Minister with responsibility for the disabled, disabled people say that they have been "singled out" for special hardship and that the law has been flouted to their detriment. How does the Minister answer that charge, of which he has been aware for many weeks, and what action has he taken?

Is it still the Government's policy that local authorities should not charge disabled people on supplementary benefit for their home helps? If so, should he not have strong words with Essex county council both about its repudiation of that policy and its discontinuance of the home help service to disabled people without diminution in need?

The legal requirements of the Act are not in dispute, as I was told in a letter sent to me by the Prime Minister on 23 January 1985—she wrote:

> "Thank you for your letter of 27 December about the reply I gave to Tony Lloyd in the House on 13 December about the Chronically Sick and Disabled Persons Act. I am grateful for this opportunity to clarify the position . . . You can rest assured that it was not my intention in any way to question the statutory duties imposed by the Act on local authorities, nor to indicate any change in the advice given to successive Ministers for the Disabled on this point. I am sorry if the wording of my reply suggested otherwise."

The Chronically Sick and Disabled Persons Act imposes a duty on the local authority to assess the needs of anyone who is permanently and substantially disabled in its area. It also has a duty to provide for a disabled person's need within a reasonable time.

The corollary of this duty, as I made clear more than once when I was the Minister, is that no local authority may lawfully discontinue a service to a disabled person if his or her need for the service has not diminished. Nor is it lawful for a local authority to plead lack of funds as a reason for not providing a service. Again, although it may recover charges for a service, a local authority may not refuse or withdraw a service if the disabled person is unable to pay.

Why, then, has the Minister not made this clear to Essex, where many disabled people over 80 years of age who are dependent on supplementary benefit, and without

diminution in need, now no longer have their home helps? Will he do so in this debate, and will he now respond to the protest of local authority leaders, of all political persuasions, who ask why they should be denied the resources they need to provide disabled people with the services that this House intended for them?

The Minister cannot deny that there is now a growing and grievious gap between the services that Parliament intended for disabled people and the provision made for them in many parts of Britain. In 1983-84, the net expenditure per head of population on services for physically and sensorily disabled people ranged from £3.91 in the London boroughs to £1.73 in the shire counties.

In London, Camden spent £8.38, compared with Sutton's 87p. In the south-west, Avon spent £3.49, while Cornwall spent £1.42. In Wales, West Glamorgan spent £3.34 and Dyfed £1.27. In the east midlands, Nottinghamshire spent £2.91 and Lincolnshire £1·52. In the west midlands, Wolverhampton spent £4·41 and Shropshire 80p.

How does the Minister justify those variations? As he knows, I quote from figures supplied by the Chartered Institute of Public Finance and Accountancy. Is he not disquieted by the institute's findings, and what action has he taken since they became known to him?

The Minister must be aware that this debate occurs at a time of very considerable anxiety about the effects for disabled people and their families of what the Government are proposing in their Green Paper "Reform of Social Security". Peter Large, of the Disablement Income Group, who has the respect of hon. Members in all parts of the House, has estimated that many disabled people on supplementary benefit now rely very heavily—to the extent of 20 to 30 per cent. of their total incomes—on payments for additional requirements to help offset the extra cost of disabled living. He refers, among other extra costs, to those for laundry in cases where the disabled person is incontinent, special diets, wear and tear of clothing and extra heating. He states:

"The proposed income-support scheme will sweep away these payments for additional requirements, replacing them all by a special premium for chronically sick and disabled people. If the premium is anything less than 30 per cent. of the basic income support payment, disabled people will again be among the losers."

The House will recall that disabled people were the losers when the supplementary benefit scheme was simplified by the present Government in 1980. They were also among the losers when the available scale margin was increased from 50p to £1 and extended to reduce heating allowances in 1984. How much longer must they be the losers?

Even if the Minister cannot provide detailed figures, will he today at least try to give disabled people some reassurance about the percentage of the basic income support they can expect as a premium? Can he also give the House an assurance that the Government's proposals in the Green Paper will not be allowed to result in any reduction, in real terms, in the totality of expenditure on provision for disabled people and their families?

Dr. Peter Kemp, housing research fellow at the university of Glasgow, has said that industrial disablement pensioners could face cuts of up to £20 a week if the Government's proposed changes in housing benefit go through. Will the Minister comment on that, and, if he disagrees with Dr. Kemp, will he give his own estimate of the effect on the industrially disabled of the Government's proposals?

As to the social fund which is proposed in the Green Paper, the Disability Alliance has said:

"The scheme will mean degradation for claimants and DHSS staff. It will force claimants to beg at social security offices for payments they desperately need. As well as cutting their income, it will strip away their legal entitlement to payments which they presently have as of right."

The proposed social fund will be under the discretion of the local DHSS office and some payments will be repayable loans. The DHSS offices will be cash limited, so what will happen to disabled people who claim after their local office has run out of cash? With payments on a discretionary basis, the Disability Alliance wants to know how a local office will choose between Mr. Jones claiming for fares to visit his terminally sick wife in hospital and Mrs. Smith claiming for fares to visit her dying child? The Disability Alliance goes on to say:

"Claimants' humiliation will be heightened by proposals that DHSS staff will help them budget. This is a gross insult . . . which will be made worse in many cases by having to pay back loans to the DHSS itself."

How does the Minister respond to these comments on the Green Paper? He cannot deny that they come from people who are as well-informed as they are representative. Failure to respond to them today will deepen concern among people for whom needless worry piles handicap on handicap.

The Royal Association for Disability and Rehabilitation has been in touch with me about the new board and lodging allowances for people on supplementary benefit. This was an issue that I raised in the House on 24 May, and most of the questions I put to the Minister, the Under-Secretary of State for the Environment, remained unanswered at the end of the debate. What RADAR says is that there is considerable alarm in the voluntary sector that the new board and lodging regulations as applied to residential and nursing care will lead to people being thrown out of homes when they can no longer afford to pay, or, if they are lucky, ending up permanently in hospital.

Local authorities are, of course, now in no position to pick up the pieces and RADAR states:

"There is increasing evidence that the level of care which the best homes in the voluntary sector seek to provide cannot be provided within the limits set. Particular anger is directed at the different limits for disabled people according to whether they became disabled before or after pension age."

I shall be grateful if the Minister will respond to that statement also when he replies to the debate.

I urge the Minister today to assert the priority of the claims of disabled people. We have to look within groups as well as between them. Among the elderly, the disabled are more hard-pressed and have problems and needs over and above those of the generality of elderly people. If, in a one-parent family, the parent or child is disabled, that family will usually be worse off and more at risk than other one-parent families. The same applies within other groups and strongly emphasises the priority of the claims of disabled people. It is also the answer to those who now demand more "savings" in expenditure on disabled people.

The calls for cuts in benefits, as for more flexibility in applying the Chronically Sick and Disabled Persons Act, have to be resisted in the interests both of disabled people and of the taxpayer. Most people with disabilities face a higher cost of living than other people. They do so with lower than average incomes. The services that Parliament

[Mr. Morris]

intended them to have under the 1970 Act are not a luxury or a privilege but a vital necessity if they are to live independently and as full members of society. There is ultimately no gain for the taxpayer in depriving them of those services. In fact, the cost of driving people into institutional care is often higher than that of allowing them to live, with the help of support services, in the community.

The description that I like best of the Chronically Sick and Disabled Persons Act is that for disabled people it was a first step into the light. Everyone who worked for its enactment can rejoice in the fact that it has been a model for legislation in many other countries across the world.

I am delighted, as the Minister must be, that the debate coincides with the visit to Britain of a distinguished delegation of people who work in the field of rehabilitation in China. The delegation is here until 17 June and is led by Wang Luguang as a senior representative of the China Welfare Fund for the Handicapped. He is accompanied by Qu Degui, as director of the international department of the fund, and by their colleagues, Liu Jing, Huang Dashu, Wang Dajue and Gao Jian. The Minister and I, together with my right hon. Friend the Member for Stoke-on-Trent, South addressed them on their arrival in London on 4 June. They are here at the invitation of the British Council and the Sino-British Group on Rehabilitation, of which His Excellency the Chinese Ambassador and the Secretary of State for Foreign Affairs are patrons.

The delegation's close interest in the relevance to China's disabled people of the Chronically Sick and Disabled Persons Act has been a source of special pleasure to many of their hosts here. Wang Luguang and his colleagues are our honoured guests, and I am sure that the House as a whole would want them to convey, on their return to China, our warmest best wishes to all their colleagues for success in their endeavours in the service of disabled people there.

One of the central purposes of the Chronically Sick and Disabled Persons Act was to challenge what Sir William Oastler, talking of those who can afford every comfort, once called that

"serene satisfaction with the status quo".

The Royal Assent to the Act was welcomed by informed people in the statutory and voluntary sectors alike. There is still much to do if all its objectives are to be achieved and, until every locality has a level of provision equal to that of the existing best, the battle for fuller implementation of the Act must and will go on. None of the very wide fellowship of people who helped to enact my Bill ever doubted the size and gravity of the task that we confronted. Our hope was that, by working together to change the law, we could also change the status quo for disabled people and end the "serene satisfaction" by which they were oppressed. That still has to be our resolve.

4.4 pm

The Minister for Social Security (Mr. Tony Newton): I, too, am very pleased that the House has the opportunity today to mark the 15th anniversary of the Chronically Sick and Disabled Persons Act 1970, the passage of which attracted considerable attention at the time and, as the right hon. Member for Manchester, Wythenshawe (Mr. Morris) has very fairly recognised, received, has continued to receive and will continue to receive a very wide measure of all-party support.

The concepts which the Act embodied—being aware of the needs of disabled people, supporting them in their own homes, giving them greater assistance with mobility, and greater access to a range of everyday facilities—command very strong support in all parts of the House. I say without hesitation and with pleasure that it is appropriate that the debate should be opened by the right hon. Member for Wythenshawe, in view of his personal contribution and his continuing commitment to the purposes and working of the Act.

On hearing the right hon. Gentleman's historical account of the difficulties which attended the birth of the measure, I was left almost feeling that it is easier to review the whole of the social security system than to go through what the right hon. Gentleman went through in an earlier period of his life.

I, too, was very pleased to have the opportunity last week to join the right hon. Gentleman and the right hon. Member for Stoke-on-Trent, South (Mr. Ashley) in meeting the deputation that is here from the China Welfare Fund for the Handicapped, and to be able to assure them that we in the United Kingdom will do everything we can to help them in any way we can with their efforts to develop services for disabled people in China.

I am particularly glad that there have already been contacts between those concerned with the question in China and the formidable group of people with interests in disabled people in Hong Kong, which I happened to visit last summer, including the well known Dr. Harry Fang, a former president of Rehabilitation International, who attaches great importance to building up the links between Hong Kong and China in this respect.

I am particularly happy that, as a result of a co-operative exercise in which a number of us have been engaged—certainly the three of us who were present at the China Welfare Fund for the Handicapped last week—we were able to make arrangements for the supply of a number of hearing aids to China. I hope that will be seen as a practical demonstration of our good will. I pay tribute to the right hon. Member for Stoke-on-Trent, South for the part that he has played in that exercise.

I do not mean to diminish the importance of the individual details and provisions of the 1970 Act when I say that in many ways its greatest impact and importance has been in its effect on the awareness of the needs of disabled people, not just within this House or in Government but at every level in society. Indeed, there can be very few Acts of Parliament of what is essentially a rather specialist nature which have made, directly and indirectly, so considerable an impact, and whose title has become almost a household word.

The Act undoubtedly marks a significant milestone in the history of services for and of attitudes towards disabled people and, if I may change the metaphor, it has provided a foundation on which all succeeding Governments have sought to build.

Over the past 15 years, many hundreds of thousands of disabled people have gained not only from the greater development of direct practical help, such as domestic assistance in the home, house adaptations, aids, the provision of telephones and so on, but from those

provisions designed to open up opportunities and facilities for disabled people which have since been built on and supplemented by other developments.

Section 1 of the Act addresses itself to the importance of assessing the overall needs of disabled people and of ensuring that they are aware of the services available to them. Both those concepts have a wider application which the Government have sought and continue to seek to develop further. As the House knows, about 18 months ago we announced, together with the social security reviews, our intention to commission the Office of Population Censuses and Surveys to conduct a new national survey to gain more up-to-date information about the extent of disablement and its effects. The last such survey, the well-known Amelia Harris survey, was carried out at about the time of the Chronically Sick and Disabled Persons Act 1970 and is therefore about 15 years old. Much of the information that it gave us is out of date, and the survey has significant gaps, especially about disabled people in residential care. The new survey — the first major survey during that entire period—will help us to gain the sort of up-to-date information that we need for further planning for services and cash benefits for disabled people. In due course it will become an important part of our data base for carrying further the purposes which both sides of the House share.

A further important feature of the Act is its emphasis in section 2 on practical support for disabled people in their home, which goes closely with the concept of care in the community and the programmes to that end, which have subsequently been developed and reinforced. The Government — the right hon. Gentleman acknowledged this in a backhanded way — have sought to place growing emphasis on that through the development of joint planning, the extension of joint finance and the funding of pilot programmes. Those are all exercises in which my hon. Friend the Under-Secretary of State for Health and Social Security has had a significant hand. We have given extra powers and extra cash to allow health authorities, local authorities and voluntary organisations to build and enlarge the care in the community programme.

Mrs. Elaine Kellett-Bowman (Lancaster): Will my hon. Friend assure the House that every possible recourse is made to the European Community on pilot projects? It is extremely keen on pilot projects for the handicapped, and we wish to tap every possible source.

Mr. Newton: I could hardly agree more with my hon. Friend's suggestion that we need to tap every possible source. To the extent that I or my hon. Friend can play a part in laying our hands on additional EC money for our community care purposes, she can be assured of our enthusiastic assistance and support. If with her experience and knowledge of the European scene she has any bright new ideas about how we can get more of that money, I hope that she will not hesitate to let one or both of us know of them. I assure her of a prompt response.

Regarding joint finance and care in the community, I re-emphasise the importance that we attach to the legislation which we passed in 1983, and which is beginning to come into effect. It ensures that voluntary bodies are represented on the joint consultative committee concerned with the care in the community programmes. I know from my constituency that that is beginning to happen. The voluntary organisations attach importance to it, as do the Government. It is a fruitful development of the decision-making machinery in this area.

The 1970 Act also gave statutory recognition to the need for adequate access provision for the disabled, not merely to specialised health or social service buildings, but to all the general facilities open to the public. It would be an understatement to say that over the years a great deal of attention has been given to that issue, for example by the work of the silver jubilee committee on access and the committee on restrictions against disabled people. We as a Government attach great importance to the access issue. As the right hon. Gentleman acknowledged in his speech, it is one of the areas where the provisions of the 1970 Act did not go far enough.

The decision recently announced by my right hon. Friend the Secretary of State for the Environment to amend the building regulations to ensure adequate access provision for disabled people to all shops, offices and single-storey public buildings was welcomed on all sides of the House and well beyond the House. Although I know that many would wish that we had already been able to go further, it has been firmly stated that my right hon. Friend hopes to extend those provision further when work on satisfactory means of escape requirements has been completed.

The access committee for England, which I established a little more than a year ago with DHSS funding by building on work by my predecessor my hon. Friend the Member for Honrsey and Wood Green (Sir H. Rossi), to whom I readily pay tribute, has made a considerable impact in its first year of operation, not least by drawing together consumers and providers of buildings in constructive debate about some of the complex issues involved. I have been immensely encouraged by the progress of that committee and its vigorous start. Indeed, it was a pleasure to me that the announcement about the building regulations was made at an important conference organised by the acces committee for England a few months ago. I have no doubt from the work that it has already undertaken that its activities will be of major benefit to all local access groups, now established throughout the country, in their efforts to improve access locally.

In having a hand in setting up the committee I was particularly concerned to ensure that the committee should include planners, designers, providers of buildings and a considerable number of the disabled who would represent the consumer voice. That reflects a theme of the 1970 Act —the need for the interests of the disabled themselves to be acknowledged, and wherever possible for them to participate in the decision-making processes. I am happy to say that that principle has been readily embraced not only in the Government, but in many other public and commercial areas, with examples far beyond the original confines of the Act.

The statutory requirements in the Telecommunications Act 1984, both for British Telecom to take account of the needs of disabled people and for the Director General to establish a committee to advise him of the needs of disabled people and elderly consumers, is a clear example. So too is the decision by my hon. Friend the Minister of State, Department of Transport, whose long-term interest in the needs of the disabled is well known to the House, to establish an expert advisory panel on disability to help guide her Department's policies.

[Mr. Newton]

As I have ranged wide, I shall return to the specific provisions of sections 1 and 2 of the Act, which deal with the practical support which local authority social services departments should be providing for disabled people in need. For many people those services have undoubtedly represented the most concrete and beneficial manifestation of the Act. It is perfectly proper that over the years those aspects have attracted most attention and interest from hon. Members, and today have brought many comments from the right hon. Gentleman.

I recognise that criticism has been voiced that local authority provision is not monitored closely enough by the Government, that restraints on local authority expenditure inhibit its power to meet the needs identified in that Act, and that the original Act needs to be reinforced in some way to remedy those alleged defects. On monitoring, local authorities are well aware of their duties under the Act, and it is clear that they take them seriously. Detailed guidance was issued to accompany the Act, and dealt with, for example, the way in which the numbers and needs of the disabled may be sought. At present I do not believe that there is a clear need for further detailed guidance. Apart from anything else, the Act leaves it to authorities to determine need in relation to individual cases, and how best to meet it. That is both right and an important principle.

Local authorities are the best judges of local circumstances, and are best able to assess the needs of the individual. Detailed guidance prepared by a Government Department, however well-intentioned, would not be an adequate substitute for on-the-spot decisions by the authorities that are closest to the needs of the indvidual and the services which exist in his area. More important, there is always a risk that minimum standards — in practice that is all that we could sensibly talk about—would be treated in some cases as maximum standards and would inhibit some of the developments that we would wish to see. They would restrict rather than enlarge the scope for flexibility and innovation.

Often, the results of innovation by some authorities and by voluntary organisations have been the spur to progress in this area. For example, some local authorities have been experimenting with different means of providing care in the home. There has also been a movement away from institutionalised and group provision for holidays towards more individual provision in mainstream holidays. There have been more partnership arrangements with voluntary organisations in the planning and delivery of services. I would not wish to inhibit such successful development by appearing to give guidance from the centre, which might all too easily become a straitjacket.

However, to acknowledge that local authorities are the best judges of local needs is not to absolve them of their statutory duties under the Act. We have always made that clear, and have always been prepared to pursue investigations where prima facie evidence is submitted to us that a local authority may be in default of its duty.

Mr. Frank Field (Birkenhead): Does the Minister have any comment to make on Wirral authority, which is in breach of its statutory responsibilities by not budgeting for adaptations?

Mr. Newton: The hon. Gentleman would not expect me to make a judgment such as he invites in an exchange across the Floor of the House. I am aware of the comments that have been made about Wirral authority and, as he will know, we are making inquiries of the authority to enable us to judge the criticisms that have been made. If I can add to that when I respond to the debate later this evening, I shall, but the hon. Gentleman will accept that that is as much as I can sensibly say in response to his intervention now.

Mr. Field: I suspected that the Minister could not answer me now, but it would be helpful if he could give us an idea of when he expects to reply. We are debating the important anniversary of the Act, and in Wirral there is no money to carry out the adaptations that are an important part of the Act.

Mr. Newton: I note the hon. Gentleman's request, and if I can help him further at the end of the debate, I shall. However, he should understand that the inquiries that we make when we hear suggestions of a breach of statutory duty—there have been more than 20 over a fairly long period—take some time to carry out and involve us in considerable correspondence with authorities. If I cannot help him further today, I shall ensure that his query is answered as soon as possible.

The right hon. Member for Wythenshawe made several observations about financial resources. It is obvious that local authorities must make difficult choices, as must central Government, at a time of budgetary and financial constraint. I must make the basic point that the Government believe that it is essential, in the interests of the economy and not least in the interests of restraining inflation, which must benefit the disabled, that local authority overall expenditure is controlled. The adoption of sensible priorities is in no way inconsistent with the proper provision of direct services to vulnerable groups such as the disabled.

I am strengthened in that view by the fact that the Audit Commission states that there is still scope for saving in local authority support and administrative costs. Until some of the local authorities which are complaining can convince us that they have examined the range of their services to ensure that they are delivering value for money, I should be somewhat sceptical about some of the claims that are made about their ability to provide the services about which we are talking today.

The Government believe that local authorities can continue to bear in mind the interests of vulnerable groups within the financial resources available to them. After all, local authority budgets for personal social services increased by 21 per cent. in cost terms between 1978-79 and 1984-85. That is a long way from the cuts about which we sometimes hear. Those figures are reflected in the fact that, between 1979-80 and 1983-84, expenditure by local authorities on personal aids increased by nearly 40 per cent. in cost terms, and the number of cases of such assistance increased by 37 per cent. During the same period, expenditure on assistance with providing telephones to the disabled and the elderly increased by nearly 12 per cent. in cost terms, and expenditure by local authorities on residential homes for the younger physically disabled, blind and deaf increased by nearly 51 per cent. in cost terms.

I shall require much more persuasion than the right hon. Gentleman was able to produce today before I am convinced that the resources made available by the

Government within their framework of policies make it impossible for well-organised local authorities to provide the services that the disabled require.

The right hon. Gentleman referred not only to the workings of the Act but to the Government's Green Paper on social security as it affects the disabled. There is no doubt that, alongside the improved services which we wish to offer and for which the Act has been an important part of the framework, the wider opportunities that we try to offer to the disabled, including improved access to buildings, the third main arm of the Government's policy towards the disabled must be the provision of an adequate framework of financial support. Without wishing to labour the Government's record in this area, I should say that we have increased expenditure on benefits for the long-term sick and disabled to £4 billion in 1984-85, which is more than 35 per cent. higher in real terms than in 1978-79—the year before we took office. As part of that, we have improved the structure of benefits for the disabled, for example, by introducing the severe disablement allowance to replace the non-contributory invalidity pension, and by removing the invalidity trap, which kept many long-term sick and disabled people on the short-term lower rate of supplementary benefit rather than the higher long-term rate. I could mention several other points, including the improvement in the mobility allowance.

However, in response to the right hon. Gentleman's queries, I should start by saying that I hope that no one on either side of the House will attempt to suggest that there has been anything other than widespread dissatisfaction with the present supplementary benefit scheme. Hon. Members may have different views about the Government's proposals and about possible alternatives, but there can be only one view about the unsatisfactory nature of the present scheme. Everyone will have heard comments that it is too complicated for the staff, let alone claimants, to understand; that some aspects of the scheme —especially those relating to disability—can lead to intrusive and humiliating questioning; and that in the areas of greatest pressure, the present rules do not allow a sufficiently flexible response to individual need.

It is to meet those criticisms that the Green Paper proposes a major reform, which will replace the present system with two new schemes. The first is the new income support scheme to provide regular weekly incomes for claimants. All claimants will receive a personal allowance based on their age. For those with families, there will continue to be children's scale rates, and, in addition, there will be a new flat rate family premium. I should make it clear, because I am not sure whether it has yet been fully appreciated, that where a family has a child in receipt of attendance or mobility allowance, the family will receive a double family premium.

For groups with extra needs, such as the long-term sick and disabled, there will be a further system of premium rates. On top of the basic personal allowance would be a premium for all pensioners, which would be higher for the over-80s, for lone parents and for the long-term sick and disabled. For this purpose, all claimants receiving invalidity benefit, severe disablement allowance, attendance allowance and mobility allowance, as well as those who are blind, would get the disablement premium automatically. There would be no separate rules about time on benefit.

Where the claimant's partner is getting one of these benefits, the couple would get double benefit premium, regardless of the status of the claimant. In both cases, where the claimant or partner does not, for one reason or another, qualify for one of these passporting benefits, there would be an alternative link to benefit—28 weeks incapacity for work would also qualify the claimant for the disability premium.

I shall attempt to list briefly the advantages of these proposals. First, they will be clearer and more comprehensible and will avoid, as a routine matter of setting basic benefit rates, the sort of questioning, for example, about laundry needs, and conceivably about bathing, that can occur. Secondly, they will be more consistent with the pattern of invalidity and disablement benefits and in particular fairer to those who may fall narrowly outside the qualifying criteria for mobility allowance and attendance allowance that are used for certain passporting purposes to some of the additional payments.

Thirdly, for those who qualify by incapacity—this is an important point—the proposals will mean getting the premium rate after 28 weeks, whereas at present such people have to wait a year before going on to the longer-term scale rate. Some 20,000 long-term sick and disabled people have been in that position for between six months and one year.

Fourthly, the blind will qualify automatically for the premium, which is likely to be of particular advantage to those who are not judged to be incapable of work and do not therefore at present receive the longer-term scale rate.

Fifthly, because in setting the premium we shall have regard to the existing expenditure on additional payments, the new system is likely to do more to help the 50,000 or so long-term sick and disabled claimants of supplementary benefit who at present receive no such additional payments. We have heard a good deal both in the debate and in other quarters about those who receive a number of additional payments. However, 50,000 people get no additional payments and therefore clearly stand to have their position assisted by our proposals.

Sixthly, as I have already made clear, families with children who are disabled as measured by mobility or attendance allowance receipt will automatically receive the double family premium.

Seventhly, I repeat that the disability premium will be payable to claimants with disabled partners on the more widely measured basis that I have described, instead of being limited mainly to the circumstances of the claimant. To put that point more clearly and specifically in terms that I am aware will be picked up by the hon. Member for Birkenhead (Mr. Field), that means that an unemployed claimant with a disabled wife as measured in the way that I have described will receive the disablement premium, whereas at present he would normally be on the short-term scale rate of benefit.

Mr. Pavitt: The hon. Gentleman has clearly spoken about the premium being automatic. Does this mean that, over the whole range of new proposals, there will be many fewer means-tested benefits and less requirement for people to be able to show that they have a deserving case in the various categories?

Mr. Newton: We are in danger of some confusion of terminology. We are basically talking about a means-tested benefit in the replacement for supplementary benefit. However, it is clear that, because of the

[Mr. Newton]

simplification of the benefit structure to incorporate the disablement premium and the extent to which that disablement premium will go automatically to a fairly wide group of claimants who are manifestly long-term sick or disabled, there will be a reduction in the amount of intrusive questioning that such people have to face before gaining entitlement.

Mr. Jack Ashley (Stoke-on-Trent, South): What exactly will the double premium be?

Mr. Newton: The right hon. Gentleman will be aware that the Government have made it clear that for the present we are debating the proposed structure of income support and that until the details of the structure have been settled following consultation, it would not be sensible to seek to elaborate specific benefit rates that at any rate would not be coming into effect until April 1987. I fear that I cannot help the right hon. Gentleman with a specific figure for the family premium.

Mr. Alfred Morris: On the point made by Peter Large, is it possible for the Minister to speak about percentages? As he knows, the Green Paper is long on ideology and very short on figures. The Minister cannot help us with figures, but he should be able to help us to some extent with percentages, and to reply to the important point made on behalf of the Disablement Income Group, among other organisations.

Mr. Newton: I accept that my life would be easier if I were able to respond in the way that the right hon. Gentleman has suggested, but the difference between giving percentages of basic benefit rates and actual figures is not large enough to enable me to respond differently from the way in which I replied to the right hon. Member for Stoke-on-Trent, South (Mr. Ashley) or to the right hon. Member for Tweeddale, Ettrick and Lauderdale (Mr. Steel) who asked me somewhat similar questions on Thursday last week.

Mr. Frank Field *rose*——

Mr. Newton: The hon. Gentleman and I had about 10 minutes on this subject last Thursday, and I do not wish to detain the House as long this afternoon.

Mr. Field: I shall try to be more brief. Is it possible to answer the question put by my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris) earlier? Will the Minister give a guarantee that no disabled people on supplementary benefit will be made worse off by these moves?

Mr. Newton: I have given signs that significant numbers of disabled people are likely to gain within such a structure but I cannot, for obvious reasons, put figures on the numbers. However, our intention will be to make sure that at the point of change in the system, there will be protection against cash losers in income support. I cannot give the hon. Gentleman a guarantee that all disabled people will be gainers and none will be losers in cash terms if no other considerations apply. However, I can say that, to the extent that there might be some who would otherwise be losers because of what I would see as a fairer distribution of the newly structured system, it would be our approach to ensure full cash protection on the point of transition. I hope that it is reasonably clear to the hon. Member for Birkenhead and will be thought by the House to be a sensible policy.

The right hon. Member for Wythenshawe asked about industrial disablement benefit, and the effect for people receiving that benefit on their housing benefit entitlement. Again, it is impossible for me to speculate in detail about the effects on particular people of benefit rates, taper rates and the rest that have not yet been settled and could be settled only once the structure of the system is settled.

However, I hope that it will be clear to the House when I say that one of the key features of the Government's proposed reforms in the Green Paper is a common basis of assessing income and of setting the benefit structure that carries through from income support to housing benefit and the proposed new family credit. The point in that which is relevant to the point raised by the right hon. Member for Stoke-on-Trent, South is that the disablement premium will automatically carry through into what are now called the housing benefit needs allowances because the income support rate in the new income support system will form the needs allowances in the reformed housing benefit system. So the needs of disabled people are also clearly reflected in our proposals for housing benefit.

I want to deal with two other matters affecting the income support scheme. First, we are very conscious of the need to encourage disabled people to remain active to the maximum possible extent. The present earnings rules can undoubtedly be a discouragement for disabled claimants to earn more than £4 a week. We are proposing that single claimants or families receiving the disability premium should be able to earn a significantly higher amount—we have in mind £15—before their benefit is reduced. We believe that this will be welcome to many sheltered workshops, and I know from my own direct contacts that the British Institute of Industrial Therapy will feel that that helps its efforts to ensure a degree of active work and help for many disabled people.

The second matter touches on the capital rule. We are proposing to end the present £3,000 cut-off and to substitute a taper between £3,000 up to a final cut-off at £6,000. Although I do not want to exaggerate this in this context, from the many representations made to me over recent years I believe that that will be widely welcomed not just by claimants generally but particularly by the parents of many mentally handicapped youngsters who set out deliberately to provide some capital support for their children when they themselves have passed on. I hope that that will be a help to them.

Our proposals are concerned mainly with the structure of the new benefit system at this stage, and decisions on specific rates cannot be taken until nearer the time of implementation. However, I emphasise that the Green Paper makes it clear that one of the purposes of this reform is to give greater recognition to the needs of people who are disabled. It is our firm belief that the new structure will make that easier to achieve.

I ought to respond to what the right hon. Member for Wythenshawe said about the social fund, which is the second arm of our proposed replacement of supplementary benefit and which will provide help with budgeting difficulties, funeral expenses and financial crises. Especially relevant to this debate is that it will also seek to provide help with care in the community needs. At present the scheme contains in the rules on single payments a number of provisions to help vulnerable people

to maintain themselves in the community. But, frankly, these areas can get lost in the mass of detailed rules which apply to the system. It can mean that many people may not know of the help available and that the process of decision making is insufficiently able to take account of all the circumstances of certain claimants such as disabled people. In proposing the social fund we want to give greater emphasis to these areas so that the needs of disabled people and others can be handled more flexibly and with greater regard to individual circumstances.

We shall continue to provide help which allows disabled people to move from institutions into the community. We shall continue to provide help with moving and other expenses, such as furnishing needs, for those setting up on their own. We shall continue to help with moving expenses for disabled people to go to more suitable accommodation such as sheltered housing. We shall also continue to help people to visit sick and disabled relatives in hospital.

In view of the anxieties that have been expressed I should make it clear that it is not intended that help of that sort should necessarily be made by way of loan. For the most part, help with moving out of hospital and re-establishing in a community care context would normally be more appropriately met by a grant rather than a loan. There will be areas where we hope that disabled people will benefit from the budgeting and loan-making provisions of the social fund, but in the area of community care plainly it will be more appropriate to do so by way of grant.

Mr. Michael Meadowcroft (Leeds, West): The Minister may be aware that I am rather more sympathetic to the idea of the social fund than even some of my hon. Friends, partly because I have a naively optimistic view of DHSS staff and the way that they may operate it, given the chance. Will the Minister help me by saying whether grants under the social fund will be appealable to a tribunal on the grounds of reasonableness, say, and that it will be possible for those seeking to help disabled people to appear before such a tribunal and assist claimants if they feel that the fund is not being sensitively administered?

Mr. Newton: I welcome the hon. Gentleman's remarks. They give me some encouragement because I respect his judgment in these matters. He will be aware from his evident reading of the Green Paper that we have said that our intention with the social fund will be to make it subject to some form of speedy and flexible system of review within the Department rather than by the semi-judicial process of appeal which currently characterises decisions under the social security regulations. In my view, it is likely to be incompatible with our aim of sensitive and flexible decision making, taking account of the circumstances of an individual's need and not simply trying to apply detailed regulations, as happens with the present single payments regulations, to establish alongside that all the rigidities of a semi-judicial or judicial appeal process.

Mr. Meadowcroft: Can the Minister help me further by saying whether it will be possible to include advocacy in that? Many people in these quite extreme needs find it difficult to present their cases. Will there be the possibility of advocacy by local councillors, social workers or welfare rights workers?

Mr. Newton: That is a matter to which we shall wish to give further thought during the process of working up the social fund proposals. I must again unashamedly fall back on the fact that this is a Green Paper on all parts of which we shall welcome the views of others, including the hon. Member for Leeds, West (Mr. Meadowcroft). I shall want to give further thought to his question, but my initial reaction is that I very much hope it will be possible. It is in line with our general wish to ensure that decision making in this area incorporates some of the strengths—I hope not the weaknesses—of social work practice as distinct from rigidly applying social security regulations.

Beyond those reflections on the present single payments system, we wish to work towards developing this part of the new arrangements to promote further our community care objectives. The fund represents in significant ways a new approach in social security administration. It will be important to avoid the risk of being over-ambitious from the start, but I emphasise that it is our intention to enable the system to contribute more effectively than it often does now to a sensible mix of cash and care for vulnerable groups in the community.

The hon. Member for Leeds, West asked about staff. It is also our intention that these arrangements shall be run by specialist staff with special training. We have a core of such expertise at the moment because of the build-up since 1980 of the so-called special case officers who have been concerned with handling the more difficult cases. They have been encouraged in recent years to build up contacts with social service and health professionals. We shall seek to build on that experience, to give them training in handling the more sensitive issues affecting individual claimants and to enable them to serve as a readily identifiable focus for the other welfare interests which may be involved in helping disabled claimants.

We are looking for a system which will be more sensitive than the present one, and not more intrusive. We aim to match the skills needed to apply judgment in handling these community care issues and a response which is less bound by detailed rules and restrictions. We are talking about trained specialist staff handling a limited number of cases with more freedom of manoeuvre than is possible at present.

If we are able successfully to build up those proposals alongside the clearer, fairer and more comprehensible system of income support which I described earlier, we shall both have done a significant service to disabled people in relation to the benefits system and, in doing so, have underpinned those wider objectives of making this a better society for disabled people, which were the foundations of the Act for which the right hon. Member for Wythenshawe was responsible 15 years ago.

4.50 pm

Mr. Jack Ashley (Stoke-on-Trent, South): The Minister for Social Security has unsuccessfully tried to ride two horses at once. He has tried to defend the savage local authority expenditure cuts by the Government. At the same time, he has tried to claim that he is defending the rights of disabled people. The two are incompatible. He cannot support the local authority expenditure cuts because they have severely damaged the living standards of the disabled. If he supports the cuts, he must acknowledge, not gloss over the fact, that they have been severely damaging to disabled people. That was the first two-horse ride that the hon. Gentleman tried to take.

[Mr. Jack Ashley]

The Minister tried to do it on another occasion. He tried to assure us that his review will not damage the interests of the disabled, but at the same time he tried to keep the review figures secret. That, too, is incompatible. He cannot assure the House that the disabled will not be damaged if he is unable to provide figures. We do not know what the figures are. Therefore, the Minister made a sanguine speech which was unjustified by its content. He pointed to the numerous advances that have been made, but they are limited and minor advances. They do not amount to a comprehensive package for the disabled.

The Minister is capable of making good speeches—he is one of the few good Ministers in this terrible Government—but on this occasion he did not make a good speech because he was unable to defend this Government's record and simultaneously to do his job successfully as a Minister with responsibility for the disabled. I intend to deal in more detail with some of the points that he made, but first may I say that I agree with the Minister about the importance of the Chronically Sick and Disabled Persons Act, which was piloted through the House by my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris). That Act was a great landmark for disabled people in Britain and, as we have heard from our great friends in China and, indeed, across the world, it has created new opportunities. It gave positive and constructive help to disabled people in need; it changed the climate of the whole country towards disabled people. It was an outstanding achievement, of which my right hon. Friend the Member for Wythenshawe can be proud.

The Chronically Sick and Disabled Persons Act was passed in 1970. Today, in stark contrast to those heady days, there is a mood of deep disillusionment that has to be contrasted with the picture painted a few minutes ago by the Minister for Social Security. Not just a general abstract feeling of disappointment but in some cases real, deep and grievous hardship is being faced by some disabled people. The tragedy is that that hardship is often unnecessary.

I have recently spoken to some severely disabled people and to three great experts on disablement: first, my wife Pauline; secondly, Molly Meacher of the British Association of Social Workers; and, thirdly, Peter Large of the Disabled Income Group and the Disabled Professionals Group. As all hon. Members know, Peter Large is both disabled and an expert. His views, as my right hon. Friend the Member for Wythenshawe has said, carry very great weight in the House.

All three of those experts have spoken to me of the changed mood among the disabled—of their battles to get any help at all from some local authorities and of the hardship now being endured by many thousands of disabled people. Despite the Minister's speech, that is the reality of disability in Britain today.

One of the cases quoted to me by Peter Large illustrates the suffering of disabled people that can be attributed to the cuts made by local authorities. This case will be familiar to the Minister. It concerns a woman, a tetraplegic, who is being cared for by a very elderly mother whose ability to cope is decreasing week by week. The local authority has tried to cut her home help, and the time of the nurses looking after her, who put her to bed at night, has been cut by more than half. Although her situation has improved recently, she still has to stay in bed throughout the weekend—fancy that—because she can get no help at all then. Her mother is too frail to use the hoist. She has been warned by the local authority that the present arrangements are certain for only six months and that thereafter she could be forced into an institution.

As Peter Large says:

> "For far too many people, care in the community at the moment is an ad hoc, stressful, hand-to-mouth fight for survival—an unhappy existence, often lacking dignity and privacy."

That is a sombre, and, in my view, realistic appraisal by one of the greatest experts on the disabled. He pays tribute to that woman's Member of Parliament and to the Minister with responsibility for the disabled for their help. He says that their help for that woman has been very constructive, but that the personal intervention of the Minister is not the right way to run the welfare state. I agree with him. That should not be necessary. We should not need to call upon the Minister to rectify a grievous anomaly. Even after the Minister has acted, that woman is still confined to bed throughout the weekend. The Member of Parliament has done what he can and the Minister has done what he can, but that problem still has to be faced. I am not saying that that particular example applies to millions of people, but I believe that similar things are happening to many people throughout Britain.

The truth is that many disabled people in Britain are today living in fear. They fear what will be cut next. They have neither confidence nor peace of mind. They fear where the cuts will fall. They are consumed with anxiety about how long their family or the carers can cope without adequate help. Those problems are exacerbated by the proper policy that is being pursued by the Minister of expelling people from institutions and trying to integrate them into the community. The policy is breaking down because proper provision for those people is not being made in the community. They are being denied adequate community care.

One of the original aims of my right hon. Friend's Act was to make it easier for the disabled to obtain the basic help that they require, such as home help, aids and adaptations, but it has become a nightmare of complexity and a veritable Grand National of obstacles to be negotiated by people who are very severely handicapped. Such people are often not given information about their entitlements. They should receive information, because without it they do not know what to ask for or to whom to turn. However, when they are told of their entitlements, they face arguments as to whether they need the help, aid or adaptation. If they win that battle, they then have to be assessed by an occupational therapist. But there is a great shortage of occupational therapists, so they have to wait. It is a national scandal that there should be a shortage of such people. Even if the disabled win that battle and are assessed, they may be told that the aid, help or adaptation is not yet available, which means a further long wait.

The lesson to be drawn from those points and from the experience of many people is that life may be for living, but for far too many disabled people it is merely for existing. It is not the local authority that is mainly to blame for such a deplorable situation, but the Government. They must accept the responsibility. The Government's battles with local authorities are familiar to hon. Members on both sides of the House. However, their financial support for

local authorities has been slashed from 60 per cent. in 1980-81 to 49 per cent. now. The Government are responsible for that savage cut.

Local authorities vary greatly in their attitude towards the disabled. Unfortunately, the Minister was far too sanguine about local authorities. He said that they were the best judges. That may be true in general, but it overlooks the fact that there are many negligent, lazy, greedy, selfish and stupid local authorities that do not care about the disabled. We must face that fact. We must do as we always do, and pay tribute to local democracy, but let us simultaneously recognise that there are bad local authorities that give the disabled in their areas a rotten deal. We should be doing something about them.

Some of us, including the Minister, have argued about the disparate provision of local authorities and called for action. My right hon. Friend the Member for Wythenshawe quoted some figures. Perhaps the Minister will comment on them at the end of the debate. The national average for local authority expenditure on the disabled is £2·07 per head of the population. But perhaps the Minister will comment on other local authorities, such as Sutton which spends 87p, Bury which spends 86p, and Oxfordshire, which is even worse, which spends 75p. How can one defend local authorities that are evidently neglecting the problems and difficulties of severely disabled people, some of whom may be imprisoned in bed all weekend and may have to look to an elderly mother to work a hoist which she is too frail to do?

I could cite many more examples, but I do not want to be emotional. I want, instead, to be practical. I have referred to the genuine practical problems and difficulties being faced by human beings. When we use the umbrella term "the disabled," we are really talking about individuals who suffer grievously. We should attack those local authorities that have neglected their responsibilities to them.

In the Minister's speech, I noticed a regrettable dichotomy in his attitude towards local authorities that he felt had been overspending. He implied that we could not allow authorities to waste money—that they should be businesslike, prune their expenditure, or conduct their business properly. But that attitude should be compared to his attitude towards their decisions on the disabled. On the one hand, the Minister seems to be ready to condemn local authorities if he feels they are extravagant, but, on the other, he is rather complacent if he feels that they are not fulfilling their duties to the disabled.

The Minister implied that we should leave things to the local authorities because they are the best judges of what should be done. That is an unfortunate attitude. The Government are eager to intervene when they think that local authorities are spending too much, but there are never any stern ministerial statements threatening penalties for local authorities that spend too little on the disabled. There should be. The Minister has powers. I accept that he makes investigations, but only about individual cases, and they do not affect the generality of disabled people. The Minister should get the Secretary of State to use his great powers and to take action against recalcitrant and negligent local authorities.

The fundamental issue is one of cash, and the omens for the disabled are grim. The Minister has discussed the new scheme, and he recognises that many severely disabled people rely on supplementary benefit and extra payments just to subsist. I think that 80 per cent. of disabled people on supplementary benefit receive those additional payments. But the Government have plans to abolish those additional payments and to replace them with a higher level of income support. Indeed, I felt very uneasy when the Minister negatively responded to my request for figures. But figureless proposals are meaningless. It is just possible that the average may suit the average person, but disabled people are not average, and their exceptional needs will draw heavily on the social fund. However, that social fund is cash-limited, and when it runs out periodically, those requiring help will presumably receive the same response as Old Mother Hubbard. That would be a sad response to make to people who are in great need.

Disabled people are also very worried about the Government's "enabling" theme for local authorities. Many of them fear that it shows a lack of commitment. I think that they are right. The Government are encouraging local authorities to duck the issue and are failing to extend the necessary and proper pressure on behalf of disabled people. Fine-sounding words from Ministers cannot disguise a lack of conviction or commitment. I do not level that charge at the Minister for Social Security, because he does his best, but in general the Government are failing the disabled. Many of the speeches made about the disabled do not reflect the passionate commitment and determination to act which should be there.

Voluntary organisations are admirable institutions, but they are not renowned for working together. Some of the bickering between them causes heart searching among those of us who are active on behalf of disabled people.

It is, therefore, a demonstration of how worried the organisations have become that they have formed an association called the Voluntary Organisations Social Services Group, which is determined to ensure that voluntary organisations should not become tools of the Government. It knows that the Government are turning from proper local authority provision to excessive reliance on voluntary organsiations and it rightly insists that any special programme funding should be supplementary and not a replacement for local authority services.

Disabled people and voluntary organisations are fighting back against the current disturbing trends. They reject the view implied by the Minister—I deplore his implication — that the Act is laudable, but not affordable. The Act is the law, and the law should be obeyed and enforced. It is the Minister's duty to ensure that the law is enforced, and he will be failing in his duty if he does not ensure that.

We need a number of clear and positive steps from the Government. First, the Act must be enforced, and heavy penalties must be imposed on those who break the law.

Secondly, we need a code of practice for local authorities on the provision of services for disabled people. The British Association of Social Workers produced such a code in 1983, and I hope that the Minister will consider its general application, because it would bring Scrooge-like local authorities into line. The code should include a specific requirement for the provision of information. The DIAL system — the disablement information and advice line — is demonstrating how effectively that can be done.

Thirdly, we need an alternative to the creaking, groaning machinery of getting help to disabled people. Gearing up the whole Heath Robinson contraption of local authority services to provide, say, a bath rail belongs not to pre-1970 but to pre-1870.

[Mr. Jack Ashley]

Fourthly, we need greater participation by disabled people in the decision-making process.

The paternalistic days are over and the involvement of disabled people results in better decisions and preserves dignity. The centres for independent living set a fine example in the sharing of decision making and service delivery between local authorities and disabled people. If those centres are properly funded, they can provide great opportunities for many disabled people.

Disabled people have not only a claim, but a right, to participation in the making of decisions that affect them. They have a great deal to offer and they are willing to offer it. I hope that the House will not turn them down, but will give them an opportunity to play a major role in their own affairs.

We need change, and the debate should mark the moment of change, when the Government began to act decisively on behalf of disabled people and when disabled people played a much larger role in their own destinies.

5.14 pm

Mr. Andrew Rowe (Mid-Kent): It is a rare privilege for me to be fourth in a debate in which the three previous speakers have a record on this subject which I should like to match when I have been here as long as they have.

I pay special tribute to the right hon. Member for Manchester, Wythenshawe (Mr. Morris). People all over the world know what a tremendous amount of work he put into the creation of the Act. In some ways, he is a remarkable model to new Members, such as myself, who are told when we come to the House of the dangers of not specialising.

On the other hand, it must be said that the right hon. Member for Wythenshawe and the right hon. Member for Stoke-on-Trent, South (Mr. Ashley) are in danger of that other peril against which new Members are warned, which is taking one small corner of the whole fabric of society which—mixing my metaphors—could be a bottomless pit and insisting at every turn that all the resources available for the betterment of society should be directed to that corner.

I take issue with the right hon. Member for Stoke-on-Trent, South, because it is an old trick to try to differentiate between a good Minister and a bad Government. The Minister represents a Government under whom expenditure on the chronically sick and disabled has reached previously unknown heights and has grown in real terms by percentages of which any Government have a right to feel proud.

I accept that there are local authorities whose record in this, as in many other matters, leaves much to be desired, but I am nervous of the suggestion that central Government should dictate exactly how much should be spent or what resources should be involved in every individual case. The need to look wider than just one's own preoccupation does not belittle the importance of the disabled, but it is necessary to remember other needs.

My constituency spans two district councils. For the 10th year running, one of those councils has set its rate at the same level. As a consequence, in a pocket of high unemployment in a prosperous part of the country, unemployment is beginning to fall because employers are moving into the area, partly because the rate is not only stable, but is extraordinarily low. That is a social good which will have an impact on the disabled, as on other people.

Regrettably, I shall not be able to stay for much of the rest of the debate, because I have to go to the annual general meeting of the Community Service Volunteers, of which I have the honour to be a trustee. That organisation is relevant to the debate, because, among other pioneering efforts, it has pioneered the exciting experiment of independent living for the disabled, under which young volunteers live in the same house as severely disabled persons and help them to cope with the difficulties of their independence. I echo the right hon. Member for Stoke-on-Trent, South when I say that the volunteers undoubtedly learn more than the disabled person about what is needed in the partnership.

Mr. Tim Yeo (Suffolk, South): Would my hon. Friend like to pay tribute to another aspect of community service volunteers' work? The able-to-help scheme allows disabled volunteers a chance to be the volunteers rather than the recipients of voluntary effort.

Mr. Rowe: I am of course delighted to pay tribute to that work. What is being done is a clear lesson that the disabled have as much to offer the able-bodied as the able-bodied have to offer the disabled. One of the essential features of this scheme is that local authorities need to respond to some of the difficulties with greater sophistication. I am sure the House knows that there was a tragic incident of a volunteer watching a disabled person die in peculiarly unhappy circumstances. The local authority, the volunteer and everyone involved was still so new to the scheme that they did not grasp some of the dangers in the experiment. It says a great deal for the maturity of the CSV and the local authority that the scheme did not die as a result of that unfortunate accident, but rather that lessons are being carefully applied to future efforts.

There is one minor but important point which I should like to raise with my hon. Friend the Minister. Although he has given the official reply, I hope that he will once again consider the matter. Let me cite the example of a couple in my constituency. The man is 100 per cent. disabled and his wife is unable to take any form of employment because she is caring for her husband. By frugal management she has managed to save some of the benefits which accrue to her family each week, and was looking to take out an insurance policy for the unhappy day, which is likely to come before her own death, when her husband dies. It transpires that, no matter where she turns or how she does it, the surrender value of any insurance policy that she takes out will be counted against her benefit entitlement.

Although I welcome the intention of the Green Paper to raise the disregard from £3,000 to £6,000, will my hon. Friend look again at those rare cases where there is 100 per cent. disability in the household and consider allowing some disregard on this so-called capital sum, which is a capital sum only in theory, especially if some form of caveat is entered against the possibility of borrowing against it.

Mr. Newton: As my hon. Friend courteously said that he might not be able to be here at the end of the debate, perhaps I might ask him whether his constituent is aware

of the current £1,500 exemption on the surrender value on life assurance policies, which is part of the present capital rules.

Mr. Rowe: I think that she is aware of it, but I cannot be absolutely sure. Even so, the impression was that it would not take very long to build up a policy entitlement which would overtake virtually all of the disregards. It seems hard that people who forswear present pleasure for future frugality should be penalised in this way.

It is important that resources be made available for the disabled. Without money, comparatively little can be done. However, it is erroneous to believe that only money is required. We need a change in the attitude of society. Perhaps I might give a small but pertinent example. It is strange how reluctant house builders are to consider the possibility of building the kind of home that they build for young couples, which incorporate features that would enable the homes to be used by the disabled. I do not believe that any young couple, glad to have their first home, would find slightly wider than average doors or electric sockets half way up the wall a major impediment to their happiness. It is much cheaper to build in the flexibility than to make modifications. Such a simple adaptation on the part of society would meet the needs of the disabled and others.

I strongly welcome the recently introduced extension of the joint financing arrangements, which will allow joint finance to continue for 13 years in some cases. Decanting disabled people into the community is an immensely important issue, but there is an evangelism about some of those who believe in getting rid of institutions. If we are not careful, we will find that people for whom the community is not ready and who find it impossible to adjust are put into the community. That does not diminish the enormous importance of taking those huge institutions, often of Victorian origin, and reallocating them in other ways to the benefit of the Health Service and social services, thus making it possible for the disabled to live within the community. The recently improved joint financing arrangements give tremendous help to that.

Another commercial. I have in my constituency the headquarters of only one national voluntary organisation. It is small but of fundamental importance and is called the Association of Carers. It has just received its first assistance from the Government. We welcome that. It is designed to make it easier for the army of men and women —mostly women—who have devoted their lives to the care of disabled or handicapped people, to articulate their needs and to describe the support that they require. Much of what they have to tell the Government has been greeted with considerable sympathy by my hon. Friend the Minister. There is a long way to go before the disabled receive the kind of dignified treatment which we would all like to see. The Government have nothing of which to be ashamed. They have made enormous advances, with the assistance of the Chronically Sick and Disabled Persons Act, in the introduction of which the right hon. Member for Wythenshawe played an important part.

5.28 pm

Mr. Michael Meadowcroft (Leeds, West): I do not regard myself as a centrist but I shall not go as far as the forthright criticisms made by the right hon. Member for Stoke-on-Trent, South (Mr. Ashley) and I go further than the hon. Member for Mid-Kent (Mr. Rowe).

I agree with the hon. Member for Mid-Kent that we must not enforce nationally what we cannot persuade people of the need to do locally. If we cannot persuade recalcitrant local authorities to spend on what we believe they should spend on, it is up to us and our colleagues locally to persuade people in the area that they should support expenditure on means of assisting disabled people. We must create a resonance locally rather than think that we can do things centrally by forcing action on local government.

I am sometimes anxious that, in debates on social services and social welfare, the Chamber is rather cosy. Those right hon. and hon. Members who attend are anxious about the disabled, and their attendance hides the fact that there are other hon. Members who are not as interested and who do not have the same determination to fight for the disabled.

It is a strange paradox that although the Minister can give global figures for expenditure and cite straightforward cash increases we all find that in practice many needs are not being met. Perhaps higher expectations and greater information about what should be available mean that these needs come to the fore more than in the past, but I hope that the Minister will examine the situation carefully and not hide behind national figures when hon. Members are being bombarded constantly with cases of apparently simple needs not being met at the local level.

In Thursday's debate on the problems of the elderly, I cited two cases of linkage which I regarded as unsatisfactory and in which I believed that better services could be provided without additional expenditure. One concerned the vast cost of wholesale slum clearance and rebuilding. The other concerned the interaction of the social services, social security, the voluntary organisations and the National Health Service to assist individuals. Today I shall give one instance in which linkage is not working as it should for the disabled.

I am concerned to find that in some instances non-teaching assistants provided in schools are being withdrawn or are not following through to assist young people who move on to other schools. It is hard to dispute the statements of local authorities about the limited resources currently available making it extremely difficult to continue providing extra services which in virtually every case we would all regard as valuable and necessary to enable disabled people to blossom to their full potential in the education environment.

I, too, wish to congratulate the right hon. Member for Wythenshawe (Mr. Morris). I was not in the House in 1970, but I appreciate the problems that he must have faced and the last-minute fears that he must have felt about whether his Bill would finally become an Act. The right hon. Gentleman never misses an opportunity to put the case for the disabled and it is to his credit that he is not deterred by the risk of wearying people with a recital of the same facts and cases but ploughs on consistently.

The first election that I fought was for Leeds city council in 1968. Early on in my campaign I was brought starkly up against the problems of disabled people. As I canvassed in the streets of Leeds a message was brought to me asking me to call at a certain house to discuss the problems faced by a family with a mentally handicapped daughter. Without feeling that I was being particularly brave or deserving of credit, I duly called on the family and was horrified at the amazement of the parents when I did so. They told me that all too often the mention of

[Mr. Michael Meadowcroft]

mental handicap meant that no one turned up. That was an astonishing comment on the state of affairs in society at that time.

In the 15 years since the Act was passed, a great deal has been achieved in helping many disabled people to live almost completely normal lives in society simply because attention has been paid to providing greater access for them.

Another aspect of the Act which has not been fulfilled concerns the need for a better census by every local authority of the number of disabled people in its area. As far as I am aware, very few authorities carry out a proper census so they are unable properly to assess the provisions required. I cited the case of a rubella-affected child in Leeds who was very severely handicapped. She was deaf and blind and had a heart murmur. The authorities said that they would not provide a rubella unit because there were not enough rubella-affected children in the catchment area to justify such action. However, the parents of rubella-affected children in the area knew the precise numbers. On a certain day in Leeds the parents and the rubella-affected children all got together with the policy-makers from the local authority, both officers and councillors. As a result of that meeting, a rubella unit was built, attached to a school for people with hearing defects, and it has proved a great success. The census is a crucial tool if one is to make proper provision for disabled people.

I want to develop the whole problem of linkage and local authorities. One can place too much emphasis on the need to spend money. It is dangerous to make a statement like that in the House as it may be pounced on by the Minister and his colleagues as implying a need to spend less money or not to spend money where it is needed. I am not suggesting that. In many cases there is a need to provide cash to assist people. Sometimes, however, we do not look at a problem in the round to see how different Government Departments are affected and where their responsibilities lie.

The reduction or lack of expansion in home help services is not justifiable in financial terms. Looked at in the round, the lack of home help services probably causes greater expenditure elsewhere by accelerating the need for disabled people to be taken into institutional care. The home help service is one of the cheapest and most cost-effective services we have. The kind of people who are home helps, both male and female these days, are people who if they could afford not to be paid to do their work would willingly carry it out for nothing. I am sure many hon. Members have experienced, as I have, telephone calls to their homes at night and at weekends from home helps on behalf of their clients. They do this quite apart from their paid duties. It is a splendid service. I suspect that the home help service may thus even create a profit in sheer cash terms.

The way in which we help the unemployed through the Manpower Services Commission schemes is not cost effective and could be improved to the benefit of all concerned. I have previously mentioned the welfare maintenance and supply group in Bradford. That group of 12 disabled men met through the social contacts of disabled folk and found that they all had an interest in craft skills, so they decided to get together to make aids and adaptations for disabled people. They managed in the first year through the usual 100 per cent. MSC grant towards all the labour costs, but the MSC rules mean that no money can be kept by the project. That is crazy if one is trying to encourage people to be self-supporting.

I am sorry that the hon. Member for Lancaster (Mrs. Kellett-Bowman) is not present as it would gladden her heart to hear that it was then suggested that the EEC would make funds available to carry the project on, the local authority bridging the gap between MSC and EEC funding. Paradoxically, despite being a larger organisation, the EEC is more flexible in giving grant to such projects and it was able to work in conjunction with the project, covering a declining percentage of the labour bill according to manufactured goods sold and the contracts for adaptations secured by the group.

As local council for voluntary service secretary, I thought that the group would probably survive with a grant of 40 per cent. of the wages bill, the rest being made up through the open market. In fact, the group is now working on a mere 20 per cent. subsidy. With that kind of flexibility, a 20 per cent. subsidy on the wage bill can enable 12 disabled people to fend for themselves and work in the community at a cost far less than that of having them unemployed and paying them 100 per cent. of all the multifarious benefits that the Minister has outlined today. These schemes have vision and if one considers the linkage between provisions they are both cost effective and beneficial to the individuals concerned.

There has been much criticism from various sources of the fact that, once held, international years are often forgotten, but such criticism is not always necessarily justified. When such a year works well and local committees are established, there is the possibilibity of continuing the momentum in beneficial ways. In the context of the International Year of Disabled People, many schemes were established—for example, access guides and information guides, which have since been updated —which have continued ever since. I am pleased that groups such as DIAL — Disabled Information Advice Line which was set up by disabled people for disabled people—have been able to maintain their funding. In many respects, the transportation side of the problem also burgeoned during that year.

I hate to say it, but it looks as though some of the community transport projects, such as dial-a-ride, will be hard hit as a result of the abolition of the GLC and the metropolitan counties, because the money received from hiring charges was underpinned by grant aid from the transport bodies. It would be a shame if such projects were now to disappear.

It is important to look at the implications of grant aid. It should not be shuffled from one Government Department to another. As to ways of achieving innovation, I am well aware that some DHSS section 64 grants have been very much appreciated and have done a great deal to assist voluntary bodies to provide a different style and character of service than that provided by the state, whether centrally or locally. I am glad that there is an increased ministerial awareness of the need not to confine such grant aid to year-on-year funding.

Sometimes it is almost self-fulfilling for Ministers to say, "But you do not get the same kind of secure provision or calibre of staff," but by and large, we shall not get the present array of people working in such projects if there is merely year-on-year funding.

It is now apparent that there is greater awareness of the administrative implications of grant aid. In work for the

disabled and other work which qualifies for grant aid, it is often assumed that grant is simply given for a project, without realising the administrative implications. Some voluntary bodies have come unstuck through underfunding, even though it is only by a small proportion. However, such a proportion is crucial for a project even though it may not be for a statutory body.

We must also look carefully at what is now happening to urban aid grants through the Department of the Environment. I understand that in the main there is a virtual bar on new revenue money for projects, and for urban authorities such as Leeds and others in west Yorkshire, it will be difficult to maintain projects even at their present levels unless there is a change of heart about the amount of revenue finance to be made available.

The hon. Member for mid-Kent referred to the National Association of Carers. It has been estimated that if only 1 per cent. of families which now care for disabled or elderly persons refused to carry that burden and asked that their dependants be placed in residential care, the cost to the state would increase overnight by 20 per cent. I suspect that in some cases carers are literally being exploited. We must look carefully at support for such carers, not just in financial terms but also in terms of respite. If we do not do so, we may find that there will be a decrease in the number of those who are prepared to be carers, simply because they are incapable of doing so for any length of time.

It is desperately important that institutional care and care in the community are interlinked. However, I do not wish to anticipate the debate that I hope we shall have on the report of the Select Committee on Social Services. I notice that the hon. Member for Halifax (Mr. Galley) is present, and I am sure he would agree that the Minister should be given no excuse whatever to deny a debate on those matters. However, it is important to take on board many of the provisions contained in the recent report on care in the community. During our visits here and in the United States, we were impressed by the fact that when a local authority or voluntary project said that a certain number of disabled people would always remain in institutional care, we always discovered that in other areas such disabled people were being cared for in the community. Given the right support, I do not believe that it is impossible to care for any group of people in the community. We must therefore look at ways and means of drawing the funding together.

It is important that disabled and handicapped persons come out of institutions with a cheque which would go either to the voluntary body or the local authority. Even with joint finance or other tapered methods of finance, I do not believe that organisations are prepared to take on such responsibilities unless they have an assurance of continued financial support. It is important that such money be given for the place, not just the person, since otherwise voluntary bodies with no great capital resources on which to fall back might experience severe cash flow problems if the disabled person died, as a result of which that finance ceased. I understand that in the north-west that type of dowry money is being used effectively to enable people to come out of the institutions.

Given the different disabilities for which people are taken into care and for which they need special attention, it is interesting that quite a number of those disabilities are preventable. For example, the fourth largest group of people needing special care contains those suffering from cardio-respiratory disorders. More than 10 per cent. of the total fall into that category. We must therefore look at preventive work such as that carried out on diet and nutritional food labelling rather than concentrating on treating people once they have become disabled.

Those of us who are fortunate to be able bodied must talk to our constituents whenever we can, even in the clubs and pubs, and should point out that people who are not as fortunate as ourselves must have the care to which they are entitled. One of the Minister's predecessors, the right hon. Member for Daventry (Mr. Prentice), told the Royal National Institute for the Blind in July 1979:

> "The disabled cannot expect to be exempted from the sacrifices necessary for economic recovery."

I reject that. People with needs that are perhaps more serious than the problems we face economically are entitled to be protected from the cold winds that may blow. It is incumbent on us all to ensure that such services are provided and that those in need are properly cared for so that they can live as full a life as possible. That will be of benefit not just to the disabled, but to the rest of us when we see them take their full place in society.

5.48 pm

Mr. Tim Yeo (Suffolk, South): The hon. Member for Leeds, West (Mr. Meadowcroft) made some of the points that I shall attempt to make, but perhaps I can approach them from another angle.

I begin by paying a tribute to the right hon. Member for Manchester, Wythenshawe (Mr. Morris). I am sorry that he is not present, but he will do doubt read what I have said. I congratulate the right hon. Gentleman on his original Chronically Sick and Disabled Persons Act and also on initiating this debate on the 15th anniversary of that Act. It was on the right hon. Gentleman's first visit to India that he was informed that he had come first in the 1969 ballot for private Members' Bills.

At about that time the right hon. Gentleman and I were visiting the then Prime Minister of India, Mrs. Gandhi, as part of a group representing the Indian Spastics Society. We were lobbying the Indian Prime Minister to extend the special tax concessions available to voluntary organisations in India, which allow corporate donors to deduct more than 100 per cent. of the cost of a donation to certain research bodies in India. Tax concessions remain close to the heart of the right hon. Gentleman and myself in relation to what can be done for voluntary organisations in Britain. We are particularly worried about the problem of VAT and charities.

The Act has played a major role. Not only has it provided solid, practical help for thousands of disabled people and their families in the last 15 years, but it has significantly increased the public's awareness of disability. That is an important effect of the Act. It has been a beacon for many disabled people. As many hon. Members have said, it is regrettable that too many local authorities are still failing to carry out all their obligations under the Act.

All those right hon. and hon. Members to whom I wish to pay tribute seem to have left the Chamber. I was about to say something complimentary about my hon. Friend the Minister, but he too has left. His commitment is widely recognised. I have been aware of its since before I became a Member of the House.

I have had a long interest in the Act. I served on a group set up by the Royal Association for Disability and

[Mr. Tim Yeo]

Rehabilitation to examine the effects of the Act and to see whether it needed strengthening. We concluded that it needed strengthening three or four years ago. Voluntary organisations play an important role in monitoring the Act. They are useful watchdogs outside Parliament. They use their expertise to see whether it is effective in dealing with the problems in the way that was as originally intended.

The passing of the Act was not the end of the story. It was more of a foundation than a conclusion, and I should like to discuss the future. I do not want to discuss the social security Green Paper because we shall have ample opportunities to do that. I do not want to condemn that document before we have had a chance to examine it in detail.

There is much to be commended, particularly in relation to the principles, in the Green Paper. Everyone who has had to deal with the social security problems of the disabled and other claimants recognises the need to simplify the system. If we can direct a greater share of the social security budget to the most needy households, the Green Paper will serve a valuable purpose.

Hon. Members have accused local authorities of failing to carry out their obligations under the Act. Some local authorities claim that a lack of resources prevents them from carrying out their obligations. There can be no clearer reminder of the need to ensure that local authority money is spent wisely than the fact that it is not being spent on important services of the type required by this Act.

It is deplorable that ratepayers' money is being spent for political purposes such as publishing leaflets to promote anti-Government propaganda. Some local authorities refuse competitive tendering for their services at a cost to the ratepayers and to disabled people living in their areas.

Mr. Roland Boyes (Houghton and Washington): The hon. Gentleman has been active among disabled people, and I am surprised that he should accuse local authorities in that way. He is talking about minute amounts of money being spent on political propaganda when millions of pounds are needed to satisfy the Act introduced so well by my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris). Surely the hon. Gentleman concedes that each time the Government cut the grant-related expenditure allocation to local authorities they make it more and more difficult for authorities to carry out their obligations under the Act. Some local authorities can carry out their obligations only by breaking the law.

Mr. Yeo: I do not want to mar our constructive and mainly bi-partisan debate by having a detailed argument with the hon. Member for Houghton and Washington (Mr. Boyes). For whatever reason, local authorities have limited resources. That is inevitable. I want to ensure that those resources are used in the most effective way. Since one of the proper purposes for which those resources are needed is the relief of the problems of disability, it is a pity that some local authorities do not maximise their available resources.

The prevention of disability was referred to by the hon. Member for Leeds, West. The problem of prevention illustrates the difficulty of persuading local authorities and health authorities to carry out the wishes of central Government. Naturally, central Government are reluctant to dictate too minutely to local authorities about what they should do.

Before I worked for the Spastics Society, my predecessor Mr. James Loring launched the "save a baby" campaign, which was concerned with what the society described as the "priority of priorities"—the health of the future generation, and the need to ensure that as many babies as possible are born free of handicap and disability and are healthy.

Many aspects of prevention still merit attention. One aspect is the inadequacy of neonatal intensive care facilities. The provision of neonatal intensive care units remains below the level which even the DHSS acknowledges is required. That point was dealt with by the Social Services Select Committee in one of its early reports last year. It has been proven beyond doubt that the availability of neonatal intensive care facilities can save lives and enable healthy babies to be born, when the absence of such facilities would result in a handicapped baby being born. It is tragic that work by men such as Professor Osmond Reynolds cannot be duplicated throughout the country because of the absence of such facilities.

Mrs. Edwina Currie (Derbyshire, South): As a member of the Social Security Select Committee, I confirm that what my hon. Friend the Member for Suffolk, South (Mr. Yeo) says is true. However, does my hon. Friend recognise that under the guidance of our right hon. and hon. Friends on the Front Bench considerable progress has been made and that the perinatal mortality rate has dropped to 10·3 per thousand, which is close to the best rates in Europe, and is improving?

Mr. Yeo: I rejoice with my hon. Friend at the fall in the perinatal mortality rate, which is a mark of the considerable progress here over the last five or six years. It is the result not only of efforts by voluntary organisations and the professional skill of the medics, but of the fact that the Government have been willing to acknowledge the problem and allocate the resources to deal with it. The progress shows that it is worth doing even more, because there is still potential for further improvement.

Antenatal care is another important aspect of prevention. The Spastics Society produced a film three years ago entitled, "A Question of Confidence", which emphasised the tremendous variation in the quality of antenatal provision throughout the country. It is clear that some antenatal care clinics provide facilities for other children to be looked after while mothers attend the clinic. The environment, transport facilities and all other services connected with the good clinics are attractive and welcoming. In contrast with clinics which provide good facilities and are conveniently located, there are clinics in which appointments are not easy to make, where there are long waits and where no facilities exist for mothers to attend with other children.

Women are positively deterred from early attendance at poor antenatal clinics, although it is clear that clinics can be of vital importance. I hope that the Minister will draw the attention of his colleagues at the Department of Health and Social Security to those points, and I am delighted to see the Under-Secretary at that Department, my hon. Friend the Member for Oxford, West and Abingdon (Mr. Patten) in attendance.

I have been disappointed with the reports of the maternity services advisory committee. They can be described as weak, in that they have resulted in virtually no action being taken. We now find that the committee itself has quietly been wound up, although it was to have been one of the major responses of the Department to the 1980 report of the Social Services Select Committee on perinatal and neonatal mortality.

Another aspect that must be stressed in connection with prevention is health education, by which I do not mean just sex education, but the whole question of teaching youngsters the importance of such issues as pre-conceptual care, of diet before pregnancy and of not smoking for those who are planning to have children. Those are all aspects which deserve greater attention than they now receive, and the way in which health education is put across in schools —I accept that it has received considerable attention recently—must be monitored carefully.

The prevention of handicap is vital. However, another aspect is preventing the ill effects of handicap. The hon. Member for Leeds, West referred to this when dealing wih short-term respite care, which is a vital service, as I know from the work that is carried out at the Tadworth court children's hospital, where I have the privilege of being chairman of trustees,. The service which that hospital provides is of the greatest possible value to families who care for chronically sick and disabled children for most of the year.

The relief provided by having their children in Tadworth for a week or two takes off the pressure, which can be considerable indeed when caring for children in those circumstances. Unfortunately, there is no clear statutory obligation on authorities to pay for that short-term respite care, although they have a statutory obligation to provide even residential education, if necessary in special schools, for handicapped children.

There is an obligation to provide residential accommodation for any child or adult where families are unable to cope. However, where families are trying to cope—and, in so doing, are relieving the state of a considerable financial burden—there is no obligation on any authority to pay for the respite care that may make that process possible.

The ultimate consequence of not providing such care would be to throw a greater burden on health or local authorities, and there could be further costs in connection with families which might break up through the pressures of looking after such children. Local authorities are reluctant to sponsor children unless they are compelled to do so. Although I cannot offer an easy solution to the problem, we must accept that it exists.

About two years ago a private Member's Bill was introduced with the aim of amending the Chronically Sick and Disabled Persons Act. It was designed to be an anti-discrimination measure. I regret that the hon. Member for Liverpool, West Derby (Mr. Wareing) is not present for this debate, although he introduced that amending measure. It is a pity that his interest in the subject appears to be so short lived——

Mr. Boyes: Cheap.

Mr. Yeo: —in that he has not managed to be here on what is, after all, an Opposition day.

The Act tackles a number of the consequences of disability and, in the way in which it raises the public's consciousness of the subject, it has contributed to reducing the problem of discrimination against disabled people. Nevertheless, more needs to be done and it is worth recalling the detailed survey that was carried out by the Spastics Society in 1983, under the chairmanship of Mr. Ron Gerver, which came to the conclusion that discrimination against disabled people existed and that the one way to tackle it might be by legislation.

A great deal of discrimination results from ignorance or lack of thought on the part of people who have no first-hand experience of disability. However, there are more serious problems, particularly, for example, in employment. Applicants for jobs who acknowledge their disability at the time of applying find that their interview rate is substantially lower than those who make no reference to their disability. That is a sad but unfortunate truth.

On a less acute scale is the difficulty which, for example, spastic youngsters may encounter when getting served in pubs. Because of their physical disability, they are sometimes turned away because it is thought either that they will be unable to hold their drink in the way in which other youngsters can — a belief which is without foundation—or that the way in which they drink might deter other customers. I appreciate that discrimination of that sort is not easy to legislate on and that probably the educational process is the best way to put it right.

I welcome some of the imaginative educational advertising campaigns that have been launched, particularly the campaign which the Spastics Society has been running for some time, and I pay tribute to Mrs. Anita Monsell and Mr. Benjamin Bowles, who put together that campaign. There is, however, a role for legislation, too. A measure might be difficult to frame, and I accept that the amending Bill which was introduced in November 1983 was far from ideal. However, legislation could be part of the educational process, and the first step to putting matters right is to recognise the existence of discrimination.

I could not conclude my remarks without referring to the voluntary organisations. I pay tribute to the large number of outstanding voluntary bodies which are active in the field and I hope that their role can expand. Many of them contain a specialist expertise which can never be in the possession of statutory bodies. They are run by extremely committed people who offer outstanding value to the state in the work that they do, and I urge the Government to continue their programme, which is already encouraging, of exploring how voluntary organisations can be used to help implement policies such as care in the community.

The hon. Member for Leeds, West rightly referred to the funding problems of the various organisations. When the Government are assisting voluntary bodies with their funding, I hope that proper account will be taken of their administrative costs. Many schemes fall down because of lack of concentration on that aspect.

I welcome the debate and hope that the Minister will take careful note of the points that are being raised.

6.8 pm

Mr. Laurie Pavitt (Brent, South): Hon. Members in all parts of the House know that I am disabled by deafness. I am grateful to your predecessor in the chair, Mr. Deputy Speaker, for assisting me. For about 20 minutes I was disabled by blindness, but your predecessor had the good

[Mr. Laurie Pavitt]

sense to have the blinds drawn. The sun was no longer in my eyes and I was able to see with clarity the handsome faces on the Conservative Benches.

I agree with the hon. Member for Suffolk, South (Mr. Yeo) that this is, in the main, a consensus debate. However, I question his final remarks about voluntary bodies. In my constituency there are 44 marvellous organisations, including the Brent Association for the Disabled, which last year received £840,000 as a pump priming grant from the Greater London council. Although I agree with the hon. Gentleman about the important role that voluntary bodies play, unless central Government replace the finance that such bodies have in the past received, I fear that their voluntary work will come to an end.

I share the concern of the hon. Member for Suffolk, South in that while I, too, intended to speak about the Minister and my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris), the fact that they are both absent from the Chamber means that I must rely on the junior Minister and junior shadow Minister to convey to their superiors the essence of my remarks.

Today is a bit of a birthday for my right hon. Friend the Member for Wythenshawe. Those who piloted the Bill through in 1970 rejoiced that time had been found to pay tribute to his work. One of the key points of the Bill was that it co-ordinated the work of a number of different Departments under one Minister. Under the Labour Government, my right hon. Friend was the Minister with sole responsibility for disabled people.

I pay great tribute to the Minister for Social Security. He has the responsibility for disabled people as well as many other matters. The weakness in the present system is that there is still not only one Minister with responsibility for the disabled as provided for under the Act. Disablement is dealt with by many different Government Departments—Social Services, Transport, the Home Office and many others. All Departments have a responsibility towards the disabled and the chronically sick.

I have a profound regard for the Minister, but he has two responsibilities. I should be happy if the Minister were to be made Secretary of State or Minister for Health in the next Cabinet reshuffle. It would be a great improvement. Unfortunately, I am not at 10 Downing street to make that decision.

My right hon. Friend the Member for Stoke-on-Trent, South (Mr. Ashley) commented on the Minister's speech. He said that he thought that it was a bad speech. I did not. The Minister made a good speech. He had the problem of having a dog's dinner wrapped up in green paper that he had to try to justify to the House. I thought that he made a good job of it.

The great thing about the Act was that it gave dignity and understanding to the disabled. It directed people's attention to them. On the last occasion upon which I had the privilege of speaking on health matters in the House, I referred to the National Health Service as being the jewel in the crown of the Labour party. It was, of course, associated with my right hon. Friend the late Nye Bevan. My right hon. Friend the Member for Wythenshawe added a further jewel to that crown 20 years later. The Act will be his monument during his period in Parliament and for the rest of the century. The Act was, as a number of hon. Members have said, a landmark.

The chronically sick have not been mentioned much during the course of the debate. During the Bill's passage through the House the young chronically sick were of prime importance. Young people who were permanently disabled were in geriatric wards. They watched people in the surrounding beds dying. A geriatric ward for an active-minded, intelligent young person, merely because he or she was paraplegic, was a second disability that the House would not tolerate. It is one of the reasons why the House passed the Act.

That anxiety has not been followed up. It is the responsibility of district and regional health authorities to provide wards in which the young chronically sick can be separated from geriatrics. The Willesden general hospital has a young chronically sick ward. Even there, the original intention of separating the young chronically sick from the geriatrics has not worked, because Willesden general hospital is now a geriatric hospital. When I served on its committee, it was an acute hospital. It now has 16 beds for the young chronically sick, but its other 80 beds are occupied by the elderly. The whole purpose of that part of the Act was to put young people with other young people so that their youth did not stick out like a sore thumb among elderly people.

There are two pioneers in my area who are confined to wheelchairs. They are Nancy and Andrew Robertson, and they gave their name to the young people's ward at Willesden general hospital. It is called the Robertson ward. It was a tribute to the work that they had done with Disability Alliance and the many other organisations that helped to put the Act on the statute book.

Access has been mentioned by the Minister and other hon. Members. People like myself who are disabled by a hearing loss are entitled to access to the spoken word. The Act provides for that, but it does not happen everywhere. Access is provided in the Chamber. It has an electronic loop, which it took me eight years to persuade the authorities to install. Members who are hard of hearing need not listen acoustically; they can hear electronically, as I do. Unfortunately, one can only hear the main speaker and sometimes, especially at Question Time, interjections are far more interesting. The person listening electronically does not hear them. I am pleased to say that the House of Lords has a loop system. Black Rod consulted me, and now their Lordships do not need to wear a type of glorified telephone; they can also hear electronically.

I had the privilege of inaugurating the loop system at Leeds castle, in conjunction with Lord Geoffrey-Lloyd. Marks and Spencer has done a marvellous job in providing facilities from its foundation fund for churches and other public buildings, including Leeds castle. There is no point in people having access to a church if they cannot hear what is being said. There is no point in going to a cinema if the sound does not exist. The National Film Theatre fortunately has a loop, but no other London cinemas have. Three theatres have the system. I was able to persuade the Barbican to have a loop installed in its theatres.

That aspect of access has been neglected. Although the Act provides for it, local authorities do not regard it as a priority. One of the reasons is that a hearing disability is invisible. Everyone notices the paraplegic and the blind man with his stick, but those of us who are deaf find that not many people understand the problems involved.

The cost of the loop is negligible, but it makes a great deal of difference. The hard of hearing lose consonants. For example, someone might say, "Let's take a look." If I lose the consonants and am not wearing my two hearing aids that could be, "Let's rape the cook." There is no difference in the sound to a person who is hard of hearing. We have to be able to increase the clarity, not necessarily the volume.

There have been some advances since the Act came into force. There is now a new system to help the hard of hearing. It uses the infra-red ray. The Royal Festival hall has instituted that system. It is the only hall in the country that has it. The cost of such facilities for the hard of hearing is much less than the cost of ramps and a number of other things that are needed for wheelchairs. The cost of installing the loop system in the Chamber could be less than £1,000. Even at a time when there is a cash shortage, access for people who are hard of hearing should be provided as a priority by local authorities.

If hon. Members want to understand deafness, they should, if they have the chance, see the play "Children of a Lesser God", which has returned to London. It is a magnificent piece of dramatic art. The original actress in it was completely deaf, as is my right hon. Friend the Member for Stoke-on-Trent, South. I am fortunate to have a residue of hearing. I can hear with two hearing aids. My right hon. Friend, who was only half as deaf as I am when he was first elected, unfortunately has no hearing at all. He has to rely upon a number of other aids. No disabled person wants pity. A number of hon. Members have said that we want equality. We do not want things done for us out of charity. We want them done as a result of decisions taken in the House and elsewhere, through participation. We do not want pity; we do not even want sympathy. We want understanding.

The best hearing aid ever walks on two legs—any member of the family or a friend of a deaf person. Pauline, the wife of my right hon. Friend the Member for Stoke-on-Trent, South, is a fantastic person. She has done outstanding work for the deaf as the chairman of the Royal National ear, nose and throat hospital. Her work surpasses all understanding of what can be done by a person who is fully involved. The family and friends of a deaf person must understand how important it is for them to talk clearly and distinctly and to make sure that they have communicated. That is the best hearing aid that a deaf person can have.

As I said earlier, the debate has been about the second jewel in Labour's crown, provided by my right hon. Friend the Member for Wythenshawe. We still have a long way to go. I do not agree with the Minister that he cannot monitor the huge discrepancies in spending allocations by local authorities. My right hon. Friends the Members for Stoke-on-Trent, South and for Wythenshawe gave figures showing that many local authorities are failing to meet their legal requirement under this Act to service the disabled.

My right hon. Friend the Member for Wythenshawe, in his opening speech, mentioned several helpful books, but he did not mention his own book, "No Feet to Drag". The House gives my right hon. Friend credit for putting pressure on his own Government on these matters, just as much as he has with Conservative Governments. My right hon. Friend's book shows that those responsible for providing services for the disabled have failed in their duty, dragged their feet, and did not have sufficient understanding of the problems of those who are unable to do their own thing in their own time.

In 15 years' time, in the next century, when my right hon. Friend—like a Manny Shinwell—is sitting on the Front Bench of a Labour Government, I hope that the House will then have the sense to have another debate to mark the passing of 30 years since the Chronically Sick and Disabled Persons Act received Royal Assent. It will be a permanent monument to him and to the Labour party.

6.22 pm

Mr. Roger Sims (Chislehurst): It is a great pleasure to follow the hon. Member for Brent, South (Mr. Pavitt), who has done so much on behalf of the chronic sick and disabled and has a long record in that respect which I could not hope to match.

The hon. Member and other hon. Members have referred to public attitudes. Whatever reservations the right hon. Member for Manchester, Wythenshawe (Mr. Morris) may have as to the extent to which his Act has been legally enforced, he can take a good deal of credit for the considerable change in public attitudes towards the disabled over the past 15 years. Not only is more provision now made for the disabled, but there is far greater understanding of and consideration for the disabled in many ways.

People now take it for granted that there may be a wheelchair going up and down the high street or moving in and out of the shops, and they make allowances for it. People understand the problems of the blind, whether or not they are accompanied by a guide dog. People realise how they can be helped.

The hon. Member for Brent, South was right to call attention to a group of the disabled whose problems are still not fully understood in the community, despite his work and that of the right hon. Member for Stoke-on-Trent, South (Mr. Ashley) over so many years. Both of them have set a splendid example in showing how the profoundly deaf and the hard of hearing can play a full and active part in public life and in this House. As the hon. Gentleman said, part of the problem is that deafness is, as it were, an invisible disablement.

There have been some impressive technical developments which have done much for the deaf. There are far better and far more effective hearing aids available today than there were a few years ago. The introduction of Teletext on television has been an enormous boon for the hard of hearing and the deaf, who are now able to enjoy television to an extent that was never possible before.

The equipment used by the right hon. Member for Stoke-on-Trent, South to enable him to take part in our debates has been a great step forward and has enormous potential, but, as the hon. Member for Brent, South said, in the community generally it is still difficult for people to understand and appreciate properly the problems of the deaf. They have not yet the equivalent of the white stick by which the blind can make their disablement evident to those around them, although the introduction and spreading of the sympathetic hearing scheme is a step in the right direction.

People generally do not always know how to react to the deaf. As the hon. Gentleman said, it is important to understand their problem and to speak clearly to them. To use the title of the BBC's Ceefax magazine, when speaking to deaf people there is "no need to shout". The

[Mr. Roger Sims]

important thing is to speak clearly and slowly. From time to time I enjoy the intriguing experience of an animated conversation with the right hon. Member for Stoke-on-Trent, South in the "silence room" of the Library of the House of Commons.

Deafness is a far more widespread disability than is generally appreciated. The right hon. Member for Stoke-on-Trent, South and the hon. Member for Brent, South are quite open about their disability and show how they can live with it. It is surprising that a number of hon. Members on each side of the House who suffer from a degree of deafness seem reluctant to make it evident and thereby enable others to help them.

One of the problems for those who suffer from some sort of physical disablement arises from ordinary everyday living conditions. They need housing accommodation that is suitable for their particular needs. They need accommodation that has been constructed or adapted to cope with their requirements. Local authorities and housing associations are active in building or adapting accommodation to suit the disabled. Wonderful work has been done in that respect by the Cheshire homes. There is a first-class scheme running in my own constituency at Wood Lodge, where a mini-village has been constructed, with conventional types of accommodation as well as houses and flats specially built for the disabled, so that they can feel very much a part of the community.

My Government's policy of restrictions on the extent to which local authorities could spend their capital receipts inevitably affected housing associations, and therefore restricted the amount of work that could be done for the disabled, but help to the disabled in their own homes may well be even better than moving them into special accommodation. Often the provision of relatively small items or adaptations can make a great deal of difference to their lives. Some criticism has been made of the extent to which local authorities help the disabled in that way, but my own local authority social service department has done much to provide small and relatively inexpensive aids to the disabled, such as an extra stair rail, special seating and frames in the lavatory, walking frames, zimmers and so on, all of which make life so much easier for the disabled. The voluntary organisations also do very good work in that area. The Red Cross organisation is always ready to help with equipment in an emergency. Voluntary organisations often have a specialist knowledge and expertise in their particular field which exceeds that of the local authority.

Recently I had the privilege of attending the annual general meeting of my local association for the care of those with spina bifida and hydrocephalus. One realises the particular difficulties with which the parents of children who suffer from these complaints must cope. Sometimes bureaucracy is unnecessarily harsh in allocating assistance for adaptations. Often a grant will be available, and, where that is not the case, some adaptations qualify for relief from VAT. That is right and desirable, but it is extraordinary that VAT relief is available for work done to help access to a property and for the provision or alteration of a bathroom, washroom or lavatory, but not if one wishes to build or adapt a bedroom for a disabled person.

The wife of one of my constituents is wholly incapable of walking, is confined to a wheelchair and cannot climb stairs. He is out at work during the day and, in any case, could not carry her up and down stairs night and day. For many years she has been living in a small dining room on the ground floor. To improve the quality of her life my constituent is having a purpose-built bedroom constructed as an extension to the ground floor. It will be a room with a wide entrance, a large window, a ramp and various fitments which a disabled person requires. According to the VAT regulations the only part of that work which is exempt from VAT is the ramp. If he was adapting a bathroom, washroom or lavatory, the entire work would be free of VAT, but because he is building a bedroom, he must pay VAT on virtually everything.

When I took the matter up with the Treasury, I was told that a line must be drawn somewhere, but it seems rather a harsh line, and I hope that my hon. Friend the Minster, who has a particular interest in this area, will have a word with the Treasury to see whether we can get a more reasonable approach to the problem.

We have gone a long way in 15 years, although not as far as many people would like to go in terms of the application of the law and the public attitude. There is still plenty of scope for Government action, and the Minister has not been short of advice today. There is also scope for greater public understanding of the particular problems of the disabled. If today's debate has done something to increase public understanding, our time has been well spent.

6.32 pm

Mr. Ray Powell (Ogmore): I am glad to be called to speak in this debate. I should like to echo the sentiments expressed by my hon. Friends to my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris) for his efforts over the years in this area and for initiating the debate this afternoon. Although some of us are comparatively new Members of Parliament, having come to the House in 1979, we have known, studied and followed his work and that of my right hon. Friend the Member for Stoke-on-Trent, South (Mr. Ashley).

I am the president of the disabled group in Ogmore, which has a comprehensive number of disabled people. Some of them suffer because they are legless, armless, or hard of hearing, but the majority suffer from pneumoconiosis, silicosis and other mining-related diseases. We respect them for the work that they and others have done over the years in Wales and other parts of the country, and we appreciate their problems and difficulties. My father was a miner in the Rhondda, and he worked for 35 years in Fernhill colliery. He was discharged with pneumoconiosis — 75 per cent. — but received little benefit from the coal owners at the time and the National Coal Board when it was formed.

I remember Friday 18 November 1983 when my hon. Friend the Member for Liverpool, West Derby (Mr. Wareing) introduced a private Member's Bill in the hope that Conservative Members would show compassion. A considerable number of hon. Members turned up, primarily to give the Bill a Second Reading. The Government promised to look seriously at the problem and hoped to be able to do something for us.

I wish to raise many matters on the Chronically Sick and Disabled Persons Act, and I appreciate that many hon. Members are aware of the time factor. I stress the importance of hospitalisation for people, especially as in Wales the vital care and nursing survices for chronically

sick, disabled and elderly patients is at stake. Decisions are being taken by the so-called managers of the Mid-Glamorgan health authority to close a hospital in the Blackmill area of Ogmore. For years the hospital has looked after the sick, the elderly and the disabled for short-stay periods, so that the children and, in some cases, the grandchildren can have a break from nursing them. Now that the hospital is to be closed, most of those elderly patients will have to find alternative nursing accommodation. That is precisely what the Government are doing in my constituency, in Wales, and, indeed, throughout the country. It is high time that there was either a change of attitude or of Government so that we can stop officials from reducing our health care facilities. The closure of the hospital is vigorously opposed by the people of Ogmore. Ten thousand names have been collected against the proposed closure. I am sure that with some persuasion the Secretary of State for Wales may agree to alter the decision.

When I meet the disabled in my group, they tell me of the personal and particular disadvantages to which they have been subjected since the Government came to office. Hon. Members do not need to go far to find how the disabled are suffering under the Government's policies. They need only go as far as the disabled in their constituencies. The Minister talked about the Green Paper, but the disabled people in my constituency cannot know about it because they cannot afford to buy the documents. Volume I costs £3, volume II cost £6·60, volume III costs £10·50, and the housing benefit review costs £6·10. That makes a total of £26, which is equal to the benefit on which some of them must live for a week. Therefore, when the Minister wonders why he has had no response from disabled and disadvantaged people about his proposals, I can tell him that it is because they cannot afford to buy the documents.

Mr. Alec Woodall (Hemsworth): Does my hon. Friend accept that every time the Government review allowances, whether for the disabled, the chronically sick or anyone else, the disabled are always the losers, as they will be under the new proposals? That was pointed out by Peter Large, vice-chairman of the Disablement Income Group, in a letter to *The Times* last Friday. They were the losers when the supplementary benefit scheme was supposed to be simplified in 1980, and again in 1984, when the available scale margin was increased from 50p to £1. The disabled were also disadvantaged when the heating allowances were extended.

Mr. Powell: I accept what my hon. Friend says. The Green Paper is a Government con trick. They justify their proposals on the basis of a con by the Minister who said that the proposals will mean a partnership between the individual and the state—a system built on twin pillars, as he calls it—better targeting, simplification and an improvement of the work incentive. In reality, the proposals mean a vastly reduced state provision, wholesale privatisation, more means testing, cuts, no flexibility, more cuts, stigmatisation for the unemployed, the active encouragement of low pay and yet more cuts. As my hon. Friend says, disabled people will be more disadvantaged than all the others.

I could have said much more, but I know that some of my hon. Friends wish to speak in the debate. The proposals in the Green Paper relating to the disabled and to the disadvantaged in society who receive social security benefits will undoubtedly be a complete failure — *[Interruption.]* I wish that the Minister would stop talking and listen for two minutes. It appears that he is not listening to the views of the Opposition.

As I said, many of those who would have wished to contribute to the debate on the Green Paper and other documents will be unable to do so because they cannot afford them, but those of us who have seen the documents wish to tell the Minister a few things. The Green Paper fails completely to address itself to the problems of the present social security system. Its proposals will further erode the principle of social insurance, extend the stigma of the means tests, and remove the security of protection against poverty for millions of our people.

The Government should review the system so that disabled groups can be provided with a breakdown of the proposals. One cannot expect disabled people to digest all the information, let alone to pay for it. Indeed, even if they could afford it, it would cause them indigestion. We want something different. We want the Minister to listen to disabled people and to propose something entirely different from the Green Paper.

6.43 pm

Mr. Frank Haynes (Ashfield): I shall not mention the new social security review because enough has been said about it today. I have not been convinced by the Government's explanation of the proposals. The Minister and other Conservative Members have talked about fairer distribution, but I am dying to know what amount of money the Government hope to save by the review. However, I shall have to wait to see what happens.

We are talking about the 15th anniversary of the Chronically Sick and Disabled Persons Act 1970. I congratulate my right hon. Friend the Member for Manchester, Wythenshawe (Mr. Morris) on the way in which he worked all those years ago to put this measure on the statute book. There is no doubt that it was a step in the right direction.

Like my hon. Friend the Member for Ogmore (Mr. Powell), I had many years' experience of the mining industry and I realise the disablement that can result from such employment. I was one of the lucky ones, because I spent 40 years in the industry and was unaffected. I feel extremely sorry for those who have been affected and whom we try to help as much as we can. The nearest that I have been to their experience was spending a day in a wheelchair to find out how the disabled cope with their problems. I discovered some amazing problems. I tried to enter the public library, but discovered that the door was not wide enough for the wheelchair. I had great difficulty in squeezing into a lift so that I could get upstairs to where the books were. I could not reach the top two shelves. It showed me that we are falling down on the job of providing facilities for disabled people.

My hon. Friend the Member for Ogmore mentioned pneumoconiosis, which is an extremely serious problem. I have seen people fighting for breath as a result of contracting the disease from working in the pits. They are sent by their general practitioners to see the local consultant, who does a series of tests. The results of those tests are then sent to the regional health authority, where the decision about the percentage of coal dust in the lungs is made. Many of those people are told that their disablement is not severe enough to warrant the payment

[Mr. Frank Haynes]

of benefit. However, it grieves and sickens me that, when many of them have died and post-mortems are carried out, more often than not it is discovered that they were 45, 50 or 60 per cent. pneumoconiotic. Yet they were turned down by those whizz kids in the regional health authority. The Government must examine the matter, because such people should receive the benefits to which they are entitled but which they are being denied. That is one matter that worries me when I consider the new review. How many more people will be affected in the way that I have suggested?

There are many accidents in the mining industry. We have a system of rehabilitation, but what happens? The Government put on the clamps and tell the regional health authorities that less money will be allocated next year. That has happened in the Trent region, with the result that it wishes to close a rehabilitation centre that is doing a marvellous job. The fabulous service that it can provide helps to get men back to work more quickly.

The Minister talked about local authority overspending. Ashfield district council has been fair, and has tried to provide for the disabled as much accommodation as it can afford. However, because of Government cuts, it cannot provide enough suitable accommodation, which means that many disabled people must continue to struggle up and down stairs in their old homes.

There are terrible problems, which I hope the Minister appreciates. However, I doubt whether there will be action. There will be no action until we get rid of the Government. We should spend more money on the disabled. For two years, I have been asking the Government to do something about the provision of hearing aids. The previous Minister for Social Security took no action, but I hope that this Minister will do something. In my area, people must wait 18 months for hearing aids. However, 14½ miles away in Nottingham, the wait is between four and six months. That is unclear. Let us have a balancing up and some money put into ensuring the proper provision of hearing aids. After all, deaf people are disabled and should be looked after properly. They have made their contributions, as many are elderly people, and they need such aids to be able to hear what is going on. Travelling expenses should also be given to those who have to travel to Nottingham.

While I was in that wheelchair, I found kerbs too high and doors that I could not get through. I could not get upstairs. We have to examine the problem properly. We have skated over it far too often and for far too long, but the Act is on the statute book. We have to make it work in the interests of disabled people so that they may enjoy a better life.

6.50 pm

Mr. Roland Boyes (Houghton and Washington): My hon. Friend the Member for Brent, South (Mr. Pavitt) said that disabled people wanted neither pity nor sympathy, but opportunity and equality, and one opportunity that they want is the right to work. The Tomlinson report, as long ago as 1943, said that the aim should be to secure for the disabled people their full share within their capacity of such employment as was ordinarily available. It asked for the Disabled Persons (Employment) Act and suggested that employers with 20 or more employees should have at least 3 per cent. of their work force as disabled people.

Despite that report, only 30 per cent. of companies, according to the latest figures, meet the 3 per cent. quota. That figure was given in *Hansard* on 21 November 1984. On the other hand, there is strong all-party support for a quota system, shown in a report in *New Society* on 1 January 1981. Conservatives voted 66 per cent., Labour Members 72 per cent., Liberals 74 per cent. and others 61 per cent.—69 per cent. overall—in favour of the quota system being strengthened.

I hope that the Minister will say something about incentives to register. It is interesting to note that local authorities had an increase in the number of people registered because they get a benefit from so doing. I accept that the number of people wanting to work appears to be reducing dramatically, because there is no incentive to register as such people cannot get a job. I suggest that the Minister looks at his own house. The latest figures for Departments show that only five of the 44 fulfil the quota. In the Department of Health and Social Security, which should be particularly aware of this problem, only 1·5 per cent. of the staff are disabled. We should be asking companies, both private and public sector, to take their quota, and the Government should be setting an example.

6.53 pm

Mr. Alfred Morris: There is no time for me to reply to the debate from this Dispatch Box. I count it more important that the Minister should have some time to reply, and I have been concerned to assist as many other hon. Members as possible to take part in the debate. I have three very brief points to make.

First, as the Minister will know, the Royal National Institute for the Blind published on 3 June an important report on "Local Authority Social Rehabilitation Services to Visually Handicapped People". It is a disturbing document, which says;

> "Local Authority Social Services departments' provisions for newly-blind people are inadequate, widely variable and likely to deteriorate further."

I should be grateful if the Minister would respond to that statement in the short time available to him.

Secondly, the timing of the debate made it impossible for my hon. Friend the Member for Liverpool, West Derby (Mr. Wareing) and the hon. Member for Caernarfon (Mr. Wigley) to be with us today. I am sure that the House will understand their problem and will very much have missed the contributions they would have made to the debate. Thirdly, I hope that the Minister will deal with more of the questions raised with him in the debate than he has so far been able to do.

I am grateful for the kindness shown to me by so many of my colleagues — indeed by right hon. and hon. Members on both sides of the House—who have spoken in the debate.

6.54 pm

Mr. Newton: The right hon. Member for Manchester, Wythenshawe (Mr. Morris) will realise that I am also under some pressure about the number of points that I can make. Not quite so many kind words have been said about me as about the right hon. Gentleman, but I am told that my hon. Friend the Member for Suffolk, South (Mr. Yeo) was quite nice about me, as was the hon. Member for Brent, South (Mr. Pavitt). I am only sorry to have missed the rare privilege of compliments to a Minister.

I acknowledge the strictures on the social security review made by the hon. Member for Ogmore (Mr.

Powell). However, I cannot immediately think of any significant way in which the social insurance principle is altered by the way that the provisions of the review affect disabled people. What has been the subject of debate today has nothing to do with social insurance benefits. We are concerned with the income-related or means-tested benefit, which is undoubtedly of great significance to disabled people, as has been acknowledged.

A number of organisations gave oral and written evidence to the review. In view of the strength with which the hon. Member for Ogmore put his remarks, I point out that I went out of my way to arrange for the Wales Council for the Disabled, which was not able to come to a public hearing, to come to see me personally at Alexander Fleming house to put its views. I was glad to be able to do that.

I remain convinced that our proposals, which I described at some length earlier, provide a clearer, more comprehensible system of assistance to disabled people in the income-related sector. It will be fairer across the range of disabled people who depend upon income support. To pick up what the hon. Member for Ashfield (Mr. Haynes) said, for those two reasons and especially because of the former, benefits are likely to be much more effectively taken up by those at whom they are directed, than with the present confusing and complicated system.

Earlier, when I spoke of the advantages of the proposed new structure, I said that our intention was for the disablement premium to be paid where the claimant's partner, as distinct from the claimant, was either in receipt of certain benefits or simply certified as having been incapable of work for 28 weeks or more. I said that we would wish this last qualification — simply being incapable of work for 28 weeks even if no incapacity benefit was payable to form a passport — would also apply to the partners of claimants.

So as to avoid misleading anyone, I should acknowledge that this intention presents some practical problems, as in many cases the partner will not normally be in the employment sector. I cannot be absolutely sure that we shall be able to overcome this problem, but we shall certainly seek to do so, and in many cases the equal treatment rules that allow partners to decide which of them will be the claimant will probably provide an appropriate answer. I wish to show knowledgeable people outside that there is a practical problem.

I attach importance to the problems of deaf people, a point raised both by the hon. Member or Brent South, with his well-known knowledge of, and interest in, this sector, and by my hon. Friend the Member for Chiselhurst (Mr. Sims). The problems of deaf people demand more of our attention. I have formed that impression in the period over which I have been Minister with responsibility for the disabled, and we shall seek to reflect that in developing our policies.

The right hon. Member for Wythenshawe spoke about the RNIB and its survey. It will be within his knowledge that the Department has been carrying out work to discover more up-to-date information about the services provided by local authority social services departments to the blind. We have not yet managed to complete collating all that information, but it will be used as a basis for discussion with bodies outside, including the RNIB, to see what action might be appropiate to bring about any improvements that are shown to be needed.

I take the point made by my hon. Friend the Member for Suffolk, South about the need for prevention. He will be aware both of the present rubella campaign and of the Asian mother and baby campaign. These are two significant initiatives directed at prevention with which my hon. Friend is associated. I thought that he was a little hard in his words about the maternity services advisory committee. In general, its reports are felt to have been very useful exercises. They have been sent to all health authorities, with the committee's own check list of action, and the Government have made it clear that they hope that health authorities will pick up the suggestions made by the committee.

Finally, in this brief canter round the field, I must pay tribute to the work of the voluntary organisations. This matter was touched upon by the hon. Member for Leeds, West (Mr. Meadowcroft) and a number of others——

It being Seven o'clock, the motion for the Adjournment of the House lapsed without Question put, pursuant to Standing Order No. 6(2)(c).

Orders of the Day

Food and Environment Protection Bill *[Lords]*

As amended (in the Standing Committee), considered.

New Clause 1

ENFORCEMENT OF CONVENTIONS

'(1) The Ministers may jointly by order made by statutory instrument—

(a) declare that any procedure which has been developed for the effective application of the London Convention or the Oslo Convention and is specified in the order is an agreed procedure as between Her Majesty's Government in the United Kingdom and the Government of any Convention State so specified; and

(b) specify any of the powers conferred by this Act for the purpose of enforcing this Part of this Act as a power that may be exercised, by such persons in such circumstances and subject to such conditions or modifications as may be specified, for the purpose of enforcing that procedure.

(2) A person who exercises any powers by virtue of an order under this section shall have the same rights and liabilities in relation to their exercise that a person authorised under section 11 above would have in relation to the exercise of any powers for the purpose of enforcing this Part of this Act.

(3) A statutory instrument containing an order under this section shall be subject to annulment in pursuance of a resolution of either House of Parliament.'.—*[Mr. MacGregor.]*

Brought up, and read the First time.

7.1 pm

The Minister of State, Ministry of Agriculture, Fisheries and Food (Mr. John MacGregor): I beg to move, That the clause be read a second time.

Mr. Deputy Speaker (Mr. Ernest Armstrong): With this motion, we may discuss Government amendment No. 50.

Mr. MacGregor: In Committee, amendments were tabled by the hon. Member for Pontypridd (Mr. John) which would have re-enacted section 6 of the Dumping at Sea Act 1974. That section enables Ministers to make orders putting into effect any co-operative procedures between contracting parties to the London and Oslo conventions for enforcement of those conventions on the high seas. Since no such arrangements had been made since 1974, or seemed likely to be made, the provision was not included in the Bill because it seemed to be unnecessary. However, the hon. Member for Pontypridd argued in Committee — really in response to an invitation from me—that if the situation ever arose, he would prefer to see statutory provision that anticipated the likelihood of any arrangements of this kind so that it would not be necessary to have emergency or primary legislative provisions. I said that I had no strong feelings either way, but that, in the light of the hon. Gentleman's arguments, I was happy to concur.

The new clause meets that commitment, although the drafting is considerably changed from the 1974 Act both to fit in with the other provisions of the Bill and to make a number of technical changes and improvements. It gives us all the powers that we think might be needed in the event of enforcement procedures being agreed.

Government amendment No. 50 is consequential on the new clause on enforcement of the conventions. It excludes the Northern Ireland Office from making an order under the new clause. The clause concerns enforcement of the conventions outside United Kingdom territorial waters, and such matters are outside the jurisdiction of the Northern Ireland Office. Any orders made under the new clause would be made by the Minister and the Secretary of State.

It might be helpful if I added some further explanation. Both the conventions contain an agreement to co-operate in developing enforcement procedures, in particular on the high seas. Any orders made under this clause would specify the convention state or states with which we had agreed such procedures, and may confer on officers of such states any of the powers which British officers have for the purposes of enforcing part II of the Bill, with or without any modifications. Officers of the specified convention states could be empowered to enter British vessels on the high seas if they suspected there were substances or articles to be deposited on board. British officers' powers may be extended so that they could enter vessels of specified convention states on the high seas. British officers may enter any vessel inside United Kingdom waters under powers conferred in the Bill. It is not intended that any officers would be given powers of entry within another country's territorial waters. This will be made clear in the order.

All officers acting under the order would have the same rights and liabilities as British officers enforcing part II of the Bill—for example, they must be issued with, and must produce, evidence of their authority; they must carry out their functions at a reasonable hour; and they have the same protection from prosecution.

I spell this out only for the convenience of the House, because the issue may be academic. However, it is useful to add this provision to the Bill and to have powers to act for any such eventuality.

Dr. David Clark (South Shields): The Opposition welcome the new clause and the subsequent consequential amendment. We are grateful for the way in which the Minister has taken on board what my hon. Friend the Member for Pontypridd (Mr. John) said so eloquently both on Second Reading and in detail in Committee. It has allowed us to adopt a bi-partisan approach to this aspect of the Bill.

The clause replaces in statute form section 6(1) of the Dumping at Sea Act. It appeared that the Bill repealed completely the Dumping at Sea Act, and the Opposition felt that by including a provision along the lines of the new clause people would be reassured that, although the Act was being repealed, we were in no way weakening it.

The whole House believes that we should not weaken our commitment to the principles of the Dumping at Sea Act, and there is considerable evidence to suggest that we should look closer at ways of developing the provisions of the Act to try to ensure that the seas that surround us, especially the North sea, are protected from the cumulative effects of pollution.

The Opposition regard section 6 of the Dumping at Sea Act as important. As the Minister explained, it was essentially an enabling provision. It permitted Her Majesty's Government to introduce agreements made under the conventions and to carry them forward into legislation by means of a statutory instrument. We have

felt that that was very much preferable to emergency or primary legislation. We have seen again and again how Governments have difficulties in providing time for the consideration of primary legislation, as the Minister knows from his experience of the Wildlife and Countryside Act and primary legislation enacting the Government's environmental policies as they affect agriculture.

As I understand it, the Government originally omitted the clause on the logic that, because it had not been used for the past 11 years or so, it would perhaps never be used. History may be used to judge what is likely to happen in the future, but on this occasion, I think that that was a false judgment. It may be that events are taking place which will result in agreements under the conventions, and we may wish to incorporate those into British law. I say that because the House knows of the growing unrest about the amount of pollution being unloaded into our seas, the North sea especially.

Our concern is justified because much pollution is cumulative. With modern science and technology, it means not only that the type of pollution is more complicated, but that our methods of testing are more complicated and sophisticated. Therefore, we are able to judge the effect of increasing dumping in the sea and, from that effect, we can make a judgement about the damage that it will cause to the marine environment or to the human environment which may depend on the seas. That was outlined clearly in the 10th report of the Royal Commission on environmental pollution. It drew attention to this problem, especially in the North sea.

The Government take a rather relaxed attitude—I do not say a non-vigilant attitude—about the North sea. With our fast rivers running into the sea and because of our topography, we tend to see the seas differently from our neighbours. Although Her Majesty's Government's attitude may be relaxed, that is not the view of many of our neighbours. Recently, the Dutch Minister of Transport described the North sea as

"the dustbin of the coastal straits."

There is no doubt that Britain is probably the worst polluter of the North sea.

The clause would allow the encouragement of a convention agreement. As the Minister knows, there was a very important conference in Bremen in November 1984 when these problems of pollution and related aspects were discussed. Britain was somewhat isolated at the conference. One result is that, at the Government's invitation, a second conference is to be held in London towards the end of 1986. I hope that the Government will push for a joint agreement under the convention, which may call for legislation under this clause. Between now and 1986 the Council of Europe municipalities working group on marine pollution is to hold a major international conference under the auspices of the Tyne and Wear county council in the north-east of England. Some of the ground work to be carried out at that conference will be useful to the conference to be held in London in 1986.

We have argued all along for the inclusion of this clause, for two reasons. First, it would reassure people that, although we were repealing the Dumping at Sea Act 1974, we were not throwing away any of its principles. Secondly, we welcome it because we believe that there are great advantages in having enabling legislation of this kind, especially when we are dealing with an area where there is movement and a great deal of discussion and where I hope that before too long there will be international agreement. We very much welcome the Government's flexibility on this point and the new clause.

Question put and agreed to.

Clause read a Second time, and added to the Bill.

New Clause 2

CODES OF PRACTICE

"(1) The Ministers may from time to time after consultation with such persons or bodies as seem to them representative of the interests concerned—

(a) prepare and issue codes of practice for the purpose of providing practical guidance in respect of any provision of this Part of this Act or of regulations; and

(b) revise any such code by revoking, varying, amending or adding to the provisions of the code.

(2) A code prepared in pursuance of this section and any alterations proposed to be made on a revision of such a code shall be laid before both Houses of Parliament, and the Ministers shall not issue the code or revised code, as the case may be, until after the end of the period of 40 days beginning with the day on which the code or the proposed alterations were so laid.

(3) If, within the period mentioned in subsection (2) above, either House resolves that the code be not issued, or the proposed alterations be not made, as the case may be, the Ministers shall not issue the code or revised code (without prejudice to their powers under that subsection to lay further codes or proposed alterations before Parliament).

(4) For the purposes of subsection (2) above—

(a) where a code or proposed alterations are laid before each House of Parliament on different days, the later day shall be taken to be the day on which the code or the proposed alterations, as the case may be, were laid before both Houses; and

(b) in reckoning any period of 40 days, no account shall be taken of any time during which Parliament is dissolved or prorogued or during which both Houses are adjourned for more than four days.

(5) The Ministers shall cause any code issued or revised under this section to be printed and distributed, and may make such arrangements as they think fit for its distribution, including causing copies of it to be put on sale to the public at such reasonable price as the Ministers may determine.

(6) A failure on the part of any person to follow any guidance contained in a code issued under this section shall not of itself render that person liable to proceedings of any kind.

(7) In all criminal proceedings any such code shall be admissible in evidence; and if any provision of such a code appears to the court conducting the proceedings to be relevant to any question arising in the proceedings, it shall be taken into account in determining that question."—*[Mr. John.]*

Brought up, and read the First time.

7.15 pm

Mr. Brynmor John (Pontypridd): I beg to move, That the clause be read a Second time.

Mr. Deputy Speaker: With this it will be convenient to discuss Government amendments Nos. 47, 48, 49 and 51.

Mr. John: Normally it is with tongue in cheek that we speak about improving a Bill in Committee because we do our damnedest either to get our point of view accepted or to wreck the principle. The new clause is an example of the way in which we have succeeded in clarifying our minds about the contents of the Bill. The addition of the clause will improve the Bill.

The clause provides the codes of practice with a statutory base. The Government's proposal was that the codes of conduct should not necessarily be given statutory force, but in Committee and again tonight our view is that the codes of practice should be given statutory force. I hope that this proposal will be supported by the

[Mr. John]

Government. Having got the principle right, I messed up the consequentials and the Government have kindly tabled a number of consequential amendments which put the matter right.

The Bill provides a statutory basis and allows the House to pray against codes of practice which may be deemed to be harmful. There is procedure for dealing with such a prayer. Subsection (5) deals with the distribution of the codes of practice to those who use or who are likely to use them. I shall deal with that point later.

It is important that these codes of practice should be made known to those branches of industry which are likely to use them. I hope that the Government will announce the steps that they will take to ensure that the codes of practice are widely disseminated. They ought to be made available either free or at a nominal cost to farmers and to others who may be expected to use them in order that they may be widely known and observed. That is the object of providing codes of conduct of this kind.

Nobody disputes that pesticides are highly toxic chemicals. They have to be used, but they must be used properly because of their toxicity. We must weigh both the benefits to be derived from them and the risks involved in using them. The benefits are obvious. They have led to increased food production and to a reasonably uninfected environment. Nevertheless, we must weigh up the risks both to the users of the pesticides and also to those who live in the vicinity—the people who may be either directly or indirectly affected by the vaporisation of the pesticides.

Pesticide residues can affect the consumer if harvest intervals are not observed or if the pesticide residues that are to be found in the food chain are too high and therefore dangerous to the consumer. We must also consider the effect upon wildlife and the environment of the use of pesticides and their allied products because of the damage which in the past has unwittingly and innocently been caused by all of us. We do not wish to inflict further damage in the future.

On the effect of organochlorines, I read in the newspapers last week that some people allege that certain of the DDT derivatives are still being used in this country. One wonders how the people who use them can be so heedless of their health and about the damage that they are causing to the environment. Wildlife has been endangered by the use of pesticides. We have to guard against a number of dangers in the codes of practice.

We pride ourselves upon the fact that we are now fairly conversant with the dangers of pesticides but we are not yet aware of all the dangers, certainly not of the long-term dangers. Some of the risks are not yet known and will probably not be known for decades to come. Therefore we should always err on the side of safety and consider not how narrow but how wide is the use of pesticides or pesticide-like substances. They are used not only for the production of food but for the storage of food.

Pesticides will probably be used for the storage of food for a very long time. I understand that last week a committee dealt with irradiation and expressed fears about it. Pesticides and herbicides are used in ever-increasing quantities in our houses and gardens. In percentage terms, this is probably a major growth industry. Pesticides and herbicides are excellent when they are used according to the regulations. It is vital that they should be stored and used properly because they can be lethal to pets and children.

Most members of the public do not appreciate that pesticides and herbicides are used by local authorities in public parks and on roadside verges. It is important for those who use herbicides in parks, and for those who use those recreational areas, that such substances should be used properly and that there should be a code of practice, which is observed, thus ensuring some safety.

Domestic pests and timber control is one of the most neglected aspects. Indeed, it was neglected during the debate in the other place, and the situation was remedied only in Committee, when there was a thorough discussion of the issue. Given the confined spaces involved and the highly toxic substances used in pest control and timber treatment in the home, it is highly desirable that there should be a code of practice. Furthermore, I believe that codes of practice should be sent to those involved. However, to ensure proper observation we need a fairly stable timber treatment industry so that the means of control and treatment do not vary dramatically from year to year.

In Committee, I produced statistics showing that, according to the Yellow Pages, firms were going in and out of existence with alarming frequency. Such short-lived organisations must involve a cowboy element, and thus are not the experts that they hold themselves out to be. Consequently, it is important that some safeguards should be provided through a code of practice. The registration of such organisations should also be considered where they contract out and hold themselves out as being experts.

Industrial pest control in factories, hospitals, restaurants and so on is a highly sensitive matter for the many people who work in them. In Committee we had a long discussion—it seemed long, but perhaps it was just a short interchange — about whether compulsion and persuasion were mutually exclusive. As hon. Members will see from the new clause, failure to follow any guidance is not made a criminal offence. However, any such code of practice will be admissible in evidence during any future prosecution. That strikes a balance. We all hope that the codes of practice will persuade people to pursue decent practices both indoors and outdoors for their safety and that of others. However, if they do not do so, there should be some sanction to prevent them from carrying on.

The problems are different in the various areas that I have already outlined. For example, different problems arise in respect of parks, the treatment of timber in domestic houses and industrial pest control. Consequently, there should be a separate code of practice dealing with each major sector so that, to quote the Secretary of State for Social Services, we can have codes of practice that are targeted on the particular evil that we want to avoid and on the areas that we want to govern. In particular, I hope that aerial spraying will be dealt with in that way. Despite all the debates and assurances, I am still unhappy about the interest of the Civil Aviation Authority in the aerial spraying debate. I should be ruled out of order if I dwelt on that now, but I should like to record my general unhappiness, and my belief that a code of practice on aerial spraying would have a definite effect.

But the main code of practice should deal with the training of those using pesticides. The 1976 ADAS report has been quoted, and it showed that 40 per cent. of those using pesticides on farms had received some training. The

conclusion was that 60 per cent. had received none. The British Agrochemicals Association talked about the mismatch of a high technology means of application and the largely unskilled operators of such highly technical, increasingly complex machinery. We know that the agricultural training board has the means and courses to offer to such people, but they are very much under-subscribed. The reason may be a matter for debate, but the fact that they are under-subscribed is undeniable and is a cause for concern to us all.

As agriculture is an industry whose machinery is becoming ever more complex, people should be trained in its use and application both for their protection and to ensure the proper application of pesticides. Therefore, some form of certification might be considered. The training of employees in wood preservation is also essential, because some of the substances used are particularly toxic. However, that is only likely to happen in a stable industry and that, in turn, depends on registration.

Enforcement is perhaps the one matter that is not dealt with in the new clause and that may be the subject of criticism. I deliberately did not include it because it is a matter of fact rather than of legislative provision. But in the past three years the farm inspectorate's establishment is reported to have fallen from 179 to 151. Even with the 12 people allocated to the inspectorate for the purposes of the Bill, there will still be fewer inspectors dealing with agriculture than three years ago. Moreover, they will be dealing with a far wider range of issues because of the legislative burden that the Bill imposes on them.

There was a difference of opinion as to whether the farm inspector would interrupt someone's breakfast every fortnight or every five or six years. It was rare for us to disagree in Committee, but when we did so, we did not do so by halves. There was a considerable difference in the estimates as to how often the inspector would make a routine visit. However, I stick by my estimate that the visit is likely to be every five or six years. If that is so, the enforcement that is necessary as a backup to persuasion is not likely to be very effective. Perhaps I am ending on a rather negative note——

Mr. John Carlisle (Luton, North): If inspections took place more regularly, perhaps every two to three years, how many people would have to be employed?

Mr. John: More. Obviously, I cannot give a precise answer, but we are placing more duties on fewer people and, therefore, we must be over-stretching them. I hope that hon. Members will be conscious of that fact. Indeed, that is why the codes of practice are important and should be statutory. Much enforcement could be avoided if we could get an acceptance within all branches of the industry that codes of practice should be followed in their own interests, and those of others.

We would then not need to be so worried about enforcement, but that will depend on what the Government do to disseminate the information and to make it relatively cheap. Expensive booklets tend to be remaindered and I do not know of a remainder bookstore run by ADAS.

To avoid ending on a negative note, I should say that a statutory system, with properly enforced and regulated codes of practice, could be of immense benefit in dealing with highly toxic substances. I believe that the new clause will bring great benefits and I thank the Government for their assistance in the matter. We have been at one on the principle and I hope that the House will ensure that we are also at one in practice.

7.30 pm

Miss Joan Maynard (Sheffield, Brightside): I welcome the new clause and I agree with my hon. Friend the Member for Pontypridd (Mr. John) that it is important that there should be adequate enforcement of the codes of practice. That will require an adequate number of inspectors which will obviously cost more, but when people's health is at stake, we should not be deterred by costs.

Because of the great dangers of pesticides and the new methods of farming, we need rigorous control over these dangerous, toxic substances. I think first of those who work in agriculture, forestry and horticulture, but consumers and wildlife are also affected. This is a matter of tremendous importance.

The vast majority of pesticide users are the workers in the industry and there is no statutory provision for paid time off work for training. Because of the dangers of many of the toxic substances, employees should be properly trained in their use and should be given paid time off work to receive that training. There should be statutory provision for such time off for all employees required to use or handle the pesticides. There should be no difficulty about that, because the training could be done through the agricultural training colleges, the industry's training board, the national proficiency test council, the TUC or the appropriate trade union. However, the training should not be organised by the pesticide manufacturers who have a vested interest in the matter.

Proper training is missing from new clause 2. I am glad that the new clause has been tabled, but I feel strongly that workers should be given proper training before using dangerous toxic substances.

Mr. John Carlisle: The hon. Lady suggested, perhaps inadvertently, that training should not be given by manufacturers. However, manufacturers already do a tremendous amount of training and are very concerned about the training of operators. I would not want the House to get the impression that that valuable work in research and development and in the training of operators has not been recognised.

Miss Maynard: I am sure that the hon. Gentleman will appreciate my nervousness about training by manufacturers. He cannot deny that they have a vested interest in the sale of chemicals and I should be happier if the training were organised through the agricultural training board or the agricultural institutes. They are more likely to give adequate and proper training.

Mr. Paddy Ashdown (Yeovil): On behalf of the alliance parties, I welcome the Government's agreement to include new clauses 1 and 2 in the Bill. My hon. Friend the Member for Ceredigion and Pembroke, North (Mr. Howells), who served on the Committee, has asked me to say how glad he is that the Government have made so many amendments to the Bill. He thought that the Committee was one of the most constructive on which he had ever served.

I agree with the hon. Member for Pontypridd (Mr. John) that codes of practice are necessary. The hon. Gentleman said that he hoped that they would be fairly

[Mr. Paddy Ashdown]

cheap, if not free. I have with me a guide to the Poisonous Substances in Agriculture Regulations 1984, which retails at £4·20. I hope that the codes of practice will be cheaper.

No doubt the guide should be read carefully by farmers throughout the country, but I doubt whether many will read all 50-odd pages and whether many copies of the guide will be found on our farms. Section IV of the guide includes the only recommendation about the protection of the public in the use of poisonous substances. It says:

"Do not spray in unsuitable conditions because of the danger of spray drift, or in hot still weather, as unpredictable vapour drift may occur."

It says that the safest condition may be checked with a simple anemometer. I have been on many farms in my constituency and elsewhere and have seen much equipment lying in corners, but I have yet to see even one anemometer. I suspect that there are few in Britain. The guide explains how the safest condition may be checked without an anemometer and adds:

"Advance warning will allow neighbouring farmers and bee-keepers to protect livestock and honey-bees. Warning occupiers of adjacent domestic premises will also allow them, their children, pets and personal items which may become soiled or contaminated, to be safeguarded."

That is all good stuff and it would, indeed, be nice to warn neighbours, but there is no obligation to do so. However, the provision of such information in a simpler, more readily available form would be a welcome addition to the Bill.

The Parliamentary Secretary to the Ministry of Agriculture, Fisheries and Food (Mrs. Peggy Fenner): I am happy to accept the new clause, which was drafted by parliamentary counsel in response to an initiative of the hon. Member for Pontypridd (Mr. John) in Committee. I believe that it will be a useful addition to the Bill and will result in greater parliamentary participation in the regulation of pesticides.

The content of the proposed new codes will depend on the outcome of negotiations later this year on the implementation of part III. Obviously, we shall draw to some extent on existing codes issued by my Ministry and on those already operated voluntarily by the industry.

We shall have to ensure that the new codes do not overlap other statutory codes issued under the Control of Pollution Act 1974 and the Health and Safety at Work etc. Act 1974. We shall be glad of the participation of hon. Members in the process of approval. The Ministry will discuss distribution with all interested parties so that they get to everybody who needs them. The hon. Gentleman asked that the codes be made available free or at a nominal cost. I cannot guarantee charges at this stage, but I am sure that the hon. Gentleman agrees that the Highway Code is priced modestly.

Several hon. Members have aired their anxiety about training. We have made real progress on training and certification. Hon. Members have expressed their conviction that people who use pesticides should be trained appropriately. The hon. Member for Pontypridd said:

"There is a general principle that it is desirable that people using a toxic substance such as a pesticide should be trained in its use."—[*Official Report, Standing Committee H*, 23 April 1985; c. 267.]

We have accepted the point and stressed that the Bill has an important part to play in achieving the result—in general terms by introducing the requirement to act safely when applying pesticides and, more particularly, through our stated intention that those who apply pesticides commercially as their main business must demonstrate the appropriate level of skill training and supervision of those who apply the products. Health and safety at work legislation already has a major impact in terms of human safety.

The House has also accepted that it is reasonable to draw distinctions between those who apply pesticides as their main business and those, particularly farm workers, whose use of these products may be only occasional. I should stress that under this legislation the pressure will be on the farmer as well as on the professional operator.

It is likely that the codes of practice will advise on the appropriate level of skill to suit different circumstances, and the farmer as employer or operator will be wise to take account of this advice. As we said in Committee, there are several sources of training—the ATB, the chemical and machinery manufacturers and the local education authorities—but we will be discussing with the ATB in the first instance the practical problems in a programme to extend training to all those who need it.

Certification is the other side of the same coin in many ways, but there is one aspect which may worry hon. Members — the future of BASIS. Hon. Members reminded the Committee of the good work done by BASIS and that the manufacturers' and the merchant organisations felt strongly that BASIS should continue. We did not really need reminding: we were already keen to create conditions in which BASIS could continue to operate, which was why we came forward with the idea of the requirement for distributors to show proof that their premises are up to standard and that their staff are appropriately trained and supervised. We still believe that that is the right approach. I am pleased to learn that BASIS is responding to this possibility by giving itself a stronger base through direct elections of its board members and by preparing to alter its character to that of a certification scheme designed to furnish proof of achieving standards on the lines that we have it in mind to require. These are important changes and will, I believe, leave BASIS well equipped to serve the industry under the statutory scheme.

7.45 pm

Mr. John Carlisle: I am grateful for what my hon. Friend has said about BASIS, and the industry too, will be grateful. In view of my hon. Friend's strong support for BASIS, will she tell those members of it who might be considering withdrawing from the scheme because of the Bill that they should remain in it and try to strengthen it by their own membership?

Mrs. Fenner: I hope that what I have said will give them just the conviction that they need. The Bill will put responsibility for achieving specified standards on the industry. It is for the industry to respond as it thinks best. There might be different ways of achieving the same thing, but all will require some organisation. That is why we welcome the signs that the industry is preparing to organise itself and why we shall co-operate in the process.

The hon. Member for Pontypridd mentioned the number of inspectors. I shall not challenge the figures that he gave, but merely say that the Bill increases the numbers in response to what the Health and Safety Executive said it needs to carry out these statutory duties. I commend the new clause to the House.

Mr. John: I thank the hon. Lady for her positive reaction. She has made it clear that we are in the business of motor car manufacture. We have made the machinery—the Bill—which is good. The rest depends on the quality of the driver, the regulations and the code of practice.

I am grateful to the Minister for emphasising that Members of Parliament should be involved. We have shown a deep and abiding interest in the Bill's future and could help the Government in their deliberations. The problem about BASIS is one that I mentioned in connection with wood treatment. The danger is that, when statutory provision is made, the relevant voluntary body starts to fall apart. BASIS depends on high membership.

I agree that the agricultural training board is by far the best body to give farm workers necessary advice and training, but BASIS has provided an excellent scheme for some suppliers and merchants, and it should be continued. I should hate to think that we were doing anything to undermine it. I hope that the Government will continue to consider how to strengthen BASIS and how to avoid the possibility of its being undermined.

We moved some amendments to give BASIS statutory recognition because of this very fear. It will be up to the Government to show that a voluntary body can exist under a statutory framework. I also commend the new clause to the House.

Question put and agreed to.

Clause read a Second time and added to the Bill.

Clause 1

POWER TO MAKE EMERGENCY ORDERS

Sir John Farr (Harborough): I beg to move amendment No. 1, in page 1, line 9, leave out 'or may have been'.

The amendment tightens up the Bill. The Bill is imprecise, largely because of the number of orders that will necessarily flow from the Act. There is much discretion in clause 1, which provides:

"if in the opinion of a designating authority"

and, one line later,

"there has been or may have been".

That allows far too much scope for the designating authority. One of the problems is that the designating authority could make wider use of the powers than is envisaged. Therefore, in all modesty, I suggest that the amendment will improve the Bill. The words "in the opinion of" in line 8 give sufficient discretion, and there is no need for a further imprecise phrase.

We appreciate that the Bill must be discretionary in many ways, but we must take every opportunity to tighten it where possible. If the amendment is not made, the designating authority may be tempted to widen the scope of its activity "just in case".

We had an interesting debate in Committee about the possible effects of a designation order, and I shall not dwell today on the possible consequences for smallholders, farmers, horticulturists and others. They could be severely hit if such an order was made at a time when crops were available for marketing. If it was made when soft fruit, such as strawberries, was ready for picking, it could bring financial disaster for the producer.

My hon. Friend the Minister suggested in Committee that risks of that kind could be covered by insurance. I have a later amendment seeking to set up a compensation system to cover cases in which an order is made when no pollution has actually occurred, so I shall deal with the insurance question when we reach that point. I hope, however, that my hon. Friend will accept this little amendment. If the amendment is made, it will encourage the designating authority to restrict its actions to the narrow area affected by a possible event. It will remove the temptation to place an embargo on movements in a much greater area "just in case."

Farmers cannot obtain insurance against such an event and the Government have not yet agreed to set up a compensation fund. In Committee, my hon. Friend the Minister said that she was confident that the Government would make orders only when there had been a hazardous release. If that is so, why do they need power to make orders when there may or may not have been such a release?

Mr. John Carlisle: I rise briefly to support the modest little amendment proposed by my hon. Friend the Member for Harborough (Sir J. Farr). The four words in question are an important element at the start of the Bill, and their removal would tighten the Bill and its interpretation.

There is great concern in the industry about the whole question of compensation and insurance—a subject to which we shall return later—and it is felt that the powers and the rules are far too wide. The amendment is both modest and short, but it well addresses the concern expressed. If we wish to ensure that the Bill is accepted by farmers and other trades, we must be conscious of the risk of things going wrong on inspection. The realms of the possible and the impossible have been discussed in the House many times. I believe that this comes within the realm of the possible and that the words in question should be deleted.

Mrs. Fenner: As drafted, clause 1(1) enables Ministers to make an emergency order to protect the public if, in their opinion, there has been a release of hazardous substances or if there may have been such a release. The amendment would narrow the scope for action at the discretion of Ministers. They could still act if, in their opinion, there had been an escape of a dangerous substance, but they could not act if there merely might have been such an escape. It is difficult to judge the practical effect of the amendment, as any action would still depend on the opinion of Ministers and not necessarily on fact proven beyond all doubt.

I have two criticisms of the amendment proposed by my hon. Friend the Member for Harborough (Sir J. Farr). First, the fact that its effect is uncertain must make it undesirable as law. Secondly, the Bill, as drafted, accurately states the Government's intention. If Ministers believe that

"there has been or may have been"

an escape or release of hazardous substances, they have a duty to take steps to protect the public. It is in the nature of the case that circumstances may arise in which they cannot at first be sure—hence the words "or may have been"—but if they are unsure of the full facts but believe that the public may well be at risk they should surely take precautions at once. That is the purpose of the Bill. I am sure that my hon. Friend the Member for Harborough and the House in general agree that that should be the purpose, but I believe that the amendment would weaken that purpose.

[Mrs. Fenner]

I need hardly assure the House that there is no intention of making emergency orders frivolously. The words "or may have been" are not intended to provide scope for Ministers to make orders recklessly or in the light of some remote possibility. Excessive or unreasonable action of that kind could render Ministers liable to challenge in the courts.

I hope that, in view of what I have said, my hon. Friend the Member for Harborough will agree to leave the clause as it stands and not seek to press his amendment.

Mr. John: I think that the Minister's embarrassment about this is largely of the Government's own making because in Committee they resisted the question of insurance so fiercely that the possibility of loss to the individual has become a very large issue. I believe, however, that the two subjects are severable. Therefore, although I agree very much with the hon. Member for Harborough (Sir J. Farr) on the question of insurance and making good losses sustained by individuals, I believe that the Government are right to maintain the fallback position. An almost platitudinous example is the type of event that occurred at Seveso. If anything illustrates the maxim that time is of the essence, it is an occurrence of that nature. In circumstances of that kind, the Government must be able to act on the best information at their disposal rather than having to wait until formal proof is available.

I am therefore willing to support the Government with my voice on this occasion, but there is a price. The price for the Government should be acceptance of amendment No. 4 or amendment No. 7 to indemnify anyone who suffers damage as a result of over-enthusiastic Government demarcation of a possible Seveso-type incident. If the Government offered to indemnify people in those circumstances, I believe that half the anxiety expressed by the hon. Member for Harborough would vanish immediately.

Sir John Farr: In view of what my hon. Friend said, and in the confident expectation that she will say something entirely different very shortly, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

8 pm

Mrs. Fenner: I beg to move amendment No. 2, in page 1, line 9 leave out

'a release (whether or not accidental)' and insert 'an escape'.

Mr. Deputy Speaker (Mr. Harold Walker): With this it will be convenient to discuss Government amendments Nos. 3, 5, 6, 8, 45 and 53.

Mrs. Fenner: In Committee, I undertook to look again at whether we could reasonably expect the courts to interpret "a release of substances" as including instances where substances had escaped accidentally. I still believe this to be the case, but I agree that it is important that there should be no question of any doubt.

The Government have therefore tabled these amendments which build on a suggestion made in Committee. All references in clauses 1 and 4 to "release" would be replaced by the word "escape", and "escape" would be defined as including the "release or expulsion" of substances whether

"by human agency or by any other cause".

There is a consequential amendment to the list of definitions in clause 22.

Mr. John: I spend most of my time in politics trying to live down the fact that I was a lawyer. As the House will know, lawyers are used to arguing both sides of the case. Having strongly argued that "release" was the wrong word and that "escape" was the right one, I am now tempted to reverse the process and to argue for the contrary.

I welcome the Government's acceptance of my point. This is a prime example of what the Welsh call "bwrw dy fara"—casting your bread upon the waters. I tabled a probing amendment in Committee, and the probe struck home. It revealed a drafting weakness that had to be put right. I therefore welcome the amendment very much and, despite the temptation to argue the contrary case, I must decline that brief on this occasion.

Amendment agreed to.

Amendment made: No. 3, in page 2, line 14, at end insert—

'"escape", in relation to substances, includes their release or expulsion by human agency or by any other cause;'.—*[Mrs. Fenner.]*

Mr. John: I beg to move amendment No. 4, in page 2, line 31, at end insert—

'(4A) The Ministers may jointly by regulations provide for the payment of compensation to any person who has incurred loss or damage as a result of the making of an emergency order in circumstances where no hazard to human health has been created in the area in which that loss or damage occurred.'.

Mr. Deputy Speaker: With this we may discuss amendment No. 7, in page 2, line 38, at end insert—

'( ) Where any person has incurred loss or damage in consequence of the making of an emergency order, and it is subsequently shown that no release of substances likely to create a hazard to human health through human consumption of food has taken place, the designating authority shall pay full compensation for the loss or damage.'.

Mr. John: These are the two amendments tabled by myself and the hon. Member for Harborough (Sir J. Farr) which relate to insurance. We were placed in a difficulty in Committee, in that when we differed we did not do so by halves. On this occasion, the difference was whether insurance was payable when an order was made by a Minister, but where pollution did not occur, or where the area designated was wider than required. Compensation was not provided for, but the Government assured us that this was an insurable risk.

The hon. Member for Harborough and I had differing information at our disposal which showed that such an eventuality was not insurable. I would prefer amendment No. 4, which is not just amour propre, but goes slightly wider than amendment No. 7. It is therefore only right that I should highlight the difference between the two amendments.

Whether or not the polluter can be identified is a separate question. Both these amendments relate to cases where a person has suffered loss and damage because Ministers have made an emergency order that goes beyond what is required. There are two possible scenarios. First, there might be no escape of a harmful substance or no occurrence might be evident. That is always possible so long as the words which the hon. Member for Harborough criticised remain in the Bill. Secondly, an escape could happen, but the area covered by the order might extend further than the area affected by the escape.

As I understand amendment No. 7, it will affect only the first example — where no escape of a harmful

substance took place. However, if the Minister made an order covering half a geographical county and loss occurred in the other half, it is right that the same principles should apply. That is why I prefer my amendment to that of the hon. Member for Harborough. I know, however, that he and I are at one on the sentiment behind these amendments.

The Government adopted a Maginot-line-type defence. Indeed, they had three separate lines of defence, any one of which they called on freely.

Mr. Ashdown: I seek some clarification from the hon. Gentleman. He said that his amendment was drafted with the intention of covering a designated area within which damage had not taken place or, alternatively, cases arising from the fact that the designated area was so large that some people were not affected whereas others were. If that is so, the word "area" in amendment No. 4 can be capable of being read in two different ways, and perhaps the word "place" would be better as the Bill uses the word "area" as meaning a designated area.

Mr. John: In fact, we are dealing with a designated area, because the Minister must designate it before the right to compensation can arise. An area must be set aside as having had a Seveso-type escape. A food producer may suffer a loss because of the designation of the area, even though his part of the area suffered no injury by reason of the escape.

There are two possibilities. First, there may be no escape even though the Minister has made an order. Secondly, the Minister could make an order in respect of an area, part of which is not affected by the escape. In my view, both situations are admirably covered by my amendment.

Since we debated the Bill in Committee, my research has shown that in this case the risk is uninsurable. Do the Government agree? All the evidence points to the fact that that is so. As well as being in uninsurable in principle, it is equally uninsurable because of the expense of the premiums. The NFU briefing and *Farmers Weekly* suggest that the Government have accepted that argument and have moved away frm their repeated assertion in Committee that this was a perfectly insurable risk.

The second defence is that the Government would not lightly make such an order — that they would never make such a mistake. One does not have to be a cynic or to be particularly partisan to know that Governments of all parties make mistakes when designating orders and regulations. If Ministers doubt that, I merely refer them to the social security regulations which were due to come into force on 19 December last but which have recently been declared illegal because the proper consultation procedure was not observed. Mistakes can be made. We cannot rely upon Government infallibility to get us through.

It is said that legal action is possible. I am doubtful about that because if the polluter were sued he would have the defence that the damage occurred because of the Government making the order rather than because of any wrongful act or attitude by him. How, and under what head, could the person affected by damage sue the Government? Would the person accuse the Government of negligence? He could certainly have the order put aside, but that would not entitle him to compensation and it would be of little use in terms of financial loss if all that he could prove was that the order was ultra vires or mistaken.

How would compensation be awarded against a Minister who made such an order? The Government made commitments to liaise with industry. What are the results? It is doubtful that a legal action would succeed because such an action would be expensive and speculative. In the two specific cases under which the Government make an order alleging that an escape is taking place when no such escape takes place, or make an order in relation to an area affected by such an escape, part of which is not affected by the escape, the Government should take the consequence of that order. They should say to the people who suffer damage through no fault of theirs—they are the innocent parties whatever view is taken—that they are able and willing to provide compensation. If such a provision will never be used it will cost the Government nothing to concede the principle.

Sir John Farr: I back 100 per cent. what the hon. Member for Pontypridd (Mr. John) said in his usual clear way. There is much to be said for his amendment No. 4 in preference to my amendment No. 7, because his amendment covers what will happen when there has been a release and producers outside the affected area suffer a loss.

I tabled amendment No. 7 as a result of discussions in Committee, when the Minister assured me that such risks by producers when no escape had taken place would be covered by insurance. I wrote to Lloyd's. The chairman of Lloyd's underwriters' non-marine association told me in a letter:

"I have spoken with a number of my colleagues in the market relative the question you ask and regret to say that the consensus of opinion is that there will be little likelihood of a policy to protect the destruction of goods following an Emergency Order, which subsequently proved to be unnecessary, being available in the Market. One has to say that the market is already struggling with a number of problems as a result of possible pollution losses and the truth of the matter is that it probably has not come to terms with exactly how the cover should be provided following an action or pollution incident. As a result, the thought of providing cover for damage which may have occurred when pollution did not, I believe, is a remote possibility."

That clear statement prompted me to table amendment No. 7. The statement destroys the Minister's argument in Committee when she said that such risks were insurable. They are not. I hope that she will accept either amendment No. 4 or my amendment No. 7. If she does, she will gain a good deal of confidence among many food producers throughout the country.

Mr. Ashdown: I support the hon. Member for Pontypridd (Mr. John) and his amendment No. 4. Like the hon. Member for Harborough (Sir J. Farr), I prefer amendment No. 4 to amendment No. 7 because it covers the case when no release has taken place and where a release has taken place when the area designated is wider than thought necessary at the time.

The hon. Member for Pontypridd said that the question of loss to the public was one of the key unresolved issues, and I agree. However, another key issue is involved. I hope that the Minister will agree with the hon. Member for Harborough, because in Committee insurance was a key defence in the Government's argument in favour of not accepting the need for compensation. That is no longer an argument, because such events are uninsurable.

There is a flaw in the drafting of amendment No. 4. The words cover only incidents when no release has taken place. The amendment states:

[Mr. Ashdown]

"no hazard to human health has been created in the area in which that loss or damage occurred."

The hon. Member for Pontypridd means to use the words "at the place" where the loss or damage occurred. I hesitate to take issue with him, but I think that he means the designated area, which might be some distance away. It would be clearer if the words were not "in the area" but "in the place".

Mr. John: If the principle is accepted, it will be easy for the Government to correct the wording.

Mr. Ashdown: I was hoping that the hon. Gentleman would say that, because the principle is impo tant. I hope that the Government will accept the principle, because if they do that will reassure the public. I urge the Government to accept the principle, for the reasons advanced by the hon. Members for Pontypridd and for Harborough, because that will strengthen the Bill and make it more reassuring.

8.15 pm

Mr. John Carlisle: It will be no surprise to my hon. Friends on the Front Bench to know that I sympathise with the amendments tabled by the hon. Member for Pontypridd (Mr. John) and by my hon. Friend the Member for Harborough (Sir J. Farr). We are talking about an important aspect of the Bill—as the hon. Member for Yeovil (Mr. Ashdown) said, one of the Bill's few omissions. As the hon. Member for Pontypridd said, mistakes can happen. It would be a brave Minister who said that such mistakes could never happen.

We all agree in principle that the polluter should pay, but in many cases—let us not forget that we are talking in the realms of possibility—it will be difficult to know exactly who is the culprit, and my hon. Friend the Member for Harborough pointed out how such an eventuality could particularly affect soft fruit.

The inspectors may be highly qualified to do their work, but they may face emergency situations which have never been faced before. Might not an inspector panic and then err on the side of making recommendations which might later be discovered to have been an over-reaction, with the inspector having been over-zealous in his judgment?

As the Minister said when dealing with the previous amendment, the Government wish to protect themselves in this matter, just as we wish to protect the public, but a young, inexperienced inspector faced with a panic situation might recommend the destruction of foodstuffs on a wide scale, when in more measured circumstances such a judgment would not have been necessary.

As my hon. Friend the Member for Harborough pointed out, the possibility of being insured for such an eventuality would appear to be nil. I have little knowledge of the insurance industry. I suggest, however, that somebody somewhere might be prepared to offer insurance, but the premiums would be prohibitive. In principle, therefore, I support the Opposition amendment or the amendment standing in the name of my hon. Friend the Member for Harborough.

We are dealing with a vital part of the Bill. Great concern was voiced in Committee, as it has since been expressed inside and outside the trade. I hope that my hon. Friend the Minister will be able to allay some of the understandable fears that have been expressed.

Mrs. Fenner: Although they are not identical, the amendments have similar purposes. That in the name of my hon. Friend the Member for Harborough (Sir J. Farr) would require Ministers to pay compensation where they had made an emergency order as a precaution, though it turned out that no release of substances had taken place. The Opposition amendment would provide for compensation where there may or may not have been an escape of substances but it turned out that there had been no hazard to human health.

I hope that the amendment will not be pressed. Consider, first, the case postulated by my hon. Friend the Member for Harborough where an order is made, even though no escape of dangerous substances has taken place. The case is highly unlikely, but it is conceivable. It is conceivable that some incident — say, at a chemical plant—might lead Ministers and their scientific advisers to believe that the public was or might be at risk. They would then take precautionary measures. The House will agree that that would have been the right course, even if it was subsequently discovered that there had been no danger.

As I said, the case is highly unlikely. It is even more unlikely that the measures involved would be of long duration. It should be remembered that the Bill gives Ministers powers to vary and to make exceptions to meet circumstances. In other words, it is a highly flexible measure. As soon as the true facts were established, the emergency measures would be withdrawn.

In the case that we are considering, the cost could hardly be great. However, that cost would be for the purpose of making sure that people near the incident were safe. No reasonable person could resent the cost and inconvenience of short-lived measures to make sure that people were safe.

The same applies in the circumstances envisaged by the hon. Member for Pontypridd (Mr. John). In the possible case which Opposition Members have in mind, where an escape of substances has indeed occurred but is later found to be harmless, there would naturally be more likelihood that the safety measures would be kept in operation longer than in a case where nothing had escaped. Even so, it would not be long before the investigating officers studying the incident established that anxiety was needless.

In Committee, I pointed out that the Government were discussing the question of insurance with representatives of the insurance industry and that I would say more on that subject. We have not argued that it would be possible to insure against the possibility of measures being taken following an event which caused no damage or against a false alarm—the subject of the amendment—bearing in mind that the Government must still adopt the rule of safety first. But the safety first measures would not have to be of long duration and, therefore, they would not be costly.

More generally on the question of insurance, the Bill does not alter liability for loss or damage caused by an escape of dangerous substances. The responsibility remains with the potential polluter under ordinary principles of law. My officials have had a series of valuable meetings with representative organisations of the insurance industry, and one point to emerge is that, apart from the civil nuclear industry, where there are special

statutory arrangements, those who may incur third party liability have already assessed their risks and made appropriate insurance arrangements.

It is true, however, that the Bill may have the effect of increasing the cost of the consequences of an escape of substances, because of measures that Ministers might take under part I, but that aspect should not be exaggerated. The Bill is intended only to make sure that the safety measures that responsible citizens would probably adopt anyway could, if necessary, be imposed by Ministers. It will also enable Ministers to give prompt leadership in an emergency, and the public would probably welcome that, too.

Mr. Ashdown: Assume that there is a fire at a chemical plant with a good deal of ash falling—as in the case of Flixborough—on the surrounding countryside. It might take some days for the analysis of the ash to be completed to discover whether it was inert. At Flixborough it was found to be inert. It might be necessary in such a case for the action to cover a much broader area than, strictly speaking, was necessary at the time. What would be the plight of those in that designated area who had suffered disadvantage or loss as a result of sensible precautions taken by the Government in those circumstances?

Mrs. Fenner: It is possible to insure against the consequences, for example, of fire, explosions, and so on. Such matters might cause an escape of dangerous substances, with the need to take measures to restore safety. I agree with the hon. Gentleman that at Flixborough the dust was found to be inert and could be washed off, so that would not have come under part I of the Bill.

Mr. Ashdown: While the ash at Flixborough proved to be inert, the results could not, I think, be covered by insurance, because no loss or damage was caused by the ash. Any loss or damage was caused by sensible action taken by the Government on a safety basis to ensure that time allowed for the ash to be analysed.

Mrs. Fenner: I am assured that it is possible to insure against the consequences of fire, explosion, and so on—the events which may cause an escape.

Mr. John Carlisle: Will my hon. Friend confirm that one cannot insure against a wrong decision being taken by a Government inspector? That is the nub of the amendment.

Mrs. Fenner: A wrong decision is unlikely, albeit conceivable. Ministers would want to give prompt leadership in an emergency, but that would not alter the measures that needed to be taken. As the Government have already stated, it would be up to business men and the insurance industry to consider, once the Bill is on the Statute book, whether they need to revise their existing insurance. The Government see no reason to alter——

8.30 pm

Mr. John: It is a return to the Committee stage on ice. Having said that the Government realise that the risk is not insurable, the Minister is saying now that it is for the insurance industry and the persons involved to make arrangements once the Bill is passed. As the risk is not insurable, is the Government's maxim to be that the polluter and the sufferer must pay?

Mrs. Fenner: We believe that it is the legal responsibility of the potential polluter. We made that clear several times in Committee. The Bill is not on the statute book. Whatever the actions of insurers would have been heretofore, they will be confronted with different circumstances once the Bill is on the statute book. The Government see no reason to alter their opinion that the courts would regard the effects of an emergency order made under the Bill as a foreseeable consequence of an escape of dangerous substances, and the legal responsibility of the potential polluter.

Again, as the Government have said, the courts could hold the Government responsible for the loss or damage——

Mr. John: In what way?

Mrs. Fenner: The hon. Gentleman asks, "In what way?" For loss or damage caused by an unreasonable or excessive use of the powers in part I. The issue of insurance does not arise there.

Mr. John: The Minister said that if there is no escape, the polluter has created a foreseeable risk and therefore given rise to the order. If there is no escape, the polluter has done nothing. There is no pollution. There is no entitlement to damages that I can discover, although other actions for a declaration against the Minister for wrongful use of power could be taken. It is no consolation to a farmer who has lost £20,000 in destroyed crops to say that he can obtain an order saying that the Minister was wrong if he can obtain no damages.

Mrs. Fenner: I can only reiterate that my advice—it was outlined again in another place—is that the courts could hold the Government responsible for loss or damage caused by an unreasonable or excessive use of the powers contained in part I. There is no issue of insurance there.

Discussions held between my Department and the insurance industry have covered the position of the possible polluter and sufferer. They have shown the need to be clear about what is being asked. Pollution as such is not insurable, and the Government have never envisaged that insurance policies would be likely to give cover expressly against the cost of any measures which might be taken by Ministers at any time under the Bill.

However, as I said to the hon. Member for Yeovil (Mr. Ashdown), it is possible to insure against the consequences of fire, explosion, and so on, and those are the matters which may cause an escape of dangerous substances and consequential measures to ensure or restore safety. I hope that the hon. Member for Pontypridd (Mr. John) will feel able to withdraw his amendment.

Mr. John: I am worried that the Minister should take that line. I do not think that it is a reasonable or fair response. It is merely a reiteration of what we were treated to in Committee. Nothing new has happened. In Committee, the hon. Lady said:

> "It is for the people concerned to protect themselves by proper insurance and the legislation must not interfere." — [*Official Report, Standing Committee H*, 21 March 1985; c. 55.]

I believe that I can speak on behalf of the hon. Member for Harborough (Sir J. Farr) and other hon. Members when I comment that the Government are saying that in those circumstances people can pay for the pleasure of suffering damage from the mistaken use of Government power. I do not believe that to be right. I should not quarrel with the

[Mr. John]

sincerity of the Minister who made an order, but mistakes should be paid for. They cannot be insured against. I do not believe that the Government and the Minister can seriously pretend that they can be insured against.

If the Minister is suggesting that once there is an Act the insurance companies will take a radically different view, all I can say is that the quality of advice that she has received is not such as to impress me. I do not believe that the insurance companies will suddenly say, "We know that we have said all along that this risk is uninsurable, but now that it is an Act of Parliament it is insurable." It is or it is not a risk. That is the calculation of the insurance companies. It does not matter to them whether it is covered by an Act of Parliament. It may happen once in a million, once in a thousand, once in a hundred years, or never, but it is wrong just to say, "That is too bad," where the Minister makes an order and no escape is subsequently shown to have occurred and an innocent grower has suffered loss from the making of the order.

We are trying to protect people, but we cannot protect people properly by sentencing others to suffer financial consequences which may occur only once in a hundred years. However, once in a hundred years, if bankruptcy is the result, is more than the price that the House of Commons should be willing to pay for the wrongful use of ministerial power.

Mr. Ashdown: I wonder whether I can tempt the hon. Member for Pontypridd (Mr. John) a little further. If we require the insurance companies to do something when the Bill becomes law, one of the factors that they will take into account will be the nature of the Minister's decisions. In other words, they will have to insure against a wrong decision taken by a Minister. We might reach the ludicrous position where insurance companies alter their premiums according to the views of the Minister taking the decision. Ultimately, they are insuring against wrong decisions taken by Ministers. Premiums might alter as Ministers changed office.

Mr. John: I can understand that with this Government there might be a principle of weighted premiums. The view of the insurance companies will not be changed because we have passed a Bill. They are under no greater or lesser responsibility to guard against the risk when the Bill is an Act than they were before. Their calculation is based upon whether the risk is insurable and, even if it is vaguely insurable, whether the premium is so excessive that it would price them out of the ordinary market. It is clear beyond peradventure that the Government are being unfair and are being seen to be unfair.

Amendment negatived.

Amendments made: No. 5, in page 2, line 32, leave out 'release or suspected release' and insert 'escape or suspected escape'.

No. 6, in page 2, line 37, leave out 'release or suspected release' and insert 'escape or suspected escape'.—*[Mrs. Fenner.]*

Clause 4

POWERS OF OFFICERS

Amendment made: No. 8, in page 5, line 24, leave out 'a release' and insert 'an escape'—*[Mrs. Fenner.]*

Mrs. Fenner: I beg to move amendment No. 9, in page 6, line 16, leave out from 'Act' to 'may' in line 17 and insert—

'(2A) An investigating officer or an enforcement officer.'.

The amendment is designed to correct an anomaly following amendments made in Committee to clarify the powers and duties of investigating and enforcement officers under part I.

At present, investigating and enforcement officers may be authorised to perform various functions under part I, including giving directions and taking action under clause 2(3), but only enforcement officers may seize things for the purpose of performing those functions. The amendment extends the power of seizure also to investigating officers.

Amendment agreed to.

Clause 5

REQUIREMENT OF LICENCES FOR DEPOSIT OF SUBSTANCES AND ARTICLES IN THE SEA ETC.

Dr. David Clark: I beg to move amendment No. 10, in page 7, line 16, at beginning insert—

'(1) The provisions of this Part of this Act shall have effect with a view to reducing the use of deposit in the sea as a means of disposal of industrial waste and sewage sludge.

(2).'.

Our purpose in moving the amendment is to declare our intention. We feel that it is right and proper that we should put in statute form our commitment to reduce the amount of industrial waste and sewage sludge that we as a nation dump into the sea.

As I have repeatedly alleged, we treat and regard the seas around us in a different light from our neighbours, especially in relation to sea disposal. That is not only my opinion. The Royal Commission on environmental pollution, in its 10th report, said in paragraph 4.100:

"the United Kingdom, with its long coastline and strong tides, sees both environmental and economic advantages in making use of the capacity of the seas to take waste materials. Other countries, with shorter and more vulnerable coasts, take a more pessimistic view of the possible damage."

The commission recommends

"that the Government should respond positively to the initiative of the Federal German Government and the Commission of the European Communities concerning the North Sea, and should promote international sponsorship of a review by an independent group of experts."

I have already quoted earlier this evening the attitude of the Dutch Ministry. We must take cognisance of our own record. It appears that in Britain we use the seas as a dumping and disposal ground because it is all too easy to do so. In that respect, we are becoming increasingly isolated. Unless we are very careful, we shall suffer an international diplomatic and political backlash and lose a great deal of good will because we are not prepared to treat industrial waste disposal and sewage sludge disposal in the way that our neighbours do.

8.45 pm

As the Minister knows, at the international conference on the protection of the North sea, which was held in Bremen in November last year, several countries joined in

a call for an immediate ban on all dumping in the North sea. Britain opposed it. I urge the Government to accept that there is a growing body of feeling which resents the way in which our Government seem not to be active in discouraging dumping. Unless we are careful, the North sea, in spite of its strong currents and its tidal systems, will eventually be in the same condition as the Mediterranean. I hope that the House is 100 per cent. against that prospect.

We believe that the pressure is now on Britain, and that is why we are moving the amendment. It is a declaration of the Opposition's intent. We must reduce dumping. I hope that the Government will accept the amendment.

I should like to remind the Government of the extent of dumping. Of all the industrial waste dumping in the North sea, almost 29 per cent. comes from Britain. The other 13 signatories account for only two-thirds of it. It is not only the amount that is worrying. The diversity of it causes great concern. All too often countries dump industrial waste when there is no easy alternative method of disposal. Even so, many of those countries are now taking determined steps to counter the practice.

I have the statistics for dumping licences issued by the Minister of Agriculture, Fisheries and Food for 1981. The 94 dumping licences were for a wide range of industries. Although the figures for 1981 show that there has been a reduction in the quantity of dumping from over 600,000 tonnes to over 400,000 tonnes, and that is welcome, it must not be seen as indicating a move away from dumping, because the respected ENDS report says that that reduction appears to reflect lower output and plant closures rather than a sustained attempt to seek alternative disposal outlets. We are using the method of dumping because it is the easy way out, and there can be no doubt about that.

In the report on the effects of the Oslo convention, the attitude of other countries is shown. Each country contributed a chapter to the report with regard to industrial waste. Belgium, Denmark, France, Germany and the Netherlands make clear their commitment to reduce the extent of sea dumping. Finland, Iceland, Norway, Portugal and Sweden undertake not to indulge in the dumping of industrial waste. Only Britain and the Irish Republic take a different view.

It is clear that other European countries are prepared to take, and are taking, action, but there is no sign that we are prepared to do so. There is no sign that the British Government are perturbed. That is why we are moving our amendment, and I hope that the House will feel able to accept it.

In Denmark, only one plant has been authorised to dump industrial waste, and Denmark's Minister of the Environment has recently taken steps to withdraw that dumping permit. The Belgians take a similar line. France makes the point that it has three plants producing phosphoric acid which dump a large amount of waste. They have been ordered by the prefect of Seine Maritime to reduce their discharges by 25 per cent.

West Germany is an industrial country of about the same size as Britain and with the same sort of industry, but of late it has taken some progressive attitudes towards pollution of the air and of the sea. The report states:

"The Federal Republic of Germany regards its national legislation, but also the London and Oslo Conventions, as the decisive tools for terminating waste disposal at sea (dumping and incineration) as soon as possible. The Federal Republic will end the dumping of waste from titanium oxide production—these are the only wastes still dumped at sea with a licence from responsible German authorities".

The Government claim that they will eliminate it by 1989 at the latest.

The chapter on the Netherlands states:

"it is the Government's ultimate objective to end the dumping of chemical waste altogether, if at all possible, at the earliest opportunity."

The chapter on the United Kingdom states:

"The United Kingdom approach to dumping at sea is essentially a pragmatic one of resource management based on the premise that the sea has an important part to play in the management of wastes and that its capacity to dilute and disperse waste may be used but not exceeded."

What do we mean by a pragmatic approach? Many people could rightly interpret that as meaning the easiest approach, the soft option, or the cheapest way.

The Government would do well to reflect on the recommendation of the Royal Commission in its 10th report, which on page 183, in recommendation 7.20, states:

"Foresight and prudence suggest that the United Kingdom should reappraise its stance on irretrievable discharges to the sea of toxic substances."

The information is there, which is why we feel that it is right and proper to insert the amendment in the Bill. If, in respect of industrial waste, the country and Governments of both parties have acted in a manner which is less than responsible and has caused great anxiety to many users of the sea, such as fishermen, we have acted worse on sewage sludge.

With the exception of the Republic of Ireland, we are the only nation of the Oslo signatories which dumps sewage sludge at sea. Indeed, 98·8 per cent. of sewage sludge dumped in European waters is dumped by the United Kingdom. That cannot be right. I suggest that we dump sewage sludge at sea because it is the easiest answer. It is worrying that the percentage is increasing. My figures — again they are slightly out of date — show that, whereas in 1975 we dumped 23 per cent. of our domestic sewage sludge in the sea, by 1980 it had increased to 31 per cent. On the other hand, sewage sludge rightly used for agricultural purposes fell from 50 per cent. to 43 per cent.

Obviously, there are dangers and difficulties about the use of sewage sludge, and the cheapest and easiest way to dispose of it is to put it into the sea. On the other hand, if we use it for agricultural purposes there is the problem of the metal content. No one should run away from that point. With the exception of lead, the level of mercury, cadmium and zinc in sewage sludge has been cut by half in the seven years from 1975.

We accept that the metal content poses a problem, but, equally, if every country but the United Kingdom finds it unacceptable to dump sewage sludge in the sea and can find alternative positive uses for it, there must be something in their line of argument. One way in which we have fallen down is that we are not spending sufficient money on research and development for the use of sewage sludge. It can be a valuable asset and is used in many countries for different purposes. Research and development, some of which is bound to be speculative and long-term, cannot be sustained without Government funding. The Government should be spending money on research and development in that area.

[Dr. David Clark]

To sum up our aims, I shall quote a former United Kingdom chairman of the Oslo commission, who in 1981 told the conference that there

"should be a revolution in our attitudes so that through technical advances, sewage sludge comes to be recognised as a valuable by-product for recycling instead of a waste product for which disposal routes have to be found."

We have tabled the amendment simply because we believe that, unless Britain is prepared to take action, the North sea will become the cesspool of Europe. No one wishes that to happen.

Mr. Ashdown: I join the hon. Member for South Shields (Dr. Clark) in commending the amendment to the House. It calls for the progressive reduction of sea dumping and has been moderately drafted. It does not require that that should happen, but merely states that we should take action with a view to that end. The action that we would presumably have to take under the Bill would merely be aimed at that end. Surely, the Government would agree with that. They may not be able to achieve that end, but they must agree with taking action with that view in mind.

The amendment refers to sewage sludge and industrial waste. Although it does not specifically mention waste from nuclear industry, I assume that it is included under industrial waste. I shall concentrate on that subject. It is a pity that it is not mentioned specifically.

As the House knows, the dumping of waste from Britain's nuclear industry has temporarily been suspended pending an international review which is to be completed this year. The international review pending is revealed to those of us who have examined the facts as cosmetic. In reality, the comments of the Minister, the industry and most people who have spoken on the industrial side show that it is widely forecast that dumping will soon resume. Indeed, in Committee the Minister said:

"We believe that sea dumping is a safe and acceptable method of dispsal as long as it is carried out in accordance with international agreements." — *[Official Report, Standing Committee H*, 28 March 1984; c. 117.]

Why is the Minister waiting for the international review to be completed if he has come to the conclusion that dumping nuclear waste at sea is safe?

The radioactive waste management committee makes the same point in its evidence to the Select Committee on the Environment. It states:

"it seems unlikely that international reviews will come up with new scientific evidence."

The industry in the form of the United Kingdom Atomic Energy Authority in evidence to the same Committee stated:

"Sea disposal is used for only a small volume of low and intermediate level wastes but it is very suitable for certain types of wastes."

I shall return to the various types shortly. It therefore appears that the United Kingdom will resume sea disposal in 1986.

Many of us who are opposed to the dumping of nuclear waste in our oceans have come to the conclusion that the Government have already made up their mind on the matter and that they are merely going through the motions. The present position is nothing short of cosmetic. In due course, there will be an increase in the dumping of nuclear waste at sea.

In its evidence to the Select Committee on the Environment, the UKAEA numbered among the items to be dumped

"certain bulky items from the future decommissioning of redundant plant".

I wonder what those bulky items are that are so coyly described. They might be oil drums, but there is evidence that they are likely to be something much more significant in size. Indeed, it is highly likely that we are talking about the dumping of major parts of power stations. As we know, the Magnox power stations were designed for a working life of only 20 years. According to a parliamentary answer on 8 May 1985, five Magnox power stations have already been operating for more than 20 years, and by next year, four more will have been operating for more than 20 years. Therefore, by next year we shall have nine nuclear power stations which, according to the UKAEA, will be

"bulky items from the future decommissioning of redundant plant".

9 pm

It is possible that the lives of those power stations will be extended by five years, but there is no doubt that there will soon be a massive decommissioning programme of nine nuclear power stations. I suspect that the UKAEA is talking about filling the oceans with massive chunks of nuclear junk. The reactor of a Magnox power station is estimated to weigh tens of thousands of tonnes, and I am told that an advanced gas-cooled reactor weighs 130,000 tonnes. If the Government do not accept that we should have a view towards action to reduce dumping at sea, they should tell us what they have in mind for the decommissioning of those nine plants. They cannot be buried. Are the Government reluctant to accept such an amendment because they wish to retain the possibility of dumping large parts of those power stations in the North sea?

We must realise why the amendment's call for a progressive reduction in the dumping of industrial waste in the sea is vitally important. Scientific calculations have shown that the effects of the chain reaction started by the dumping of nuclear waste may not be known for 50 years. We started dumping in 1949, so its effects have not yet come to light. Paragraph 5.8 of the Holliday report, which refers to nuclear waste dumped at a depth of 4,000 m, states that it would take 33 years for plutonium 240 to turn up and have an effect on the human cycle. That means that the first of the waste dumped in 1949 would have started to turn up in 1982. We must also consider the cancer-producing effects of such dumping, which, at the earliest, could occur in 15 years' time. The Holliday report also states that it might take 95 years for the effects of polonium 210 to come to the surface.

This is an important amendment which requires us to take action with a view to reducing the disposal of industrial, and therefore nuclear, waste in the sea. I hope that the Government will accept it.

Mr. D. N. Campbell-Savours (Workington): I congratulate my hon. Friend the Member for South Shields (Dr. Clarke) on an especially lucid speech. It served to show the country the value of the title, which he so richly deserves, of the Labour party's green spokesman. Increasingly, the Labour party has considered such matters as important, which is why we decided to have a green spokesman. There are many green issues which affect millions of people.

My hon. Friend said that Britain was almost the only Oslo convention country to dispose of sewage in the sea. That process give Britain cheaper infrastructural costs and places it in an unfair competitive position with its trading partners in every possible way. The Minister would do well to consider the position of landlocked countries. They simply do not have the sea into which to push their sewage. They have to make arrangements that are more expensive, but somehow they manage to include them in their infrastructure costs and remain competitive.

The amendment says:

"The provisions of this Part of this Act shall have effect with a view to reducing the use of deposit in the sea as a means of disposal of industrial waste and sewage sludge."

The intention is therefore to reduce dumping at sea of low, intermediate and high-level waste. In the past few years, the dumping at sea of low-level radioactive waste has been controlled by the London dumping convention and the Dumping At Sea Act 1974, which is being repealed in part by part II. These arrangements have caused increasing international concern.

In 1983, a meeting of the London dumping convention voted to suspend dumping of low-level radioactive waste at sea. The vote was not binding, but following action by the National Union of Seamen, Britain was forced into line. The Government and the TUC then supported an independent inquiry under Professor Holliday. In November last year it published its report, which found that radioactive dumping has a low impact on the environment. However, it recommended wider international reviews. This was referred to by the hon. Member for Yeovil (Mr. Ashdown). A meeting in 1983 of the parties to the London dumping convention could not decide whether the disposal at sea of high-level waste was covered by that convention. The regime is based on confusion.

I shall now point out precisely whence cometh the material about which we speak. In Britain, radioactive waste originates from four main sources — the commercial nuclear fuel cycle, the military nuclear weapons programme and defence-related activities, institutions such as hospitals or universities that use radioactive materials for chemical research purposes, and the industrial use of radio isotopes. A fifth source — uranium mining—is not found in Britain.

Some 80 per cent. of radioactive waste, and potentially the most dangerous, is created by the nuclear power programme. The Nuclear Industry Radioactive Waste Executive estimates that the volume of intermediate and high-level waste is equivalent to 35,000 cu m in total. The volume is equivalent to a football pitch five metres in height. That perhaps gives the public and the House some idea of the amount of material that we are considering.

The Government's policy on radioactive waste disposal is based largely on the recommendations of the Royal Commission's sixth report of 1976 on nuclear power in the environment. In 1981, the 10th report supported a modest increase in the nuclear capacity in Britain provided that the principles for environmental protection set out in the sixth report were satisfied. Today, the Government and the nuclear industry alike recognise that finding the solution to the nuclear waste problem is the critical gap in the desire to expand the British civil nuclear programme.

Until the Royal Commission's sixth report, there was little public discussion or apparent appreciation of the problems of the radioactive waste management. It was criticised in the sixth report as showing

"insufficient appreciation of long-term requirements either by government departments or by other organisations concerned . . . a much more urgent approach is needed, and the responsibilities for devising policy and for executing it need to be more clearly assigned".

The current proposals for the management of radioactive waste have evolved since 1977. The Royal Commission's sixth report's conclusions have led in turn to the Department of the Environment being given overall responsibility for the management of radioactive waste. But it has been plagued by a number of technical problems. They include the possibilities of a migration of radioactive elements through geological processes, also the possibility of disruptive geological events and also the possibilities of human intervention.

All that must be read against a background of very strong public reaction and resistance to the burying of nuclear waste in various parts of the United Kingdom. It seems that no one wants it, and that is the story we learn from Stockton-Billingham and Bedfordshire, the last two sites that have been identified for waste disposal.

The truth is that no one wants nuclear waste, and therefore I believe that the Government should set about establishing a more realistic alternative.

It was put most effectively by NIREX in its journal, *Plaintalk*, of May this year. In an editorial headed "Plaintalking", it asked:

"Why the delay on new sites? Following the Government statement in the House of Commons in January asking NIREX to name at least three alternative sites for investigation as possible near-surface repositories, we said in answer to questions that we hoped to name them in early summer. June is now upon us and you might well be asking, why the delay? The short answer is that it is not as easy as it looks! Our task is to find a safe and environmentally sound way of disposing of the nation's low and intermediate level radioactive waste. That means exploring lots of alternatives and studying hundreds of different locations to find one that will fulfil each very important condition for a good safe site."

My view again is that there is no solution available within the United Kingdom. There is no way of resolving the problem of disposing of nuclear waste, and we must look elsewhere and to another solution.

Before I do that, it might be wise of me to comment on the position in the United States of America and in Canada. In those countries, the practice of waste disposal is currently carried out in above-ground engineered structures. The Tennessee Valley authority, an American electrical utility, has built above-ground storage modules at the Sequoyah nuclear plant in Tennessee. Several utilities in the north-east of the United States are designing and building similar facilities. Ontario Hydro, which operates eight nuclear reactors, has built a central storage area at the Bruce nuclear reactor.

I was in America some years ago, and I went with a congressman to attend his hearings on nuclear waste disposal in Connecticut. Throughout the course of the hearings, repeatedly we were confronted with lobbies, not just anti-nuclear lobbies but local environmental lobbies, community lobbies, women's organisations and so on, all objecting to disposal arrangements for nuclear waste. It may be that they did so to some extent out of ignorance, but the point is that the public's perception of nuclear waste is that it is dangerous. Whether it is dangerous is not relevant. If the public believes that it is dangerous and if,

[Mr. D. N. Campbell-Savours]

however much politicians and bureaucrats set out to convince people that it is not, it does not work and the case does not get over, we must face reality and find solutions for the disposal of nuclear waste which meet people's anxieties and fears.

It was on that basis that in Committee I put forward a proposal for dealing with the problem when we discussed the matter some weeks ago. I put forward the rather novel but, I repeat, serious proposition that we should identify somewhere on this earth, a small piece of land away from the great centres of population—away from the United States of America, western Europe, the United Kingdom and all the major industrialised and populated countries —a small island, perhaps. It was even said by one of my hon. Friends in a previous debate that the Falkland islands would provide a good locational solution. I do not advocate such a proposition because some of my hon. Friends might laugh at it, but in principle the Falkland islands offer a solution.

Although I do not submit the Falkland islands as a solution, there are other islands of a similar nature which, if we approached the problem in a responsible manner, could offer a locational solution for the disposal of nuclear waste. A regime should be established at that location which would be responsible for the management of waste disposal. It would draw upon the expertise of all the countries which were contributing waste for disposal at that site. The management would be responsible for planning the disposal and also for policing and security.

9.15 pm

Mr. Stuart Randall (Kingston upon Hull, West): My hon. Friend is proposing that there should be a centralised approach to the storage of waste materials. Does he not agree that, because of the hazards that would ensue from this approach it would be better to adopt a distributive approach to the disposal of waste?

Mr. Campbell-Savours: My hon. Friend has referred to the hazards. I do not necessarily accept that the public perceive that such hazards exist. This measure is concerned with satisfying world opinion. It is not only the people of the United Kingdom who express concern about the disposal of nuclear waste. This is an international problem. The same debate is taking place in all the western countries that rely upon nuclear power. Environmental lobbies in all those countries are demanding that proper solutions should be provided to this problem. I am putting forward a single-site solution to the problems of nuclear waste. Countries throughout the world could contribute the nuclear waste that they generate and participate in policing the site.

During the earlier proceedings, the Minister of State offered to deal with the matter and to write to me. As his letter is not on the record, I want to read part of it because it sets out the Government's views on my proposition. The Minister of State said:

"I find there has been talk from time to time about the possibility of international disposal facilities, and polar and desert regions have been suggested as suitable. However, much of this talk has been essentially speculative."

I have not proposed either polar or desert regions, but I understand why the Minister referred to them. He continued:

"You may have seen that a Technology, Growth and Employment Working Group established by the seven Western Summit countries at Versailles in 1982 has recently suggested that an existing international scientific organisation should review available information in order to assess the merits of optimising the number of storage and disposal sites for radioactive wastes from the points of view of costs, environmental impact and logistical considerations. They envisaged that this would be combined or co-ordinated with a conceptual study of international waste repository systems which is being undertaken by the Nuclear Energy Agency (NEA) of OECD. However the Radioactive Waste Management Committee of NEA has emphasised that the priority must lie with the development of pilot land disposal facilities at a national level . . . my environmental colleagues see major legal, logistical, technical and political difficulties in developing a single site to take all countries' waste."

The Minister referred to

"legal, logistical, technical and political difficulties",

but it would seem to me that legal difficulties could arise only from the title to the land which is used for disposal. I should have thought that such difficulties could be dealt with quite easily within the framework of international law. Perhaps the Minister can explain to what extent such legal complications might arise, as I understand that it is only a question of title.

Logistical difficulties were also mentioned, but the means of transportation are available. We are already transporting such material around the world. Similarly, when it comes to technical difficulties, the technology is already there. Members of Parliament, particularly those who have some connection with the nuclear industry, are besieged weekly by organisations that tell us of the advances that are being made in the technical arrangements governing the disposal of nuclear waste.

Finally, the Minister mentioned political difficulties. But if the international will is there to find a solution, there can be no political difficulties. According to the Minister's letter, the NEA has stated that the development of pilot land disposal facilities at a national level must be the priority. In suggesting that, it is sticking to the existing regime, and telling us all to keep our nuclear waste and to solve our own problems. It is saying that we should find our own sites within our own countries. But that is what the whole argument is about, because no one wants nuclear waste. I say that as a supporter of the nuclear industry. Why do we not deal with the problem? A whole industry of environmental groups has set up in this country. At the heart of their existence is the argument about the disposal of nuclear waste. Indeed, 99 per cent. of the arguments about Windscale are not about nuclear power but about nuclear waste and its disposal.

If nuclear power is to be accepted in this country, we must identify and deal with the problems that cause the public so much concern. Ministers ignore the responses of such organisations, and simply do not understand the pent-up pressure within the system. If they do not deal with that pressure, the anti-nuclear lobby will become stronger as the years go by and will eventually strangle the industry. The Government will be held responsible.

Mr. MacGregor: Judging by the phrasing of the amendment, it is simple and fairly clear. However, the debate has opened up a much more wide-ranging set of issues. Moreover, the amendment's implications are anything but clear. I hope to show that it is not only unnecessary, but that it could also prejudice the aims of part II and at times be environmentally damaging, rather than the reverse.

I shall begin by briefly examining the quantities dumped in the past few years. In Committee, I gave some

figures, but I shall give two more that bear directly on the amendment. The most recent year for which statistics are available is 1983. Judging by the definitions of the London convention, the amendment is talking about liquid industrial waste not radioactive waste.

Dr. David Clark *indicated assent.*

Mr. MacGregor: I see that the hon. Member for South Shields (Dr. Clark) agrees, so I may, strictly speaking, be out of order when I make a few remarks about nuclear waste. But the tonnage of liquid industrial waste——

Mr. Campbell-Savours: It is industrial waste.

Mr. MacGregor: Perhaps the hon. Gentleman was putting his notes together, but I did just explain that, according to the normal conventions, the definition of industrial waste here applies to liquid industrial waste. Indeed, the hon. Member for South Shields nodded his agreement.

Between 1980 and 1983, the tonnage of liquid industrial wastes and sludges fell by 34 per cent., and that of sewage sludge by 18 per cent. I recognise that some part of that fall may be due to the level of economic activity. Nevertheless, those are very substantial reductions in the tonnage of liquid industrial wastes and sludges and of sewage sludge. Incidentally, sewage sludge certainly cannot be related in the same way to the level of economic activity.

The figures that I quoted in Committee are worth repeating. Between 1977 and 1983, the quantity of cadmium and mercury in dumped sewage sludge fell by 65 per cent. and the number of licences for dumping at sea fell by 29 per cent.

The hon. Member for South Shields mentioned incineration. The difficulties of international comparisons are demonstrated by the fact that the United Kingdom is not heavily dependent on marine incineration. In 1982, we contributed less than 2 per cent. of the total in the Oslo convention area. I shall mention sewage sludge later, but it is important to point out that our contribution on marine incineration is tiny.

The Oslo convention countries have to meet before 1990 to decide about the future of marine incineration and one of the factors that will influence their decision will be the availability of other methods of disposing of the wastes in question. I shall return to that aspect. It is too early to say what those countries will decide about marine incineration, but, whatever the decision, the Bill will give us power to implement it. As I said, we make a very small contribution to any problems caused by marine incineration.

I should ensure that I am being fair all round by admitting that the amount of colliery waste and fly ash rose between 1980 and 1983, but those solid materials are generally regarded as inert, and I think that the Opposition are more worried about liquid wastes and sewage sludge, which both show substantial reductions.

Therefore, my first comment must be that we are moving in the direction that the Opposition seek. I share the view of the hon. Member for South Shields about the need to avoid the problems that have arisen in the Mediterranean. We have made substantial progress — much more than many other countries—in dealing with industrial wastes in rivers and their pollution of the sea.

The hon. Member for South Shields, in his response to new clause 1, suggested that we had a more relaxed attitude than our neighbours to dumping at sea and that there were suspicions that by leaving out of the original drafting of the Bill the provision that has been re-inserted by new clause 1 we were seeking to abide less by the conventions.

I refute both those suggestions. On the claim that we are less keen to abide by the conventions, I should point out that new clause 1 dealt with a narrow point about co-operative procedures—a mechanism which has never been used under the conventions. I was happy to put the provision back into the Bill, but whether new clause 1 is in the Bill has nothing to do with our willingness and enthusiasm to abide by the conventions. We already have under the Bill all the powers necessary to abide by the conventions, and I have made it clear on many occasions that we abide by them firmly.

The hon. Gentleman also suggested that we had a more relaxed attitude than our neighbours to dumping at sea. Hon. Members who served on the Standing Committee will remember that I made a long statement on the subject, but perhaps Committee *Hansards* are not read as widely as they sometimes deserve to be read. Therefore, I shall repeat some of the points that I made in Committee. It is relevant to point out, in relation to our responsibilities under the conventions, that we provided the chairman of the Oslo convention from 1980 to 1984 and played a leading role in gathering the scientific information for the North sea conference at Bremen. We are hosting the next conference. Those are hardly the actions of a Government unconcerned about the North sea. They show clearly that we have played a major role in the conventions.

9.30 pm

The evidence is also against the hon. Gentleman. I should like him, or others, to give some evidence to show that the United Kingdom plays the biggest polluting role in the North sea. The last North sea conference showed clearly that the major problems arose from continental rivers. I am not in the slightest complacent about the problem, but we must get the perspective right. The hon. Member for South Shields said again that we contribute 98 per cent. of the sludge dumped in the Oslo area. That sludge is only about one third of the total that we produce. Most of the rest is disposed of on land. Moreover, it represents only a tiny proportion of the heavy metals and nutrients entering the marine environment. In Committee, I said:

"sewage sludge accounts at most for only 1 per cent. of the heavy metals entering the North sea."

Dumping is only a minor input into the marine environment. Even on the most pessimistic calculations, dumping, other than dredging, accounts for no more than 3 per cent. of the input of heavy metals into the North sea. The major contributors to the marine environment are the atmosphere and rivers.

When considering the biggest polluter, we must assess what types of contribution are causing the biggest pollution. Just one continental river—the Rhine-Meuse — accounts for at least three times as many heavy metals as all dumping operations. As I said in Committee:

"The geographical areas about which there is the most pressing concern are the German bight and the Wadden sea, which are not affected at all by United Kingdom dumping, but are seriously polluted by inputs of the Elbe and the Rhine-Meuse —[*Official Report, Standing Committee H*, 28 March 1985; c. 114.]

[Mr. MacGregor]

I refute the charge that we are major polluters, and I refute most strongly the allegation that we are not worried about it.

Unlike many other inputs into the sea, dumping is subject to strict controls, the main aim of which is to ensure that the environment is protected. Dumping makes a comparatively small contribution and is subject to strict controls, so there is no significant evidence of damage around our shores or that disposal is uncontrolled. It would be wrong to make policy changes, which would often have adverse effects on other parts of the environment, without having a firm scientific basis for such changes.

Mr. Campbell-Savours: The Minister says that there is no evidence of damage to our coastline. Does he not take his family to our coasts in the summer? Has he never seen the filth, the excreta, the toilet paper and the rubbish piled up on beaches? Has he not seen the material that floats in the sea, even just off some of our major resorts? Does he agree that the Government have some responsibility to deal with the problem urgently, or is he blind? Does he simply refuse to accept that there is a problem? That is what his statements imply.

Mr. MacGregor: Anybody who tries to put problems into perspective runs the risk of being accused of not bothering about some aspect of the matter. I was endeavouring to show that, in regard to the charge that we are major polluters of the North sea, many other considerations must be brought to bear if we are to get a fair picture. Of course I am concerned when I see rubbish, but I have often seen more of what the hon. Gentleman described on Mediterranean beaches when I have taken my family abroad.

Of course we are anxious to improve matters. I have given the figures which show how we are improving the situation and which distinguish us from some other countries. We put heavy emphasis—rightly, in my view—not on particular emotional charges, if I may so put it, but on strict scientific criteria. I am not arguing that we should not make improvements. I am arguing that, in enshrining certain policies in legislation, we must ensure that they are based on strict scientific criteria. I agree with the hon. Member for South Shields that this is one way in which we differ from some other countries, but I believe that we are right to put that emphasis on the strict scientific criteria.

Having demonstrated that improvements are being made and that quantities have declined, why can we not accept the amendment? First, it is potentially inconsistent with the aims of part II of the Bill. Clause 8 strengthens the provisions of the Dumping at Sea Act. The need to protect the marine environment and its living resources has been the cornerstone of dumping policy since 1974. I do not think that that has been challenged, but the amendment could have the unintended effect of calling it into question. *[Interruption.]* I hope that the hon. Member for Workington (Mr. Campbell-Savours) will listen, because in developing policy we must be careful about the implications of what we are doing.

The amendment implies that quantitative reductions are the best way to protect the marine environment, but that is an oversimplification, because the sea's capacity to absorb waste varies from place to place. It may be possible to dispose of a large quantity of material at a site where the currents are highly dispersive, but a much smaller quantity may cause problems at a less suitable site. In other words, it is more important to have regard to the capacity of each site than to concentrate entirely on total quantity. That is why the conventions emphasise the examination of site characteristics—an obligation that we implement by means of the licence conditions under clause 8.

The licensing authority often has to persuade applicants to accept particular conditions, and the willingness of applicants to go to environmentally better but probably more distant sites could well be inhibited by a provision which prevented any increase in the quantities licensed.

Mr. Ashdown: The clause to which the amendment relates refers specifically to the depositing of solids in the sea, so it covers the points raised in my intervention and that of the hon. Member for Workington (Mr. Campbell-Savours). The Minister is putting too much emphasis on quantity. That is not what the amendment says. The amendment refers to

"reducing the use of deposits in the sea as a means of disposal".

That can be read in all sorts of ways. It does not have to hang on quantity. It could hang on type or nature. It means reducing deposits in the sea as an option necessarily used by us, so the Minister's argument about quantity does not apply.

Mr. MacGregor: The amendment could refer to quantity, and many people will see it in that context; but that is not the main argument on which I rest my opposition. I was merely pointing out the danger of diminishing the impact of the Bill by insisting on the amendment, because quantity will be the factor that most people have in mind.

The far more powerful objection on which I rest my opposition to the amendment concerns the availability of alternative methods of disposal and the effect on the environment generally. The Government have tabled an amendment to clause 8 in response to an Opposition-led debate in Committee. That amendment will require the licensing authority to have regard to the practical availability of alternatives. The Opposition pressed the Government on that and I have conceded the point. In Committee, I said that I wished to give the matter further thought, and I have now tabled an amendment.

In my view, it is dangerous for the Opposition to ask us to have regard to what is feasible and practicable but then to argue that reductions in dumping at sea should be pursued regardless. I should have thought that the Government amendment went a long way towards meeting the objective of the present amendment, but by a much better and more effective route.

On a more technical point, I am somewhat surprised at what has been included in the amendment and what has been omitted. Dredgings constitute the largest tonnage and the bulk of the heavy metals—I am told that dredgings account for more than half the dumping—but they are not mentioned in the amendment. Is that because there are no practical alternatives or because, by and large, the Opposition do not regard them as damaging to the environment? I am not clear, but it is strange that one of the major contributors to dumping should have been left out of the amendment. Whatever the reason, it is clear that other wastes could fall into the same category.

Many of our conurbations are near the coast, and their sewage sludge is dumped at sea. The alternative is to transport it by road for spreading on land. Would that be

a practical proposition in the London area? In addition, dilute liquid industrial waste is not particularly damaging to the open marine environment — the amount of harmful substances is too low for that — but the only alternative method of disposal would be discharge into rivers, where further dilution would be slower. Perhaps the considerations that have excluded dredgings should apply here as well.

I could also mention other areas that have been excluded from the amendment, such as radioactive waste, marine incineration and sub-seabed disposal. I say that only to demonstrate that, even in its own terms, the amendment is incomplete and does not deal with some of the areas that most affect pollution of the marine environment.

I have given the main arguments against the amendment, although I hope I have made it clear that I am entirely at one with the Opposition in wishing to do anything that can reduce pollution at sea.

The hon. Member for South Shields referred to research into sewage sludge. The hon. Member for Pontypridd (Mr. John) and I had an exchange on that subject in Committee, and I have written to him since. I hope he will not mind if I refer briefly to part of that response. It is worth drawing it to the attention of a wider audience as it deals with a real concern.

The main thrust of our research into the disposal of sewage sludge is to improve the treatment of sewage and to monitor its quality and the effects of current methods of disposal. I hope that the House will agree that improvements in treatment are just as important for new disposal methods as for traditional ones. They are also just as important as looking at novel sewage sludge disposal methods.

These novel methods are currently being investigated, but none has been given a high priority—certainly not as high as improving the treatment of sewage, which at the end of the day has the same beneficial effect on pollution —because their practical application is not yet proven. The types of projects under consideration are conversion to animal feed, incorporation into building materials, production of earth worms and conversion to fuels. Some of these have been tried commercially, but have so far failed because the end product was more expensive than a similar conventionally produced product.

The hon. Member for Yeovil (Mr. Ashdown) spoke of radioactive dumping. I gave the Government's position on that in Committee. It is fairly well known that we accepted the main recommendations of the Holliday report—that dumping should not resume until the various current reviews in the London dumping convention, the IAEA and the Nuclear Energy Agency were completed. The report also recommended that we should publish a comparative study of all the options for nuclear waste disposal. We have accepted all of those.

Progress is being made on the various stages of the review in the LDC and related organisations, and, as recommended by the Holliday team, the Department of the Environment is reviewing the best practicable environmental option for disposal of each type of radioactive waste. The report will be shown to the team and to the radioactive waste management advisory committee, and it is hoped that it can be finalised around the end of the year. At present, we are working through the various international and national reviews on this subject. It is too early to predict when they will be finished or what the outcome will be, but the position will be clearer by the end of the year.

The hon. Member for Workington and I had an exchange, followed by written correspondence, about his suggestion of finding one international site to which most nuclear waste could go. I very much hope that his reference to the Falklands was a joke, because I do not want to see any headlines in the morning indicating that in any way that was a sensible suggestion. However, the hon. Gentleman greatly underestimates the difficulties. It is fairly obvious to us all that there are difficulties in finding a further national site for disposal. Such difficulties are technical, logistical and, above all, political. The difficulties of achieving agreement on a single site on an international scale are formidable.

9.45 pm

I hope that I have said enough about the defects of the amendment and about the progress that we are making to persuade hon. Members against the amendment. Dumping at sea is not an easy option in the United Kingdom. We require applicants to justify their use of sea routes. The Government have amended legislation to take account of alternative methods. We would not permit dumping if there were an easy alternative. For the reasons that I have given, it would be a mistake to agree to the amendment because it could be counter-productive.

Dr. David Clark: I am disappointed with the Minister's response. A general unease is felt, not only by Opposition Members but by some people in other EEC countries. I admired the Minister's spirited defence of Government policy, but it revealed the Government's isolation.

The Minister asked for evidence that the United Kingdom is the major polluter of the North sea. The Royal Commission on environmental pollution, in paragraph 4.9, describes the estimated contaminant loads for the North sea. There is no doubt that we contribute considerably more than any other nations which border the North sea. That is well known and the recommendations make it clear that the Government should change their policy.

I recognise the improvements that have been made. Fish can now live in the Thames and the cleaning of rivers such as the Tyne has improved the quality of the environment enormously, to the benefit of the people who live near them and to the benefit of those who enjoy their leisure by the use of such rivers.

Dumping is responsible for only a small part of the pollution. Pollution affects rivers and the atmosphere and is caused naturally. However, we can do something about dumping, and we should tackle the problem. Much pollution is cumulative and if we can tackle one aspect of it we should act.

I was surprised at the Minister's defence of the sewage sludge problem. It causes inconvenience to the outer sections of the North sea and to inshore areas. Fishermen off the north coast of England will tell the Minister of their dislike of the dumping of sewage sludge only five miles off the mouth of the river Tyne. We spent millions of pounds clearing up that river so that salmon could breed there, yet sewage sludge is still being dumped 5 km or 12 km from the mouth of that river.

[Dr. David Clark]

I thought that the Minister was reasonable when he said that sewage sludge occurs in conurbations and other built-up areas and that therefore it would not make sense to transport it by road to treat it elsewhere. As he said, many of the conurbations are by the sea, so it is easy to load the sewage on barges, and he cited the case of London.

It is equally easy for that sewage sludge to be transported into the country, where it could be treated. Landing sites around our coastline could be used to take profitable industry from some of those conurbations to rural areas for the treatment of sewage sludge. Let us not forget that in parts of the country—for example, south Yorkshire — a large percentage of sewage sludge is treated simply because it costs too much to transport it to the sea.

It is possible, therefore, to tackle the problem in the way we suggest; and that is proved not only by what happens in Britain now but by what is done in other countries. The Minister did not attempt to deny that over 98 per cent. of the sewage sludge dumped in the seas around Europe is dumped by the United Kingdom.

Our amendment states the national position. It is, in a sense, a declaration of intent. We were not convinced by the Minister's argument and I quote against him a statement made at a recent conference:

"the several countries interpret the need to consider land-based disposal as mandatory, with dumping as an option in the last resort. Most Oslo Convention countries which permit industrial waste dumping do so only for a very limited number of wastes for which there are genuine difficulties in finding alternative disposable routes. This is in marked contrast to the United Kingdom's practice of accepting a wide range of wastes for sea disposal, provided they can be disposed of without unacceptable environmental charges."

That statement was made by one of the Ministers senior scientific advisers whom I will not embarrass by naming. The view of our neighbours is even more colourful. We believe that in the national interest we should clearly state our intention. That is the purpose of the amendment, and we are disappointed by the response of the Government.

Amendment negatived.

Mr. MacGregor: I beg to move amendment No. 11, in page 7, line 19, leave out 'in United Kingdom waters' and insert

'within United Kingdom waters, either in the sea or under the sea-bed'.

Mr. Speaker: It will be convenient to consider at the same time Government amendments Nos. 12 to 16, 19, 20 and 54.

Mr. MacGregor: These amendments deal with sub-seabed disposal, which is one possible method of disposing of radioactive waste. As yet, its technical feasibility remains to be proved, and the legal situation is also under consideration. We are not sure whether it can be done, how it may be done, and, while agreeing that the London dumping convention is the right international forum in which to elaborate controls, we should not pre-empt its decisions. It is in these rather difficult circumstances that we are trying to legislate.

In Committee we had a very constructive debate following amendments tabled by the Opposition which would have extended the Bill's scope to cover deposits under the seabed. At that time I was hesitant about specifying powers in a Bill for a situation for which we could not predict properly in advance, but agreed to look again at the question.

I emphasised that there was uncertainty about the technology to be used in sub-seabed disposal and about any decisions on a regulatory framework which might be made under the convention. For those reasons, I was hesitant about making specific provision now, but I accepted that if we had no provision in the Bill we would not be able to control or prohibit such activities at all. After much thought, we have come up with these amendments.

The hon. Members for Pontypridd (Mr. John) and for South Shields (Dr. Clark), who mentioned this subject in Committee, will be pleased to see that we have not departed much from their original drafting. That shows that both sides of the House have been looking with open and constructive minds at the Bill, and I am grateful for the generous comments of the hon. Member for Pontypridd, and of the hon. Member for Ceredigion and Pembroke, North (Mr. Howells) through the hon. Member for Yeovil (Mr. Ashdown).

There are, however, a few additions, especially to deal with vehicles, which are intended to make the controls as comprehensive as possible. There are a few consequential amendments to the provisions on enforcement, on the public register of licences and to the Bill's long title.

The effect of all that is that any operation of sub-seabed disposal would be subject to the same control as would ordinary deposits at sea. That is to say, if the operation takes place in United Kingdom waters, or if the loading takes place in the United Kingdom, or if the vehicle or vessel concerned is British, a licence will be needed. Let me emphasise again that the purpose of bringing sub-seabed disposal within the Bill is not to permit it, but to make it subject to control pending a decision in the London dumping convention. I also said in Committee that I thought an order-making power might be the best way to deal with this subject. However, I am now satisfied that the powers flowing from this amendment are very broad and that they are all we would need to put into effect any regulatory framework elaborated under the LDC. I therefore believe that these amendments deal with all of the concerns voiced during Committee, and I commend them to the House.

Dr. David Clark: We have returned to our bi-partisan approach. I congratulate the Minister. It is agreeable to find him proposing this group of amendments so, as he said, ably drafted by my hon. Friend the Member for Pontypridd (Mr. John), who is such an expert at this. As the House is aware, he has a long history of drafting suitable amendments, some of which will stand the test of time and others that I dare not mention.

Some of the amendments add to the Bill. The crucial point, as the Minister has so correctly said, is the reference to the sub-seabed. Since the Oslo and London conventions and the Dumping at Sea Act 1974, technology has moved quickly. Occasionally, it is worth while stopping to remember that. When those conventions and the Dumping at Sea Bill were drafted we did not have the marine technology of oil exploration which we now have.

That technology, coupled with the nuclear waste disposal problem, have made people question the possibility of emplacing nuclear waste under the seabed. That was an argument that we advanced in Committee and we are pleased that the Government have accepted it. It

is feasible to emplace waste under the seabed. The Minister has now taken the power to grant, or refuse, licences, as he put it.

As we understood it, without this group of amendments there was nothing to stop oil companies drilling a hole under the seabed and emplacing waste therein. This group of amendments is essential. I am sure that the House will agree to them. Companies such as Ensec are pressing ahead. They may be right. It is not for us to judge. It is right that we explore every method of disposing of nuclear waste—even those suggested by my hon. Friend the Member for Workington (Mr. Campbell-Savours) with which not everyone agrees. It is a problem that will not go away.

The hon. Member for Yeovil (Mr. Ashdown), who is not present, made an interesting speech about nuclear waste disposal on an earlier amendment. There is a problem. Even if we decommissioned all our nuclear plants tomorrow, we would have to treat our nuclear waste. The onus is upon us all to find a suitable solution.

I should like to ask the Minister whether he has anything to add that is consequent upon the Holliday report. I understand that since the report was made there has been a meeting between the Secretary of State for the Environment—at which I understand the Parliamentary Secretary was present—and representatives of the TUC. At that meeting, which I understand was very cordial——

It being Ten o'clock, the debate stood adjourned.

Ordered,

That at this day's sitting the Food and Environment Protection Bill *[Lords]* may be proceeded with, though opposed, until any hour.—*[Mr. Garel-Jones.]*

Dr. Clark: I understand that arising out of that meeting there were to be further tests and investigations into the problem of the disposal of nuclear waste. It may be that the Minister has nothing to tell us, but if he has it will be useful in discussing the amendments tonight. The Minister shakes his head, but perhaps before too long he will be able to respond.

With those few words of welcome, we greatly approve of the Government's action in moving the amendment, and I commend it to the House.

Amendment agreed to.

Amendments made: No. 12, in page 7, line 27, after 'sea', insert

'or under the sea-bed'.

No. 13, in page 7, line 34, leave out 'in the sea within British fishery limits' and insert

'within British fishery limits either in the sea or under the sea-bed'.

No. 14, in page 8, line 3, at end insert—

'*(cc)* for the deposit of substance or articles anywhere under the sea-bed within British fishery limits from a vehicle which was loaded in the United Kingdom with any of those substances or articles;'.

No. 15, in page 8, line 18, after 'sea', insert

'or under the sea-bed'.

No. 16, in page 8, line 18, at end insert—

'*(ee)* for the loading of a vehicle in the United Kingdom with substance or articles for deposit from that vehicle as mentioned in paragraph *(a)* or *(cc)* above;'.—*[Mr. MacGregor.]*

Clause 8

LICENCES

Dr. David Clark: I beg to move amendment No. 17, in page 9, line 19 at end insert

'and *(c)* shall consider any written representations from a person objecting to the issue of that licence'.

As the Minister has reminded us, the control of pollution at sea caused by dumping and incineration is done, under the various conventions, by the issue of licences. Clause 8 lays down the criteria that a licensing authority must take into account when determining whether to issue a licence. Among the matters that the licensing authority has to take into account is the need

"to protect the marine environment, the living resources which it supports . . . and . . . to prevent interference with legitimate uses of the sea"—

which I presume includes fishing and certain scientific activities. The clause also says that a licensing authority

"may have regard to such other matters as the authority considers relevant."

We felt that a further condition should be for the right of written representation. There may be other people who have an interest in the granting or refusal of a licence, and it is only right that they should be able to make their representation in the same manner as with a land planning application. Obviously, I am not arguing that exactly the same criteria should apply to the maritime environment as to the land environment, but there is a principle that should be taken into account.

The House might be forgiven for imagining that the point is covered by schedule 3 to the Bill as schedule 3 is entitled "Licences — Right to make Representations, etc." But the right applies only to the licence holder or the would-be licence holder. That is how I read the schedule. Indeed, when it was put to the Minister in Committee, I think that that was also his reading of it.

Other interested parties should have the right to put their point of view, which would be considered together with other points of view and the other information taken into account by a licensing authority in determining whether to issue a licence.

Surely it is not too much to ask that, if someone believes that he has a legitimate interest which may be affected, he has the right to be heard. He may be a fisherman, a fish farmer whose living may depend on the susceptibilities of the quality of the water or tide, a shipper, a marine scientist or someone who wishes to challenge the scientific assertions on which the application is made.

The amendment speaks for itself and, therefore, I shall not go into great detail. Clearly, a matter of principle is involved, and in that spirit I move amendment No. 17.

Mr. MacGregor: This is an interesting amendment, and I shall attempt to speak as briefly to it as did the hon. Gentleman. I am glad to have the opportunity of explaining the Government's position on representations from the public, which the amendment allows.

Clause 8 already requires the licensing authority to consider certain matters and gives it power to consider any others which are relevant. The terminology may have led to some misunderstanding on the question of representations. Indeed, we discussed this in Committee. Let us suppose that an individual or organisation has written in with relevant information of which the licensing authority

[Mr. MacGregor]

was unaware. The authority would not only have the power to consider the information, but would be positively irresponsible if it did not do so. Indeed, if the authority refused to consider it, an objector with sufficient interest would have grounds for seeking a judicial review of the authority's decision. The court might then find that the authority had acted unreasonably.

The legal position is, therefore, rather stronger than the bald provisions of the Bill seem to imply. There is virtually a duty and a sanction to ensure that the licensing authority considers well-founded objections. Why, then, do I not accept the amendment? There are many difficulties.

First, the amendment talks only about objections. In the context of the sort of controversial applications over which objections may arise, it is possible that other interests would express support for the application. An evenhanded provision would have required any well-founded view to be required. Secondly, the hon. Gentleman referred to schedule 3, but it gives certain rights to make representations after a licence has been issued, whereas the amendment talks about representations before a licence is issued.

Moreover, one often wants to deal with these matters speedily. To have a complex representational system, which would have to go beyond what is in the amendment, could delay many applications. As the hon. Gentleman knows, we have scientific and other advisers who advise us on these licences.

Finally, the Dumping at Sea Act 1974 has been on the statute book for 11 years. The absence of a provision on public representation has not been raised until now, nor was it commented on during consultations on the Bill. In Committee I was asked whether there was any evidence that the lack of such a provision had caused problems. I have examined that carefully and I have never received a complaint or an objection. Therefore, the area does not seem to be creating problems.

I am grateful for the short debate, and I hope that I have demonstrated that we are able to listen to objections, just as we can listen to other representations on an application.

Dr. David Clark: I am considerably reassured by the Minister's explanation. We accept his assurance that there is a duty on the licensing authority to take into account other viewpoints and, therefore, I beg to ask leave to withdraw the amendment.

Amendment, by leave, withdrawn.

Mr. MacGregor: I beg to move amendment No. 18, in page 9, line 19 at end insert—

'(1A) Without prejudice to the generality of subsection (1) above, where it appears to a licensing authority that an applicant for a licence has applied for the licence with a view to the disposal of the substances or articles to which it would relate, the authority, in determining whether to issue a licence, shall have regard to the practical availability of any alternative methods of dealing with them.'.

The amendment places a duty on the licensing authority to consider the practical availability of alternatives to dumping. The key word is "practical", which also featured in the Opposition amendment and the dumping conventions, to which I shall refer shortly. The end result is that the authority will look at practical alternatives—it will not have regard to theoretical ones. I could have given several examples, but, as the hour is late, I shall give only one, which relates to dredgings. For the most part, these are marine sediments and there is no practical alternative to the sea route.

The hon. Members for South Shields (Dr. Clark) and Pontypridd (Mr. John) will recognise that the amendment is a slightly changed version of one which they tabled in Committee, and which I undertook to consider. As I explained then, the duty to consider alternative means of disposal, treatment or elimination is a requirement under the conventions, and, as such, it is a factor that we always take into account where it is relevant, but I am happy to see it in the Bill.

In redrafting the hon. Gentlemen's amendment we have spelt out the circumstances where it will be relevant—when the purpose of the deposit is disposal. That is the extent of the convention's control, but we license deposits that are not made for disposal, such as piers or breakwaters. For those operations, alternatives are not relevant. The original amendment said, "where appropriate", but we have been a little more specific. I hope the hon. Gentleman will agree that this new, slightly improved version meets the point that the Opposition made in Committee.

The amendment strikes the right balance. There is now a duty, not just a power, to consider alternatives. We accept that it is sensible, but the licensing authority will have to regard to what is practical. This should help to ensure that waste disposal decisions take full account of the environment as a whole.

Dr. David Clark: I welcome the amendment, which will be a useful weapon in our armoury for the best practical environmental option approach that we are trying to follow with regard to sea dumping. The amendment will be much more important than may be suggested by the time that we have allocated to it this evening. I have already mentioned the fact that, in the eyes of others, Britain treats its surrounding seas differently from them. Often, we do so on the grounds of custom and ease. Customs must change with technology and science. Ease must be changed by considering alternative means of disposal.

The amendment, which states that the licensing authority

"shall have regard to the practical availability of any alternative methods of dealing with them",

is a major step forward in changing our approach to the disposal of waste at sea and, in that sense, I welcome it.

Amendment agreed to.

Clause 11

POWERS OF OFFICERS

Amendment made: No. 19, in page 13, line 20 after 'sea', insert 'or under the sea-bed'. *[Mrs. Fenner.]*

Clause 13

DUTY OF LICENSING AUTHORITY TO KEEP REGISTER OF LICENCES

Amendment made: No. 20, in page 14, line 6 leave out 'or(e)' and insert '(cc), (e) or (ee)'. *[Mrs. Fenner.]*

Further consideration of the Bill adjourned.—*[Mr. Peter Lloyd.]*

To be further considered tomorrow.

BUSINESS OF THE HOUSE

Ordered,

That, at the sitting on Tuesday 11th June, Standing Order No. 3 (Exempted business) shall apply to the Motion in the name of Mr. Secretary Hurd relating to the draft Historic Churches (Northern Ireland) Order 1985 with the substitution of half-past Twelve o'clock or two and a half hours after it has been entered upon whichever is the later, for the provisions in paragraph 1*(b)* of the Standing Order.—[*Mr. Peter Lloyd.*]

Belgian Sanitaryware

Motion made, and Question proposed, That this House do now adjourn.—[*Mr. Peter Lloyd.*]

10.13 pm

Mrs. Ann Winterton (Congleton): When the United Kingdom joined the European Community, it did so in a spirit of support for the principle of free trade. That principle continues to be a fundamental part of the philosophy of the Conservative party and of the Government, which is exactly as it should be. However, in some areas, the principle is being exploited by our Community partners. There are numerous examples of such exploitation which leave British firms at a great disadvantage compared with their European competitors, simply because Britain obeys the rules and the spirit of our free trade agreements whereas others in Europe do not operate with the same honesty and openness.

One example of such an imbalance in the environment and level of support between a British producer and its European competitors is in sanitaryware. This has been drawn to my attention by the firm Twyfords, which employs about 750 people in Alsager in my constituency, and a further 1,100 people, many of them locally in Stoke-on-Trent and its surrounding areas. I am delighted to see in their places tonight my hon. Friend the Member for Mid-Staffordshire (Mr. Heddle), who has done much to forward the case of the industry recently, and my hon. Friend the Member for Macclesfield (Mr. Winterton), who has supported the industry since he came to the House some time ago.

The name of Twyfords has come to be associated with a British-made product of high quality which is so much is demand that between 25 and 30 per cent. of the firm's products are exported, thereby making a major contribution to our balance of trade. Twyfords is one of the largest United Kingdom producers of sanitaryware, and one of the few manufacturing firms that can boast that virtually all of its raw materials are of domestic origin.

The firm is obviously a major customer for the British clay industry, as well as being a major consumer of gas and coal. In addition, it is a major source of work for the glaze manufacturing industry. In short, Twyfords is a firm producing a high quality product using domestic materials, exporting many of its finished goods, employing many people and thereby making a major contribution to our economy.

The firm is competitive and has to compete very effectively to survive in the world-renowned British sanitaryware market. Therefore, it is essential that the spirit of competitiveness is preserved on a fair and open basis. However, there is a major threat to the free trade environment within the industry. The threat comes from Belgian producers, notably the firm Boch SA, now reconstituted as Noviboch.

Figures show that imports of sanitaryware from Belgium have risen from 92 tonnes in 1979 to 2,300 tonnes last year. That is a staggering increase in value from £88,700 in 1979 to £2·9 million. Such figures should cause us to look into the issue. In few sectors have imports from one country increased 25-fold in volume in such a short period.

In the light of these worrying figures, the British ceramic sanitaryware industry viewed with caution the

[Mrs. Ann Winterton]

taking of a stake in the firm of Boch SA by the Belgian Government. This caution was shared by the European Commission in 1982, when it recorded:

"The Commission considers that the taking by the Belgium Government of a capital holding valued at 475 million Belgian francs is likely to impair the conditions of trade between the Member States to an extent contrary to the common interests, in view of the difficult situation obtaining in that industry in the Community."

The Commission invited comments on that matter, and following representations made by the United Kingdom industry with assistance from Mr. Robert Moreland, then a Member of the European Parliament, the Commission reached the decision in February 1983 that

"aid granted by the Belgium Government to a firm manufacturing ceramic sanitaryware is incompatible with the Common Market and must therefore be withdrawn."

The firm referred to was Bock SA of La Louviere. The firm has been making substantial losses for several years, and massive amounts were owed to the Belgian Government for social security payments.

Despite that action by the European Commission, the Belgian Government continued to play a major role in subsidising the costs of Boch SA, to the extent that imports of Belgian sanitaryware nearly doubled between 1982 and 1983. In a letter dated 22 October 1983, Commissioner Andriessen accepted that, contrary to the decisions and rulings of the Commission,

"From publications in the Official Journal of Belgium the Commission has learned that the Belgian authorities have, nevertheless, the intention to grant further aid to the firm of Boch."

As a result of this blatant flouting of the Commission's decision, the Commissioner agreed that the case should be referred to the European Court of Justice. Despite this surge in imports of Belgian sanitaryware, my right hon. Friend the Minister for Trade declined requests that an emergency quota should be introduced to limit the damage done to the United Kingdom industry until such time as the situation was resolved through the court.

Still further capital for Boch was then underwritten by the Belgian authorities in June 1984, despite the proceedings being taken through the court. The sum involved this time was a further 330 million francs. Of that sum, 104 million francs was released to the firm immediately, of which 44 million francs was to cover the running costs of the company until the end of December last year and 60 million francs to cover the costs of reorganisation in the sanitaryware division. A further 20 million francs went towards a feasibility study related to the work force of the firm, and a similar sum went on the promotion of tableware with a view to diversification. The final 191 million francs was used to meet existing debts.

It is seldom in the rather sorry history of our affairs in Europe that such blatant advantage is taken of Britain's free trade commitment by her competitors and that no action is taken that will realistically and speedily bring to an end such a protectionist practice which jeopardises British trade and British jobs.

In January of this year Boch SA went into liquidation, at a time which was blatantly coincidental with the first date set for the hearing before the European Court and which led to a delay in proceedings until 23 May. A meeting with representatives of the United Kingdom industry on 29 March still resulted in no assurance that any action would be taken by the British Government to give any protection to our domestic manufacturers against such unfair practices.

Our domestic industry, let us be in no doubt, is reeling under this blow from Belgium, and urgent action is necessary immediately. Despite its liquidation in January of this year, the firm of Boch SA was resurrected by the injection of a further £5 million of state aid and is now called Novi Boch.

The delay in court proceedings in Europe has allowed Novi Boch to become fully operational and to cloud the legality of its formation out of Boch SA. It is expected that products from the new firm will be fully available throughout the coming year and that the United Kingdom industry will therefore face still further increases in subsidised imports. The adverse effect of this upon our domestic producers, upon firms such as Twyford, will be very serious and possibly devastating.

The court's recent decision to adjourn the case for still longer leaves our industry under severe attack. I consider that we have not only a right but a duty to take action to prevent this undisguised attack upon our markets by an unfair competitor.

The case has been discussed by Ministers and by Members of this House and of the European Parliament for several years. It has been categorically ruled by the European Commission that the activities of the Belgian Government are in direct contravention of their treaty obligations. But the European Court has continually postponed deliberation of the continued breaches of free trade agreements.

If the court is to refuse to take any real action in this way, we have no alternative but to take unilateral action of our own. I am fully aware that in setting up even temporary trade quotas against imports of Belgian sanitaryware we set precedents which may be followed by other nations. However, I do not accept that we have the right to let British manufacturers and those who depend on them for work to be sacrificed upon the altar of free trade dogma.

The European Commission has shown one that it is a toothless and dumb watchdog of our free trade agreements. The European Court has shown that it is not able to deal quickly or effectively with such blatant transgressions of the principles upon which the European Community is founded. We have no alternative but to make our own stand on this issue and to assert in a forthright manner the interests of our nation and industry. Therefore, I ask my hon. Friend the Under-Secretary of State for Trade and Industry to take positive action soon. He should put maximum pressure upon the European Commission to get the case before the court as soon as possible. I stress once again that positive action must be taken soon to prevent further deterioration.

10.25 pm

The Parliamentary Under-Secretary of State for Trade and Industry (Mr. David Trippier): I congratulate my hon. Friend the Member for Congleton (Mrs. Winterton) upon her initiative in raising this important matter. I am pleased to pay a warm tribute to her for her tenacious stand upon this important subject. Her excellent speech was characteristic of the diligence that she applies to all matters which affect her constituents, and my reply gives me the opportunity to say what the Government have already said direct to the industry: that

justified cause for complaint about imports of subsidised ceramic sanitaryware from Belgium. There is nothing between us on that.

Perhaps I might begin with a brief review of the history, as known to us. We are talking abut one firm, Boch, rather than the entire Belgian ceramic sanitaryware industry. A substantially autonomous Belgian regional authority, not the Belgian Government as such, has repeatedly granted aid to Boch by way of subscriptions of share capital. It has done so without securing clearance from the Commission in advance, as required by the Treaty of Rome. The Commission has opened the treaty procedure for clearing state aids, the so-called article 93(2) procedure, no fewer than three times against successive tranches of this aid. It has reached formal adverse decisions under the first two procedures. In each instance it has required the aid to be withdrawn.

Belgium has complied with neither decision. In the former instance, in February 1984 the Commission instituted proceedings before the European Court of Justice against Belgium for failing to comply with its decision. That case has yet to be heard. I shall return to that point later. In the latter instance, Belgium has just instituted proceedings before the European court against the European Commission to have the Commission's decision declared void. The Commission has not yet taken a decision on the third article 93(2) procedure.

Boch was put into liquidation earlier this year, as my hon. Friend has rightly said, but a new company, Noviboch, was set up, with yet more state aid, to take over Boch's ceramic sanitaryware business. Our expectation is that the Commission will open a fourth article 93(2) procedure in respect of that subscription of capital. While this has been going on, imports from Belgium have indeed, as my my hon. Friend said, risen many fold—twice as fast as imports from the rest of the Community. As a result, British manufacturers have had to reduce prices markedly.

We believe that our industry can rightly complain, first, that aid has repeatedly been granted without the prior clearance required by the treaty; secondly, that the Commission's adverse decisions have not been respected; and, thirdly, that in consequence it has had to contend, for what is now a substantial period, with the deleterious effects of subsidised imports from Belgium.

It is a matter of great regret to us all that the Commission has not acted more quickly as well as more effectively and that the hearing of the Commission's case against Belgium before the European court has not yet taken place, but as a result of the debate I am prepared to press the Commission to get the case heard as quickly as possible.

This sorry saga also gives us cause for concern on wider grounds. There is no doubt that some state aids are justified. Like other member states, we assist our industry in a variety of ways. The treaty recognises and makes provision for this. However, it is equally clear that state aids can distort competition and disrupt markets.

The concept of a genuinely integrated internal market based on fair competition is central to the Community. Its fuller realisation is a major national priority, and I am confident that my hon. Friend shares that view. Therefore, it is right and very much in our interests that the treaty should provide a system whereby the Commission vets state aids in advance and that the Commission should discharge that responsibility firmly, even-handedly and effectively. It must also be a cause of concern to us if that system is seen not to be working.

Reverting to the immediate issue, my hon. Friend is naturally interested in what the Government have done and in what they intend to do. We are concerned with trade within the Community. Therefore, the question of anti-dumping legislation does not arise, any more than it does for trade between England and Scotland. Nor would it be helpful to think of countervailing action outside the terms of the treaty. I can tell my hon. Friend what would happen if we adopted that course; the relevant part of the treaty is an integral part of our national law and our action could be challenged and struck down in our own courts; the outcome would be that the Commission would be pursuing us, rather than the Belgians, for taking the law into our own hands.

It is the state aid provisions of the treaty to which we need to turn and we must remember that, as I have said, responsibility for enforcement in this area rests with the Commission.

I have spoken of the various article 93(2) procedures that the Commission has opened. On each occasion, we have exercised the right that we share with all interested parties—including our industry—to make representations to the Commission about the state aid in question. We have made quite clear our concern about the effect of this aid on competition, on trade within the Community, and, particularly, on our industry.

My right hon. Friend the Minister for Trade has raised the issue with his Belgian colleague. My hon. Friend will understand if I say that the Belgian authorities can be in no doubt about our views.

My right hon. Friend has also raised the issue on several occasions with Commissioner Sutherland, who has particular responsibility within the Commission for these matters. Mr. Sutherland is equally clear about our views. I think that I can also fairly say that he fully understands and shares our concern, and that he is determined to do all that he can to secure effective Commission action. We shall, of course, continue to take similar action whenever appropriate and as the opportunity arises. However, we take such a serious view of this case that we are anxious to go further where we can.

My hon. Friend will recall my saying that the Belgians had instituted proceedings before the European court against the Commission to have its second adverse decision declared void. In normal circumstances, we would take the view that it was for the Commission to defend its decision, and that we should not involve ourselves. But these are not normal circumstances. On this occasion we are taking a different stance. I can tell my hon. Friend that, last week, we applied to the European court to intervene in that case in support of the Commission.

Our objective in taking that course of action is to let it be seen publicly within the Community that the Belgian actions are not acceptable to us and that British industry should not be damaged by illegally subsidised imports from Boch.

I am grateful to my hon. Friend for bringing this important matter to the attention of the House.

Mr. John Heddle (Mid-Staffordshire): On behalf of my constituents, I am glad to be able to support the case made by my hon. Friend the Member for Congleton (Mrs.

[Mr. John Heddle]

Winterton). I was pleased to hear from the Minister that, after several attempts by colleagues in the European Parliament and hon. Friends in this House, legal action is at last to be initiated in the Community.

Bearing in mind that Boch in the United Kingdom went into voluntary liquidation 17 or 18 months ago, when does my hon. Friend the Under-Secretary expect the legal action to be taken? The news will encourage my constituents and those of my hon. Friend the Member for Congleton who are suffering from the decision by the Belgian authorities.

Mr. Trippier: I am grateful for what my hon. Friend the Member for Mid-Staffordshire (Mr. Heddle) said. I understand that court proceedings would have been held later this year. I am suggesting that that is too long to wait. As a result of what my hon. Friend the Member for Congleton has said, I am prepared to intervene this week as, I am sure, will be my right hon. Friend the Minister for Trade, in the hope of bringing these proceedings speedily to the court's attention. I hope that the matter will be dealt with effectively.

Question put and agreed to.

Adjourned accordingly at twenty five minutes to Eleven o'clock.

House of Commons

Tuesday 11 June 1985

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PRIVATE BUSINESS

BIRMINGHAM CITY COUNCIL BILL

Order for consideration read.
To be considered tomorrow.

KING'S COLLEGE LONDON BILL [*Lords*]

As amended, considered; to be read the Third time.

BRITISH RAILWAYS (TROWSE BRIDGE) BILL [*Lords*]

Order for Second Reading read.
To be read a Second time tomorrow.

Oral Answers to Questions

EMPLOYMENT

Crown Immunity

1. **Mr. Ashley** asked the Secretary of State for Employment what representations he has received about removing Crown immunity from workplaces covered by the Health and Safety at Work etc. Act; and what consideration he has given to the matter.

The Parliamentary Under-Secretary of State for Employment (Mr. Peter Bottomley): The General Municipal, Boilermakers and Allied Trades Union has sent my right hon. Friend a report on this subject. This followed our meeting with the trade union, the right hon. Member and other right hon. and hon. Members on 17 April. We have asked the Health and Safety Commission for its considered view of the case set out in the report.

Mr. Ashley: I welcome that request to the Health and Safety Commission. However, is the Minister aware that Crown immunity protects from criminal prosecution so-called Crown institutions, such as hospitals, when they break the law under the Health and Safety Acts and that this is gravely damaging to patients? Can he give one good reason why a hospital which food-poisons its patients should be immune from prosecution when a hotel which food-poisons its visitors can be prosecuted?

Mr. Bottomley: As the right hon. Gentleman knows, the food hygiene regulations are a matter for my right hon. Friend the Secretary of State for Social Services. I cannot give him a good reason, but I can give him a true reason. It took two years, from 1977 to 1979, for the Labour Government to take no action. I therefore believe that we are pursuing the right course in asking the commission for its advice, and we shall then consider the advice that it gives.

Mr. Gregory: Does my hon. Friend realise that hon. Members on both sides of the House feel that inactivity in this regard is quite shameful? Frankly, the deaths from food poisoning at the Stanley Royd hospital in Wakefield cannot be tolerated. At present, patients going into hospital face possible danger. However, there is no question of environmental health officers being entitled to go into hospitals—they go in by invitation. I therefore urge my hon. Friend seriously to hold talks so that Crown immunity is stripped away to ensure that patients enjoy the same privileges as they do if they dine in a hotel or restaurant.

Mr. Bottomley: As I have said, we shall give serious consideration to the advice for which we have asked. Although there are differences between Crown and non-Crown premises, there is a shadow procedure for Crown notices similar to statutory notices, which ought to have a great effect.

Disabled Persons

2. **Mrs. Clwyd** asked the Secretary of State for Employment if he is satisfied with the operation of the quota system for the employment of disabled people.

The Parliamentary Under-Secretary of State for Employment (Mr. Alan Clark): The Government have been concerned for some time about the working of the quota scheme. I have recently received from the Manpower Services Commission a report on the scheme by a working group representing all interested parties. I am now considering its advice and recommendations.

Mrs. Clwyd: As only 30 per cent. of employers reach the 3 per cent. quota, will the Minister use the code of practice on the employment of disabled people as a means of strengthening the quota? If the code of practice does not work, will he give statutory backing to it?

Mr. Clark: As the House knows, the hon. Lady has long and valuable experience of this subject. From our evidence to the all-party disablement group six weeks ago, she will be aware that the principal difficulty is the reluctance of disabled people to register. However, the DROs in the employment service are doing their best to persuade employers the advantages of employing disabled people. I am glad to say that this is reflected in the figures for placings, which have gone up from 69,000 to 71,000 against an extremely disappointing general employment background. We hope that this trend will continue. If it does not, and in the light of research which the special MSC report recommends, we shall consider what further action to take.

Mr. Holt: I am delighted that my hon. Friend is at last beginning to tackle the problem. What does he intend to do about the certification of exemption, which is all too readily available to employers? Does he agree that the regulations for exemptions should be much stricter and stiffer?

Mr. Clark: I appreciate my hon. Friend's point. The reluctance of disabled people to register means that only 32,000 registered disabled people are eligible and available for the quota scheme, so, even if every one of them were taken into employment, the total would still be less than half that required by the Act.

Mr. Boyes: Does the Minister agree that Government Departments could set a good example by fulfilling the

quota themselves? Is he aware that data made available earlier this year show that only five out of 44 Government Departments reached the 3 per cent. quota, and that, even more disgracefully, the DHSS, which ought to be well above the quota, accounts for only 1·5 per cent.? Will the Minister ask his colleagues to do something about that?

Mr. Clark: The hon. Gentleman is perfectly right. The Government should set an example. As I have explained, the sheer mathematics of the problem makes it virtually impossible to comply, but I take his point about the poor figures for the majority of Government Departments. I have written to them once about this and I shall be writing again. I am glad to say that by Department has the best record of all with a figure of 2·5 per cent.

Trade Unions (Postal Voting)

3. **Mr. Meadowcroft** asked the Secretary of State for Employment if he will now introduce legislation to make compulsory the use of postal voting in ballots for trade union political funds.

The Secretary of State for Employment (Mr. Tom King): No, Sir.

Mr. Meadowcroft: If the Secretary of State will not go so far as legislation, will he at least authorise the certification officer to grant exemption from postal balloting based on the case put to him by individual unions?

Mr. King: The rules have been agreed by the House and the ballots are now taking place. One has been a fully postal ballot; two have been conducted on a part workplace and part postal basis. I am encouraged by reports of the efforts being made to conduct the ballots in the appropriate way. The House will remember this in the future and will expect the same standards to be observed by all unions.

Mr. Cockeram: Does my right hon. Friend accept that irregular and corrupt practices regularly take place in union elections, not just in relation to political funds, but in the election of union officers and when strike decisions are taken at mass meetings? Does he agree that it is time those practices were brought to a halt in the interests of the average union member?

Mr. King: My hon. Friend helpfully supported legislation which has effectively outlawed mass meetings and removed immunity from them. We welcome the procedure increasingly being followed in any question of strike or industrial action whereby there must be a secret ballot if immunity is to be retained. That is a most important and successful reform.

Mr. Golding: Is the right hon. Gentleman aware that the ballots on political funds that have taken place so far have been extremely successful, not just in their results, but in the way in which they have been conducted? Is he further aware that more discussion and interest is shown by trade union members in workplace ballots than in postal ballots, as the turnout figures show?

Mr. King: I confirm that my information is that in the one fully postal ballot the turnout was 20 per cent., whereas in the two part workplace and part postal ballots the figures were 57 per cent. and 67 per cent. Despite all the opposition from Labour Members about monstrous and impossible impositions on trade unions, I note and welcome the observance of our legislation by the unions. We shall note the efforts made to ensure fair balloting, and we shall expect that to be the practice in all future ballots in the interests of union members.

Mr. Merchant: Does my right hon. Friend agree that far too much money is donated to and by trade unions without ballots and proper consultation? Was that not illustrated last weekend by the unfortunate donation of £16,000 by the rock star, Bruce Springsteen, to support miners who were sacked during the strike, which probably also illustrates a lack of proper consideration and advice?

Mr. King: With regard to the legislation and the steps that are being taken, I welcome the important development that if a ballot for political funds is conducted, and is successful, it is the duty of that union to notify each of its members under the 1930 legislation, which was repeated in the 1984 Act, of their right to contract out of that political fund. If the ballots are to be correctly conducted, the House would expect that step to be implemented.

Mr. Skinner: Is the Secretary of State aware that we do not want lectures from Conservative Members of Parliament, who get money from companies which are members of the CBI—which would not know a ballot if it stared them in the face—and that we do not need hypocrisy from the Liberal party, which has just received the biggest-ever political donation of £188,000 from the British School of Motoring and for which no ballot was conducted? Would it not be a good idea if everyone who has paid through the nose for lessons at the British School of Motoring were given the chance of a ballot to decide whether the Liberal party should have received that money? Is it not the height of hypocrisy?

Mr. King: I am surprised that the hon. Gentleman has still not learnt the important lesson. As a Member sponsored by a union that must bitterly regret the fact that it did not dare to consult its members before embarking on such a disastrous strike, I should have thought that even he might have begun to understand the merits of ballots.

Mr. Nicholls: Does my right hon. Friend agree that postal balloting must be evaluated in the much wider context of an improvement in the general industrial climate? Therefore, will he join me in welcoming the recent decision by British Rail to end the closed shop?

Mr. King: I noted that announcement. My impression was that the closed shop in British Rail ended about two years ago, and I am surprised at the excitement about the announcement. Following our legislation, the British Gas Corporation, the Post Office, British Telecommunications and all the water authorities have notified all their unions that the closed shop is ended.

Mr. Prescott: Will the Secretary of State make it clear that he rejects the scurrilous charges that are made about irregularities in ballots without the production of evidence? If no such evidence is available, we should treat those charges with the contempt that they deserve. Does the Secretary of State accept, after three political fund ballots, that a combination of workplace and postal ballots produces twice as many participants as does a pure postal ballot? Will he make that clear to the Prime Minister, who is considering new legislation for the trade unions in pursuit of her vendetta against them?

Mr. King: It is incredible that, so recently after the serious events in the Transport and General Workers Union, the hon. Gentleman can allege that there are no malpractices in trade union elections. If anything could clearly underline the importance of our legislation and of the emphasis that we have given to fair and secret ballots, those recent events have done so.

Youth Training Scheme

4. **Mr. Sheerman** asked the Secretary of State for Employment when he will next meet the chairman of the Manpower Services Commission to discuss the second year of the youth training scheme.

The Minister of State, Department of Employment (Mr. Peter Morrison): My right hon. Friend and I frequently discuss the progress and development of the youth training scheme with the chairman of the Manpower Services Commission, and did so yesterday.

Mr. Sheerman: At one of his meetings, will the Minister of State make sure that he gives a very strong lead on the second year of the youth training scheme? If the second year of YTS is not planned as a proper foundation stone for a real training programme for our young people, YTS and all the Government's temporary training measures will fall totally into disrepute. We must have a foundation stone for real training in the 21st century, not cheap job experience.

Mr. Morrison: I agree entirely with the hon. Gentleman. It is absolutely crucial that the second year of the youth training scheme should be real training, with qualifications at the end of it, so I am delighted to have his support. I can assure the hon. Gentleman that that is precisely what my right hon. Friend and I and the chairman of the Manpower Services Commission are saying.

Mr. Lawler: Following the launch of the Genesis programme, when my hon. Friend sees the chairman of the Manpower Services Commission will he discuss how greater advice and encouragement can be given to trainees to use their skills to set up their own businesses?

Mr. Morrison: My hon. Friend will be pleased to hear that the enterprise courses are part of the youth training scheme. I agree that many trainees should consider setting up in business on their own. In fact, that has already happened.

Labour Statistics

5. **Mr. Yeo** asked the Secretary of State for Employment if he will arrange for equal prominence to be given by his Department in the publication of numbers of people employed at the same time as the release of statistics showing the numbers unemployed.

Mr. Tom King: We seek to give equal emphasis to employment as well as to unemployment, since clearly both statistical series are important to obtain a clear perspective of what is happening in the labour market. The figures are released at different times in the month as soon as they are available.

Mr. Yeo: I share the concern that is felt by all hon. Members about unemployment. Does my right hon. Friend agree that if we were to succeed in securing wider publicity about the number of people employed that would not only recognise the steps that the Government have already taken to create more jobs, but offer some hope in an otherwise rather depressing scene for those who are still unemployed?

Mr. King: I understand my hon. Friend's question. I have been seeking to emphasise that point. Hon. Members know that during the past 18 months there has been a rapid increase in the working population. That has made the task not only of providing more jobs but of reducing unemployment more demanding.

Mr. Leighton: In view of those bullish remarks, does the Secretary of State think that by the time of the next general election there might be a return to the same number of people in employment as there were when the Labour Government left office? If that is too optimistic, does he think that there might be a return to within 1 million of that figure?

Mr. King: The challenge that is being faced not only in this country but in every other country of the Western world is very tough. I have never concealed that fact and I have never sought to put forecasts before the House. I take encouragement from the rapid increase in the number of new jobs being created and from the fact that the most recent forecast of the Confederation of British Industry is the most optimistic for many years. I hope that at last there will be the scale of improvement that every hon. Member wishes to see.

Mr. Rowe: Does my right hon. Friend agree that there are parts of the country—for example, not far from my own — where the number of jobs available is much greater than the number of people applying for them? Does he also agree that one of the disincentives to people seeking employment in those areas is that it is too easy, for young people in particular, to move into employment which is some kind of cul-de-sac? Can he give an assurance that he is taking that point on board?

Mr. King: There is no doubt that the overall figures show a considerable improvement in the number of vacancies, but I am the first to accept that they are not evenly distributed around the country. In many areas there are frequent complants about skill shortages and the difficulty of getting labour for jobs, but that at least shows that there is an improvement. We hope that the improvement in the economy will help to reinforce it.

Mr. Foot: Since the right hon. Gentleman is so interested in the employment figures as opposed to the unemployment figures, will he now answer the question of my hon. Friend the Member for Newham, North-East (Mr. Leighton) and say what were the employment figures in 1979 and what are the employment figures now.

Mr. King: The figures are known to the House. There is a later question on this subject. Between 1979 and March 1983 there was a net fall of about 1·8 million in the employed labour force. Since March 1983 there has been an increase of about 600,000 in the employed labour force.

Mr. Heathcoat-Amory: Is my right hon. Friend aware that the Liverpool research group estimates that the black economy is now worth about £45 million a year? Does he think that people registered as unemployed are contributing towards that vast sum? If so, what can be done about it?

Mr. King: I am under no illusions. It is a substantial figure. The chairman of the Inland Revenue has on occasions tried to make an estimate of the scale of the black economy. I have no doubt that it is substantial and that some unemployed people are taking advantage of the situation. However, I am well aware that there are many parts of the country with substantial problems of unemployment which are not met by explanations of that kind.

Mr. Penhaligon: Is the right hon. Gentleman aware that the figures would be more realistic and would give us a better ability to interpret the situation if they included whole-time equivalents?

Mr. King: There is obviously something in that. I have made it clear that there are a number of part-time jobs. However, some hon. Members have an illusion that the increase in the employed labour force, to which I have referred, is entirely part-time. I assure the hon. Gentleman that there is an increase in full-time male employment, in full-time female employment, in self-employment and in part-time employment.

Mr. Lilley: Does my right hon. Friend agree that there is growing interest in the employment figures, for two reasons: first, because the CBI has forecast that by the end of this year there will be 1 million more people in work than there were at the last general election; and, secondly, because of the embarrassment that that will cause to the alliance parties, which, in their manifesto at the last election, said that the biggest increase that could be expected over the same period would be far less than one million jobs - - about 650,000 — if their policies were pursued?

Mr. King: I do not know how much of an embarrassment it would be. I suppose it would depend on how many people actually read their manifesto. I was not aware of the point as stated by my hon. Friend, but I note what he says. Certainly there is considerable optimism about the creation of more jobs. I do not conceal from the House the challenge that we have to face, with the substantial increase in the working population. We may be meeting that challenge better than other countries in Europe, but not well enough to achieve a real reduction in unemployment.

6. **Mr. Robert Hughes** asked the Secretary of State for Employment what are the numbers of people who have been unemployed for over 12 months; and what this is as a percentage of those registered unemployed.

Mr. Peter Morrison: On 11 April 1985, the latest date for which figures are available, the number of claimants in the United Kingdom who had been unemployed for over 12 months was 1,334,000—41 per cent. of the total.

Mr. Hughes: Does the Minister recollect that in April 1980, 334,000 people, or 23 per cent. of the total, had been unemployed for more than 52 weeks? Is he aware that eminently respectable people, such as Hywel Jones, director of the Henley Centre for Forecasting, have estimated that unemployment will continue to rise year by year until the end of the century? Will the hon. Gentleman look at the facts of the case rather than at dogmatism and produce a policy for employment?

Mr. Morrison: The hon. Gentleman should recall that at the time to which he refers the community enterprise programme was in existence and had 30,000 places. Since then, under the community programme for the long-term unemployed, that has been expanded to 130,000 places. Now, with the Chancellor's announcement in the Budget, it has been increased to 230,000 places. That is a practical example of what the Government are doing and how we care for the long-term unemployed.

Mr. Forman: As the most notable aspect of the plight of the long-term unemployed is their lack of any formal or educational qualifications, will my hon. Friend pay close attention in any extension of the community programme to the training content of the programme and the prospects for remedial education?

Mr. Morrison: That is precisely what we are doing. As my hon. Friend is probably aware, my right hon. Friend the Secretary of State has announced that about 50,000 places in the programme will have a training element.

Mr. Evans: Does the Minister agree with the Prime Minister's weekend statement that there will still be about 3 million people unemployed at the time of the next general election? Do not the figures mean that the overwhelming majority of over-50s who are currently classified as long-term unemployed have no reasonable chance of a full-time job so long as the Conservatives remain in office?

Mr. Morrison: The hon. Gentleman has probably seen the outturn statistics for the community programme.

Ms. Clare Short: What do they show?

Mr. Morrison: The hon. Lady is right to ask. They show that one in three get a job and that their opportunity of getting a job is greatly enhanced as a result of the community programme, which, as I explained, has been expanded substantially by the Chancellor's Budget proposals.

Mr. Cyril Smith: The Minister has told us that there are now 1,200,000 fewer people employed than there were in 1979. How many of those who have been unemployed for more than 12 months are young people who, training schemes apart, have never had a job?

Mr. Morrison: I cannot cite the precise statistics. The hon. Gentleman has rightly put his finger on a key area. Many of the 21 to 24-year olds did not have the opportunity offered by a youth training scheme. If the last Labour Government had bitten the bullet in 1978, those people would have had that opportunity. Because of that lack of action, their position has been made rather more difficult.

Young Persons (Langbaurgh)

7. **Mr Holt** asked the Secretary of State for Employment if he will make further arrangements to cater for the high unemployment rate amongst young people in the Langbaurgh region in view of the fact that the youth training scheme will not be available to all those eligible in the area.

Mr. Alan Clark: There has been no shortage of places in the Langbaurgh area under the present youth training scheme; and young people there will benefit substantially from the expansion of the scheme.

Mr. Holt: I am grateful to my hon. Friend for the reassurance that, despite the rumours in the area, there will

not be a shortfall. The major consideration is, however, about the national average of a 60 per cent. take-up of full-time employment after YTS is completed. In Langbaurgh the figure is about 20 per cent., or even less, despite the hard work of the staff. What encouragement will there be for young people to embark upon YTS for one year if their chance of obtaining full-time employment following that scheme is less than 20 per cent.?

Mr. Clark: The rumours to which my hon. Friend refers are always regrettable because they lead to a great deal of disillusionment and to uncertainty about whether it is worth going on to the scheme. I am glad that my hon. Friend welcomes the expansion of the scheme and the fact that the number of places provided for in Langbaurgh is larger than the number of projected applicants. Subsequent entry into employment must necessarily depend upon the level of economic activity where the scheme is situated. The scheme's extension to two years has been widely welcomed. The extension will give a higher level of skills and training to those participating in the scheme and will further enhance their employment prospects.

Wages Councils

9. **Mr. Lofthouse** asked the Secretary of State for Employment if he has received any further representations regarding the proposal to abolish or reform wages councils.

Mr. Peter Bottomley: Yes, Sir.

Mr. Lofthouse: Will the hon. Gentleman confirm that there is little evidence that the abolition of the wages councils will create any real jobs? Does the hon. Gentleman not think that the Government would be better occupied in creating real and lasting jobs than in destroying the wages councils, which action will remove the protection for all trained workers?

Mr. Bottomley: No, Sir. I take this opportunity to point out that the movement of wages and costs, especially unit labour costs, throughout the economy makes a very substantial difference.

Mr. Favell: Has my hon. Friend read the recent survey of members of the Institute of Directors, which showed that 54 per cent. of those interviewed would employ more people if wages councils were abolished?

Mr. Bottomley: I am delighted to hear that. Most of those members already have the opportunity of doing that because they do not all operate in wages council industries.

Mr. Merlyn Rees: Are statistics available for each travel-to-work area giving the number of people covered by wages council awards?

Mr. Bottomley: I think that the answer is no.

Mr. John Townend: Does my hon. Friend agree that, if the United States had had wages councils, it would not have been able to create 10 million new jobs during the past 10 years? *[Interruption.]*

Mr. Bottomley: I wish that the hon. Member for Birmingham, Ladywood (Ms. Short) would stop answering my questions for me. As she has rightly pointed out, the United States has a national minimum wage. It is important to start looking at the real effects of minimum wage legislation, how it operates in this country and the age groups it most affects.

Mr. Barron: Will the hon. Gentleman confirm, or deny, that his Department is thinking about attacking the minimum wages paid to people under 21 so that their wages will be about the level paid to people under youth training schemes?

Mr. Bottomley: The hon. Gentleman should pay a little attention to the motives and success of the people in the electrical contracting industry, who freely negotiated a reduction in the starting pay and raised the number taking part in traineeships by three times in 18 months. So, the simple answer to his question is no.

Mr. Nicholls: If evidence is being called for, is my hon. Friend aware of the work done by Mr. Stanley Siebert of Birmingham university, who has estimated that there are about 230,000 jobs lost for teenagers because of the minimum wage structure established by the wages councils?

Mr. Bottomley: Yes. The important thing is to put people on the bottom rungs on the ladder and ensure that more have a chance to move up the ladder.

Ms. Clare Short: Given the large number of press leaks that we saw over the weekend, will the Minister tell the House what the Cabinet decided last week—if the Secretary of State has told him? Will the Minister confirm that it means that the current consultation is something of a sham? In reply to a large number of representations it was said that the system should not be weakened in any way. Those assurances have obviously been ignored because of the Cabinet's decision to legislate in the next Session either to weaken or to abolish the wages council system.

Mr. Bottomley: The difficulty in answering the hon. Lady is that hers is the only question to which she does not give the answer. The only person to whom I offered advice wrote an article that was exactly the opposite of what I said.

Mr. Cockeram: Will my hon. Friend accept that one of the defects of wages councils is the abnormally high rate fixed for school leavers, usually 60 per cent. of the rate for an adult trained worker, and that that precludes the employment of many school leavers?

Mr. Bottomley: Yes. It is worth recognising that most school leavers, or people of school leaving age, face four choices. They can stay on at school, getting no income whatever; they can try to get one of the jobs that are available, in a wages council industry or some other industry, at a fairly high rate of pay; they can stay on in education, at a college of further education, where they get less money; or they can use the youth training schemes, where they can get training to make them better qualified for employment. It is better to make sure that the wages that they get in wages council industries are not so high as to stop most of them getting their feet on the bottom rungs of the ladder and moving upwards.

Labour Statistics

11. **Mr. Fatchett** asked the Secretary of State for Employment, on the latest available figures, what is the total number of unemployed under the age of 25 years.

Mr. Peter Morrison: On 11 April 1985 the number of unemployed claimants in the United Kingdom under 25 years of age was 1,213,000.

Mr. Fatchett: Does the Minister realise the depressing nature of that figure? Have not the Government, through their economic policies, written off a large proportion of the generation under the age of 25? When will the Government act on their behalf? What hope can there be for those people in the future if there is continuation of the same miserable policies?

Mr. Morrison: As I said in answer to a previous question, the Government have not written off the 18 to 25-year-olds. The Government have expanded the community programme to almost double its size. As the hon. Member will be aware, about half of the people on that programme are under 25.

Sir Dudley Smith: Is it not time that we had a significant drive to get more young people to take jobs in the service industries? In view of the high unemployment figures, is it not ludicrous that restaurants and hotels throughout the country are staffed almost exclusively by foreigners?

Mr. Morrison: I agree in part with what my hon. Friend said. There are many opportunities available in hotels, restaurants and the retail industry. As he will no doubt know, there are large numbers of youth training scheme places aimed at precisely those parts of the economy.

Mr. Janner: Does the Minister know that, as the end of another school year approaches, the prospects for school leavers throughout the country—certainly in my constituency in Leicester—are very bleak indeed, and that many of their school friends who left at the end of the last school year are still unable to find jobs? The youth training scheme may be admirable, but it is no substitute for a job.

Mr. Morrison: As the hon. and learned Gentleman knows well, in Leicester, as in other parts of the country, every one of this year's school leavers will have the opportunity of taking part in a quality youth training scheme. That is more than ever happened under the last Labour Administration.

Mr. Peter Bruinvels: One regrets the large number of unemployed people under the age of 25, but is my hon. Friend aware that in the city of Leicester, because of a dispute within NALGO, the community programme has not been agreed as an agency agreement with the city council, and that, therefore, 400 jobs cannot be confirmed? Will my hon. Friend arrange for the jobcentres to publicise the number of jobs going begging, numbering about 1,600 in Leicester? If those jobs were filled, it would reduce the number of unemployed and would be of help to the rest of the country.

Mr. Morrison: As my hon. Friend will know, I am aware that NALGO in Leicester has, for the moment, not approved the community programme. One must, therefore, assume that it is not worried about the long-term unemployed. At present I am looking into that matter.

12. **Mr. Haynes** asked the Secretary of State for Employment what proportion of those in employment are in full-time work; and what the proportion was in May 1979.

Mr. Alan Clark: The labour force survey conducted in the spring of 1984 found that 79 per cent. of employees regarded themselves as working full time. That compares with 82 per cent. in the survey conducted in the spring of 1979.

Mr. Haynes: Does the Minister realise that that reply and those figures mean that there is a growth in part-time employment, which means that there are fewer full-time employees? Is he further aware that those part-time employees are represented in the main by the council—I mean, by wages councils? Bearing in mind that the Government have a policy to abolish wages councils, is the Minister aware that bosses and employers will walk all over those people? It is obviously a typical Tory party policy.

Mr. Clark: I am certain that the House will feel that the hon. Gentleman's question lost nothing in the brief interval during which he rehearsed his punchline. If he examines the figures, he will see that the difference between 1979 and 1982 is small. Indeed, the proportion has hardly altered. There is nothing disreputable about part-time work. It is generally accepted that future patterns of employment in industrial societies will include an element of job-sharing and splitting, and flexible early retirement. Government policies and special employment measures are directed towards that.

Skillcentres

13. **Mr. Norman Atkinson** asked the Secretary of State for Employment how many people are currently attending skillcentres; and what were the figures for 1984 and 1983.

Mr. Peter Morrison: During April 1985, the latest month for which information is available, on average 8,800 people attended skillcentres at any one time. For April 1984 and April 1983 the numbers were about 10,600 and 12,100 respectively. Overall, however, skillcentres plan to train 35,000 adults in 1985-86 compared with 33,000 in 1984-85 and 31,000 in 1983-84.

Mr. Atkinson: Does the Minister recollect the words of the Secretary of State, who recently said that the shortage of skill in Britain represented a time bomb which, if not remedied, would blow the whole economy to pieces? Why, then, has he changed his mind and decided to keep open only two skillcentres out of all those that have been closed? The two that have been re-opened are in Twickenham and Southampton, and members of the Conservative party in those two areas knew that their centres would remain open before the Minister announced publicly the new decision.

Mr. Morrison: I recollect well what my right hon. Friend said about skill shortages. Surely the hon. Gentleman was not listening to my answer. I pointed out that in the year ahead 35,000 people would be trained in skillcentres, compared with 31,000 in 1983-84. Furthermore, thanks to the rejigged adult training strategy, 250,000 people will be trained next year, as opposed to 125,000 in the past year.

Mr. Baldry: Does my hon. Friend agree that it does not matter whether the physical building is called a skillcentre, a technical college or a training centre; what matters is the quantity, quality and cost-effectiveness of the training?

Mr. Morrison: I could not agree more with my hon. Friend. That is precisely why the adult training strategy has been adopted.

Mr. Sheerman: Will the Minister come clean and accept that the so-called re-jigging hides the fact that throughout the country short-term "cheapo" courses are being substituted for genuine year-long skills training in our skillcentres? Is it not a surprise that the two skillcentres that the Minister has saved are in Tory marginal seats? Is he aware that men and women in other areas will take that lesson hard, they having had their skill-training opportunities taken away from them?

Mr. Morrison: The decision as to which skillcentres to keep was made entirely by the chairman of the Manpower Services Commission. The hon. Gentleman will know that the leader of the CSU pleaded with the chairman of the MSC to retain the Southampton skillcentre. He will know also that it was the Labour-controlled council which guaranteed money for the Southampton centre. Those are the facts.

PRIME MINISTER

Engagements

Q1. **Mr. John Townend** asked the Prime Minister if she will list her official engagements for Tuesday 11 June.

The Prime Minister (Mrs. Margaret Thatcher): This morning I had meetings with ministerial colleagues and others. I was present at Victoria station to meet President de la Madrid of Mexico at the beginning of his state visit to this country. In addition to my duties in this House, I shall be having further meetings later today. This evening I shall be attending a state banquet given by Her Majesty the Queen in honour of President de la Madrid.

Mr. Townend: Is my right hon. Friend aware of the growing resentment in the country over the activities of the European Court of Human Rights? Is it right that a court dominated by foreign judges should dictate who enters Britain, should prevent naughty schoolchildren from being caned and should discuss the future of Myra Hindley? Is it not time that these decisions were brought back to the House and the Government? Will my right hon. Friend give notice that we shall terminate our membership and recognition of this body?

The Prime Minister: I can understand why my hon. Friend feels deeply about some of the judgments that have been given. However, we have signed that declaration and we must abide by its rules. The court held, for example, that the immigration rules applying to the admission of husbands had the legitimate aim of protecting the domestic labour market. It is worth noting that Myra Hindley has tried previously to get her case before the European Court and has failed. It was ruled inadmissible.

Mr. Steel: Will the Prime Minister join me in deploring the concentration of television interviewers and Conservative Central Office on something called the TBW factor? Does she agree that it is merely a pathetic excuse for the failures of the Government's economic and social policies?

The Prime Minister: I note that the right hon. Gentleman cannot find a more effective and more important supplementary question than that.

Lord James Douglas-Hamilton: Does my right hon. Friend agree that the victory of Barry McGuigan was a great victory and one which symbolised the capacity of the different communities in Northern Ireland to live together when they have the will to do so?

The Prime Minister: I agree with my hon. Friend and I congratulate the winner most warmly. We are all delighted at the reception that he received in both parts of Ireland.

Q2. **Mr. Evans** asked the Prime Minister if she will list her official engagements for Tuesday 11 June.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Evans: How many people will have to pay increased national insurance and pension charges if the state earnings-related pension scheme is abolished, which apparently the right hon. Lady is determined to do?

The Prime Minister: Any increases will be nothing like those that would have had to be paid had SERPS continued. There will be a certain number of increases, because SERPS will continue until the end of the century for those who are entitled to it. As the hon. Gentleman knows, the money that is paid out in pensions this year has to be met by contributions, a factor which I wish he would remember more often.

Mr. Crouch: Is my right hon. Friend aware that if she decides to intervene in the current moves to find a peace settlement in the middle east she will have the wholehearted support of the House, and no one will criticise her for visiting Cairo, Amman and other centres in that area, or suggest that she should take a holiday instead?

The Prime Minister: We cannot intervene directly, as my hon. Friend knows, but we keep closely in touch with these matters, both with the parties concerned and the United States. I have often been asked to visit Egypt and Jordan as Prime Minister, and by the time that the long recess comes it will be about time that I accepted those kind invitations.

Mr. Kinnock: The right hon. Lady gave an evasive response to the question asked by my hon. Friend the Member for St. Helens, North (Mr. Evans). Is it not the plain truth and the plain fact that every worker, whether contracted in or contracted out of SERPS, will have to pay more as a consequence of any abolition of the scheme? Why does she not come out and admit that?

The Prime Minister: As long as SERPS carries on, yes, more contributions will have to be paid to meet the liability. The right hon. Gentleman must be well aware that the contributions paid so far towards SERPS are not being accumulated to pay out SERPS but are used to pay out existing basic pensions as well as increments on former graduated pensions that have built up. The situation will be far worse under the system that he proposes. If SERPS were fully in operation for the period in which it was arranged for it to be in operation it would cost £66½ billion, compared with the £15 billion now on the same price terms.

Mr. Kinnock: The Prime Minister wants us to forget that not only did she vote for the scheme but that she endorsed it at the last general election. Setting that aside,

how does the abolition of SERPS meet the problems about pensions that are bound to be encountered? We know that contributions are going up because of the right hon. Lady's deliberate act trying to abolish SERPS. Is she now saying that there will be a real cut in pensions in 20 or 30 years' time, and that she favours that? Is the alternative that extra payments will go in extra subscriptions to private pensions, without any particular advantage for anyone now having to pay for pensions?

The Prime Minister: No, and if the right hon. Gentleman read it all carefully, he would find the answers for which he is asking. SERPS goes on, for all those entitled to it, up to the end of the century. The outgoings on SERPS have to be met by incoming contributions. As to beyond the century, the contributions that people will make to new occupational pension schemes will be accumulated and will therefore be there, saved and ready to be paid out. I remind the right hon. Gentleman that Labour's proposals for pensions alone at the last general election would have already added—*[Interruption]*—£10 a week to the national insurance contributions of the working population. The right hon. Gentleman never thinks of the working population, which has to pay for all his promises.

Mr. Kinnock: Why does the Prime Minister never want to talk about her pensions policy now or in the future? What is she trying to evade now? What does she have to hide about the future? Is she in favour of a real cut in pensions in the future simply because she will not bear the obligations, through a state scheme, that people are willing to bear?

The Prime Minister: SERPS could not be delivered, in spite of all the right hon. Gentleman's promises. At the next general election, at any time, I will stand on our record and on our proposals compared with his. He is proposing to quadruple spending on pensions in real terms over the next 50 years, but he is refraining from saying that the majority of his constituents, the working population, will have to pay for his extravagant promises.

Sir William Clark: Does my right hon. Friend agree that, when the earnings-related pension scheme was introduced, its actuarial value was far too optimistic? Does she further agree that, whereas the working population is today paying 9 per cent. of its earnings in national insurance contributions, if SERPS were not altered, some 15 per cent. of every worker's gross income would have to be paid out? The working population could not sustain such a burden.

The Prime Minister: I do not believe that the working population could sustain the burden. What is more, the figures on which SERPS was calculated took no account of the number of pensioners after the year 2010, which will now be 3 million higher than the figure taken account of in SERPS.

Mr. Hirst: Has my right hon. Friend had an opportunity to read the bizarre background to the secrets trial currently in progress at the Old Bailey? Can she assure me that when the verdict is announced——

Mr. Speaker: Order. I think that the hon. Gentleman's question may well be sub judice.

Mr. Hirst: I apologise, Mr. Speaker.

Q3. **Mr. Fatchett** asked the Prime Minister if she will list her official engagements for Tuesday 11 June.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Fatchett: Has the Prime Minister had an opportunity to read the article prepared by supporters and members of the Federation of Conservative Students, for publication in the Aston university student newspaper? The article is so outrageously offensive that it can even express pleasure at seeing black people die in the fire at Bradford City football ground. Will the Prime Minster repudiate such vile rubbish which comes fom members of her party? Will she take this opportunity to assure the House and the country that that rubbish in the Federation of Conservative Students will be cleaned out? Does she agree that the article represents a true sickness in the FCS?

The Prime Minister: Perhaps the hon. Gentleman will send me the evidence that he has to support his assertions——

Mr. Fatchett: I have sent the right hon. Lady a copy.

The Prime Minister: I do not know who prepared the alleged article. I do not know whether the alleged article, which the hon. Gentleman has sent me, was published. Perhaps he will send me supporting evidence for his contentions. If the article was published, that is disgraceful, whoever wrote it.

Q4. **Mr. Nicholls** asked the Prime Minister if she will list her official engagements for Tuesday 11 June.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Nicholls: Although the Unborn Children (Protection) Bill has now been effectively killed off, the fact remains that the House of Commons has voted overwhelmingly against experimentation on human embryos. As it was possible to deal with surrogacy in isolation, does my right hon. Friend agree that experimentation on human embryos is also a matter that could be dealt with in legislation soon? Does she further agree that, if it is true that we must wait at least two years, and probably longer, for a Government Bill, that would be unacceptable to many hon. Members and reflect grave discredit on the Government?

The Prime Minister: As my hon. Friend said, we introduced a Bill to deal with commercial surrogacy, which we felt had to be dealt with urgently. We intend to bring in a comprehensive Bill with regard to the Warnock proposals as soon as it is practicable. As my hon. Friend said, there will be a good deal of contention about the Warnock proposals and it is as well that that should be resolved before we bring forward a Bill. I am well aware of the strength of views expressed by hon. Members during debates on the Bill introduced by the right hon. Member for South Down (Mr. Powell). Indeed, I share many of those views.

Mr. Cyril Smith: Although I welcome the visit of the President of Mexico, was it really necessary for the streets of London to be snarled up for two hours? Traffic was unable to move and constituents were unable to get into the House. Is it really necessary to plan visits in this way?

The Prime Minister: The hon. Gentleman is aware that it is the habit and custom for those on a state visit to

be met at Victoria, or sometimes at Windsor, and for them to proceed through the streets of London. I think that most of the populace of London would wish that to continue.

Q5. **Mr. Robin Squire** asked the Prime Minister if she will list her official engagements for Tuesday 11 June.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Squire: In the light of my right hon. Friend's interview on Sunday, can she now produce a word that would describe an Opposition party more interested in analysing the reason for past military success than in producing a defence policy designed to avoid future military defeat?

The Prime Minister: I hope that my hon. Friend will think that I showed great restraint in not quoting the remark in full, since it has a great pedigree. In full, it would have been "stark staring bonkers."

Legal Profession Reform

3.30 pm

Mr. Austin Mitchell (Great Grimsby): I beg to move,

That leave be given to bring in a Bill to make provision for the development of a more unified legal profession by enabling solicitors, as of right to exercise rights of audience in all courts and tribunals, civil and criminal, in England and Wales; to regulate and provide for advertising of pupillages and tenancies in barristers' practices and to enable barristers to establish practices anywhere in England and Wales with direct access to those seeking legal advice and when appropriate, representation, there being no mandatory intervention of any solicitor's or barrister's clerk or any other person whatsoever; to enable barristers and solicitors to practise together in any mutually acceptable form; to enable barristers to litigate for professional fees; to enable barristers to advertise; and to abolish the rank and title of Queen's (or King's) Counsel and the two Counsel rule.

The first thing that we must do is summed up in the words

"let's kill all the lawyers",

as Dick said in Henry VI, part II. Ever moderate, and because some of my best friends are lawyers, I am not proposing to take that extreme course, but I am proposing to save the lawyers from themselves, and to save the consumer from them.

My Bill deals with three problems. The first is the ever-escalating scale of legal costs. In the BBC libel case it is estimated that of £900,000 of legal costs, £650,000 were fees. It worked out at £1,149·42 per day for QCs and £574·71p for their juniors. Secondly, the processes are slow, arcane, cumbersome and inefficient. Thirdly, the system is characterised by monopolies and restrictive practices that are at variance with the competitive ethose of the times. Too much is regulation by barristers for barristers.

Therefore, the first thing that my Bill does is give solicitors rights of audience in every court, thus ending the barristers' monopoly of the higher courts, which will be welcomed by most customers. After all, there is no point in having a Rolls-Royce when a Mini will do equally well. Most people prefer to be represented by someone who knows them, and knows their problems and their case, rather than by a total stranger who is thrust on them at the last minute, all too often on the day of the case itself. The rich can buy the barrister of their choice, but the poor get Murphy's law, and all too often Murphy himself.

The Bill will be welcomed by most solicitors. It allows those who want to specialise in advocacy to do so. Indeed, on 27 March last year, the Law Society launched a campaign to end the Bar's monopoly of advocacy. It said: "citizens should be entitled to retain the advocate of their choice and not to have to employ more lawyers than are necessary for the case."

I say, "Hear, hear," to the Law Society, for once. I am afraid that the Law Society has gone a little quiet about it probably because of the threat by barristers that conveyancing will be handed to banks and building societies unless the Law Society lays off. I have to tell the Law Society that conveyancing will go to banks and building societies anyway, and the principle of equal access to the courts is right.

Secondly, the Bill abolishes the distinction of QC, a title conferred by the Lord Chancellor in his doubtless idiosyncratic and wholly undemocratic way, behind closed doors, with no appeal. It is essentially a mark of status. As one QC wrote to congratulate a newly appointed QC:

"You'll talk the same rubbish—but now they'll listen to you."

If people are going to charge higher fees, as QCs do, it should be for quality as designated by the market place, not for status. They should not be able to charge for a junior on half fees to milch the customer at the same time.

The third and most important part of my Bill will democratise the Bar. How wrong it is that we should have a self-selecting, self-regulating elite of some 4,800 barristers whose training is shorter, more amateurish and less adequate than that for solicitors. The profession is exclusive and amateurish, and there are rich rewards. I am talking of incomes of up to £250,000 a year, and even higher. Such incomes are showered on the top, while at the bottom penury prevails. There is a struggle for survival so intense that one has to have either private means or well-placed connections to get in and survive the starvation years.

The right hon. Lady the Prime Minister has testified to what a struggle that is. I was deeply moved in her biography by Penny Junor to read what a struggle the right hon. Lady had to get into chambers, and how much prejudice there was against a woman, just as there is now prejudice against blacks, and how Sir John Senter promised her a place in his chambers and then threw her out at the end of her pupillage, together with the present Secretary of State for the Environment. It was the right hon. Gentleman's first experience of abolition.

Many are called, but few are chosen, and especially not working-class provincials. Mr. Norman Lloyd, the careers officer at Manchester university, quotes one barrister as saying:

"My advice to working class students would be to avoid the bar at all costs."

Mr. Lloyd says:

"The entry route is an obstacle route so elaborate and so bizarre that it might have been invented by the producer of It's a Knockout."

He is right. That is why my Bill regulates pupillage to ensure that it is a proper training and that it is paid. That is why it regulates tenancies to ensure that they are advertised openly, encourages the co-operative pooling of fees, as in Lord Gifford's chambers, and stops exploitation by the head of chambers.

The Bill allows barristers to set up practices wherever they please even in co-operation with solicitors—as the Royal Commission on legal services recommended—without the intervention of barristers' clerks.

Barristers' clerks have been variously described as an untrained legal mafia or as barristers' pimps. They have been described as a "unique and disturbing breed"—unfortunately I forget where that quotation comes from—who manipulate the monopoly power of barristers, all too often for their own purposes because clerks take between 5 and 10 per cent. of all fees. They can earn from £30,000 to £100,000 a year, much of it from public money. Their power must be restrained, and my Bill proposes to do so.

The Bill allows barristers to set up anywhere without the necessity of having clerks. It allows barristers to take customers without going through the intermediary of a solicitor, as they can already take cases from abroad. It is interesting to note that barristers have girded their loins and revised their practices to deal with Common Market competition, but they will not give customers in this country the same benefit. The Bill allows barristers to advertise—something that solicitors have now begun to do, with great benefit to the profession and to the public.

Most other countries have a unified legal profession, and it works well for them. It would here. I see no reason for our obsession with keeping two or even three legal taximeters ticking over, shuffling papers and people to and fro, aggregating dramatis personae in cases, and with not setting up a common training for barristers and solicitors.

It is important to note that my Bill only opens the way to unification. It allows solicitors and barristers to work together in any way that suits them and their purpose. It does not enforce a unified profession.

The Bill keeps specialisation, but it eliminates its excesses. What is most important is that it opens the gateway to change at the Bar. It ends the rigidities and inflexibilities. It paves the way for a more democratic, open and efficient profession which can adjust to the times, because this Government of barristers have made a gospel of competition.

I am not seeking to inflict the same damage on the legal profession as the Government have on manufacturing, by the misguided application of competition. I am saying that the test of restrictive practices, wherever they are, must be public interest and not the convenience of a dreadfully complacent, conservative profession.

On that test, barristers need to be brought kicking, struggling and, no doubt, pleading into the 20th century if we are to have a healthier and more open profession and a better and cheaper service to the public. We want not a closed, proud, restrictive and exclusive profession, but one which serves people and protects their rights and liberties. That is what my Bill will provide for.

3.39 pm

Mr. David Sumberg (Bury, South): I wish to oppose the Bill, but before doing so I wish to declare an interest. In a strange reversal of roles which may appeal to the hon. Member for Great Grimsby (Mr. Mitchell), I am able to say for the first time in my life that I am a solicitor briefed to appear on behalf of the Bar. Having said that, I must also say that many members of my branch of the legal profession must be surprised to see that a measure which at first glance may appear to benefit them should come from the hon. Member for Great Grimsby. After all, following his single-handed effort to break the solicitors' monopoly of conveyancing, his achievement may well be popular in certain quarters, but he is hardly the most popular toast at the annual dinner of my local Law Society.

The core and essence of the Bill is in the very first sentence, which says that solicitors should have the same rights of audience as barristers in all the courts. I freely accept that, if the House was minded to accept that part of the Bill, the other parts within it fall naturally into place. It would be quite illogical and unfair to give solicitors an equal footing with barristers in courts while at the same time imposing restrictions on barristers in relation to fee collection, partnership and access to the public.

I shall devote my main attention to that part of the Bill, except to say — en passant, as the hon. Member for Bolsover (Mr. Skinner) might also say — that the last sentence in the Bill, which calls for the abolition of the two-counsel rule, is just a tiny bit out of date, as I understand that it was abolished some years back.

There are three principal reasons why I invite the House not to extend the rights of audience which solicitors presently enjoy. First, when the last Labour Government set up a commission to examine the legal profession, they rightly framed its terms of reference to incorporate this very question. When the commission finally concluded its judgment — it had 15 members, of whom only two were barristers — its decision was very clear. Even more important than its clarity was the fact that it was helped in its deliberations by a wide process of consultation, not just with solicitors, barristers and the judiciary but with many organisations and people with connections in litigation. The commission concluded that the restriction of the rights of audience in the legal profession underpinned the profession and was in the public interest. That is why this Conservative Government accepted those recommendations.

I have heard nothing since that commission reported, and certainly nothing in the arguments of the hon. Member for Great Grimsby, which leads me to think that Parliament should now take a totally different course.

The second reason is that, paradoxically, I believe that the Bill will be detrimental to those whom it is apparently designed to assist — solicitors and members of the public. You, Mr. Speaker, may be aware of the dramatic changes that have occurred in solicitors' practices in the last few years. Those changes were well set out in a recent article in the *Financial Times*. We have seen the growth of major City of London firms which have concentrated to themselves an expertise almost exclusively in certain types of legal work. At the same time we have seen a tremendous extension of scope in the law and its practice.

All these developments have made it increasingly difficult for the average solicitor in the small and medium-sized firm to perform his vital role in his service to the community. That they are still able to do so is caused by a variety of factors. One of the main ones is that in this country there exists an independent and experienced Bar which is available to all solicitors, and hence to all clients, throughout the length and breadth of England and Wales.

The Bill would destroy that independent Bar and, in the wake of that destruction, would destroy many of the small and medium firms to which I have referred, driving their clients into the arms of the bigger firms. The vital role of the independent smaller solicitors practising in every constituency would become a thing of the past.

Finally, I ask the House to reject the Bill because I believe that it perpetuates a disturbing trend in our society — to attack, disparage and ultimately destroy excellence in our professions. No one in the House, not even the hon. Member for Great Grimsby, would dream of promoting a Bill to abolish the distinction between general medical practitioners and medical consultants. No one would deny that both those professions perform equal but different roles for their patients. The same is true of the legal profession. By and large, it serves the community well, with trust and integrity — something that cannot always be said of legal professions in other parts of the world.

Members of Parliament who are barristers can be expected to oppose the Bill and those who are solicitors are likely to view with suspicion a Bill about their profession which comes from the hon. Member for Great Grimsby. It should also be expected, however, that members of the public, who should be our prime if not our only consideration, will feel on mature reflection that they will be ill served by this measure. It is in their name, in their interests and on their behalf that I invite the House to reject the Bill.

Question put, pursuant to Standing Order No. 15 (Motions for leave to bring in Bills and nomination of Select Committees at commencement of public business):—

The House divided: Ayes 119, Noes 151.

Opposition Day

[14TH ALLOTTED DAY]

Developing Countries (Famine and Debt)

Mr. Speaker: I have selected the amendment in the name of the Prime Minister. Before I call upon the Opposition Front Bench spokesman, I have to announce that no fewer than 15 Back Benchers have indicated that they would like to speak in the debate. I hope that will be borne in mind by both the Front and the Back Benches.

3.58 pm

Mr. Stuart Holland (Vauxhall): I beg to move,

That this House deplores the Government's continuing and substantial cuts in overseas aid and its failure to provide an effective response to the crisis of drought and debt afflicting Sub-Saharan Africa; and calls on the Government to double the official United Kingdom aid programme, both advancing our assistance to developing countries towards the United Nations target of 0·7 per cent. of gross national product and generating employment opportunities in Britain, to take urgent and new measures to increase food, fuel and aid for agricultural development to famine areas, and to promote joint international action to re-schedule and, where possible, write-off the debts of the poorest countries.

There are three main parts to the motion: first, the aid programme in general; secondly, the call for new measures; and, thirdly, the demand for rescheduling and, where possible, writing off the debts of the least developed countries.

The House is aware that the Minister likes to give the appearance of being a well-meaning wet corralled in a hard Cabinet. However, a recent Foreign Affairs Select Committee report on famine in Africa shows that the Government have made no additional resources available for famine relief. The funds have been taken from other ODA development budgets, and in one case, which we raised earlier on the Floor of the House, food aid, which would now be highly welcomed in Bangladesh, was reallocated to Ethiopia instead of extra aid being provided.

One of the major recommendations of the Foreign Affairs Select Committee was that extra funds should be added to the aid budget to cover Government contributions to major disasters such as we are witnessing today in Africa. It is scandalous that at a time when long-term development needs have never been so clearly urgent, Britain is contributing much less to those needs, because £100 million in the 1984-85 financial year was transferred from the development budget to emergency relief.

The Government argue that the ODA's contingency reserve is adequate. We recommend that from now the Government should calculate average annual contributions to emergencies—for example, over the 1980 to 1983 period—and should add into the aid budget for this year a sum equal to the difference between this figure and the planned emergency contributions to Africa. It is time that the Government started to account for emergencies and mobilised the net resources needed to meet them.

The House has also widely noted that the Conservatives have cut the total overall aid programme since they came to office in 1979. But it is not clear by just how much it has been cut. In practice, the total net aid budget has increased from £1·099 billion in 1984-85 to £1·130 billion in 1985-86, a 2·8 per cent. cash increase, but, taking inflation into account, representing a real decrease of about 3 per cent.

The aid contribution of the United Kingdom is now 0·33 of 1 per cent., which represents nearly a 20 per cent. cut in aid spending by the Conservatives since they came to office. As a proportion of GNP, therefore, the Government have not only allowed the programme to fall to under half of the UN target of 0·7, but Britain's record compares badly, for example, with a Government who are much criticised by Conservative Members, that of the French, with 0·76 per cent. of GNP; Germany, 0·49; Belgium, 0·59; the Netherlands, 0·91; Norway, with over 1 per cent; and with a dramatically rising share in the aid programme of Italy, under a Socialist Prime Minister, especially to Sudan and Ethiopia.

Not only are we behind in the overall aid stakes—not only have there been cuts in the overall aid programme — but it has been authoritatively reported that the British Government have been foremost in the Council of Ministers, in the Budget Council of the EEC, in recommending cuts in food aid spending for 1985-86, cuts from the figure proposed by the Commission, of 65 million ecu to 26 million ecu. That is a difference of over £22 million in what the Commission wanted to spend next year and what the British Government recommended should be spent, even though those sums were scheduled simply to maintain the real value of food aid in the 1985-86 period.

It is double standards, therefore, for the Government to claim that they are seriously concerned to defend, far less to extend, the aid budget. In reality, they have not only been cutting it, but cutting it in the European Community.

The Government also say that they are concerned about the quality of aid. Clearly, aid quality is vital in projects such as in the Indian Orissa family welfare project and the fertiliser education project covering six eastern states. It is clear that good models of official aid can help the poorer 50 per cent. of the population.

However, this type of poverty-focused aid represents a small percentage of ODA funds. In particular, only about one third of United Kingdom bilateral aid to Africa goes directly or indirectly to agriculture and related sectors, and only a small proportion of that goes to peasant agriculture and especially towards helping to improve traditional crops such as sorghum and millet.

Perhaps the Government now share a relative distate for large scale prestige projects. But even, for example, expenditure of perhaps £10 million on an individual dam could provide extensive supplementary irrigation to about 300,000 acres, benefiting up to 100,000 families, without doing damage to the environment in the way in which big projects have done. I shall be interested to hear whether the Minister is prepared to make a statement today about that type of project.

Further, on the double standards of the Government, when in a recent television interview relating to the film "African Calvary" the Prime Minister was asked what the United Kingdom could do to help famine victims, she listed among her three priorities one which was designed to help to develop improved varieties of drought-resistant crops. In reality, the Government have taken steps which have resulted in funds being withdrawn from precisely that kind of project.

For example, Oxfam is now funding the arid land seed research project at the Royal Botanic Gardens, Kew, after

[Mr. Stuart Holland]

the Government discontinued funding for it. Oxfam's field director in Ethiopia has pointed out the sad anomaly that the excellent Addis-based international livestock centre for Africa, which works mostly in connection with the problems of poor farmers, now contributes more to the United Kingdom in the form of goods and services purchased here than it receives in EEC aid.

Then there is the issue of the replenishment of IFAD —the International Fund for Agricultural Development —which is one of the most effective organisations in helping to improve peasant farming and which is funded both by Governments of the Western world and OPEC. The OPEC countries have seen a substantial loss in their real revenues with the weakening of the world price of oil, and it is understandable that OPEC feels that it cannot continue to fund IFAD in the way in which it has in the past. The result of the cuts in IFAD's budget will be terrible. As opposed to an injection of $1 billion to last for three years, the agreed three-year replenishment is likely to be only $600 million.

Mr. Tony Baldry (Banbury): If the hon. Gentleman intends simply to read out the Oxfam brief, I can perhaps help him by saying that most hon. Members, at any rate on the Conservative Benches, already have copies of it. We should, however, be interested to know how the Labour party would deal with the crisis of famine and debt if they were in government, rather than have the hon. Gentleman tell us what Oxfam proposes, because we know that.

Mr. Holland: The Labour party is committed on aid to achieving 0·7 of 1 per cent. of GNP within the lifetime of a Government. It is also committed to aiming towards 1 per cent. What we are urging on the Government—it is well publicised by Oxfam; I agree with the hon. Gentleman about that — is that precisely for those reasons the Government have no excuse either for continuing their cuts in the aid programme or for claiming that their hands are tied and that they are doing the best that they can.

The Minister—for example, in the case of food aid distribution in the Horn of Africa—has paid lip service to the difficulties caused by the civil war in Eritrea and Tigre, and he has made minor resources available through some of the agencies which may reach either Eritrea or Tigre from Port Sudan. But these resources are minuscule. Eritrea and Tigre need about 20,000 tonnes of food aid per month, whereas only 2,500 tonnes is reaching them. The Government's claim to recognise the problem is not matched by anything like a sufficient scale of food aid allocation for the voluntary agencies at Port Sudan.

Further, the exodus of refugees from Eritrea and Tigre underlines the current crisis in the Sudan. One of the relief centres, Wad Kowli, is now the third largest city in the Sudan. Senior Sudanese officials made it plain earlier this year that they were disappointed with the Minister's visit in January and with his failure to realise that transport and fuel would be needed by the end of April if there was to be any way effectively of distributing food aid to the areas where it is most needed, especially on the borders with Eritrea and Tigre and in west Sudan. It is clear that the Government have relied almost entirely in west Sudan on American agencies taking responsibility for food aid distribution. But now there is a major tragedy in that area.

On 22 March and 5 June the Minister referred to transportation. On 5 June, he claimed that

"large numbers of trucks are already available in Sudan, which has a strong private enterprise trucking agency." —[*Official Report*, 5 June 1985; Vol. 80, c. 306.]

In reality, because of its debt problem of between $8 billion and $9 billion, Sudan has not been able to buy the fuel needed to ensure that the private trucking sector is available for food aid distribution.

In December 1984, the Sudanese Government asked for tenders to renew railway rolling stock and equipment in west Sudan. British firms responded magnificently to that request, and some went out there within three or four days. On their return, they immediately submitted tenders— that was by mid-January—but it was only last week that the Minister was able to tell the House that approval for the £6 million project had finally been given by the EEC.

It is quite wrong for there to be such a delay in ensuring that the railway is in working order. Only one fifth of the food that is needed in west Sudan is getting through via the railway. The rains have come. They may not be sufficient to sustain a future crop, but they certainly will wash roads away. Road transport cannot possibly cover the whole of the Sudan. It can be used only on a limited basis in food distribution — for example, around Darfur. Because of the delay in approving the railway project, 1·5 million people in west Sudan are now at risk.

The Minister has repeatedly said to the House, "What can I do? My hands are tied. It takes time for the multilateral aid agencies to operate. Very difficult decisions must be made." In reality, if the EEC would not approve that project, why did the Minister not do what the Germans did? It appears that the German project for refurbishing the railway was not an integrated part of the EEC programme. There is no reason why the British firms which were ready to meet the orders for repair of the railway should not have been able to do so.

Fuel is a similar issue. On 22 March, I put it to the Minister that there was a desperate shortage of fuel in Sudan. Again, he told us that his hands were tied by the EEC. He said that the EEC was examining the issue and that he was foremost in the EEC in arguing the case. I said to him, "Britain is a shipping and oil-producing nation. Why do you not commission a tanker, fill it with fuel, send it to the Sudan and then send the bill to the EEC Commission?" Had that tanker gone to Sudan and had the fuel arrived in April, the food aid distribution problem would have been very different.

In contrast to what the Minister told the House last week, nearly half a million tonnes of food intended for famine victims is said to have piled up in ports in Ethiopia and Sudan because of the lack of transport. Some of that food has been spoilt. A United States official, Mr. Peter McPherson, who is the administrator for the agency for international development, has blamed Ethiopia and Sudan for the hold-up. He has said that neither of those Governments has given transport the priority that it deserves. In Ethiopia's case, the lamentable tragedy of the civil war and the Ethiopian Government's failure to ensure the safe passage of food aid or to allocate sufficient vehicles for food aid distribution are much to be deplored. I know that hon. Members on both sides of the House deplore this. The Government in Sudan should not, however, be blamed. In January, that Government gave the message clearly to the international community and to the Minister. The Minister failed to react.

The cyclone in Bangladesh has directly affected almost 3 million people—more than 1 million seriously—and caused substantial damage to livestock, homes and crops. The Government of Bangladesh have appealed for $50 million to cover the immediate—not long-term—need for food, medicine, shelter, and so on. So far, the United Kingdom has pledged £750,000 from its aid budget. That is probably less than the VAT that the Government have managed to collect from the £8 million raised by the Band Aid project. It shows the lack of priority that the Government are giving to the problem.

Conditional aid and the political refusal to grant aid are also of concern. It is transparently obvious that the so-called technical reasons which the Minister claimed for not granting aid to Nicaragua through the Inter-American Development Bank or the World Bank are entirely without foundation. The Nicaraguans showed me the projects that they have submitted for aid. It is clear that the proposals have been admirably vetted and are technically excellent. There are no essentially technical reasons for blocking aid to Nicaragua; the reasons are political. They reflect the fact that the British Government are prepared to coat-tail the United States rather than concern themselves with a basic needs programme of the type that Nicaragua has already shown it can pioneer—in health, education and food production—and, with resources, deliver.

Mr. Geoff Dennis, a junior civil servant in the ODA, has been suspended without pay and may face charges following allegations that he was involved in the release to hon. Members of information which showed that the technical reasons for denying aid to Nicaragua were implausible. I am sure that I speak for both sides of the House in saying that few of us believe that civil servants should release material to hon. Members in any circumstances, but this case is directly comparable with the Ponting case, where a Minister misled the House. The jury expressed its views on that matter by dismissing the charges brought against Mr. Ponting by the Government under the Official Secrets Act.

We understand that, while Mr. Dennis has been suspended without pay, he is still technically employed by ODA and therefore cannot sign on for unemployment benefit. The Government have already penalised him by his loss of earnings. We suggest to the Government that no charges should be pressed and that Mr. Dennis's salary should be post-dated and paid from now until he is reinstated, or dismissed, by the ODA. We shall carefully watch the Government to ascertain how they choose to handle the matter.

The third part of the motion concerns debt. The scale of the financial crisis is recognised internationally as overwhelming. Mr. Tom Clausen, the head of the World Bank, warned that the future would bring "more Ethiopias" unless action is taken now. It appears, however, that that view is not shared by the Chancellor, who told an IMF meeting that world economic conditions are the best they have been in six years.

Yet between 1980-82 and 1985-87, annual average national capital flows to sub-Saharan Africa fell from $11 million to $5 million. That represents a drying up of private capital aid flows. Official international development funds from the West and the East are stagnant at $9 billion. Many of those loans will have to be repaid shortly. An extra $2 billion is needed to keep the official aid flows to sub-Saharan Africa at the 1980-82 level. That is why the World Bank, in its project for Africa, recommended a $2 billion target. It appears to be clear, unless the Minister says otherwise, that this target will in no way be met. In fact, it is probable that between only a quarter and a half of that sum will be allocated.

Further, the sub-Saharan countries are suffering from crippling debt servicing. Their debt service bill alone in 1981 was $4·1 billion. That is projected to increase on average from 1985 to 1987 to $11·7 billion. In other words, there has been an almost threefold increase in debt servicing in sub-Saharan Africa.

The interest rates are extremely high. While 4·5 per cent. may well not be considered high for official interest rates, they are 12·5 per cent. for private loans. When the United States Administration are recommending more market forces within the African sub-continent, and when they are recommending that the forces of supply and demand should make a contribution to development, what is the development difference between interest rates of 4·5 per cent. and 12·5 per cent? It is not merely 8 per cent; it is the difference between viability and financial bankruptcy. That is what is now facing the sub-Saharan countries.

In the sub-Saharan countries, overall debt service is now rising to about 27 per cent. of total export earnings. That is twice the ratio of 1977. Therefore, even if there had been no drought, there would be a development crisis in Africa today. The measures that the international community is taking in relation to the crisis vary substantially. There is the obduracy of the United States and the unwillingness of our Government to pioneer and press for increases rather than cuts in EEC programmes, so the position is getting worse.

It is relevant to make a comparison with the cost of intervention storage and export subsidies of the food programme in the CAP. It now amounts to about $10 billion in a total EEC budget of $16 billion. Against that, the Government were pressing that the spending on the food aid programme for next year should be reduced by £22 million.

In reality, who are the real debtors? The biggest debtor in the world at the moment is the United States. The biggest creditor in the world at the moment—although it may shortly be Japan—is the United Kingdom. We are lending all right—the Government do not have a bias against lending—but we are lending to the rich and to the most developed countries. We are not lending on a sufficient scale to the lesser or least developed countries.

There are other issues that the House has addressed on other occasions concerning the deteriorating terms of trade of Third world countries, the practice of IMF conditionality, and other matters, but in reality the three main parts of the motion are crucial.

Have the Government any target whatever for increasing official development assistance over the lifetime of this Parliament? Will they undertake substantial new measures to remedy drought in sub-Saharan Africa, rather than the minuscule measures which are a fraction of the debt needs and development needs of those countries? What action will the Government take internationally either to reschedule or to write off the debts of the poorest countries? I am not talking here about the conversion of loan into grant, because we appreciate that the Overseas Development Administration has a record for doing that with the least developed countries. It is the overall financial debt that is crippling those countries.

[Mr. Holland]

The Government have acted too late. They have failed to respond to warnings. They are, with other EEC Governments, directly culpable for the fact that a railway in the Sudan is not now functioning, and that another 1·5 million people are now suffering in addition to the 10 million migrants and the 100 million other people affected by the drought. The Government must learn the lessons of the famine and act urgently along the lines recommended in the motion. It is for that reason that I commend it to the House.

4.24 pm

The Minister for Overseas Development (Mr. Timothy Raison): I beg to move, to leave out from "House" to the end of the Question and to add instead thereof:

'welcomes the effectiveness of the Government's action in tackling the famine in Africa; endorses its policies to promote long term development in Africa; supports the present approach of the Government and the international financial institutions to the severe debt problems of the day; and recognises that Britain's aid policy confers real benefits not only on the developing countries but also on British industry and employment.'.

The Opposition motion focuses on a number of topics, but especially on sub-Saharan Africa, and that is as it should be. It is there, after all, that the famine has been so devastating. It is there that the long-term development problems seem most formidable. It is also there that we have special responsibilities.

We cannot do everything across the world; we have to concentrate to some extent. Quite rightly, we do a great deal in the Indian subcontinent. We are active in other areas of Asia, such as Indonesia. We have important programmes in the Caribbean and the south Pacific. We have to sustain and develop our own dependencies. There are other useful things that we do across the world, not least in English language training and technical co-operation in many countries. But Africa presents the greatest challenge to us. We are heavily involved there and we are contributing heavily.

As we all know, the famine has highlighted in the most terrible way a profound and long-term problem. I shall look first at the immediate crisis and then at the long-term crisis.

Many people have said—rather glibly—that nothing was done until the television cameras aimed on Ethiopia and then the Sudan. That, of course, is false. As it happens, Ethiopia was the biggest recipient of aid under the Lomé 2 convention and the biggest African recipient of food aid from Britain over the three years before last autumn.

Sudan has not, in the past, been so big a recipient of food aid. Although we provided 45,000 tonnes of wheat in 1983 and 1984 to help the UN refugee programme there, the Sudanese themselves have not normally needed or asked for food aid. But Sudan has one of the biggest British bilateral development programmes, and we have been involved there for many years. Sudan was also, like Ethiopia, one of the largest recipients of European Community aid under Lomé 2. So it is far from the case that we or other donors have been doing nothing. Nevertheless, the famine has come with a dreadful impact, and no one can possibly be complacent about what happened or say that enough had been done by the world as a whole.

The motion alleges that we have not provided an effective response to the drought crisis.

Mr. Tam Dalyell (Linlithgow): I should like to put a question to the Minister before he leaves the problems of the Sudan. I am not quarrelling with him, but in the statement last week he was a bit dismissive of my question about trucks. Yesterday, Mr. Prattley and other senior officials of the United Nations said that trucks and fleets of lorries were needed, above all else. The Minister knows my interest in relation to trucks at Bathgate and I do not press that too strongly. It has been widely said in my constituency, "We have all these trucks lying around. Why cannot some of them go to the Sudan?" What is the answer to that question?

Mr. Raison: I have not left the problems of the Sudan, and I am about to say something about trucks. I hope that the hon. Gentleman will stay and listen to what I have to say. I am sure that he will.

I want to tell the House what we have been doing in Ethiopia and the Sudan, two countries to which we have specifically directed our relief efforts. Of course, I recognise that other countries are badly affected, but our help to them is mainly carried out through the European Community and other multilateral organisations.

In Ethiopia, since October 1984 we have provided over £40 million—£28 million bilaterally and more than £12 million through our share of Community actions. We have provided a wide range of assistance, including food aid. As I said yesterday, I am ready to offer more when we are satisfied about proper arrangements for its transport and distribution. We have provided transport itself, including lorries, Land Rovers, semi-trailers and mobile workshops and spare parts. We have provided medical equipment, tents and blankets, seeds and tools.

The RAF and Army detachments have done a marvellous job since last November. They have flown 10 hours a day every day since then, including over 300 airdrop missions. To date, they have successfully delivered over 4,500 tonnes of grain and other supplies. I must also mention that we have provided two men for the world food programme team monitoring the distribution of food supplies. They have been working in Eritrea and Wollo.

The overall position is now broadly as follows. The recent widespread rains have favoured the secondary belg crop to be harvested shortly and land preparation for the main crop, which is scheduled for planting in the next few weeks. However, those rains have also impeded the distribution of supplies in some remote areas. The main rains, which we hope will come during the next three months, will make road transport more difficult.

Of the 1·1 million tonnes of food aid pledged, some 60 per cent., that is 680,000 tonnes, has been shipped. About 185,000 tonnes are now in the three ports and 135,000 tonnes are in store or being distributed. The main problem now in Ethiopia is the shortage of transport, which is seriously hampering distribution. The Ethiopian authorities have recently provided 350 lorries to increase the daily offtake at Port Assab to 3,000 tonnes, but they need to do more. Yesterday I announced the further assistance that we shall be providing—£750,000 for land transport, the extension of the airlift to the end of September, and 10,000 tonnes of grain to be used when it is needed and can be used effectively.

Finally, although the position is desperate in many respects, one redeeming feature has been the effective co-ordination between the donors — typified perhaps by West and East co-operating on the airdrops — and the Ethiopian authorities. Great credit for that goes to Mr. Kurt Jansson, the United Nations' co-ordinator, who is doing an excellent job in difficult circumstances.

Mr. Stuart Holland: The Minister will be as aware as anyone that air transport is expensive. We are not saying that the Hercules aircraft should not be there. Indeed, we would even say that at this stage there should be more of them. Will the right hon. Gentleman address himself to why the railway is not working, and why there was a six-month delay in approving the project, which means that the bulk of the food aid cannot get through?

Mr. Raison: The hon. Gentleman is confusing Ethiopia and the Sudan. I have just been talking about Ethiopia, where the Royal Air Force has been operating. I now come to the Sudan.

Our efforts in the Sudan have also been considerable. We have provided a total of £17 million for famine relief since last October. That is all additional to our normal substantial development aid programme in Sudan. Our contribution includes the cost of 62,000 tonnes of food aid, all of which has now been delivered to Port Sudan. When I was there earlier this year, I formed the strong view that we must get our food aid there before the rainy season. I said that on my return, and we have succeeded in that objective.

We have also provided more than £5 million to the voluntary agencies, including assistance to Save the Children Fund for overland distribution and an airlift to western Sudan. I welcome the appointment of Mr. Winston Prattley as the United Nations' Secretary General's representative to do a similar job in the Sudan to that done by Mr. Jansson in Ethiopia.

Food is now arriving in significant quantities in Port Sudan. More than 700,000 tonnes have been delivered, and pledges now cover the estimated requirement of 1·4 million tonnes to October. Distribution is a critical problem, especially, as the hon. Gentleman fairly said, in Darfur in the west. It is right that attention is focused there at present. The monthly cereal requirement there is more than 30,000 tonnes. The airlifting of medicines and supplementary foods will be invaluable, but airlifts cannot cope with these tonnages of cereals.

Overland trucking is difficult in desert conditions. It has been averaging 100 tonnes a day. Efforts are being made to mobilise more lorries, but the key is the railway. Its performance has been weak, and has averaged 200 to 300 tonnes a day. Our expert advice is that that could be at least doubled through a system of so-called block trains devoted exlusively to transporting food and relief supplies. We have provided technical help for that from British Rail, and I have pressed the Community into funding the emergency rehabilitation of locomotives. It is hoped that the system will begin operation between Kosti on the Nile and Nyala within the next week, although it is primarily in the hands of the Sudanese authorities. However, we shall continue to do everything that we can to support efforts to improve this vital rail link.

The problems will not be over when the grain reaches Nyala. Rains will undoubtedly make distribution even more difficult. However, we have already provided considerable support for the Save the Children Fund logistics effort in Darfur.

Today I can announce further assistance. We are providing a grant of £1·2 million to Save the Children Fund to purchase 60 Leyland trucks and to hire an additional 50 lorries in Sudan. The trucks will be used to move food supplies from Kosti and Omdurman to Nyala in western Sudan. Leyland Trucks has offered to loan Save the Children Fund free of charge an engineer to service the new trucks for a period of 12 months.

I am also providing a grant of £150,000 to the Catholic Fund for Overseas Development to buy 12 four-wheel-drive vehicles and spares, which will be used by the Church organisation, Sudan Aid, to distribute food to more than 100,000 families in western Sudan and the greater Khartoum area.

I have also approved a further grant of £1 million to the 1985 Africa appeal of the International Committee of the Red Cross and a donation of £250,000 to the United Nations Disaster Relief Organisation appeal to enable cereals to be distributed to villages affected by drought in Niger.

We also continue to respond generously to refugee appeals. I have now agreed to provide £3 million in response to three 1985 appeals from the United Nations high commissioner for refugees. We shall contribute £1·5 million to the Africa emergency appeal, £1 million for Sudan and £500,000 for Somalia. Our contributions to the Africa emergency and Sudan appeals will help with UNHCR programmes for the 700,000 refugees in Sudan both for short-term needs and longer-term settlement schemes.

Our £500,000 for the Somalia programme will help with the UNHCR provision of food, medical and water supplies, transport and education. Since 1 April we have committed £5·85 million in response to various refugee appeals for Africa.

Mr. Guy Barnett (Greenwich): Was any of that new money?

Mr. Raison: The money comes from our aid budget. I shall come back to that subject in a moment.

Throughout, I have taken the view that it is not merely gestures that are wanted, but effective action specifically targeted at priority needs. That is why so much of our effort has gone on transport and distribution, and why both in Addis Ababa and Khartoum our embassies have worked so actively and effectively to that end. There is absolutely no doubt of the value of our contribution in the countries concerned, and I am proud of what is being done in the name of Britain in these desperate circumstances.

The hon. Member for Vauxhall (Mr. Holland) asked about our attitude to European Community food aid. On 7 May I wrote to him about that and explained that in the April Budget Council we had supported a Presidency which increased by 25 million ecu, or £14·5 million, the level of food aid appropriations over those in previous draft budgets. On 22 May my hon. Friend the Economic Secretary to the Treasury accepted further increases worth a total of £52·8 million above the original figure.

I am sure the hon. Gentleman appreciates that it is wrong to equate the level of EC food and the size of the famine relief effort. The two largest recipients of food aid are India and Egypt, and this year some food aid has gone

[Mr. Raison]

to Malta. Most food aid is sold by recipient Governments, which is perfectly legitimate in terms of their agreement with the Community. Only a comparatively small but growing proportion of the budget is spent on sending food to famine victims.

During the past months my whole object in the EC has been to get the Community to focus its food aid primarily on those areas where the need is greatest. We have had considerable achievements in that respect. The House knows very well that indiscriminate food aid does not do any good, but is a way of using up surpluses. The effect can often be detrimental to the proper indigenous agriculture in the countries concerned.

Mr. Stuart Holland: In relation to the 25 million ecu, will the Minister confirm or deny that the Commission's proposal was for 65 million ecu? The difference in today's prices is £22 million. Did the Commission propose the higher figure or not?

Mr. Raison: There were proposals for higher figures, but I repeat that our objective, which has been successful, is to get food aid in the Community focused much more on areas of actual need. The hon. Member for Vauxhall knows that at the Dublin summit the Prime Minister took the lead in ensuring that the Community would retarget its food aid on areas where famine relief was most desperately needed. We were successful in that and we have been successful in continuing the campaign to get food aid properly targeted. The hon. Gentleman is talking about an indiscriminate increase in food aid, which he knows would not be helpful developmentally in many instances.

The hon. Gentleman referred to fuel supplies in the Sudan. After I went there earlier in the year I, too, was concerned. However, it appears that the situation appears to have eased. The United States and Saudi Arabia have guaranteed the financing of fuel imports for four months from April. The world food programme and the United Nations high commissioner for refugees have set up their own fuel and storage arrangements. Britain contributed $272,000 for the distribution of our most recent consignment of food aid, which arrived at Port Sudan on 17 May. I do not deny that there have been apprehensions about the supply of fuel, especially diesel, but, as I found, the situation has not been as desperate as was feared.

Questions have been raised about the source of the resources that we have put into famine relief. There has been some added money on top of the aid programme. The Ministry of Defence has provided the greater part of the cost of the Hercules operation in Ethiopia. That will amount to an extra £10·5 million by the end of September. As we know, the public have responded with great generosity. If people feel that more should be spent, this is an area where they can do exactly what they feel, through our admirable voluntary agencies. For our part, we have consistently worked closely with the agencies, often placing our aid through them.

What about the Government's own response? I fully accept that we have had to operate within the limits of our overall aid budget. We are committed as a Government to the firm control of public expenditure. Nevertheless, we have provided very substantial resources towards dealing with famine in both short-term relief and long-term development.

In the last financial year, which ran to the end of March 1985, we spent, directly and indirectly, about £95 million on famine-related operations in Africa. To achieve this we drew on the contingency reserve, because that is what the reserve is for. We drew also on our bilateral food aid. We contributed through the European Community and we utilised some funds which became free as a result of slippages elsewhere in our programme. No country or multilateral programme suffered enforced reduction to achieve this. By flexible management we have succeeded in concentrating on the greatest needs. As for this financial year, I have announced that we expect to spend £60 million bilaterally and multilaterally as a minimum planning figure. If we have to find more, we shall.

These are very considerable amounts, but it is not only the quantity of our response that is significant. The quality and effectiveness of the response is similarly significant, as is our lead in stepping up and accelerating the Community's response at Dublin, in the Foreign Affairs and Development Council and in Coreper in Brussels.

Mr. Reg Prentice (Daventry): My intervention is directed to the way in which development aid is funded. The contingency reserve and the other sources to which my right hon. Friend has referred are all very well in most years for short-term emergencies, but the scale of what is happening in Africa and the likelihood that the problems will continue for some years are factors which present a new dimension and require that something should be added to the figures which would otherwise be available in the next few years. Will the Minister ask his colleagues to take that on board in the context of the next public expenditure review?

Mr. Raison: I respect my right hon. Friend's views, and I am aware that he has the courage of his convictions because of his past actions. I hope that what I have said already and what I am about to say about long-term development will show that we are able under our present aid budget to mount an effective programme in the short term and the longer term.

I shall address myself to the longer term. Confronting the short-term disaster must not distract us from tackling the challenge of longer-term development. If we had to cut short our plans for this to provide relief, we should be sacrificing the future to the present. It is important to press on, especially with aid which will help our African friends to put their own house in order, and to reshape their development plans in the light of the lessons learnt during the present crisis. This means searching for ways to make our aid both speedier and more effective.

Within all our memories, the large and poor countries of south Asia faced similar difficulties in feeding their rapidly growing populations. There were terrible famines in India. Pakistan was a major food importer. Malnutrition was widespread in Bangladesh, especially after floods or cyclones. The plight of these countries was widely regarded as desperate and likely to remain so—fragile economies balanced on the knife edge of the Asian climate.

Less than a generation later the picture is transformed. All these countries now have the capacity to feed themselves. Food grain production is at record levels. Even in Bangladesh, and even in a year of floods and cyclones, the grain stored in earlier years is finding its way through the food distribution system to those in need. And

India is emerging as a food aid donor in its own right: it has already given 10 times as much to Ethiopia in the past six months as the Russians have given.

These countries are still dependent on good weather, and they still need development assistance, but they show what can be achieved. They have had Government policies, which have encouraged food production. They have harnessed the technology of the green revolution. They have had support from the donor community in the early years and in the bad years. And they provide an encouragement to all of us who are concerned about today's desperate famine in Africa.

Mr. Max Madden (Bradford, West) *rose*——

Mr. Raison: I must press on.

Mr. Madden: I wish to intervene on the Minister's last point.

Mr. Raison: No. I must press on. Mr. Deputy Speaker has asked us to show restraint.

In 1984 we spent £234 million on direct bilateral development aid to sub-Saharan Africa. We have changed the emphasis of what we do to meet the changing needs. First, importance is given whenever possible to manpower aids of all kinds. All too often, poor management has led to poor maintenance, inefficient operation and the decay of expensive and important investments. In particular, we have to give help not only in the field but to administrations.

Secondly, we have gone over to supplying much more fast-spending programme aid. This is to keep existing assets going and to provide spares and other items which so many countries can no longer afford to buy for themselves. Last year, I agreed major allocations for nearly £39 million of this kind of aid for seven countries, chiefly to back up sectoral or macro-economic reform programmes. The bulk of this aid went directly or indirectly to support agriculture and other natural resources. In the same spirit, we have set aside £75 million over the next five years as untied grants for commitment alongside the World Bank's new African special facility.

The third element in our aid is to look much more closely at what can be done to revitalise peasant agriculture. Together with this, we have to work out ways of more directly reinforcing attempts to reduce population growth and to protect the environment, and especially bush and forest cover. These things cannot really be separated. To the farmer himself, or herself, they are all aspects of the struggle for existence. On the agricultural side, one major task is to rebuild national research systems in a way which actually seeks to answer the farmer's own problems, and to find ways of encouraging agro-forestry and the growth of woodlots which people can see as being of early and immediate advantage to them.

Indeed, the longer-term answer to famine and drought lies not in food aid and emergency relief aid but in lasting answers to the underlying problems. Research and development work, especially in the renewable natural resources sector, will therefore continue to have a high priority within the aid programme. I wish that I had time to describe all the different things that we are supporting in this sector, because the quality of the scientific work that we are backing both here and overseas is recognised as being of outstanding excellence.

These various facets of our aid reflect common perceptions among many donors and, I am glad to say, increasingly among African Governments. They also lead naturally to greater importance for the so-called policy dialogue, which is the fourth strand in our thinking. If we are to provide fast-spending, fast-consumed aid, or manpower aid, it can be most effective only within a policy framework discussed collectively with the donors. This will ensure proper, co-ordinated use. It is particularly encouraging that many African Governments are making real efforts to change their agricultural policies and systems so as to give the enterprise of the farmer room to flourish. The best recent example is the astonishing performance of peasant farmers in Zimbabwe. Thanks to good incentives and good marketing, despite last year's drought, they produced two fifths of the country's marketed grain — and did so from generally less productive land.

All in all, a new strategic approach to development in Africa is emerging. It is an approach which will stress, on the one hand, good research and ecology and effective population policies, and, on the other, not only effective co-ordination and dialogue, but the need for proper incentives to farmers — including adequate food prices, realistic exchange rates, a determined drive to escape from deadening and incompetent parastatals and bureaucracies, effective control of public expenditure, and real scope for the private sector. In the development of this strategy, the World Bank has played a leading part—so, on the more short-term side, has the IMF. It is our general policy to work alongside them towards the same objectives.

Let me move now to the problem of debt. The motion asks us

"to promote joint international action to re-schedule and, where possible, write-off the debts of the poorest countries".

The problems of many countries are severe and long term, and the level of indebtedness and the debt service requirements will remain heavy. Recovery so far has been uneven and the need for further widespread efforts of adjustment remain. None the less, some progress has been made. For instance, the combined current account deficit of the indebted developing countries, excluding middle east oil exporters, in 1984 was only one third of the level in the peak year of 1981. In addition, there has been an overall improvement in growth rates, but this conceals wide discrepancies between countries.

Nevertheless, as the Bonn summit communiqué noted, the problems of indebtedness

"though far from solved, are being flexibly and effectively addressed".

The number of reschedulings has risen rapidly from less than four a year in 1970 to 1980 to some 31 in each of the last two years. Official debts and guaranteed export credits are rescheduled through the Paris club, where a standard approach has evolved. Central to this approach is consideration of the problem of each country case by case, rather than by the blanket method favoured by the Opposition. In this way, a programme of adjustment to tackle the fundamental economic problems, and to secure a return to sustainable long-term growth, can be worked out, supported by co-ordinated financing arrangements. For this reason a conditional IMF programme has been a precondition for Paris club rescheduling.

Terms have become easier, maturities and grace periods are generally longer and re-scheduling fees have declined. In addition, we remain willing to consider multi-year rescheduling arrangements where programmes of adjustment are being implemented successfully — as

[Mr. Raison]

recently in Ecuador. ECGD is now allowed greater flexibility so that cover may be restored where appropriate at an earlier stage after the rescheduling of officially guaranteed debts. Of course, all debt rescheduling involves costs for the creditors. It has to be set against the Government's public expenditure plans or, for aid debts, against competing claims on limited aid resources.

We do not believe that wholesale writing-off of debts is the right answer. However, all the poorest countries are eligible to be considered for retrospective terms adjustment. We have a good record here. We have already cancelled the official aid debts of 12 African countries, amounting to some £211 million, most recently to Mozambique, Ethiopia and Ghana. In total, some £987 million has either been written off, or, in the case of India, local cost aid is provided up to the level of official aid repayments due each year. Largely as a result of this policy, 44 of the 50 poorest countries have no official aid debts to the United Kingdom.

We remain ready to consider applying the same measures to any other eligible countries which so request. Overwhelmingly, our aid to the poorest countries is given, not lent. It does nothing therefore to generate debts—a sharp contrast to Communist bloc practice.

Mr. Madden: Will the Minister say more about the Government's attitude to Bangladesh? I am sure he will be aware that there is considerable concern in many parts of the country — not least in Bradford and London, where there are large Bangladeshi communities—about the scale of our response to the disaster. Can the Minister say anything more about what contribution we shall give and what will be the main emphasis of our longer-term aid programme to Bangladesh?

Mr. Raison: That is a vast and important subject, and I understand the hon. Gentleman's interest. We have recently provided an immediate and substantial response, but, more important than that, Bangladesh is one of the two or three biggest aid recipients in the world. We continue to give Bangladesh large resources, and we focus them on dealing with such real problems as those exposed by the recent cyclone. Bangladesh appreciates our aid efforts.

I hope that in what I have said I have shown that Britain is making a very effective contribution to the problem of famine and agriculture, above all in Africa. We are bringing skill, determination and resources to bear, and these problems can be tackled. After all, in Asia we have seen in countries like India — and perhaps even Bangladesh—the threat of famine recede as production and skills develop. Aid plays an important part in this process.

I believe that our approach to debt is sound. We have to work constructively in the world that exists—not in some kind of dreamland El Dorado. At the same time, of course, we are concerned with British interests. We want to develop good relations and see stability increase and potential markets grow. We do not apologise for the fact that a high proportion of our bilateral aid is tied—that 73 per cent. of it returns to Britain in the form of goods and services. The aid trade provision enables us to respond flexibly to commercial opportunities and to counter the mixed credit practices of our competitors. Over the last few years some £350 million of aid trade provision has resulted in British firms winning contracts overseas valued at more than £1,400 million. Those who say that we are idle in this regard should take notice of those facts. We want to help our people too. Nor do I apologise for our stress on effectiveness and policy dialogue. Too much aid has been wasted in the past, and a 10 per cent. increase in effectiveness is as good as a 10 per cent. increase in resources.

Our commitment remains clear. We are not out to promote bad commercial ventures, any more than we are out to prop up bad bureaucracies. We want to see real development—in our own interests, certainly, but above all so that we can see an end to the terrible suffering which, with the aid of television, has so drawn the sympathy of ordinary people.

The motion is sheer Opposition rhetoric. I ask the House to reject it and to support our amendment.

4.58 pm

Dame Judith Hart (Clydesdale): I have one small question for the Minister, on which I should appreciate an answer at the end of the debate. As he will know, yesterday I tabled a question to him about aid for Nicaragua. I tabled a previous question to the Foreign and Commonwealth Secretary on the same subject. I tabled the questions because I understand that the European Community is requesting that all EEC members double their aid to Nicaragua. What response will the British Government make to that? The issue may not arise until the next Development Council. Has the Commission made its proposals, and, if not, when is it likely to make them? What do we propose to do to respond, and how far does it look as though we shall turn in the direction of the EEC's more generous and more politically realistic policies towards Nicaragua than those of the United States? I should be most grateful for some information on that matter, as I have failed to elicit anything through my parliamentary questions.

I note what the Minister said. Most people, who have been extremely generous, understand well that there has been no extra money from the Government to meet the crisis in Africa. We should be foolish not to welcome what the Government have done. They have done a good deal, but the expenditure which the Minister mentioned came out of the 1984-85 programme and the Minister's contingency reserve. The concept of a contingency reserve is slightly new to me—for at least a couple of years, we did not have an underspend on the aid programme.

Mr. Raison: The contingency reserve is not a description of underspending, but simply a sum which is set aside to deal with emergencies and special needs as they crop up. I should be extremely surprised if the right hon. Lady did not have one when in office.

Dame Judith Hart: I am well aware of that. We somehow found ourselves able to provide whenever we were asked for additional help, without having to set aside money and thus depriving the bilateral aid programme.

Last week, the Minister was good enough to receive a deputation from the social and economic affairs committee of the United Nations Association led by my noble Friend, Lord Ennals, and me. He told us, as I am sure he would be ready to tell the House, that this year, with the crisis in mind, he has increased the contingency reserve from

£45 million to £60 million. In a programme which is not increasing, that represents a cut of £15 million in bilateral or multilateral programmes.

It is scandalous that the aid programme is not increasing to take account of these needs and that money has not been taken from the Government's contingency reserve. When the pop concert with Bob Geldorf, which is hoping to raise £10 million, takes place, I hope that those who attend decide to write to the Prime Minister asking for £10 million to £100 million more on the aid programme to match what those individuals are putting in.

I am glad to hear about the special assistance being given for trucks and other vehicles in Ethiopia and Sudan. I recognise the political problems that are wrapped up in these matters. However, like the Minister, I know that Mali, Niger, Chad and Mozambique, for example, are suffering. The crisis affects a high proportion of Africa.

I should like to consider the inadequacy of the present capacity to respond. The Minister talked about the longer term. The civil servants who provided his brief are knowledgable about the best means of promoting agricultural development. Local peasant farmers need money, but none will be forthcoming from the present aid programme, at least not on the proper scale. Sources of water, roads, fuel costs and the planting of trees require direct development assistance and no amount of getting together with other donor countries and working out what is best is a substitute for them.

The Minister has set his heart on bilateral aid as far as possible. He does not want to join the World Bank multilateral programme, but would far rather provide British help which links in with it. Programmes are being worked out by the World Food Council and we have the United Nations development programme. There must be more development aid expenditure if we are to achieve anything for sub-Saharan Africa in the longer term.

Spending on up-country roads, tree planting and water points, whether for hydro-electricity or tube wells, does not fit the Government's criteria for commercial and political spin-offs. I doubt whether there will be much political spin-off from assisting in the longer-term development of sub-Saharan Africa. Those countries do not carry a tremendous amount of weight in the world arena. I doubt whether there will be more than a fractional commercial spin-off because such spending does not yield large orders for British firms. It involves a high element of local cost and does not involve enormous inputs of machinery.

Long-term development aid to avoid crisis is not compatible with the philosophy of the Government's aid programme. The Minister will have to face that and tell us where he stands. Which will win—the philosophy of the Cabinet Office or the philosophy of development assistance necessary to help the poor in sub-Saharan Africa? He cannot have it both ways. He will have to tell us, because we shall continue to probe him about which way he is going.

The Food and Agriculture Organisation warned the world for about four years about the crisis which was made apparent in the autumn, but nobody listened. The Government, the EEC and the donors of food aid did not listen, but those who knew had given a warning. They continue to give warnings and they are now telling us that matters are likely to get a good deal worse in the next few years. This is not a sporadic 1984-85 crisis which can soon be forgotten. It will go on because of what has happened to the ecology of sub-Saharan Africa.

There is no easy solution. I agree that the green revolution has resulted in massively increased food production in India and Bangladesh, but it can occur only when the new technologies in food production are applied to the right climatic conditions. The right climatic conditions do not exist in sub-Saharan Africa. There might be a considerable population movement from areas incapable of supporting people. Some communities might be saved by the right injection of assistance, but the prospects are not good.

Year by year, for the next five, six or 10 years, will we have the saga of money and food being found a little too late, taking a long time to get there, and incapable of being delivered because of the shortage of transport, trucks and so on? Are we not capable of devising a better approach to meeting what clearly will be a deep need in sub-Saharan Africa for some little time to come? That period will stretch over the next couple of years.

We have available to us the following. There are forecasts and intelligence reports, not just the global or African predictions of FAO, but a highly sophisticated method by which it is possible to forecast a few months ahead when a food crisis will hit a particular area because of what happens on the market, what people are selling and what they are doing with the food that they take to the market. All that is well known. Forecasting is possible. We can know three to six months in advance exactly in which area a food crisis will arise. Therefore, we have the intelligence.

We have the organisations. There is the office of the United Nations disaster relief co-ordinator. There is our own disaster unit here in Britain. I do not have such a terribly high regard for the EEC's capacity to integrate its various departments, so I do not know whether the European Commission has devised a similar disaster unit that brings together transport, money and food. I very much doubt it. If not, it could have such a unit.

I do not know how far it is possible to link forecasting and planning with the effective provision of what will be needed, near the points where it will be needed. I suppose that we all read the leader in *The Times* yesterday. It is not often these days that I am able to quote with any approval a leader from *The Times* on anything to do with the Third world, but this leader was probably an agricultural correspondent leader rather than a Bauer-dominated aid leader. The Minister quoted some of the things that it said about the increase in world food production. It also stated:

"the debate nevertheless will take place in a world which is awash with food surpluses. Since 1964 world-wide production of wheat and food grains has doubled and kept ahead of population growth . . . While the Commons debates these matters . . . EEC agriculture ministers are also meeting."

So is the world food conference.

"If the world is awash with grain, it is also awash with words about grain."

Again in *The Times* there is a report about the world food conference that is taking place now. It states:

"Algeria, now to be 'bombed' with a million tonnes of very cut price American surplus wheat, is only the first target of the US Department of Agriculture in its new $2 billion offensives against what it says are 'unfair trade practices',—notably the EEC's Common Agricultural Policy."

The EEC agriculture commissioner

"made it clear the EEC meant to defend itself."

[Dame Judith Hart]

In my view, there is something totally obscene about a world that has more than enough food supplies to feed everybody, in which such a dialogue is going on between two of the surplus producers, and in which there is no concrete co-ordinated effort to plan for the future.

I do not mind under which auspices it is, but a strengthened UNDRO linked up with FAO and the EEC might be the right thing—it does not really matter who. Why can there not be a massively strengthened international disaster organisation which not only has the capacity to co-ordinate, which is all that UNDRO does at the moment — it initiates and co-ordinates national responses—but has the money to organise and pay in advance for the surpluses that are likely to be needed, and has the storage and depots, which are not hundreds of miles away, so that months go by while things are being shipped to the countries that need them? The depots, storage and staff should be near the places that are likely to experience crisis.

I do not want to suggest the detail of the countries with which one negotiates a United Nations building for storage, staff, transport—trucks and vehicles of all sorts —medical supplies, tents and all the things which, at the moment, are being shipped or transported. The Minister is spending £10 million on flying such things over by Hercules. How much more sensible it would be if those things were near at hand to the Sudan, Ethiopia, Mali, Chad and Niger. That is more likely to be saving money than spending money.

I see no reason why that could not be done. It will need an initiative. It can be an initiative that links up with the voluntary agencies. They too can use the storage facilities and organise their vehicles and staff from such centres. However, an initiative will be needed, and I am very much afraid that it is the sort of initiative that can come only from the Minister. I am also very much afraid that the Minister's attitude is just a little too complacent to permit him to take such an initiative.

5.17 pm

Mr. Julian Amery (Brighton, Pavilion): I think that we would all agree with the right hon. Member for Clydesdale (Dame J. Hart) about the obscenity of the glut of food in some parts of the world and the famine that is prevailing in large parts of Africa. However, I think that we can all recognise, although we often criticise the European common agricultural policy, that it is thanks to that policy that we have an abundant surplus and can make a great deal of grain available at present. Before that policy was introduced, we might have been hard put to do so.

The right hon. Lady recognised—I think that we all do—that Africa is dying—not just the people, but the land. The crisis ahead is serious. Some of the causes can be attributed to what, without blasphemy, one could call an act of God—the drought. However, there is another aspect, which is man-made, and I should like to concentrate on it.

The drought is a major cause, but it is not the only one. War is almost as important. Two horsemen of the Apocalypse are famine and war, followed closely by pestilence. When people are weakened by famine and the consequences of war, they can no longer fight back against the natural disasters that confront them. Therefore, the four horsemen are having it pretty good in the sub-Sahara.

We need to focus on the man-made aspects, because we can make a greater contribution there than we can make to solving the problem of drought. Perhaps we could do more. Let us take Ethiopia for a start. A civil war is being waged by the central Government against Eritrea and Tigre. When I was in the Sudan some months ago, I went to some of the refugee camps in the east, near Kassala. Part of the refugee population was escaping from the famine but an even larger part was escaping from the bombing and the excursions of the Ethiopian army. The people came bringing such wealth as they had—their livestock—half of which had perished on the way. Even if the weather had been better in Ethiopia, there could be no agricultural reconstruction in Eritrea and Tigre while the civil war went on.

There is not the same degree of famine in the Ogaden, but about 1 million Somalis have left that region to pour into Somalia because of the incursions of the Ethiopian Government. The southern Sudan is in insurrection against Khartoum. I shall not go into the rights or wrongs of that, but the dissident action is actively supported by the Ethiopian Government. According to the latest report that I have, famine is now occurring in what should be a naturally rich region of Sudan.

There is a problem there upon which we should focus a little. The chances of lifting Sudan out of its historical poverty were the discoveries of oil in the south and the development of the Jonglei canal. All that has been stopped by the civil war in the south. Until that civil war is ended, in whichever way, it seems that famine will continue there, and the chances of Sudan recovering and establishing itself and developing its economy will be greatly retarded.

In the Darfur region of the Sudan, which has been mentioned, there is a growing element of local famine. It is nourished additionally by the influx of refugees from Chad. I am no expert on the position in Chad, but I cannot believe that those refugees are migrating to the Sudan exclusively because of the drought. I cannot help thinking that the war in Chad is a major element in pushing them out.

There is the political factor of civil war or war encouraged in southern Sudan by Ethiopia or in Chad by Libya. The effects of war are plain enough. My right hon. Friend the Minister for Overseas Development told us yesterday that shortage of transport is the main problem in Darfur. I believe that he said that the Ethiopians have 4,000 trucks and had made about 1,500 available so far. Of course the Ethiopians cannot make more available when they are fighting a war. Those of us who have been involved in military operations know how much transport that requires.

We are reaching a point where, given the extent of the aid that we provide, we should be insisting on a ceasefire in all those wars. It is not fair that our people, through taxation or voluntary donations, should be contributing to the relief of the famine which the Ethiopian Government — it may be other Governments as well — are exacerbating, not by neglect or inefficiency—we could accept that in an African country — but by their deliberate prosecution of military measures.

I shall be asked what leverage we have and what we can do about that. We plainly cannot cut off aid from people who are dying or from the starving, even for political reasons; but long-term aid is another matter. If I am right —my right hon. Friend will correct me if I am wrong—

we do not have any bilateral long-term aid arrangements with Ethiopia, but we contribute substantially to European aid to Ethiopia through the Lomé convention. I believe that that is the biggest aid package that Ethiopia receives.

I understand that it is a principle of the European Community that political strings are not attached to the aid that we provide as a Community. It is time that we reconsidered that. This country is a major donor through the European Community and we have a strong voice within the European Community. It is high time that we insisted that there should be a change in the political attitude of Ethiopia to its regions and towards southern Sudan if further long-term aid is to be given. I am not talking about short-term aid to save the dying.

Normally, one does not want to interfere with the internal affairs of a sovereign state, but this is not a normal situation. As it seems to depend upon Europe and the United States for the aid that it receives, we are in a strong position to talk to Ethiopia about future long-term aid.

If that approach does not succeed, we should seriously consider whether we should concentrate our aid in the future on those countries whose Governments are more or less co-operative, such as Sudan and Somalia.

I should like to say a word before concluding on the subject of foreign debt. It is a different subject and one which is much less emotive. It is dry as dust. We have learned to live with the problem, but it will not go away. It is a time bomb under the international financial system. The heavy debts incurred by Third world countries are dangerous for them. So long as they are in debt and cannot meet their obligations, they will find it difficult to obtain new loans on any investment from the industrialised West. Their development will therefore be hampered. The debts are also dangerous for the creditors.

The American banks have a curious regulation which I shall not seek to justify. They show their loans as an asset in their balance sheets. Everyone is aware that many of the Latin American debts are non-performing, but they are still shown as assets in the balance sheets of American banks. If there were a major default or a cartel of defaulting debtors, many of the banks might have to close their doors. I am not worried about the banks, but I am worried about the international repercussions.

In 1929, at the time of the Wall street crash, the dollar retained its value because it was tied to gold. The dollar is now tied to nothing. It has become the only source of wealth which is recognised by all the central banks. What is the answer to the problem? The International Monetary Fund, of course, has come up with the correct and logical answer — debtor countries must pursue policies of deflation, tighten their belts and so on. That is all right up to a point, but if they do that too far there could be dangerous political repercussions. Is there any other way? I shall take an analogy from Marshall aid. When Marshall aid was given, most of the recipient countries realised that they could never repay their obligations to the United States. They therefore set aside what were called counterpart funds. It was their local currency guarantee against inflation. The money was available for investment or for the purchase of local assets by western countries on terms to be agreed by the Government of the country involved. Could we do something of the kind again?

Could the debtor countries make available in their own currency — guaranteed, as I say, against inflation — a proportion of their debt which could be taken up by the United States, Great Britain, Japan or other interests to open banks or insurance agencies or to buy a stake in the country involved? If that is put, as I have put it, to Latin American debtor countries, they say that they cannot part with the national patrimony. They talk about "patrimonia nacional" with great emotion. They see a colonialist threat in parting with their assets. Yet the Chinese People's Republic — Communist China — seems prepared to do just that, despite its experience of foreign investment under imperial China. I would have thought that that was a less painful operation than the one which the IMF is otherwise bound to recommend. If it were carried out, it would give confidence to western investors generally to invest in those countries, and it would also give confidence to the banks to lend again.

I am glad to say that we are not as much involved as the United States, but we are sufficiently involved to make it worthwhile for our Government, in their discussions with the Americans, the IMF and the World Bank, to raise this question more seriously than it has been raised so far.

5.30 pm

Mr. Robert Maclennan (Caithness and Sutherland): As this is an extremely short debate, I shall be brief. However, it gives us an important opportunity to look at the Government's response to the present famine crisis. Although the Minister diagnosed the problems which the suffering parts of Africa are now facing and spoke of the long-term need for a new strategy, he gave very little evidence of how he saw the present British Government contributing to the solution of those problems.

The right hon. Gentleman was right to speak of the need to bring about the effective rescheduling of debt, but there was no recognition in what he said of the considerable difficulties that face us in bringing about that effective rescheduling. In particular, there was no recognition of the probability that the position will get worse rather than better if the United States, as seems likely, goes into recession over the next two years.

In fact, the Minister's attitude was somewhat complacent. It was defensive, and intellectually honest enough to diagnose the problem, but it was cribbed and confined by the Government's mistaken policy — for which the right hon. Gentleman has only a limited responsibility—for curbing public expenditure.

If the British Government, as part of the European Community, encourage their European partners to continue to proceed with this restrictive policy, we shall fail to tackle the problems of the less-developed world. Indeed, we can only expect that those problems will get worse, and it is not just a question of the level of overseas aid, even though that is important.

I wish to consider not merely the effectiveness of what the Government have done in the short term to come to the relief of those countries whose plight has so forcefully been brought to the attention of our citizens, whose generous private response has enabled the voluntary aid agencies to make a quite unusual contribution aimed at stemming the worst consequences of this immediate disaster.

It is important to emphasise that the crisis in Africa is not a short-term weather failure. The Minister spoke of a problem that had got worse, and the right hon. Member for Clydesdale (Dame J. Hart) said that the problem had been recognised for four years by the Food and Agriculture Organisation. In reality, food production in Africa has

[Mr. Robert Maclennan]

been declining for at least 10 years, and there has been a process of desertification and deforestation which has progressively undercut Africa's agricultural base.

It is to that question that the British public are increasingly directing their attention. They recognise that although the short-term assistance that we are able to give to improve the distribution of food that we ship in is necessary, it is not enough, and that we should address ourselves to the transformation of Africa's rural economy.

What has gone wrong in this great continent? First, we must recognise that farming methods have contributed to the problem, and in particular have undermined prospects for the small farmer. The Governments of many of the African countries affected have foolishly but understandably invested less in agricultural development than in urban development. Indeed, that urban development has all too often taken place on the back of the small peasant, who is responsible for the greater part of Africa's potential wealth.

A part of the blame must also be shared by external countries, in that our international aid programmes have not ensured that our long-term aid has gone to those who need it most — the rural poor. That is why I wish to stress the importance of a proposal that has been made by the independent commission on international humanitarian issues — that we should focus more directly on the provision of assistance to the rural poor through the provision of credit in amounts that will assist those who are unaffected by the larger programmes.

This has already been done with striking success in some countries on the initiative of some of their banking institutions. I particularly cite the example of the Grameen bank—the rural bank—in Bangladesh. Since 1976 that bank has provided a substantial amount of money—$6·2 million — to 58,300 people, almost half of whom are women. That is important in an African context, where the bulk of agricultural activity has traditionally been carried on by women.

Under the Grameen scheme the beneficiaries are the poorest of the poor. There is a cut-off point, so that a person who possesses more than 0·2 hectares is not eligible for assistance. Similar schemes exist in Nepal and Pakistan. The most striking feature of these schemes which should commend them to the Government is the repayment rates, which have been as high as 98 per cent. Only the building societies in this country can boast of such a level of success.

The scheme depends on the provision of credit to a small group of individuals, not members of the same family, who are seeking help in the form of sums from as little as £20 to £200. Collateral is not provided, but each member of the group undertakes to bring pressure to bear on the others to repay. The remarkable success of such schemes has led the independent commission to recommend that financial institutions should examine this example and the lessons which it may have, particularly for the continent of Africa.

Africa has a growing population and the problem of feeding that population with a declining productive capacity is stark and cannot be tackled with present forms of relief. Mr. Edgard Pisani has said that the help that we need to provide for Africa is not to build cathedrals in the desert, but to help with low-cost credit, and I urge the Government to take that course. That is a specific and important contribution which could be made by this country, with its financial expertise and its partnership with other European countries. Such action could bring about a remarkable change in agricultural practices, building up the capacity of the poorest of the poor to adapt to the needs of the situation. The Government should do this in conjunction with, rather than in substitution for, the present aid programme, the restrictions of which have understandably been the main focus of today's debate.

I condemn the Government's action on the level of overseas aid. The Government have simply recycled an amount which is limited by their budgetary policy. It is unacceptable that we should rob some of the world's least well-off countries whose predicament has been less highlighted but is no less real. The Minister claims that his hands are tied, but he must recognise that the specific proposals that I have described for credit aid to small agricultural developments are consistent with the kind of policy which the Government ought to be able to espouse.

5.42 pm

Viscount Cranborne (Dorset, South): The hon. Member for Caithness and Sutherland (Mr. Maclennan) referred to the enormous public interest in this vital issue, and the House owes the Opposition a debt of gratitude for enabling us to discuss it today. I am especially grateful in view of my interest, which I should declare at this point, as chairman of an organisation which, among other things, endeavours to provide food aid for the victims of Soviet policy in Afghanistan; a policy which is purely directed at trying to subjugate that unhappy country by starving its population and destroying its crops and cattle. I therefore have almost daily contact at long distance, and sometimes at closer quarters, with those tragic events.

I am perhaps a little less grateful for the terms of the Opposition motion. The hon. Member for Vauxhall (Mr. Holland) has been notorious in the past for his somewhat dismissive attitude to the United States Government and to Americans in general, and some may feel that he almost delights in scoring easy runs off them, so I hope that he will not be insulted when I say that in some of his comments today he reminded me of the type of American who believes that difficulties can be solved merely by throwing megabucks at them.

Mr. Stuart Holland: It often helps.

Viscount Cranborne: Despite a few nods in the other direction, that seemed to be the approach of the hon. Gentleman and other Opposition Members today. I am the last to decry the importance of resources, but in the sphere in which I have experience I would rather see £50,000 well spent than £500,000 ill spent, however much the provision of a greater sum might increase the outrage and rhetoric in which the Opposition take such delight.

As those of us who have had the misfortune of seeing it know, famine can strike with enormous speed. Very often, those who study these matters can predict the threat of famine, but once it has occurred it is extremely difficult to put it right. The help that we provide, however great, very often proves inadequate, because of the nature of the beast, and it also tends to be extraordinarily expensive. How much better it would be—I am delighted to have heard this several times from both sides of the House today —if we could concentrate on the long term, on trying to prevent famine; an approach which is not only cheaper but more effective.

My right hon. Friend the Member for Brighton, Pavilion (Mr. Amery) observed with some justice that we cannot do anything about the weather. As a rather better historian than I am, he may care to reflect that the granary of the Roman empire was destroyed largely by the irruption of Semitic peoples bringing huge flocks of sheep and goats in their wake, thus destroying the vegetation which once enabled what is now a desert to feed the greatest empire of the ancient world. So perhaps the weather is not entirely an act of God, but has been brought about by mankind over the course of many centuries.

I am delighted that there seems to be a consensus in the House about the need to consider the long term, but if we are to do that we must pay particular attention to the quality of our aid and the influence that we can bring to bear on that quality by eliminating the human causes of some of the disasters that we see with such horror on television and which some of us have been unfortunate enough to see on the ground with even more effect, dare I say it, than on the little screens in our living rooms.

As my right hon. Friend the Member for Pavilion said, the human factor is all too often very largely to blame. I have already referred to the extraordinary events of the past five years in Afghanistan. I do not know whether any Opposition Members have seen a Russian MI24 helicopter gunship. It is an enormous and frightening machine and it can be seen any day of the week in the valleys of Afghanistan. Let us imagine one of those machines wheeling over a valley in which large herds of cattle, sheep and goats are guarded by a young boy. Near the flocks are fields of corn. The gunship comes down over the valley, which is undefended by anti-aircraft weapons. Its first act is to shoot the boy. Its subsequent act is to shoot the sheep, the goats and the cattle. It goes round to make sure that none of them is moving. After that fairly long process, it devotes attention to setting fire to the crops.

It is hardly surprising that there were indicators of famine in Afghanistan. To a lesser degree, the same has occurred in parts of Africa. The nations of the West and public opinion in the Western world can expose what is happening and shame the perpetrators of those ghastly acts into desisting.

Many hon. Members could itemise other factors that are part of the human cause of famine. The list is long, but three items are especially worthy of consideration. During the past few weeks, *The Economist* has addressed itself, with admirable pithiness and understanding, to the way in which so many developing countries produce policies which encourage a drift to the towns. Many inhabitants of those countries already feel that they would like to follow that drift. Will my right hon. Friend the Minister consider the possibility of trying to encourage the recipients of British aid to reverse those policies so that we can encourage the growth of a rural rather than an urban economy?

The Minister knows that that is not always an easy task. Many dictators find it attractive to encourage an urban population rather than a rural one because it tends to be easier to control and easier to bribe. My right hon. Friend is already well seized of the problems in making sure that financial aid is directed where it can be of most use. In the past, far too much money has found its way into the Swiss, and perhaps even the British, bank accounts of Government officials who had no right to it in the first place.

I wonder whether the right hon. and hon. Members who have referred to the human factor this afternoon have got their priorities right. Above all, we should consider the small farmer as an individual, not as part of a collective or a traditional tribal society. Those of us who have seen the dust bowls of Africa, as I have done during the past 20 years, know that a tribal society can lead to too many crops and cattle, the destruction of the soil and the appalling erosion that follows. Equally, we know of the dangers of collective farming and the adhesion to ideologies which may be attractive in theory but which lead to under-production in practice.

I am delighted to have had the opportunity and privilege of taking part in the debate. I congratulate the Minister on what he said this afternoon, and I hope that he will ensure that the human factor, over which we have some control, is not far from his mind when he formulates the important policies to which he referred, and that he will not be swayed by fear or fashion from considering the realities of life.

5.54 pm

Mr. Guy Barnett (Greenwich): The hon. Member for Dorset, South (Viscount Cranborne) mentioned Afghanistan twice in his speech. He may be interested to know that, before the Russian involvement in Afghanistan, that country was about the lowest recipient of aid in the Third world. We may learn some interesting lessons from that.

The right hon. Member for Brighton, Pavilion (Mr. Amery), who has left the Chamber, mentioned the effect of war in Ethiopia, and I can only agree with him about the damaging effect of war and civil war in the Third world. I believe it is correct to say that more than 140 wars have taken place there since 1945. I hope that the right hon. Gentleman agrees with me about the need for peace and development programmes under the authority of the United Nations as a solution, on a regional basis, to some of the problems that he raised.

I shall confine my remarks to a few general observations, having considered with great interest the recent Select Committee report on famine in Africa. I am sorry that it has not yet been mentioned in the debate. I begin by committing myself to the statement that the tragedy of human suffering and death which occurred in Africa should never have happened. It is a bitter reflection on the world community that it did happen. No one, least of all no one who followed the growing crisis in Africa during preceding years, should have been in any doubt that we were heading for a major disaster, and this Government, with others, must accept their share of responsibility for that. It is not as though we were not warned.

As my right hon. Friend the Member for Clydesdale (Dame J. Hart) said, the FAO-OAU publication in 1982 went by almost unnoticed. In April 1983, just before the general election, we debated famine, and again in the autumn of the same year. The matter received attention in countless conferences. I recall taking part in a very valuable conference of the Commonwealth Parliamentary Association in Nairobi in October 1983. People were concerned then with malnutrition—the sapping of the will to live effects of malnutrition which have inhabited the Third world for so long. I said at that conference that the trouble was that starvation is news while malnutrition is not.

[Mr. Guy Barnett]

We must use this debate and the evidence that has been gleaned in the Select Committee's report to learn lessons. The Select Committee rightly pointed out that the cause of the famine was not just the drought. There were short-term causes, but I believe that there were deep-seated and long-term causes for what has occurred.

The fact is that the rains failed in Africa. They have done so since time immemorial. Pre-colonial societies knew that, and many of them knew the necessity of maintaining buffer stocks against the possibility of drought in the next season. The hon. Member for Dorset, South played down the importance of the wisdom of tribal societies, but I hope that he will take the fact into account. I hope that he will also realise that those tribal societies, because they had to do it for their very survival, recognised the prime importance of growing enough food to meet the needs of their people.

We are inclined to underestimate the explosive revolutionary impact of the European incursion into Africa which came with colonialism. African people, many of whom did not even have the use of the wheel a century or more ago, were understandably overwhelmed by the technology of the West. The people of the West have encouraged Africans to believe that they knew better and that the West possesed a technological solution to every social, environmental and political problem. The expert has often been treated, therefore, as though he were infallible. He feels, perhaps too easily, that he has nothing to learn and that therefore he has no need to listen, even if he understands the language of his potential informant in Africa. When his chosen project fails, he holds up his hands and exclaims, "Africa wins again."

In fact, Africa has lost heavily because our all too frequent failure to take into account the experience and wisdom of centuries has had the effect of devaluing it. If one wants to know why agriculture and husbandry are held in low regard in Africa—thought of as primitive, almost as degrading for the person who engages in it — I suggest that one should examine the impact of white people during the past 100 years as well as the industrial-based technology that they brought with them.

I said at the outset that the African tragedy ought never to have happened. The pain, misery and deaths which have afflicted hundreds of thousands of people and which will continue to do so were preventable if action had been taken in time. The cost has been colossal, not just in terms of loss of human life and suffering. Famines are disruptive. The resultant distress migrations mean the uprooting of families and whole communities who often travel miles on foot in search of distribution centres. The question arises: how will the people who survive be successfully resettled and enabled to become productive again?

As we have been reminded this afternoon, famine relief is hugely expensive. Famine almost invariably occurs in remote areas where there is an appalling lack of infrastructure development, so the cost of getting food into the mouths of those who need it and medical and other supplies to where they are required is prohibitive.

It is extraordinary that the cost of all this effort should be set against the aid budget. Millions of ordinary folk, both in this country and elsewhere, have dug deep in their pockets and are still doing so, many of them making enormous sacrifices. But not so, apparently, the taxpayer. For one thing, as Oxfam points out in its brief, the proportion of total Government expenditure going to aid has fallen from 1·01 per cent. in 1979-80 to 0·87 per cent, which is the estimate for the current year. Even so, the taxpayer's contribution is unchanged by this massive human disaster.

Can the Minister say that, as a consequence, people who might have received technical assistance will not now be denied it, or that countries which might have received project or sectoral aid will not now get as much as they might otherwise have received? The fact is that under this Government so far the taxpayer has not been required to make any sacrifice. Our aid programme in percentage terms compares poorly with that of most other Western countries. If we cannot persuade the Government to raise the figure, the House must persuade them to restore the principle of aid to the poorest.

The majority of people expect our aid programme to concentrate upon that, not upon the matters which the Minister for Overseas Development mentioned at the end of his speech — commmercial self-interest and other similar objectives. That means a larger and more relevant contribution to the needs of the peasant farmer and the rural community, restoring the funding that has been taken away from the scientific units, which can make an enormous contribution, and making a larger contribution to the International Fund for Agricultural Development. These, and other changes of direction, are urgent. I hope that the Government will at last recognise the need for change.

The subject of this motion should be debated more frequently. It is a matter of great concern to every section of our community. I do not believe that the Government have reflected that concern in the resources that they devote to the aid programme.

6.5 pm

Mr. Colin Moynihan (Lewisham, East): Recently I had the privilege of visiting the Sudan and Ethiopia with the hon. Member for Stoke-on-Trent, Central (Mr. Fisher), whose contribution, insight and participation were greatly appreciated by me and the all-party parliamentary group on overseas development under whose auspices we went to those countries.

I was glad to hear the comments of the right hon. Member for Clydesdale (Dame J. Hart) on the report which appeared yesterday in *The Times*, upon which I, too, have reflected. I hope that she will agree with one or two of my reflections.

Britain stopped guaranteeing its farmers the highest possible prices about 30 years after the Napoleonic wars. At that time, everybody forecast gloom and doom. In practice, Victorian prosperity took over. Britain was not ruined. A similar challenge now faces the Western world. By fixing food prices artificially high in developed countries and artificially low in poor countries, food output swamps Japan's paddy fields, Europe's grain mountains and North America's rich prairies, at the expense of poorer countries, where babies grow faster than crops. These prophetic words of *The Economist* are no less true today than when they were written over a year ago.

The result is that 2 per cent. of the world's farmers —the 24 million in the rich countries, where fewer than one tenth of the people work on farms—are providing nearly a quarter of all the world's food and nearly three quarters of its food exports. The other 98 per cent. of farmers—the 1·2 billion in the poor countries, where up

to two thirds of the people work on the land—grow three quarters of the world's food but still do not have enough to eat.

The average farmer in rich countries, including hobby farmers, produces $8,000 worth of food a year. The average full-time farmer in poor countries produces $650 worth of food a year. The rich land farmer is paid far more than the $8,000 worth that he produces, while the poor land farmer is often paid far less than the $650 worth that he digs out.

If politicians want to help, if politicians can help, there is not one hon. Member whose time could be better spent than in protracted argument for a comprehensive reform of the common agricultural policy, for a comprehensive reform of farm policies worldwide and for a move away from the policies which have been pushing up farm output in countries where obesity is the main medical problem, and pushing it down in countries where malnutrition is the main problem.

The story of World Bank lending to Ethiopia is interesting for many reasons. The bank's lending programme to Ethiopia was doubled after the 1974 revaluation, despite the political concerns of the United States and European Governments. This doubling was justified by the Government's programme of land reform, which had always been considered by the bank as essential both to growth and equity objectives in Ethiopia. Attempts at land reform before 1974 had failed. Post-revolutionary Ethiopia has managed what Stanley Please recognised as "a fairly sound record of macro—and development—oriented economic management, particularly by sub-Saharan African standards."
But the domestic economy continues to weaken in Ethiopia.

Compensation arrangements for nationalised foreign investors were not adequately forthcoming. Foreign investors have become objects of suspicion by the radical Government in Addis Ababa, exemplified by scepticism towards the international values of financial and Western democratic behaviour, which now dents the confidence of Western donors. Meanwhile, calls for a policy dialogue are snubbed by new joint venture codes without guarantees for withdrawal or guarantees to repatriate profits.

The horrible inevitability of disaster, the hallmark of so much of Ethiopia's history, unleashed itself in the famine. Western donors now tread precariously in Addis Ababa, but once again food production must take the pole position. Peasant farmers produce 94 per cent. of the food. The state farms and co-operatives produce 6 per cent. of the food, yet 80 per cent. of the output comes from state farms, 12 per cent. from the producer co-operatives and 8 per cent. from the peasant sector.

With millions of peasant farmers malnourished and starving, the cry from Western donors has been that it is wrong to go for big agricultural schemes, that Lomé 3 should concentrate on the peasant sector, that there should be a policy dialogue, that the agricultural marketing organisations should be reformed and that there should be collective conditionality of the donors, land tenure and a free market. But in reality the enthusiasm dies and can often be insensitively handled. Even the peasant agricultural development programme of the IDA is withdrawn. The Ethiopian Government refuse to accept a World Bank adviser to examine pricing policy.

Not surprisingly, and regrettably, Marxism has no love for policy dialogue, which even now evaporates and is transformed into policy monologue. It is an ideology where people serve policies, instead of the policies serving the people, where the starving villagers come to the refugee workers over the Sudanese border, not the refugee workers to the villagers; where Soviet planes decant thousands of Eritrean and Tigre refugees on to the tarmac of Addis Ababa airport, to be bussed on to resettlement camps in the south-west; where Ethiopian officials take off the dying and dead from the overcrowded, unpressurised holds; where the fire engines wash out the contaminated remains which trickle down the camber of the airfield towards the RAF Lyneham teams, glancing nervously as the water approaches their supplies, hopefully, this time, free from 001, the code word for the unmentionable, cholera.

It is a relentless, merciless world for the relief workers from all countries, who cannot switch over, as we television viewers can, to the other channel. They deserve our respect and admiration.

Meanwhile, by complete contrast, the Sudan — geographically the area of the whole of Western Europe —consistently accepts refugees across its borders from war-stricken Ethiopia in the east, 250,000 refugees from Uganda in the south, 5,000 from neighbouring Zaire and hundreds of thousands recently from Chad into Darfur in the west.

To do that on a humanitarian basis, and to attempt to assist in settling them away from the borders, deserves the admiration of the Western world. Relief workers go where they are needed and the refugees have equal access to whatever social services are available. Moreover, Government policy favours settling refugees in organised settlements to maximise the provision of the available services.

This is all happening at a time when the Sudan is experiencing its second major drought in 15 years. I was glad that the right hon. Member for Clydesdale referred to forecasting and planning, because there is strong evidence that drought, apparently persistent and endemic to Africa, is linked to long-term changes in Africa's climate.

The process of desertification—caused by a number of factors — must be considered carefully. We must examine such factors as livestock over-grazing, over-cutting for fuel wood purposes and the uncontrolled expansion of human settlements. The latter in its own right may be one of the causes of climatic change, in that it reduces the soil's capacity to store water.

Five of the Sudan's eight administrative regions are affected by the drought, yet the Sudan continues to maintain its open-door policy to refugees. Regional Governments estimate that 4·5 million people are affected in the Sudan, having lost crops or livestock, or both, and as a consequence are unable to provide for themselves adequately without external support. Yet the Sudan continues to maintain its open-door policy.

Among the immediate manifestations of the drought have been food riots as convoys of lorries carry grain through hungry villages to border camps for foreign refugees. A fourfold to fivefold increase in the market price of the main food staple, dura and sorghum, and a sixfold to eightfold drop in the price for livestock in affected regional markets inflame domestic resentment.

In western Sudan, the news of drought in Darfur was known long before this week's radio broadcasts. The Darfur region was declared a disaster zone as long ago as July 1984. A national relief committee was established to

[Mr. Colin Moynihan]

combat the effects of drought in that region and in Kordofan. The committee has since evolved into a national high commission for drought and desertification, and it is chaired by the first vice-president. Entire villages in Darfur have been virtually deserted, while others have been left to women, children and the elderly as the men have set forth seeking pastures and employment.

In terms of scale, only the east of the country is worse. Only a month ago, Wad Kowli, a camp which the hon. Member for Stoke-on-Trent, Central and I visited, was the main refugee camp in the Sudan. It was the final resting place for Ethiopian refugees, many of whom had walked hundreds of miles through war-stricken zones to reach the refugee workers, the unsung heroes who run the camp and minister to the children.

I welcome the news given by the Minister today of increased funding for the Save the Children Fund. Wad Kowli is the fastest growing African city—a city of humble, gentle and dignified people. Compared with having fewer than 20,000 people at Christmas, Wad Kowli sheltered 91,000 on 10 February.

The hon. Member for Stoke-on-Trent, Central and I were privileged to be the first Western politicians to meet the new Sudanese leader, who was remarkably frank in his approach to the problems that he faces. He made it clear that the solution to political problems to which reference has been made, with John Garang and the rebel forces in the south, were vital so as to open up the Jonglei canal and get oil flowing once again—action which can only benefit the economic crisis in relation to the $9 billion external debt.

The Sudanese leader said that the Sudan faced a 30 per cent. deficit of food aid and famine relief, and a 60 per cent. deficit of essential seeds for sowing. If these shortages are not made up, the famine crisis will worsen dramatically, in the way that has been visible in recent weeks. In addition, $11 million is needed to ensure water supplies, and new water boreholes are essential to the medium and long-term solution of the problems that we are discussing.

We must reject as nonsense and lamentable ignorance the calls that have been made recently for camp closures. When the rains come, the journey home with limited provisions and the likelihood of heavy mud, swollen rivers and war-stricken zones will prove well nigh impossible for many. Equally, we must fight against "aid fatigue"—the "Why bother, we have done our bit?" attitude in a Western world anaesthetised by television.

We must, as the hon. Member for Vauxhall (Mr. Holland) rightly said—I have long supported this stance and will continue to do so—work towards the 0·7 per cent. United Nations target for aid. Above all, we must work for agricultural reform and conditionality between donors and recipients, based on trust and understanding and not imposed insensitively.

I am grateful, in the brief time available for the debate, to have had the opportunity to talk on this subject.

6.16 pm

Mr. Tom Clarke (Monklands, West): The hon. Member for Lewisham, East (Mr. Moynihan) will forgive me if I do not discuss the points that he raised. I wish to be brief, in the knowledge, which I find encouraging, that many hon. Members wish to speak in the debate.

The Minister speaks for a Government who were launched, in the words of the Prime Minister, by a quotation from St. Francis of Assisi. In reflecting on the hon. Gentleman's speech today, we must recall that St. Francis sought to encourage people to understand as much as to be understood. I hope that the Minister will understand, despite the assurances that he offered the House, that we have grave misgivings about Government policy on this whole issue.

Grave reservations exist about the Government's commitment to try to seek a solution to the problem of world poverty. Few of us can be satisfied with the figures that are available. The Minister spoke of £95 million, which is an 18 per cent. cut in real terms in the aid programme since the Conservatives assumed office.

In view of the information that is available and the pictures that we see on our television screens, it is clear that the great anguish in Africa, Asia and the Third world represents a scene that we would be negligent to ignore. It is a picture to which the British people want us to respond. The case for increasing aid is, therefore, already made.

We are entitled to be worried about the quality of aid. Of the £200 million given to Africa, a mere £27 million went to agricultural development. If we are concerned about prestigious projects such as the £74 million spent in Khartoum on a massive building which could have waited for some years, it is clear that we must be concerned about priorities.

Apart from asking Third world countries to deal with the problems of the debt crisis to which the motion refers —to deal with increasing interest charges at a time when commodity prices are going down and to cope with international inflation, which applies as much to them as to us, remembering that it greatly concerns the world recession—we must remember that we have given a commitment to spend amounts on armaments which, I suggest, are unreasonable in the light of the problems that the countries of the Third world are facing. How can we defend an aid budget of £95 million when last year alone we exported £1·8 billion of armaments? The people ask for bread and we send them tanks; they demand water and we send them an arms race. Our priorities are indefensible.

I hope that the Minister understands the anguish of 500 million people—one eighth of humanity—who, every day, experience poverty, misery and deprivation. I hope that, despite the Minister's wish to defend this Government's record, he will accept that the House must give a considered response to the anguish of those people. I hope, too, that, when those people think of the problems that they face, they will forgive us for our collective indifference. I believe that history will find it difficult to do so.

6.20 pm

Mr. Tony Baldry (Banbury): When the hon. Member for Denton and Reddish (Mr. Bennett) and I stood in refugee camps in Korem and Mekele, one thought more than any other that gripped my mind was that one should not become numb to the reality of what one sees and that the world should not, as famine disasters are seen ever more frequently on television screens, become deadened to reality.

I hope that the House, Britain and the international community will unite in a determination to eradicate hunger, at least by the year 2000. As the hon. Member for

Monklands, West (Mr. Clarke) said; we live in a world where cohesion is threatened not by the missile gap but by the gap between the rich nations of the North and the poor nations of the South.

There is nothing inevitable about what I, my hon. Friend the Member for Lewisham, East (Mr. Moynihan) and others have seen in Africa. Some 20 years ago, famine gripped parts of India. Today, to all intents and purposes, India is self-reliant in food. There is nothing inevitable about saying that we must live with hunger for ever. Nor do we have to accept that the nations of the developed world will always have to feed the nations of Africa. There is nothing inevitable about the feeling that Hercules aircraft will for ever have to fly around Ethiopia.

We should have a simple objective—to make the countries of sub-Saharan Africa food self-reliant, able to feed themselves and to buy on the open market food that they cannot produce themselves. Despite our best will and intentions, until the international community gives the same priority to tackling hunger as it gives to the arms talks in Geneva, we will be unlikely to make progress.

Our main concern is with focus. There is a danger in seeking to give as much aid as possible to Africa while the Soviet Union uses Africa to establish its influence, as, in part, does the United States. The international community must take the responsibility. We must ask ourselves how, as a community, we can best tackle this problem. It is not acceptable for part of the international community to seek to give food aid while another part seeks simply to give arms and to help prosecute a civil war and strife that is undoing much of the work promoted by the other part of the international community. Only when the United Nations has the determination to eliminate hunger will there be any hope of ensuring that sub-Saharan Africa is not still starving in the year 2000.

Britain is in a unique position to take a lead, because it does not seek to carve out spheres of influence in northern Africa. We do not seek, by the sale of arms, to promote our influence throughout the world. We have a unique position in the European Community and in our relationship with the United States.

I hope that hon. Members will stop seeking to divide the House by making cheap political points about whether our aid contribution is 0·35 per cent. or 0·7 per cent. of GNP. Of course resources are important, but it is more important for the House and Britain generally to be determined to eliminate hunger from the world as soon as possible. I hope that we shall achieve that aim within our lifetime. If we do not, the House and Britain will have failed.

6.25 pm

Mr. D. E. Thomas (Meirionnydd Nant Conwy): The hon. Member for Banbury (Mr. Baldry) expressed the sentiments of most hon. Members. It is right to emphasise the Minister's statement about the image of suffering that created a response by the British people. That response has gone much further than many of us hoped—£60 million or more has been given by the British public to alleviate famine in Africa.

The Select Committee on Foreign Affairs, in paragraph 127 of its report on famine in Africa, stated:

> "The generosity of the British people has not been matched by the British Government."

We need to repeat that point and follow the Select Committee's recommendations. In paragraph 128 it stated:

> "We consider that it is not acceptable that almost the entire costs of the UK response to the crisis should fall on the previously agreed ODA budget."

The Select Committee said that an additional provision should be made.

The Select Committee and many hon. Members have stressed the need to develop improved agriculture policies and programmes, to provide assistance for those programmes, and to prevent a recurrence of the present crisis. The Select Committee referred to assistance by the donor communities in various ways for the food producing sector, principally smallholder agricultural and horticultural production. The Minister referred to the successful pioneering scheme developed in Zimbabwe to increase agricultural production.

We need to examine our attitudes towards aid by noting the relationship between the present crisis and the longer-term crisis of agricultural production in Africa because of the obscene agricultural policies that are pursued by Northern and Western countries in the common agricultural policy. By relating the South's agricultural needs to the overdevelopment of the North—especially in the use of large areas of Southern countries to produce cash crops for export to Northern and Western countries—and by concentrating on the real needs of the Southern countries, we shall understand the structural changes that are required, not only in production techniques in Southern countries but in the international balance of trade in agriculture. Northern and Western countries must accept responsibility for the debt crisis and the man-made famine caused by our overconsumption and our commercial systems.

We need to look at only one indicator—indebtedness. In 1973, the ratio of external debts to GDP in non-oil developing countries was 22.4:1; it is now 35:1. To pay off the debts that are often caused by the militarism of the East-West conflict, which also engulfs the South, the developing countries have to expand their cash crops and raw materials for export. That often results in the forcing of self-sufficient farmers off the land, destruction of the environment, and over-intensive development of agri-business methods—all of them Northern inspired.

We need to look again at the ways in which we in Britain, as a member of the European Community, can lend our support to fundamental changes in our own agricultural policy. We need to look at the proposals that have been made by the French for a new Bretton Woods. We need to look in particular at the ways in which domestic reflation within the Northern countries is a contribution to international change as well as to our own obnoxious levels of unemployment.

We need, in particular, to take seriously what the French organisation, Frères des Hommes, said a couple of years ago:

> "A Normandy pig or cow, or a Parisian cat or dog, has a greater purchasing power than landless peasants in the Third World."

As long as we accept that kind of situation and fail to relate the famine and the plight of the Southern countries to our economic system—in particular, to the way in which capitalism has over-exploited Southern countries—we shall not in reality tackle the hunger that faces those Southern countries.

[Mr. D. E. Thomas]

We must take particularly seriously proposals that would gradually reduce the buying of agricultural produce from Southern countries, reduce the development of international sales of that kind, and emphasise the development of food rather than cash crops in those countries.

Rather than introduce aid ourselves, we should as a European Community purchase the produce of those countries, but not for our own use. We should not take delivery of that produce. It should be sent to agreed depots in the producing countries. We should negotiate with the Governments of such countries a method of collection and distribution to ensure that the local people benefit not only from a guaranteed price but from the produce. It is that kind of radical approach to aid that we need if we are to eradicate famine.

6.32 pm

Mr. Donald Anderson (Swansea, East): The debate has been all too short. It has drawn on the experience of many right hon. and hon. Members, some of whom have seen famine at first hand in the Sudan and Ethiopia. The themes have been, among others, our own human responsibility for much of the famine which now faces us, and the civil wars in the Sudan and Ethiopia, the population explosion, the deforestation and — a topic well developed by the hon. Member for Meirionnydd Nant Conwy (Mr. Thomas)—our own agricultural policies in the West, which exacerbate the attempts of the developing countries to have their own proper agricultural infrastructure and feed their own people.

The Minister gave a valuable diagnosis of the extent of our aid—the targeting, the speed of response, the need for co-ordinating and the need for a new strategic approach. I should be interested to hear his response to the valuable points made by my right hon. Friend the Member for Clydesdale (Dame J. Hart) about storage facilities and a rapid aid deployment force to meet those famine crises which are likely to face us with increasing regularity unless the world community as a whole comes together to meet its human responsibility in relation to those crises.

The Minister failed to put the Government's response in the context of a shrinking aid budget. The hon. Member for Dorset, South (Viscount Cranborne) said, in a rather lofty way, that money is not all, but money can help. The hon. Member for Lewisham, East (Mr. Moynihan) spoke of his commitment to the aid figure of 0·7 per cent. and the need to work towards it. He must realise now that we are moving away from that figure. Last year the United Kingdom's figure was 0·35 per cent. Indeed, it is now down to 0·33 per cent. When the Labour Government left office, the figure was in excess of 5 per cent., and rising.

The aid budget has been consistently cut by the Government since 1979. Comparing the 1985-86 figure with that for 1984-85, one sees that there is a clear cut of at least 3 per cent. in real terms. There has been a cut of no less than 18 per cent. since 1979. In spite of the brave words of the Minister about the importance of science research, the budget of the science unit has been cut, and cut again.

There is a falling percentage of central Government spending on aid, and comparatively our performance, in relation to that of the Development Assistance Committee countries, is very poor. The average development assistance of all non-US DAC countries is 0·45 per cent. of gross national product. Our own figure is now 0·33 per cent. In spite of our colonial traditions and the human relationships within the Commonwealth, which should certainly have put us on a par with France, with a figure in excess of 0·7 per cent., our figure is rather less than three-quarters of the non-US DAC average, and that percentage is falling. That is the reality.

The Minister, as he says, is seeking to obtain greater co-ordination and a more coherent aid strategy. That attempt takes place within a public expenditure programme which, since 1979, has allowed an increase in defence spending of 30 per cent., an increase in the law and order Vote of almost 40 per cent., and an 18 per cent. cut in the aid budget. However skilful the Minister is in redirecting, he is doing it from a much smaller base.

In spite of the brave words of the Government at the Bonn summit and elsewhere, cuts have been made. They are certainly out of tune with public opinion in Britain. The Oxfam public opinion survey at the end of last year showed that only 18 per cent. of those polled were in favour of a lower aid budget. The Government's attitude also has to be contrasted with the magnificent response of our people to the famine in Africa. That point was made eloquently in the Select Committee report on famine in Africa, which has not been touched on as much as it should have been during the debate.

It is clear that the Government's response to the famine in Africa has been based solely on switching funds within a decreasing aid budget, and the Minister cannot resile from that starting point. Apart from the Hercules operation in Ethopia, the money to respond to the unprecedented food crisis in sub-Saharan Africa has come from the existing aid budget. Indeed, from the beginning of February this year, half of the Hercules cost has fallen on the ODA.

The Foreign Affairs Committee contrasted the generosity of the British people with the stony response of the Government and called for substantial new money in the face of the continuing crisis. It is not good enough to say, as the Minister traditionally does, that the money comes from the contingency reserve designed specifically for the purpose, because no contingency reserve within the ODA was designed to meet the scale of human catastrophe that we have seen in sub-Saharan Africa in the past year.

A further fact about the shrinking aid budget is that the debts of the relevant countries have increased because of the background, which is the on-lending of Western banks —that was true of oil money in Latin America in the 1970s—the vast increase in interest rates, and the fall in commodity prices. That means that countries in sub-Saharan Africa have debts in excess of $80 billion. Their debt service is both crippling and leads to distortions within their agricultural economy, as they are encouraged to produce agriculture for servicing those debt requirements rather than to help the poorer farmers in the poorer areas. That has been a consistent theme of many hon. Members. Partly as a result of servicing those debts, there have been the distortions to which the hon. Member for Caithness and Sutherland (Mr. Maclennan) and others referred.

The Government have honoured the debt cancellation commitments, but they were inherited from the Labour Government, and from the policy of my right hon. Friend the Member for Clydesdale of directing aid to the poorest people in the poorest countries. We accept what the

Minister said about rescheduling and writing off debts in some of those areas. However, we should like the Government to lean on the Americans and West Germans, and to follow the example of the retroactive terms adjustment of the old UNCTAD agreement.

Further relevant developments on debt have been the Government's acquiescence in September 1983 to the International Monetary Fund's change of practice on the compensatory financing facility, the food surplus policy of the European Community and, as my hon. Friend the Member for Vauxhall (Mr. Holland) said in relation to the EC, the fact that the Government took the lead in making cuts in EC food aid. Therefore, there have been cuts, the debt crisis has increased, the need has never been greater, and the general nature of the Government's response has been unfavourable.

Further famines in Africa can be prevented only if there is a decline in the African population or an increase in Africa's per capita food production. Too little of our aid has been directed to the agricultural sector. The Minister knows that the ODA figure for 1983 was only £27 million for project aid for agriculture, £15 million for technical assistance for the same sectors, and £23 million for rural roads, water and electricity, from a total budget of £224 million.

The Government's aid has been increasingly inflexible in terms of the reduction in support for local costs. The Minister will know that between 1980 and 1983 the Government's local costs contribution decreased by 25 per cent. in cash terms, and by more in real terms. I challenge the Minister to deny that figure. There has also been a reduction in programme aid and balance of payments support. Again I challenge the Minister to deny that, because it comes from his Department's figures. The reduction in programme aid since 1979 has been 55 per cent.

The Minister will be aware of the DAC checklist, which was formulated at the end of last year, for concerted action in sub-Saharan Africa. It was meant to be a guidance list for donors. I understand that progress on the checklist, which includes priority for agriculture, has been blocked by the reservations of certain donors. I should like the Minister to confirm that that is the case and that the British Government are not among those who are blocking its implementation.

Essentially, our response has been niggardly. We saw that from the World Bank specialist facility for sub-Saharan Africa, when no extra funds were committed. I hope that the Minister will say something about the Government's response to the International Fund for Agricultural Development, which now seeks replenishment. As the main meeting of IFAD has ended in disarray, will the Government contribute to the proposed special fund for sub-Saharan Africa, which is seeking at least $300 million over four years? Will we make a voluntary contribution in that area, which is the subject matter of our debate?

Clearly, there is a crisis in Africa. Our response has essentially been that of a reactive Government. There have been no initiatives and no moves overall towards the United Nations target of 0·7 per cent. of gross national product. Indeed, our contribution has fallen to 0·3 per cent., and continues to fall. Our contribution to alleviating the famine in Africa, however better targeted, can be seen properly only in the context of a much reduced aid budget.

6.46 pm

Mr. Raison: The House will agree that we have had a good debate this afternoon. I congratulate the Opposition on choosing this subject, if not on the terms of their motion. It has been useful to have a chance to consider what is unquestionably the terrible crisis in Africa. All hon. Members have spoken in the shadow of that crisis.

Some hon. Members spoke with peculiarly close experience, as they have been out to see what is happening on the ground. My hon. Friend the Member for Lewisham, East (Mr. Moynihan) described his experiences of visiting the crisis area. I echo one of his points—that while we rightly pay tribute to the work of our voluntary agencies and the people they send out, we should remember that in the camps of Sudan and Ethiopia there are Sudanese and Ethiopians who are working as dedicatedly, hard and skilfully as those from abroad. That is one of my clearest memories of my visit there.

There has been a good deal of agreement on many aspects of the debate, in particular on the enormous importance of doing all we can to help the small farmers in African countries and other parts of the world which face great difficulties. My hon. Friend the Member for Banbury (Mr. Baldry), in his brief intervention, rightly pointed out that we have a simple objective—to make sub-Saharan Africa self-reliant in food, able to grow its own crops and to do the bulk of the work in that respect.

The hon. Member for Greenwich (Mr. Barnett) also spoke about the importance of the small farmer. I share his view that the small farmers of Africa have been derided too much. A growing wisdom recognises that many of the things that small farmers have been doing over the years have been based on experience and a great deal of good sense. Anyone who goes to Africa and thinks that he can simply lecture the small farmer on what he should do without regard to that experience is making a great mistake. Sadly, in many African countries the wisdom of the small farmers has been undermined by absurd ideological policies. However, I believe that wisdom is reasserting itself, and that a greater sense of reality is coming to the countries which have been most committed to the more counter-productive forms of African Socialism, for example. That is of great importance.

The rural development and commercial philosophy argument has been advanced in the debate. The hon. Member for Greenwich alluded to it when he talked about the importance of aid going to the poorest rather than being given on commercial grounds. I suggest that one day he has a quiet word with his hon. Friend the Member for Dagenham (Mr. Gould), who as an Opposition trade spokesman seems to have espoused the cause of commercial projects at all costs without making too much of the development value of those projects.

My position is clear. As I have said, it is right that we should look to British interests, and it is right that the bulk of our bilateral aid should be tied. On the other hand, it is essential that, when we use aid funds to support industrial projects, we have proper regard to the developmental significance of those projects. That is the Government's position.

A significant proportion of our aid to Africa is already related to agriculture. That aid is mainly for smallholder development. As the right hon. Member for Clydesdale (Dame J. Hart) said, aid for agricultural development means financing the local costs of projects as well as

[Mr. Raison]

providing goods from Britain. We have the capacity within our aid programme to provide local costs, where appropriate. That capacity has long existed and it still exists. There is no going back on that. In India, for example, there is a substantial local cost element in our programme. When dealing with imports, we operate on the basis of tied aid, but we provide substantial local costs through the ODA.

The right hon. Member for Clydesdale suggested that there might be a new organisation to bring together the United Nations, the World Bank and major donors, including the European Community, to deal not only with the sudden and desperate famine problems in Africa but with disaster operations generally. I think that the right hon. Lady will know that international machinery——

Dame Judith Hart: The Minister has not described exactly what I have suggested. He had better read *Hansard* tomorrow.

Mr. Raison: As I understand it, the right hon. lady addressed herself to the need, as she sees it, of a new mechanism for dealing with disasters.

Dame Judith Hart: Yes, a new mechanism, not a new organisation.

Mr. Raison: Very well; I am sorry. However, the right hon. Lady will know that the international machinery has been enlarged and greatly improved since the famine in the early 1970s. The United Nations Disaster Relief Office was set up to act as a clearing house. The World Food Programme and the Food and Agriculture Organisation provide regular and detailed information on food aid pledges and shipments and on port and inland transport conditions. We receive a six-page telex from the World Food Programme every week and many documents on food availability from the FAO every month. In dealing with the African crisis we have seen the appointment of Mr. Brad Morse by the United Nations Secretary-General to cope with the emergency operations.

In the Community there is a new ad hoc committee meeting regularly and co-ordinating our bilateral and Community responses. There is also a new emergency unit in the aid directorate of the Community, which was set up last December. All these developments are helping to produce a more effective response. I do not think that they are the totality of the answer, but the mechanisms have improved.

Experience has shown recently that it is possible to get hold of food, thanks to the famous mountains, the surpluses, and their equivalents. We have been able to acquire food quickly. The securing of food has not been one of our problems. I think that the right hon. Member for Clydesdale must recognise that the provision of permanent stocks in every conceivable risk area would be enormously expensive and difficult to maintain. There is ample evidence that the storage of food is far from being an easy matter. There must be some storage facilities and supplies where they are most needed, but more important is an effective mechanism for ensuring that we can get food relatively easily to where it is needed. That is something that we have developed.

My right hon. Friend the Member for Brighton, Pavilion (Mr. Amery) said that in dealing with these problems we must take account of the follies of man as well as of climates. He referred to Eritrea and Tigre and said that we should insist on ceasefires in all the wars that are taking place in Africa. My right hon. Friend is right, but we must remember that we cannot intervene in ways that we would like in countries that are independent. We have supported Mr. Jansson's efforts to arrange a safe passage in Ethiopia. I acknowledge that they have not met with success, but we have pressed hard the importance of treating the starving and the famine-ridden and attaching to that the greatest priority.

It has been suggested that the Community aid programme could be used rather more rigorously to achieve our policy objectives. The new Lomé convention allows greater policy dialogue and gives a greater change to achieve policy changes, which is all to the good. The Community has made it clear that in the last resort it will suspend aid where there is gross abuse of human rights. However, we are operating on behalf of the people of independent countries. We cannot walk in, tell them what to do and resume the colonial burden.

The essence of what we are about is to give effective aid. It is important to remember that we are giving aid in Africa and in other areas where there are desperate problems, such as Afghanistan, to which my hon. Friend the Member for Dorset, South (Viscount Cranborne) referred. As my hon. Friend knows, we have provided substantial aid for Afghanistan. I have allocated a further £4 million to help the refugees in that area who are suffering so tragically.

The hon. Member for Caithness and Sutherland (Mr. Maclennan) talked about the credit scheme operated by the Grameen Bank of Bangladesh. I agree with the hon. Gentleman that that is an important job. The work is promising and we support the scheme through our membership of the International Fund for Agricultural Development. We are fully prepared to take part in the next replenishment of IFAD, and we regret the fact that the negotiations have been stalled. We hope that they will be resumed as soon as possible. We hope also that the Americans will find their way to coming in on terms which can be agreed among us all. When I go to Washington in the next day or so I shall be prepared to convey that message. It will be sensible to achieve the replenishment and then to consider what to do next about any further activities.

We have heard a good deal during the debate about targets and resources. We operate under public expenditure constraints, and we can hardly counsel sound finance to the developing countries if we do not practise it ourselves. However, we have a substantial programme that is running at roughly the overall average of OECD countries. More important than that, perhaps, is the scope and direction of our aid programme. It is too easy to think that aid is a matter of throwing in resources. Some of the parrot cries that we hear do no good to anybody. If there is one lesson on aid, it is that the policies of aid programmes must be right. Above all, that is true in Africa, where the problems are most severe.

It is fair to say that Africa has not lacked aid over the post-war years and that it does not lack it now. However, I firmly believe that there must be a workable strategy. That strategy is not to be found in Socialism. African Socialism is one of the burdens that has afflicted that continent. A workable strategy must be found in realistic policies that tackle the great needs of Africa. There must

be co-ordination between donors and sensible economic policies. Incentives must be given to key producers, notably the farmers. There must be research into the best ways of growing food and rearing livestock, and the results of that research must be disseminated. There is a need for appropriate technology. There is a need to get to grips with enfeebling bureaucracy. There must be a recognition that development will not come without scope for private investment, the operation of markets and resistance to protectionism.

We are now seeing policies emerge—this is true of the major institutions such as the World Bank and our bilateral partners as well as ourselves — which are designed to cope effectively with the fundamental and long-term problems which so afflict Africa.

Therefore, I urge the House to reject the Opposition motion and to support the amendment.

Question put, That the original words stand part of the Question:—

Tellers for the Noes:
Mr. Tim Sainsbury and
Mr. Peter Lloyd.

Question accordingly negatived.

Question, That the proposed words be there added, *put forthwith pursuant to Standing Order No. 33 (Questions on amendments), and agreed to.*

MR. SPEAKER *forthwith declared the main Question, as amended, to be agreed to.*

Resolved,

That this House welcomes the effectiveness of the Government's action in tackling the famine in Africa; endorses its policies to promote long term development in Africa; supports the present approach of the Government and the international financial institutions to the severe debt problems of the day; and recognises that Britain's aid policy confers real benefits not only on the developing countries but also on British industry and employment.

Young People

7.13 pm

Mr. Barry Sheerman (Huddersfield): I beg to move,

That this House, mindful of the fact that 1985 is the International Year of Youth, believes that Her Majesty's Government has failed to foster conditions for opportunity, choice and participation for young people and has contributed to the desperate plight of youth by failing to operate the policies necessary to assist young people in securing work, housing, income and social security; and believes that all young people, regardless of sex and social background, have a right to effective education and training in order to give them wide and continuing opportunities to secure fulfilling employment and the consequent economic and social rewards.

Mr. Speaker: I have selected the amendment in the name of the Prime Minister.

Mr. Sheerman: It is sad, but hardly surprising, that the organisers of the International Year of Youth should criticise the Government for their miserable support of the year. They have provided a measly £250,000 for the whole year's efforts. That figure should be compared with the Canadian Government's provision of £8 million and the Greater London council's provision of £160,000. That is exactly the type of helpful and progressive use of resources which has led the Government to pursue its abolition. We all know that having to watch an alternative in action upsets the Prime Minister even more than hearing about it.

The Government regard youth as an embarrassment and a liability. Faced with the crisis of youth unemployment, which is substantially of their own making, Ministers have rained blows and blame on young people. Youth should be an exciting and fulfilling time of life. Throughout the ages, poets have celebrated and revered youth.

"Youth's the season made for joys"

wrote John Gay. Byron also dwelt on the sweetness of youth:

"Oh, talk not to me of a name great in story;
The days of our youth are the days of our glory;
And the myrtle and ivy of sweet two-and-twenty;
Are worth all your laurels, though ever so plenty."

[Interruption.] It is not surprising that the Government Front Bench cannot understand why poetry should be quoted in a debate on young people.

Politicians also have known the value of youth. It was Disraeli who proclaimed that almost everything that is great has been done by youth and who described the youth of the nation as the trustees of its posterity. He might have added the word "prosperity" if he lived now. How unlike the poets and politicians of an earlier age are the present Government. They have no vision of youth. What policy they have is merely a combination of saving money and political expediency, screened by a veneer of callous and insincere celebration of Victorian family values.

We all know that the most important step in becoming an adult and taking on the responsibilities of life is having a job. Being in work gives young people independence and a new status. It gives them the money to make their own choices and introduces them to new relationships with friends at work. It enables them to move away from independence on their families. For most young people, a job is their most important possession. However, too few young people have jobs or have been able to build the right foundations for work.

The old passes to an adult place in society no longer exist. Hon. Members, especially Opposition Members, understand that. The new ones such as the youth training scheme too often lead back to the dole queue. Unless society can create jobs for young people and help them to prepare for jobs through high quality education and training, it is denying opportunities to a whole generation. All right hon. and hon. Members have had such opportunities aplenty.

I shall return to jobs, and I do not apologise for that. Unless the Government are willing to sort out the problem of jobs, there will be no end to the miseries that youth endures. The bottom line is that, if the fundamental problems facing young people are to be put right, the economy must be put right. Our shrinking manufacturing sector cannot provide sufficient jobs for unemployed youth directly or in service occupations. If manufacturing continues to shrink, as John Harvey-Jones said, what on earth will they service? Our economy needs the skills and energies of youth to help make it successful.

It has been estimated that putting the under-25s back to work would produce a saving of between £5 billion and £7 billion a year in public expenditure. That is one public expenditure cut that we would favour. An even greater sum would be saved by the additional output of those employed young people. Treated as a liability, youth has become one. Youth is an asset, but the Government have been unwilling to capitalise on it.

I shall consider the desperate plight of young people under the four major headings of jobs, education and training, income and housing.

The Minister of State, Department of Employment (Mr. Peter Morrison): Will the hon. Gentleman explain precisely how he arrived at the figure of £5 billion to £7 billion?

Mr. Sheerman: The Minister will hear later of particular proposals. That figure was arrived at by an independent assessment made in the Labour party. I shall give him the figures from independent bodies if he cares to have them.

Let us talk about the plight of youth in terms of jobs —*[Interruption.]* I am not proud of those figures. This is a most desperate—*[Interruption.]* If Ministers looked at the findings of the Unemployment Unit, they would find the figure of £5 billion to £7 billion, which was worked out by that unit. The Minister of State knows well of the existence of that unit. From 1979—*[Interruption.]* The Government Front Bench is trying to stop me giving the catalogue of the dreadful unemployment figures, but I shall continue.

Between 1979 and 1985 unemployment among all under 25-year-olds was up 167 per cent. For under 18-year-olds, it was up 77 per cent. For under 18-year-olds, including YTS trainees, it was up 168 per cent. For under 25-year-olds, the rate of unemployment was over double what it was for the rest of the population, at 22·7 per cent., compared with 10·3 per cent. for those over 25. In April 1985 1,203,000 people under 25 were out of a job. That is a dreadful catalogue of figures, especially if we add the fact that 359,000 of those people had been unemployed for 12 months or more, and 655,805 had been unemployed for six months or more. Although the totals for the past couple of years are holding relatively steady, the duration of unemployment is increasing markedly and worryingly.

School leavers' jobs and apprenticeships have also collapsed. Most tragic of all is the figure for young people

[Mr. Sheerman]

who have not worked at all since leaving school. For example, 152,795 of those over 19 have never worked in their lives. That is a dreadful figure, and one that we shall pay for dearly in the years to come. Those young people despair of any hope or future.

The Government are fond of saying that apprenticeships were out of date and produced out-of-date skills, and that they were time served rather than standard served. We have heard the catalogue of criticism about apprenticeships. However, the fact is that all over the world one can hear the praise for our apprenticeship system, which has provided skilled workers for industries in the United States and many other parts of the world. That system has been allowed to collapse. Even in 1978 we did not have enough apprenticeships. There were 86,000 male apprentices, and the figure reduced to 70,500 in 1980. However, by 1983 the figure was down to 22,000. What a record of skill training for a nation that has hopes of being a great industrial nation again.

Ministers are fond of reminding us that the YTS is a training measure, not an employment measure, so I shall deal with youth training separately. The only direct policies aimed at reducing youth unemployment are the wicked attempts to lower young people's wages, and to create jobs through the community programme. I confess that the community programme remains fairly popular, but the paltry wages—on average under £60 a week—are fast becoming a national scandal. In any event, the programme only scratches the surface of demand. I hope that the Minister will intervene if he disagrees with this. Even the increased 100,000 places on community schemes announced in the Budget will serve the needs of only less than 10 per cent. of eligible people under 25, who are out of work.

The Government's favourite claim is that it is not the Government's fault that there are no jobs. Their inadequate policies are not to blame. They are nothing to do with youth unemployment, according to Ministers and the Prime Minister. Young people are unemployed because it is their own fault. Unbeknown to them, they have been pricing themselves out of jobs for years. That is why there are no jobs. I would find that hilarious if it were not so tragic.

The Government have made much of "high" youth wages and have enlisted the YTS allowance alongside the —almost—late and wholly unlamented young workers scheme in support. However, the evidence is so thin as to be laughable. Research has been commissioned in a desperate attempt by the Government to find some evidence to back their prejudices on the matter. All the independent research that I have seen makes it clear that the Government's alleged relationship between high youth pay and the lack of jobs is nonsense. Of course, the Government find that proposition politically attractive.

The wages council proposals will further attack young people's ability to earn a decent living. There will be further moves in line with the idea that youth are to blame for their predicament, which is an amoral position for a Government to hold. Young people are the victims rather than the perpetrators, but they are blamed for the crisis. It is not youth, demographic trend or international competition that is to blame for youth unemployment—it is the Government's policies. In the debate, we hope to make it clear in the public imagination that the Government are responsible for the unemployment and despair of our young people.

The Government have failed to meet the challenge of education and training. Her Majesty's inspectorate has confirmed beyond doubt that our schools are crumbling from neglect. The leader in *The Times Educational Supplement* of 31 May is entitled

"False economy and penny-pinching".

How appropriate that is to the present Government's policies and the present Secretary of State. The leader states:

"Working in decaying conditions amid peeling paint, under leaking roofs, unable to get defects repaired let alone improvements undertaken, is one of the most widespread complaints from teachers. As time goes by, working in a poor environment becomes more and more depressing and less and less conducive to high morale and the enthusiasm which lights up enthusiasm in others."

Something else is far more telling against the Government's lack of understanding of what is happening in education today. The Secretary of State for Education and Science and his fellow Ministers do not have the imagination to understand, even when the teaching unions are reluctantly taking industrial action in support of their living standards. The teachers are doing so because it is a crime that they cannot do their job on their present rates of pay and in present conditions. The nature of education changes when there is mass youth unemployment. The Government do not have the imagination to know what the role of a teacher is, who used to teach a class of young men and women who confidently expected to get a job when they left school. Until a few years ago, they all would have done that. Let the Government compare that with trying to teach young people who know that there is no job, no future, and no opportunities when they leave school at 16. That is the measure of the Government's lack of understanding of today's education system. Until our economy provides the possibility of a job, there will be no hope for education and training. The Government have completely failed to meet that challenge.

The decay referred to in *The Times Educational Supplement* affects morale. For teachers to realise that there is little prospect of jobs for their pupils affects morale even more. The output from the system shows how badly we are lagging behind our industrial competitors. That is part of the bind we are in. The Government must be aware that we must improve our education system and have a proper training system that compares with that of Germany, Japan, the United States and our other industrial competitors and that we must move to a level of quality training and education. If we have any sense, we must do that in conditions of expansion and not contraction. It is difficult to achieve any change in an atmosphere of decline and cuts.

Britain lags behind its major competitors in every aspect of education and training. Just one third of its work force has any recognised qualifications equivalent to at least O-level, compared with about two thirds in West Germany. A high proportion of our 16-year-olds leave school with no prospects of genuine vocational preparation. That is in striking contrast to Germany and Japan. Only 13 per cent. of our school leavers go on to higher education, compared to one fifth in West Germany.

Our entry into higher education is lower than that of other countries. The recent Green Paper only squares the circle between places and demand by predicting levels of

demand that fail to accord with the predictions of those who have no expenditure axe to grind. The Government also fail to see that the object should be to encourage and stimulate demand for higher education and to support all those who want to improve their learning and the value of their contribution to society.

Then we come to the co-called jewel in the Government's crown — YTS. We find that it is not a jewel. Most people's assessment is that it is a bad imitation paste. That must be said without embarrassment. I know that the Government will say that the Opposition are being disloyal to youth, because we criticise a training programme that is not good enough for our young people, our international competitiveness or the country's future. To see the problems of YTS is not disloyalty. It is disloyalty not to recognise those problems.

I have recently visited a number of mode A schemes. I may not have visited as many as the Minister of State. I understand from the grapevine that when I visit those schemes I do something that the Minister does not do. I ask for the trainees to talk to me on their own without their supervisors, teachers or anyone else.

Mr. Peter Morrison *rose*——

Mr. Sheerman: I may be wrong about that. When one sees the trainees in a relaxed and informal atmosphere, one hears the central criticisms of even the mode A scheme about which the Minister brags so frequently. With his hand on his heart, the Minister must accept that most of the schemes that he studies involve work experience and not quality training. We must move to quality training and not merely job experience.

Mr. Peter Morrison: I am sure that the hon. Gentleman will be reassured when I tell him that that is not the fact.

Mr. Sheerman: The problem with YTS is that it leads to jobs for only half the trainees. The Government say ——

Mr. Peter Morrison: Wrong.

Mr. Sheerman: I shall stand by that statement. Roughly half the trainees obtain a job. In many parts of the country, hardly any trainees obtain a job. My information on this is as good as the Minister's. The Government say, "Yes, but only half are unemployed." Wonderful — that is the difference between us. The Government congratulate themselves on a job that is only half done. We want to start doing that job for our young people properly.

Mr. Giles Radice (Durham, North): Tell us the figures.

Mr. Sheerman: The Government do not have the figures.

Secondly, the training is not of sufficient quality or any replacement for the apprenticeship schemes, the skillcentres or the industrial training boards. Thirdly, the YTS is being done on the cheap. When the YTS was launched, we were told many times that it would cost £1 billion. That is how much the Government were spending on YTS. Ministers crowed about that figure, but now we know that that £1 billion must pay for two years of YTS rather than just one. If, as the Opposition want, YTS is to be a stepping stone into quality training which matches that anywhere in the world, it will cost money. We cannot train on the cheap. The money must come from the employer, the individual or the Government. The Government have not faced that problem.

I shall deal with the plight of youth in respect of income. First, under this Government, mass family poverty has grown. In total, the number of children living on incomes below subsistence — supplementary benefit level — almost doubled in the first two years of this Government. A combination of growing unemployment, leading more families to depend upon supplementary benefit, and low pay means that one in four children were living in or near the margins of poverty in 1981. The proportion of working parents earning poverty wages has increased in recent years, and the number of children living with working parents on incomes below 140 per cent. of supplementary benefit level more than doubled in the two years to 1981. So much for the Government's celebration of the values of the family. That is how most of the families that we see in our constituencies suffer.

Moreover, young people's standards of living are falling, whether they are on a wage, a training allowance or a student grant, without a grant and having to rely on parents, or on the dole. The Government are like the famous advertisement: they manage to reach parts that no other Government have managed to reach. In terms of delivering poverty, that is not funny.

For the vast majority of young people wishing to continue in full-time education, there are no grants or educational maintenance allowances. sayhat is something for which the Opposition have called for many years and which we are committed to introducing once we are in government. Only those whose parents can afford to keep them can continue in full-time study. The Government have stubbornly refused to provide young people under 18 with grants. It is all right for the Secretary of State to tell us what we did or did not do, but the Labour Government did not have the same level of youth unemployment. We did not have the young unemployed school leaver having to decide whether to stay at school to do his or her A-levels, to obtain a vocational qualification or to take £26.25 home to the family budget because mum and dad are unemployed. That is the terrible tension that exists in many families, and it is one that we must recognise.

Students aged 18 or more are denied grants if they are not on higher education or specially designated courses. Grants for part-time study are non-existent. The value of student grants has fallen by 14 per cent. More students have to rely on parental contributions or are forced to borrow money from the banks. The Government have threatened to introduce student loans—pay as you learn. They have already tried, unsuccessfully, to charge parents course fees.

People on the youth training scheme are paid a totally inadequate allowance of £26·25 per week. Only a very few trainees manage to get that topped up through collective bargaining, and supplementary benefit is cut if trainees leave early. Anyone who has studied the White and Green Papers carefully knows that the spectre of withdrawal of benefit entirely from 16 and 17-year-olds probably merely awaits implementation of the second year of the youth training scheme. I should like to hear the Government's response on that.

Those changes in benefit come at the end of a whole series of changes designed to force young people back on to the resources of their families. I can give chapter and verse. In 1980, supplementary benefit was removed from

[Mr. Sheerman]

school leavers for three to four months. In 1982, child benefit entitlement was reduced. In April 1983, 16 and 17-year-olds lost £3·10 per week housing benefit. That was extended to 18 to 20-year-olds in 1984. The catalogue of blows against young people is as depressing as it is possible to imagine.

The current reviews of the social security system will create ludicrous anomalies between the under-25s and the over-25s, so that a couple with a 24-year-old son or daughter will receive a different level of benefit from that received by the couple next door whose child is 25 years old. The Government have totally failed to tackle the tangle of benefits and incomes for young people, and further cuts in benefits for 16 and 17-year-olds are likely.

The plight of youth is equally desperate in housing. The decline of the private rented sector and the failure of the public sector to provide for the young and particularly for young single people has pushed them to the back of the housing queue in every area. As a result, housing problems among young people are on the increase and the unprecedented number of homeless young people is a national disgrace.

The pressure is building up, as reports from around the country show. I cite just a few instances. Between 1984 and 1985, Threshold had 1,500 new inquiries from persons under 25. Flatshop in Cardiff had 1,600 inquiries in 1983, 64 per cent. of them from people aged between 18 and 25 and 8 per cent. of them from people under the age of 18. The Association for the Single Homeless noted that between June 1983 and April 1984 79 per cent. of the homeless were under 24 years of age. Every year, 14,000 youngsters leave local authority care. It is estimated half of them end up homeless, but three out of four local authorities offer no assistance for priority allocation after leaving establishments of that kind and many local authorities maintain housing policies which operate against young people.

I have covered jobs, income, education, training and housing because they are the fundamental stepping stones for youth in moving to a full, worthwhile and secure place in adult society. The Government have not only failed to support those stepping stones but have actually weakened them in many respects. That is the measure of their culpability for the desperate plight of young people today.

The Minister may ask what Labour would do. I will tell him. First, Labour has a vision of youth.

The Secretary of State for Employment (Mr. Tom King): Yes?

Mr. Sheerman: Yes indeed, and we understand young working people in a way that Ministers with their privileged backgrounds cannot begin to appreciate.

At the heart of our policy is an appreciation of the value of youth. Youth does not last very long and it is a crime to deprive young people of all the things that the Government are taking away from them. Youth is a time to be enjoyed, a time to look forward with hope, a time of opportunity. Young people should be able to look to their families for help and mutual support, but they should also be allowed and indeed helped to work towards the essential independence and learning of life entailed by the responsibilities of adult living.

What is needed is a framework for that transition—not to mollycoddle young people but to give them something to build on and to build with—and it is the responsibility of Government to develop that framework. One element is jobs. Labour has set out its programme for getting the country and its young people back to work in "A Future that Works" and "Partners in Rebuilding Britain".

A second element is the education system. We have set out our proposals for that in our charter for pupils and parents. Thirdly, for education and training after the age of 16 we have "Learning for Life" and "Plan for Training". Fourthly, for income support we have set out our commitment to educational maintenance allowances, increased grants and a much improved grant for trainees. We also have a series of policy options to improve the housing prospects of young people, including more opportunities for rented housing, easier access to housing waiting lists and an extension of priority housing need to cover young people.

I have no doubt that the Government today will trot out the usual litany of excuses for their inadequacy, incompetence and indifference to the problems of young people, but however they twist and turn and squeal, as Harry Truman said, the buck stops there. The Government are responsible for what is happening to our young people and for the despair that those young people feel.

7.46 pm

The Minister of State, Department of Employment (Mr. Peter Morrison): I beg to move, to leave out from "House" to the end of the Question and to add instead thereof:

"recognising that 1985 is the International Year of Youth, congratulates the Government on the action it is taking to improve the prospects for young people and, in particular, for introducing through the Youth Training Scheme the most imaginative and far reaching training programme since the last war; recognises the tremendous opportunities the scheme has created for young people and looks forward with confidence to the introduction of the two-year Youth Training Scheme in April 1986; and welcomes the initiative being taken to provide more effective education for young people."

I was surprised that the Opposition chose to have a debate on youth, but I was also very pleased because their record when in government was not impressive, as what has been said today has shown. I intend to show that, despite the comments of the hon. Member for Huddersfield (Mr. Sheerman), the Government's record is impressive. The hon. Gentleman may live to regret his statement that we have no vision. The hon. Gentleman began his speech with a little poetry. He also praised Mr. Livingstone, but I wonder how many youngsters under the GLC have that sort of praise for that sort of man.

The hon. Gentleman's speech was very short on facts, and he was wrong about many facts. For example, he said that only 50 per cent. of those leaving the youth training scheme go into a job. He knows the facts because they have been debated before, so he knows that the figure is about 60 per cent., a further 6 per cent. going on to further training and education and another 5 per cent. going on to another scheme.

Mr. Sheerman: Perhaps the Minister will check his figures with the chairman of the Manpower Services Commission who is also uncertain about the figures because they are accumulated merely by survey. The figure that we have and that Youthaid has is 50 per cent.

Mr. Morrison: It is extraordinary that the hon. Gentleman should take what Youthaid says as official

when it has been proved time and again to be factually incorrect. It is also extraordinary that members of the Youth Training Board, not all of whom are members of the Conservative party by any stretch of the imagination, do not question the facts given to them by the Manpower Services Commission. The figures are obtained through an independent survey, so factually the hon. Gentleman is incorrect.

The hon. Member for Huddersfield says that Labour has a vision of youth. That is fine. But what does he intend to do with that vision? I listened carefully to everything that he said, but he did not put forward even one new idea. That is the position of the Labour party. It has no ideas —*[Interruption.]* Labour Members may not like the fact that they have no ideas, but they cannot bluster their way out of it. Rhetoric is one thing, but constructive ideas are something else. The Labour party is good on rhetoric but bad on constructive ideas. I want to hear ideas about how one gets through a difficult situation such as this, and I have not for a moment pretended that it is anything other than difficult.

The hon. Member for Huddersfield forgot to remind the House that when in government the Labour party had the chance to introduce a youth training scheme. It was put forward by the then Secretary of State for Education and Science, who is now president of the Social Democratic party. She has vividly reminded us of the way in which the Labour Government at the time totally failed to put youth and the necessary resources up the list of priorities. As a result, many 19, 20, 21 and 22-year-olds have never had a job or any training at all. Had the Labour party had the courage at the time, it would have placed those 19 to 24-year-olds in a quite different situation.

I am delighted that the hon. Gentleman spends time on the youth training scheme. As he knows, I also spend a lot of time on it and have talked to many trainees. The hon. Gentleman's experience is interesting. He said that young people were not very keen on the scheme. I have not met all the 700,000 trainees who have benefited from the scheme, but I have met a good cross-section and heard quite a different story. However, the hon. Gentleman need not believe me or perch on my shoulder as I go around the various schemes, even though I would be delighted if he came with me. Perhaps he will look again at an independent survey, which is about to go to the Youth Training Board, with which I have had nothing whatever to do. That was a survey of trainees as they came off the scheme, and many were interviewed. It showed that 84 per cent. thought that the scheme was either fairly or very worthwhile. By any stretch of the imagination, that must be an extremely successful, positive rate. I believe that about 15,000 trainees took part in the survey, but if I am wrong I shall correct that figure if I have over-exaggerated or even under-exaggerated.

Just the other day, in conjuction with the Industrial Society, we met the trainees of the year. Had the hon. Gentleman attended that meeting, he would have heard the success stories and met trainees who after some years had changed their attitude and got themselves into employment. One trainee was offered a job provided he had a driving licence. He did not, but, because of his attitude, he obtained a driving licence within 10 days and became employed.

Mr. Max Madden (Bradford, West): The Minister will be aware that earlier this year at a conference in Bradford there was extensive criticism of racial discrimination within the YTS. He acknowledges that he is aware of that, but what action do the Government propose to take to diminish the level of such discrimination with the YTS, and when will the hon. Gentleman announce the Government's proposals?

Mr. Morrison: If there is any racial discrimination, the same rules and regulations apply up and down the land. I assure the hon. Gentleman that if I hear of specific cases, they will be looked into immediately, and he can also be assured that the right statute is in place so that that should not happen.

The hon. Member for Huddersfield misled the House when he said that we had cut back on YTS. He quoted a figure of £1 billion. We are now spending £830 million on the scheme this year, and it will go up by a further £300 million during the period of the full two-year scheme. But the hon. Gentleman did not acknowledge that for the last two years, the current year and the year ahead, every 16 and 17-year-old school leaver will have the opportunity of joining the scheme if he wishes. That is no cutback at all. Originally the guarantee covered all 16-year-olds, but we have now given the opportunity to every 17-year-old. Therefore, the hon. Gentleman cannot argue that there has been any cutback. Furthermore, there is common ground between us in our wish to see better quality training throughout industry and commerce—*[Interruption.]* It is obvious that the hon. Member for Kingston upon Hull, East (Mr. Prescott) has nothing constructive to offer.

Mr. John Prescott (Kingston upon Hull, East): Of course we have alternatives.

Mr. Morrison: I hope that the hon. Member for Huddersfield will agree that there is training in many industrial and commercial sectors as a result of YTS which did not exist previously.

We have also moved away from outdated time-serving and age restrictions which were a feature of traditional apprenticeships. Many trade unionists believe that that was the right way to proceed. I am sorry that the Opposition Front Bench do not appear to believe that, because they are precluding many school leavers aged 17, 18 and perhaps 19 of getting the right sort of training.

Education and industry have been brought much closer together as a result of YTS. That is to the benefit not only of education and industry, but, perhaps more importantly, of 16 and 17-year-olds.

Mr. Prescott: How many apprentices were recruited under the normal industrial training boards in 1979, and how does that compare with the figure today?

Mr. Morrison: I cannot give the hon. Gentleman the precise figures of the number of apprentices, but the number of the traditional apprentices has dropped.

Mr. Prescott: By what order?

Mr. Morrison: By a substantial amount, but while the number of traditional apprentices has fallen, the number of people who, as a result of YTS, have obtained basic training has increased very substantially. I shall come back to the question of apprentices later in my speech.

Mr. David Alton (Liverpool, Mossley Hill): Does the hon. Gentleman disagree that between 1979 and 1983 the number of apprenticeships fell from 155,000 to about 90,000? Should we not look at the West German system and introduce statutory apprenticeships?

Mr. Morrison: I am grateful to the hon. Gentleman, and I shall come on to that subject at the end of my speech.

Contrary to what the Opposition have put forward—which, as far as I can see, is nothing at all—what we have suggested for YTS is more imaginative than any other training initiative since the war. Therefore, every school leaver aged 16 or 17 has the chance of being trained for the first time——

Mr. Prescott: Rubbish.

Mr. Morrison: I shall come to the hon. Gentleman's letter to me in a moment, which might annoy him even more. In the past, only a privileged minority went into the apprentice system.

However, the Government do not rest on their laurels. They are introducing the two-year youth training scheme, which will enhance for 16-year-olds the opportunity of obtaining employment. It could not have happened if we did not have the support of the employers and the unions. Perhaps Opposition Members are no longer worried about the support of the unions for the youth training scheme. It would not have happened without the good relationships that exist between the colleges and the training providers. I am glad to say that, although it is still early days, progress towards the two-year scheme is set fair. That will mean a better-trained work force than hitherto. The fact that we have not had a well-trained work force has meant that we have lost some markets to our overseas competitors and, as a result, lost jobs.

The White Paper on education and training for young people emphasises for the first time the importance of a unified approach to training and education for all 14 to 18-year-olds. It links, crucially, schools and industry. It is extremely depressing — I hope that the Opposition spokesman can do something about it — that some Labour-controlled local education authorities will not jump aboard the technical and vocational education initiative. Perhaps when the hon. Gentleman talks with his colleagues in local government he will encourage them to do so. If they do no take part in the initiative, they will deprive the youngsters in their areas of a vocational education that would certainly benefit them.

Mr. Prescott: I encourage everyone to do what they can about training. I should tell the Minister that Labour authorities are fulfilling the training requirements which the Manpower Services Commission is not fulfilling in many areas. One should give credit for the amount of resources allocated to training by local authorities, which compares well with the amount given by Tory authorities. Indeed, the Minister said today that the Labour authority in Southampton stepped in to save the training centre there.

Mr. Morrison: I accept the latter part of the hon. Gentleman's intervention. However, he must know that some Left-wing local education authorities will not enter the technical and vocational education initiative. I do not know why they are not interested in it, but they are depriving the 14 and 15-year-olds in their areas——

Mr. Prescott: Rubbish.

Mr. Morrison: It is not rubbish. It is true. They are depriving 14 and 15-year-olds of the opportunity to have such training. The hon. Gentleman will also know that some Left-wing local authorities will not take part in the community programme. I wonder why. Are they not worried about the long-term unemployed?

Mr. Andrew F. Bennett (Denton and Reddish): Does the Minister accept that if the Government were prepared to make the TVEI money available to all schools it might benefit all school leavers? Many local authorities are worried about the divisiveness of the scheme, whereby money is given to one school but not to another. They believe that that increases the problems of the allocation of children among different schools.

Mr. Morrison: The hon. Gentleman will be aware that about £250 million has been spent on the initiative. It is suitable for only some local educational authorities, and it is only a pilot scheme. It must be worth the while of every local authority to try it on a pilot basis. However, for party political reasons, some Labour-controlled local education authorities have not done so.

For some time, the Opposition have criticised the youth training scheme. Indeed, their opposition seemed a little more shrill this evening. I agree that the quality of the scheme is crucial. On 11 March, when we debated this matter, the hon. Member for Kingston upon Hull, East mentioned that point. He will recall that I wrote to him a day or two later saying that if he could suggest schemes that did not rate according to quality, I would examine them immediately. On 1 April—I do not know whether the date is significant—he replied:

"Thank you for your letter dated 14 March offering to look into any training schemes which I find unsatisfactory. The one involving shifting cardboard boxes around"—

this is the case which he mentioned in the House—

"is actually run by a Tory councillor and I have sorted the matter out myself, though I still think the training is not up to standard and I have discussed the matter with some of your officers."

I am grateful to the hon. Gentleman for that. He continues:

"I am compiling a number of criticisms of the Youth Training Scheme and will make you aware of my case as soon as I have it ready to my satisfaction."

The hon. Gentleman raised the matter in a bland, rhetorical statement on 11 March. He wrote to me on 1 April, but nine weeks later some schemes have become one scheme and the hon. Gentleman has not produced a shred of evidence.

Mr. Prescott: The case to which I referred that evening occurred in a business run by a Tory councillor. I did sort it out. It concerned the exploitation of a young worker. Other examples have come to my attention, and the Minister must know that we intend to produce a report by October—[HON. MEMBERS: "Oh!"] We shall produce a report not only about the youth training scheme, but about training in general and about getting people back to work. After we have produced that report, we should have a proper statement from the Minister. He seems to accept the success of the scheme, although little evidence has been produced to show that, on surveys of between 1,000 and 5,000 people. He is obviously easily satisfied. The Minister participated in a BBC programme about the YTS during which youngsters on the scheme made it clear that they believed that it was cheap labour and that they wanted nothing to do with it.

Mr. Morrison: Again, the hon. Gentleman has not produced concrete examples. I assure the hon. Gentleman that I am not complacent. If my Department receives a complaint, my officials know that they must resolve it

within 24 hours, or explain their failure to do so. The hon. Gentleman is the official Opposition spokesman on employment, yet he makes bland statements and, after two and a half months, he cannot give me more than one example of abuse. The youngsters on the youth training scheme will note that he cannot give me more than one example. If the hon. Gentleman has concrete examples, I shall consider them immediately. I am amazed that he cannot give me one today.

The knockers of the scheme, of whom the hon. Gentleman is one, include the British Youth Council. When it gave evidence to the Select Committee, it made similar remarks, and it wrote a letter to my hon. Friend the Member for Banbury (Mr. Baldry) stating:

"In response to a request of the Select Committee on Employment held 17 April 1985 and your recent comments in the House of Commons. I am writing to inform you that the British Youth Council will be furnishing you with the names of 'Bad Schemes' at the end of June 1985."

If the council knows of bad schemes, why does it not tell us immediately? It is common ground between the hon. Gentleman and me that we should improve schemes where possible. If we know of bad schemes, we shall do so. To make such bland statements is not acceptable.

The hon. Member for Liverpool, Mossley Hill (Mr. Alton) referred to health and safety. He will recall that the hon. Member for Coventry, South-East (Mr. Nellist) introduced a Bill which dealt with health and safety. The hon. Gentleman had not taken into account the fact that the Government have covered all health and safety matters in legislation. What is just as important is that every trainee on the scheme has statutory protection against racial discrimination in the selection for and termination of training. I hope that the hon. Gentleman is satisfied that the necessary legislation is in force, as it should be.

The hon. Member for Kingston upon Hull, East referred to the placement of trainees. When I first went to the Department of Employment the placement rate on the youth opportunities programme was 30 per cent. The Labour Government's youth opportunities programme was successful. Today, the placement rate is about 60 per cent., with a further 6 per cent. going into further training and education and over 5 per cent. going into another scheme. Good placements are not necessarily achieved in the areas where one expects them to be achieved. In parts of the country where there are high levels of unemployment there have been placement rates of 70, 80 and 90 per cent.

Mr. Sheerman *rose*——

Mr. Morrison: However, the hon. Member for Huddersfield has never addressed himself to the point that no Government have the power to ordain that a job should be provided at the end of the youth training scheme. The hon. Gentleman and all trainees know that a job exists only when a product is created at a cost and of a quality that the consumer wants to buy.

The hon. Gentleman referred to wages and the allowance. He will have talked to trainees, as I have, and the answer that I receive is, "We get by." Of course they would like more money, but when it is put to them that the more that they receive by way of an allowance the less will be spent on their training, because there is no pot of gold at the end of this rainbow, they begin to understand that the training element—the quality of the scheme—is crucial.

Mr. Geoff Lawler (Bradford, North): Will my hon. Friend comment upon the announcement by the Manpower Services Commission of its intention to employ clerical assistants as trainees at £60 a week? Does that not undermine the laudable efforts of the Government to persuade young people to take realistic training allowances? If everybody were to copy the MSC, there would be a substantial reduction in the number of young people who would be able to take advantage of the youth training scheme.

Mr. Morrison: Like my hon. Friend the Member for Bradford, North (Mr. Lawler), I read the report, and it came as a surprise to me, too. I made inquiries about it. My hon. Friend and I agree that wages or allowances are relevant in terms of prospective employment. Like my hon. Friend, I do not believe everything that I read in *The Times*.

On apprentices, the hon. Member for Kingston upon Hull, East, is out of step with another of his supporters. Look at what happened in the Electrical, Electronic, Telecommunications and Plumbing Union. It agreed that the pay of apprentices should be reduced from £41·63 to £27·88. The result was that the intake of apprentices trebled. But there is still a long way to go.

Mr. Sheerman: That is a most fraudulent claim. I have checked this with the EETPU and with the employers. The package for the three and four-year period provides a higher rather than a lower income over that period. There is merely a reduction in the starting rate. However, there is an overall increase. To equate low wages with more apprentices is to turn logic on its head.

Mr. Tom King: By George, he's got it.

Mr. Morrison: As my right hon. Friend the Secretary of State for Employment says, "By George, he's got it."

Despite the fact that this is an enlightened development, there is still a long way to go. The Liberal spokesman pointed to West Germany where first-year apprentices earn about 20 to 30 per cent. of the adult rate compared with the average rate of 60 per cent. in this country. The result is that about 50 per cent. of school leavers in West Germany become apprentices compared with about only 5 per cent. in this country. The Opposition fail to take that matter on board.

Mr. Prescott: Will the hon. Gentleman give way?

Mr. Morrison: No. I have given way on many occasions, and I know that many hon. Members want to take part in this debate.

During the last three years the Government have introduced a new training scheme which is universally popular and very successful. It is sad that some people are trying to encourage youngsters not to join the scheme. The Government have introduced a community programme that provides training, the technical and vocational education initiative and the enterprise allowance scheme, all of which are imaginative and relate to the 14 to 25-year-old age group. The provision of proper education and training for young people is vital both for them and for the future prosperity of this country. The measures that I have outlined represent the most wide-ranging programme of reforms that has been produced for many years.

I commend the amendment to the House.

8.17 pm

Mr. Terry Fields (Liverpool, Broadgreen): About 24 hours ago there appeared on television an advertisement warning young people and children of the seductive advances that can be made by strangers. That was in an entirely different context, but in terms of this motion the youth of this country should listen hard to the non-explanation and the bland and unpositive attitude of Government Ministers about the plight of the unemployed, particularly the youth of this country. It is to the credit of the Opposition that we have raised this key issue, not as a bantering match between sixth formers but as the reality of life for millions of people in this country, in particular for our youth. In some instances it is a life and death struggle for the youth of this country. For Ministers blandly to push aside the reality that faces the youth of this country is a crime.

I should declare an interest on two counts. I am both a father and a grandfather. My daughter has two young children. Her husband is unemployed. Both of them are in their early twenties. When I look at those kids who have no hope for the future, I despair. I have a 22-year-old son who had to leave Liverpool three years ago because of this Government's policies and the system that they represent. He has had to leave the home circle and his friends to look for work elsewhere. He has had to follow Tebbit's advice to get on his bike. I also have a 17-year-old daughter who is on a youth training scheme. She prays that she will be kept on at the end of it if she is given decent training. I have a 14-year-old lad who is still at school, with nothing in front of him but the youth training scheme and exploitation by this Government, as long as they remain in power.

It would be easy to raise the spectre of the wicked witch or the mad monk, but these matters should not be personalised. By providing simplistic answers, we do not educate youth about why these things are happening, who is responsible for them and how to resolve the problems that they face.

The hypocrisy of members of the Government is evident in their everyday speeches. As we listen to the Prime Minister talking about the creation of one nation, we must wonder where the evidence for such a creation exists. Is it in the contradictions which appeared only last week in the press? In the *Liverpool Daily Post* and *Liverpool Echo* stories appeared saying:

"Sexual harassment, verbal abuse, unpaid overtime, dirty conditions and wages as low as 48p an hour have been uncovered by a team looking into the plight of working teenagers.

They are considered to be the lucky ones because they have a job.

A 16-year-old girl machinist complained female staff were left in no doubt how they could find an extra £10 in their pay packet by an employer who regularly tried to touch her breast.

A 19-year-old clerk typist received just £25 for a 49-hour week, an 18-year-old with 11 O-Levels earned just £32·25 a week, while a young roofer was paid £8 for 12½ hours overtime."

That is the way in which the young are suffering.

Our elders and betters are supposed to be telling us what is good for us. Last week on Derby day those elders and betters consumed 8,000 bottles of champagne, 5,000 lb of strawberries, 1,800 lb of beef, 1,500 lb of salmon and 2,500 gulls' eggs. They must think that we are gulls if they believe that we will accept the propaganda, lies and distortions that come from Conservatives about the conditions of working people. They are out of touch with reality.

The Government's policy on education — on comprehensive schools, further education, higher education and universities—is an exposition of their lunacy and bankruptcy in relation to investment for the future. Places are being cut, courses are being savaged and standards in our educational establishments are being reduced.

Investment in the future should be the name of the game. If the Government were serious about their policies for industry, they would be encouraging massive investment in science and technology. The reverse is the case. The needs of the next decade, if not of the next century, are in our hands today and we, legislating in Parliament, should be preparing for the future if Britain is to survive as an industrial nation. Unfortunately, the resources and means of the nation are being frittered away by the Government.

Mr. Alton: Does the hon. Gentleman think that it helps standards in schools for youngsters to be led out of their schools to take part in demonstrations? Does he believe that constantly advocating breaking the law gives people the right standards for living?

Mr. Deputy Speaker (Mr. Harold Walker): Order. I hope that hon. Members will keep to the terms of the motion.

Mr. Fields: I knew that I was being foolish the moment I gave way to the hon. Member for Liverpool, Mossley Hill (Mr. Alton).

Government propaganda tells us that we are now going through a boom period. Tell the youth, the unemployed, the people living in substandard housing, those with no hospital services and those deprived of social services that we are going through a boom and they will reply that there is no boom.

But even if we were going through a boom, the Government, particularly in view of the class of people they represent, should be making massive investment for the future. The unfortunate truth is that increased investment is going ahead, but it is not occurring in this country. The wealth created by the workers of Britain is being invested abroad rather than in industry in our own nation.

We warn the Government that the consequences of their actions will be felt in the next 12 to 18 months when worldwide capitalism faces a further slump, and Britain will be unable to live with that situation. Hence we explain to the youth the need to create vast armies of unemployed, of people on slave rates of pay, of youth on YTS schemes doing full-timers out of jobs and part-time workers out of work, reducing the standard of living of those in work by the schemes that the Government are adopting.

In addition, on the backs of trade union legislation, the Government are attempting to whip the trade union movement into line for the inevitable catastrophe that is round the corner, a catastrophe which the commentators on capitalism understand but to which the Government seem impervious.

The myth that workers are pricing themselves out of jobs—that myth is applied in particular to the young—has exploded. But for millions of working people, in particular the young — we have the highest levels of youth unemployment and the lowest wages—that myth is a crime for which the Government are responsible.

We tell youth, "You will not resolve your problems in isolation, any more than the difficulties of the old, the unemployed in general, the problems of peace in the world, low pay, inadequate health services and social services can be resolved in isolation."

While we are fighting to get these reforms and better conditions for youth, we must explain to the young the nature of society and the reasons why, because of the greed of the acquisitive few, those few propped up by the policies of the Government are feeding off the backs of working people. Despite the faint hearts in our movement, the Youth Trade Union Rights Campaign has carried out in recent years sterling work on behalf of the youth of Britain.

The Minister boasted about the Government's record in health and safety at work. The Youth Trade Union Rights Campaign—with myself and comrade Dave Nellist as honorary vice-presidents — has achieved better health and safety conditions. In 1982 we fought against cuts in benefits for the unemployed. The demonstration and school strike this year brought about a climbdown by the Government over the compulsory nature of the YTS. We warn the Government that, if they bring in compulsory YTS, the 250,000 kids who were seen on the streets will pale into insignificance beside the mass movement of working-class youth that will appear.

A myth has been created about it being wrong to politicise young people. From the cradle to the grave, the working classes' minds are poisoned by the ruling classes and the Tories, by the present Government. It is happening in our schools. I will give just one example. Discussions were taking place in a school that I know in Liverpool about the Tolpuddle martyrs. Although that school is in a working-class area, the story that was peddled was to the effect that the Tolpuddle martyrs were criminals who, in the dead of night, carried out satanic worship, with skulls and the rest, for which they were transported to Australia. That is the level of political education in our schools.

We make no apology for joining with youth in politicising them. In my view, working-class youth should be politicised from the cradle, when they first start to speak and go on to read and talk about the nature of society. We must explain why there is no future for them under the present Tory Government and this capitalist system.

The deceit, lies and hypocrisy of society, with the YTS scheme being used, with wages councils being abolished, with low pay being the order of the day and with high levels of unemployment, which will become even higher in the period to come, is one side of the coin. On the other side are those who are telling us how wrong we are. They preach in the press that we are wrong, but they own and control the wealth of society. They are handing themselves vast pay increases, money got off the backs of working people.

The choice for us and for youth in 1985 involves recognising that society is at a crossroads. Increasingly, we must reach a decision. We must decide whether society is to continue on the greed of the few or the needs of the majority, using the wealth created by working people for the benefit of the workers.

We on the Opposition Benches, particularly Labour Members, are not here on the sufferance of the ruling class. We were forged as part of the trade union struggle, understanding that we should have to change capitalist law to working-class law. That is why the Labour party and trade unions were established. They were set up not to come to terms with the present system but to change it.

The young of today have not lived through the years of class collaboration and reformism over policies. They know, as all hon. Members should know, that there will be no return to the 1950s and 1960s. The system is bankrupt and crooked, and in terminal decay. The youth must understand that the future is theirs. As the most audacious and enthusiastic section of society, they are being denigrated by society in general and by the Government in particular. They are being demoralised.

I recently quoted the case of kids being used as scarecrows to chase away starlings from a rich farmer's cherry orchard. As I came through Euston station today I saw a young man on his knees cleaning people's shoes. "Shoeshine", he shouted, and when I spoke to him he told me that he had eight O and three A-levels. This is happening in London, not Liverpool, where we have been birched by the Government. Youth in London have no future.

Mr. Lawler *rose——*

Mr. Fields: The hon. Gentleman should sit down. He has nothing to say to me.

I, for one, have confidence in youth in particular and workers in general. [HON. MEMBERS: "They have none in you."] They have confidence in me as vice-president of the Youth Trade Union Rights Campaign. We want to point out that the Thatcher Government understand what must be done to maintain the profit system and give profits to their rich backers. That is why they are selling off all our nationalised industries and our assets to the sharks on the stock exchange.

A future Socialist Government need to carry out the pledges enshrined in clause four of Labour's constitution, giving to those who work by hand and by brain the full fruits of their labour, taking over production, distribution and exchange in society.

The youth of today are the adults of tomorrow. Past generations have let down today's youth, but youth now have an opportunity. They are saying, "We shall no longer take the crumbs from the rich man's table. We do not even want the cake now. We want to take over the bakery." The youth of today have seen through the Government and the system that they represent.

The Parliamentary Under-Secretary of State for Education and Science (Mr. Bob Dunn) *rose——*

Mr. Fields: I shall not give way. I am sorry. The hon. Gentleman should sit down.

We have a warning for the parasites who feed off the working people, who hive off the wealth for their own aggrandisement. When working people wake up and see through their own experience the distortions, lies and manipulation of society and hear the message of our Socialist alternative, an unstoppable movement will develop. The youth will be at the head of that movement, carrying out the historical task of transforming society from this rotten, decayed, exploitative system into a caring compassionate society where people will be treated as human beings, not wage slaves or market commodities for the benefit of a handful in society. Only then will youth look forward to a future free from fear and despair.

There is a correlation between unemployment and drugs, although we would not say that unemployment was

[Mr. Fields]

the sole cause of drug use. There is also a correlation between unemployment and crime. No one condones crime, hooliganism or drug taking, but if people are treated subhumanly we cannot expect any better from some of them.

The Government have brutalised social relations. They have brought about the politics of the jungle. The rich and powerful get the lion's share, and the poor and weak get the scraps. It is little wonder that the pale shadows of the Tory Government and the alliance ask why we seek to defend ourselves, our youth, our families and our conditions. We are fighting for those people against this brutal system which you are propping up along with the Government.

Mr. Deputy Speaker: Order. I am sorry to have to interrupt the hon. Member, when he is in such fine flow, but I do not prop up anything.

Mr. Fields: I shall not go into that, Mr. Deputy Speaker.

The message from this debate is that the Tory Government have nothing to offer youth. This system has nothing to offer youth. Despite the criticisms of the faint-hearted, my appeal to youth is to get organised in the Young Socialists and the Youth Trade Union Rights Campaign and fight back against this vicious Tory Government and their attacks. We say to youth "The future can be yours, organised with a programme that can and will change society to create civilised conditions in health, education, housing, jobs and personal fulfilment." If youth hear no more during this debate than this message of hope, I for one shall be satisfied.

8.34 pm

Sir Philip Goodhart (Beckenham): I have an awful feeling that when the colleagues of the hon. Member for Liverpool, Broadgreen, (Mr. Fields) take over power they will treat the young and the old with the same delicate courtesy as the hon. Gentleman showed to those who sought to intervene during his speech.

Nearly a fortnight ago, on the day on which Liverpool football club played Juventus in Brussels, I was in Holland talking to employers, trade union leaders and Government officials about the youth unemployment problem. The latest figures for youth unemployment in Holland had come out a couple of days before, and they were excited about the trend. The April unemployment rate among those under 19 had fallen by 20 per cent. between 1984 and 1985. This had followed a decrease of 14 per cent. in the March unemployment rate for the same group between 1984 and March 1985. People were optimistic that the tide had turned.

In the recent past, the Dutch were in a bad position. In 1980 an employers' federation estimated that one manufacturing job in two was operating at a loss. When the recession came, the loss of jobs was more rapid and went further than in the United Kingdom. The Dutch unemployment rate increased to 18·5 per cent. in January 1984. Nearly half the unemployed were young people.

At the end of 1982, a Conservative coalition was elected to Government. It followed policies that are broadly in line with those of the British Government. The Dutch Government gave priority to competitiveness and profitability and waged a successful battle against inflation. They kept tight control over the money supply and sought to cut public spending. They sought also to remove themselves directly from the wage negotiation process.

The one aspect of wage negotiation from which the Dutch Government have not removed themselves is in setting wages for young people. For many years, under successive Governments, an elaborate system of minimum wage levels has operated. With the co-operation of the trade unions and employers, the Dutch Government have sought deliberately to lower the minimum wages of workers under 19. Although the minimum wage for those over 20 increased between 1980 and 1985 by 6 per cent., the minimum wage of young workers was reduced, on average, by 22 per cent.

The Dutch Government's tactics in tackling youth unemployment were set at the beginning of 1983 by the chairman of the Federation of Netherlands Industry, an employers' organisation. The proposals that he put forward bore a remarkable similarity to the programme suggested at the end of 1982 by the unemployment steering group of the CBI, under the chairmanship of Sir Richard Cave, then the chairman of Thorn EMI. The one difference was that, because the situtation was rather worse in Holland than it was here, Mr. van Veen had an easier ride with his proposals and found it easier to get co-operation than have Sir Richard Cave and the unemployment steering group of the CBI in Britain.

Basically, the proposal was that the minimum wages of young workers in Holland should be reduced—as they have been there—by about 22 per cent. At the same time, a great deal of attention was paid to youth training schemes. They are not as comprehensive or as costly as those in operation here, but they are still an improvement on what has gone before. The one scheme which was adopted in Holland which we have not adopted in Britain is a shorter working week for young workers. In Holland it is impossible for any new young worker under the age of 23 to get employment in the public sector, or in a major firm covered by a collective trade union agreement, for more than 32 hours, with, of course, 32 hours' pay.

There have been some problems in introducing the scheme. The unions in the public sector showed a certain amount of reluctance, but they eventually accepted it, and I note that the 32-hour week scheme has been introduced in the public sector in a way that would certainly appeal to a Prime Minister wishing to see a reduction in public sector employment. One Civil Service department is reducing the number of posts open to recruitment from 4,500 to 4,000, yet it is taking on 5,000 new workers to fill those 4,000 jobs. Therefore, there is a reduction in the level of employment within the public sector, while at the same time more job opportunities are being given to young people.

The result has been spectacularly good in the past few months. There has been a reduction of 14 per cent. in youth unemployment in March compared with the previous year, and a reduction of 19 per cent. in April compared with a year ago. There is a real feeling that the problem of youth unemployment has been tackled successfully. If the Dutch experience continues to be as satisfactory as it has been in the recent past, I would ask the Government to look seriously at the possibility of introducing a shorter working week for young workers.

Our Government have introduced their own job-splitting programme, although not adopting it themselves.

We saw further encouragement of job-splitting for young people in the Chancellor of the Exchequer's last Budget. Perhaps this a concept that is too revolutionary at the moment. At the last count, only 1,500 posts had been split. It may well be that the Dutch approach, which is less revolutionary and much simpler to operate, offers a better and a simpler road to follow.

I hope that my hon. Friends will look very carefully at what is taking place across the Channel. As one Dutch employer said to me, "The 32-hour week for 32 hours' pay has two great attributes: first, it is very simple; secondly, it costs almost nothing." Both attributes should appeal to our Government, and I hope that they will consider them very carefully.

8.46 pm

Mr. David Alton (Liverpool, Mossley Hill): The hon. Member for Beckenham (Sir P. Goodhart) has put forward a very sensible proposition, and I hope the Government will take due note of it. I support the idea of a shorter working week for younger workers. Anything that can be done to ensure that more of the employment opportunities are shared more evenly is well worth our support. It is useful to look at examples from other European countries and see how we might emulate them.

We heard earlier about the statutory apprenticeship scheme in West Germany. At present, 500,000 young people are employed in statutory apprenticeships in West Germany, and we could well copy that. A similar scheme operates in Belgium.

In the three countries which have been mentioned—Holland, West Germany and Belgium—there is one thing that they all have in common, and that is Liberals participating in the Government. One of the problems in the United Kingdom is that the people who might be advocating measures of that sort—some of them in groups such as the Conservative Centre Forward—are not listened to with sufficient seriousness.

This year, 1985, should be a time of hope. Young people should be able to look forward with confidence to making their contribution to our community, but instead it is very much a time of hopelessness and despair.

About half of the unemployed in Britain are young people. I agree with the hon. Member for Liverpool, Broadgreen (Mr. Fields)—I hope it will not do him too much damage in the Militant Tendency—that there is an undoubted relationship between high unemployment and high rates of crime, despite the Prime Minister's regular denials of the link. Half of all the crimes are committed by young people. There is a link, too, with the escalating problem of drug abuse—a subject to which I shall like to return later in my speech.

Many of our young people face the prospect of 50 years on the dole. They face youth training schemes. They face increasing competition for university places. Many of my contemporaries, with worse A-level results than brothers and sisters who are now being turned away from universities, were able to get into higher education. It is a tragedy that those younger brothers and sisters are now denied the opportunity of going to university. What we see today is a reduction in self-esteem and self-respect.

The hon. Member for Huddersfield (Mr. Sheerman), who opened the debate for the Opposition, indulged himself in some poetry. I am glad to see him returning to his place. I think that Alfred, Lord Tennyson put it very well in a couplet that he composed when he asked:

> "Ah, what shall I be at fifty,
> Should Nature keep me alive,
> If I find the world so bitter
> When I am but twenty-five?"

The truth is that there is today a great sense of bitterness, hopelessness and despair among many of our young people.

The hon. Gentleman complained that only £250,000 had been made available for International Year of Youth. I do not intend to follow that argument because the debate is not simply about throwing money at young people and their problems. However, I agree that it should be about the Government taking International Year of Youth seriously.

The hon. Member for Broadgreen, who spoke as a member of the Labour party, struck an interesting contrast with the Labour Front Bench. We should not laugh him off, as some hon. Members tried to do today. In Liverpool, his colleagues run the council. Indeed, his colleagues have a great say in who is to be selected for many seats throughout the country. We shall see more and more people like him in the House representing the Labour party.

Mr. Tony Banks (Newham, North-West): Good.

Mr. Alton: We know that there are great affinities between the London and Liverpool Labour parties. We should not laugh off the hon. Gentleman, but should take him seriously. When he talks, as he did today, about breaking the capitalist laws and replacing them with working-class laws, it shows how he and many of his hon. Friends regard the law of the land. When I intervened, I pointed out to him that it sets an appalling standard and example to young people to lure them from their school classes, to march them to the pierhead in Liverpool and for speakers to harangue them at open-air rallies. The effect of that on discipline and morale in schools, and on their long-term opportunities and future, is unbelievable.

Mr. Tony Banks: Will the hon. Gentleman tell the House why he believes that explaining to young people the cause of their lost opportunities and how the system brutalises them is a disadvantage to them?

Mr. Alton: It is not a disadvantage to explain to people the causes of our problems. The way to solve those problems is through the ballot box and parliamentary democracy, not by pulling young people on to the streets, or by encouraging them to leave their classrooms. That is simply to take the first steps towards breaking the law.

As I also pointed out in my intervention, constantly to tell people that it is all right to break some laws but not others, and that they can defy the Government, whoever that Government may be, breeds contempt for parliamentary democracy. Some of us know that this is all that the members of Militant Tendency who dominate the Labour party in many parts are concerned with. I warn the House not to laugh off those pied pipers who pull young people from their classrooms and who constantly advocate breaking the law.

I also have a criticism of the Government. They have created the breeding ground that has allowed people like the hon. Member for Broadgreen to prosper and thrive. We have witnessed the creation of a disaffected, disillusioned, cynical and bitter youth. The measures which the Government have announced during the past two weeks have compounded the problem. They have announced a

[Mr. Alton]

rise in students' grants below the rate of inflation, which will cut the real value of the grant further. They have continued to threaten to extract young people from the vital protection of the wages councils. They have presented a review of social security which treats anyone under the age of 25 as a juvenile and forces young people into greater dependence on their parents. It has been a bad 14 days for young people.

It has also been the 14 days during which the Government have implemented their change in the Department of Health and Social Security board and lodging house allowance regulations to save £70 million. The affect of that saving has been to force about 10,000 people in Scotland on to the streets, and about 4,000 people in Merseyside to endure greater hardship. Many young people will now sleep rough in the inner cities rather than go home. Others will make fraudulent claims. Others again will take to prostitution or to peddling drugs to pay for living accommodation. How can the Government reconcile that policy with their previous urging of young people to get on their bikes, to become a nation of Dick Whittingtons, and to go off and seek their fortunes? The Government urged them from their homes, but now do not give them the wherewithal to survive in the social antipodes—the inner city areas—where young people find themselves.

This year is International Year of Youth, and my hon. Friends and I have tried to take it seriously. That is why we invited 1,000 young people to participate in our Youth Day in Westminster earlier this month. The young people who came wanted to learn about Parliament, its processes, and how this building operates and functions. I believe that they learnt a great deal that day. Many of them may have seen my hon. Friend the Member for Cambridgeshire, North-East (Mr. Freud) introduce his Bill on disabled young people.

Four other Bills have also been introduced by my hon. Friends during International Year of Youth. My hon. Friend the Member for Truro (Mr. Penhaligon), who is present, introduced a Bill to deal with the problem of young people in rural areas; my hon. Friend the Member for Gordon (Mr. Bruce) introduced a Bill to deal with the problems of young people in Scotland; my hon. Friend the Member for Rochdale (Mr. Smith) introduced a Bill to deal with employment opportunities for young people, in which he advocated the statutory apprenticeship scheme, to which I referred earlier; and on the first sitting day of Parliament in International Year of Youth my hon. Friend the Member for Orkney and Shetland (Mr. Wallace) introduced his Youth Charter Bill. We have taken International Year of Youth extremely seriously.

"International" is a word that I wish to draw to the Government's attention. It is very sad that the Young Conservatives and the Federation of Conservative Students have decided not to participate in the British Youth Council's visit to Moscow this year. The best way of building bridges and creating peace in the world is for our young people, whether they live on the eastern or the western side of Europe, to get to know each other. Unacceptable pressure has been placed on the British Youth Council. It has been threatened with losing its grant if it goes ahead with the visit. That is utterly unacceptable. I hope that the Government will say tonight that there will be no reduction in its funds. I hope that they will reconsider supporting what could be a mission of peace.

As the joint chairman of the Council for Education in the Commonwealth, I also regard it as a tragedy that during the past five years young people from the poorest parts of the world have been denied the opportunity of coming to our colleges and universities because of the introduction of full-cost fees for overseas students.

I shall make my remaining remarks in the context of the three grand themes which the United Nations designated for International Year of Youth—peace, participation and development. I ask the House to consider now not international peace, but inner peace. What sort of generation is being brought up on heroin and cocaine? Some 100,000 young people in Britain today are taking heroin. Only two weeks ago the chairman of our Home Affairs Select Committee rightly said:

> "Every son and daughter of every family in this country will be at risk from this terrible epidemic."

For years, Liberals have been advocating the introduction of life sentences for those who peddle heroin and organise the evil of trade in heroin. It is one of the worst maladies to affect our age. My right hon. Friend the leader of the Liberal party has also said that we should sequestrate the funds of those who have been making their vast profits from peddling heroin to the young. At present the racketeers salt away their ill-gotten gains, place fortunes in bank accounts in Zurich, or bask on beaches in countries with which we have no extradition arrangements. They should not be able to get away with it. We must make every effort to bring them to justice, to sequestrate their ill-gotten gains and to use them for the treatment of young people who suffer from the heroin plague. It was very easy during the strike of the National Union of Mineworkers to sequestrate the union's funds. Surely it must also be possible to track down those to whom I have referred and similarly to sequestrate their funds.

Inner peace, the opportunity to feel that one can be a self-respecting member of the community and the right to self-esteem are important conditions for many of our young people. Similarly, the right to play a part in society is vital. That is why we on the alliance Benches have considered the lowering of the age of candidature in line with the voting age. My noble Friend Lord Tordoff introduced an amendment to the Representation of the People Bill, which, sadly, was defeated by Conservative peers voting against the proposal and by the abstention of Labour peers. The alliance believes that there should be statutory representation by young people on organisations such as the area manpower boards of the Manpower Services Commission, which monitor youth training schemes at local level, thereby allowing trainees some say in the schemes in which they participate.

The alliance thinks that young people should be able to sit on local authority committees. I served on the education committee in Liverpool some years ago. The Liberal group introduced the right for a young person from one of the local schools to be elected—incidentally, by the single transferable vote system—after hustings had been held to sit on the education committee and to be able to speak on behalf of the consumers. There are other organisations, such as the health boards, where young people should have the chance to express themselves.

Participation is crucial to Liberals. We believe in giving people control over the institutions that govern their lives. For many young people the mechanisms of control do not exist as yet. Participation should not be confined to a purely mechanistic level. Unemployment means having nothing to do, and sometimes that can mean having nothing to do with the rest of us. Young people also need to be able to participate by virtue of having a job.

I have reminded the House of the number of apprenticeships that have been lost. There were 155,000 in 1979, and the total declined to about 90,000 in the mid-1980s. Far too many of our young people have been introduced to the hopelessness and despair of the dole queue.

Liberals believe that the youth training scheme is based on sound principles, but we are not happy with many of the ways in which it operates. Far too many employers view the scheme as a means of obtaining cheap labour. Too few young people enter permanent employment at the end of their YTS scheme. Many young people receive no real training from YTS and, therefore, are not having their employment prospects improved. Too many people on the YTS are being put into jobs in which they are neither interested nor suited to.

Liberals would like to see the YTS improved, first, by the establishment of an inspectorate to vet companies which wish to take part in the scheme and regularly to scrutinise the scheme at the workplace. Secondly, all health, safety and insurance regulations applying to industry should apply also to the YTS. Thirdly, no young person should be forced on to the scheme under the threat of reduction or removal of state benefits. Fourthly, we should establish an improved system of consultation so that everyone entering the YTS is appointed to a training scheme in which he is interested and to which he is suited. Fifthly, those on the scheme should receive fair payment that is set at a level appreciably higher than that of state benefit. Sixthly, each young person should receive training in a number of skills, and the system of assessment and qualification should be developed in consultation with both trade unions and employers. Seventhly, each young person on the YTS should receive training in life skills. Finally, there should be greater emphasis on training in skills that are of use to the community.

Earlier, the Minister asked what practical proposals the Opposition had for improving the YTS, and he was given some ideas by the hon. Member for Huddersfield. I hope that the ideas which I have introduced to the debate will be considered seriously by the Minister.

After peace and participation, the other great theme of this year is supposed to be development. There should be more opportunities in our Britain of 1985 for more personal development. At present, the clock is being turned back in education to a time before the Education Act 1944 and even before Mr. Gladstone's Elementary Education Act of 1870. Opportunities for development are being reduced.

Young people in the International Year of Youth have suffered a great deal if they have wanted improved education opportunities. There has been a series of attacks on their standard of living—they are already poor—and on their representative institutions. In the past fortnight they have been told that there is to be yet another cut in the value of their maintenance grant. After a 10 per cent. drop in the real value of the grant over the past five years, they are to receive only a 3 per cent. increase this year. That increase will not even allow the grant to keep pace with inflation. They will probably have to rely even more on housing benefit payments and long vacation supplementary benefit payments, which have come to provide vital income for students on inadequate grants.

The Government have thought of that. The Secretary of State for Social Services has promised that in his already infamous Green Paper there will be proposals that students should soon be deprived of long vacation supplementary benefit and housing benefit payments. Why is he taking that course? It appears that the payments made to students cause the DHSS administrative problems. However, the Secretary of State claims that it will not really matter if these payments are not made as the amount of benefit involved is usually small. The payments are not small if the student's grant barely covers his college bills, if he has a permanent bank overdraft and if his parents do not pay the full contribution. They are certainly not small if, as thousands of students have found, the new travel grant system has left them hundreds of pounds out of pocket.

How do the Government expect young people in colleges to manage? The answer is in the social security Green Paper, which says that students should be

"helped through the grant system by their families and by their earnings in vacation".

As nearly half the parental contribution to grants are not paid in full now, and as the Secretary of State chickened out of asking parents to contribute to tuition fees last November, in reality this means one thing. If a student finds that his money has run out, he will have to rely on part-time or temporary work to stay in education—never mind the damage to studies. These are Victorian values of the worst kind, and the Government are undermining the funding of public education.

Mr. Andrew F. Bennett: Does the hon. Gentleman accept that forcing students into part-time work takes jobs from other people in the community?

Mr. Alton: I made that point at the outset of my remarks. We should be sharing the available work and making more, not fewer, working opportunities available. Encouraging students to take up jobs adds to the unemployment problem. I agree with the hon. Gentleman.

There is worse. The only institutions on which students can rely to defend their interests, the student unions, are also under attack. The Green Paper on higher education accuses them of being unrepresentative and says that some of their policies are

"determined by a minute portion of the union membership."

That is rich, coming from a Conservative Government with a mandate of only 31 per cent. of the electorate.

Every student union in the country uses proportional representation in some variation to elect its officers, and all of them are therefore more representative of their electorate than is the Secretary of State. The strict controls on student union expenditure threatened in section 7.19 of the Green Paper are yet another attempt by the Government to clamp down on those of their victims who have the audacity to fight back.

What do the Government have in store for students? The likelihood is that it will be some form of student loans system, which would be a disaster. Not only would it be extremely costly to introduce, taking years to become cost-effective, but it would discourage entry into higher education by women and those from less affluent

[Mr. Alton]

backgrounds. This is at a time when a fall in the 18-year-old population offers us a golden opportunity to broaden access to education across the social spectrum.

The International Year of Youth will, for young people in Britain and in British colleges, represent the opposite of the United Nations' themes. The Government are encouraging protest, not peace. They are discouraging participation and turning away from the development of a fair and accessible higher education system. The Secretary of State for Education and Science is a fellow of the Oxford College of All Souls and the Faithful Departed. He clearly wants to add traditional British education to the faithful departed.

9.3 pm

Mr. Patrick Thompson (Norwich, North): I declare an interest. I have worked for a large proportion of my career with young people, and I made my maiden speech on this topic. The Opposition, with their unerring sense of overstatement, talk about the "desperate plight" of young people. The hon. Member for Liverpool, Broadgreen (Mr. Fields) went over the top with his Marxist analysis of the situation. For those reasons, as well as many others, I shall oppose the motion and support the Government amendment.

Although the world of the 1980s is not easy for young people, it is important to emphasise that they are in good heart. Every day in my constituency I learn about the achievements of the young people of Norwich and the surrounding areas. I learn of young people who have gone on Operation Raleigh round the world and achieved great things; I learn of young people on the Duke of Edinburgh award scheme who are achieving great things; I learn of young people starting their own businesses; and I learn of those who are aiming high in academic, sporting or other sectors. We should commend the achievements of our young people and not continually talk them down in the gloomy tones of the Opposition.

Above all else, our young people need a sense of direction — not the direction provided by the hon. Member for Broadgreen — and leadership. Any fair-minded person must pay tribute to the Government at least for their efforts to provide higher standards of education, which must be the right way forward for our young people. We should also congratulate the Government on improving and extending the youth training scheme. They plan to extend it to two years so that no young person need be without a job, training or education. If that is not an ambitious programme, I do not know what is.

The hon. Member for Broadgreen spoke proudly of how the Youth Trade Union Rights Campaign organised a strike of school students against the youth training scheme. The hon. Gentleman does not appear to be thoroughly ashamed of himself, but he should be. That is the type of irresponsibility among adults which leads young people to ignorant rather than tolerant and enlightened attitudes.

I deplore recent events at the University of East Anglia. I do not know whether the hon. Member for Broadgreen has anything to do with the Socialist Workers party, but its members did all that they could to prevent free speech at that university. Thanks to influence and firm action by the university authorities, the meeting went ahead. That was a triumph for democracy and a defeat of everything that the hon. Member for Broadgreen appears to stand for.

Opposition Members should remember that ever since the early 1960s, when Labour was in power, there has been pressure to increase the wages of young people. There may be votes in this, but the result of increasing such wages was a reduction in the length and effectiveness of apprenticeship schemes. We all regret that trend, but responsibility must be laid squarely with the Labour Governments of the 1960s. In 1970, 12 per cent. of 18-year-olds had adult rates of pay. That proportion has increased to more than 50 per cent. today. Anybody who compares what is happening in Britain with what is happening in West Germany will not be surprised at the serious depletion in the British training effort and the reduction in skills which are vital to our economy.

I do not need to spend long reminding the House of our serious skills shortages. Information technology is just one shortage area. In response to such shortages, the Government introduced and extended YTS. It was the Labour party which failed to take up the challenge when it had an opportunity to do so.

Mr. Sheerman: Will the hon. Gentleman cast his mind back to 1979 when total unemployment was equivalent to youth unemployment today? The proportion of the problem is quite different now. Does he agree that the youth opportunities programme was successful and tailored according to conditions at that time? We did not have 1·25 million unemployed young people then.

Mr. Thompson: I am grateful to the hon. Gentleman for reminding me of 1979. I remember it well. I remember campaigning when the number of unemployed people had doubled under Labour. I can remember the criticisms of the youth opportunities programme. It was right for the Conservative party to make good those deficiencies and to introduce a proper scheme in the shape of YTS.

I should like to draw the attention of my right hon. and hon. Friends on the Front Bench to some serious points about the youth training scheme. There are dangers in that scheme — for example, too much bureaucracy. I hope that we shall address ourselves to those dangers. I hope that there will be more co-operation and liaison between the Manpower Services Commission, education and industry. The lines of communication between those three areas of national life are not as good as they should be. I hope that Ministers are taking note of this point. As a matter of urgency, we should do all that we can to raise the standards of achievement on the YTS. I hope that we shall not be tempted, as sometimes happens, to mislead our young people into the belief that they are gaining qualifications when they are not.

For example, if young people are on a scheme that provides them with skills, that is fine and it must be better than having no training at all; but we must not try to give them the impression that they are obtaining craft skills that are provided by more extended training schemes elsewhere. I am not criticising the YTS in saying that; I am merely stating a very important way in which it can be improved. We must raise standards, make sure that young people fully understand what skills they are acquiring and what they will be able to do with them when the time comes.

The good news is that in Norfolk the number of people going on to jobs from YTS is as high as 80 per cent. I am

quoting the most up-to-date figures available. Surely that is a success if ever there was one. So much for Opposition carping on that point.

Education is mentioned in the motion and the amendment. Again, I should like to pay tribute to the Government's efforts to raise standards in education. I am sure that my hon. Friend the Minister will not argue with this. There is no doubt that at the moment there is difficulty and low morale in the education service. We should look seriously at the causes. That does not mean that we should change course. I should like to set the record straight. The House should be reminded that we are accused of making cuts in education, but the facts are that more than ever is being spent on education per pupil, the teacher-pupil ratio is the best ever, and more young people aged between 18 and 20 are entering higher education than ever before.

Nevertheless, we should look seriously at the causes of the present unhappiness in the education service. I know that my right hon. and hon. Friends on the Front Bench are doing so and taking that point seriously. I believe that, in the long term, for the sake of education and our young people, the financing of teachers' salaries should be removed from the local authorities. I hope that if that were ever to come about, we would end once and for all the sad saga of the Burnham committee and the consequences resulting from the failure over and over again to reach satisfactory agreements. As a Member of Parliament, and as a past member of the Assistant Masters and Mistresses Association, it is good news to find that at least some of the teachers' organisations have realised that there is no future in conducting their dispute by strike action. I hope that that message will finally get across, and that we can get back to talking about the problems of education, the teaching profession, and so on.

The financing of teachers' salaries should be taken out of the control of local authorities because, ideally, schools should be run by head teachers and boards of governors. State schools should be run by those who are closest to the school, not by large bureaucracies. There must be local input. That matter needs debate and discussion. I hope that there will be much more debate and discussion before we finish discussing local government finance and related topics.

There should be a national approach to the teaching profession. That is why I support the idea of a professional teachers' council. I hope that that matter will be discussed again. If we can move in those general directions and continue pressing for higher standards in education, as the Government are doing, we shall serve our young people well.

In case the Opposition should feel unduly pleased with themselves over their criticisms of the present education set-up, they should remember the serious damage that I saw done in Manchester and elsewhere by the headlong rush into comprehensivisation. I was teaching in Manchester at the time. Nationally, we have not recovered from the damage. We need to move on and to improve our schools in every way that we possibly can. Let us not forget the prominent part played in that dreadful, mishandled political rush to the new comprehensive organisation by one of the members of the gang of four, now a member of the alliance.

The youth service in Norwich is doing a good job. I have obtained a great deal of experience of the work being done by its professional and voluntary workers. Last Monday, I visited a youth and community centre in Thorpe St. Andrew. There is a great deal to discuss on this subject, but I shall confine my remarks to saying that I hope that the Government will continue to do what they can to encourage the professional and voluntary leaders and the young people who do good work and who take part in the worthwhile activities provided by our youth service.

In the House and the country, we need to apply ourselves even more vigorously to ways of harnessing the ambitions and energies of our young people. I should favour some form of national service, if it were possible. Nevertheless, whatever happens, we must set higher standards. The Opposition wish to level down. We must set the highest challenge and standards for our young people, and they will respond to that challenge. As we have heard tonight, they are responding to the challenge.

We have seen the effects of lower standards of discipline and moral education in schools, families and society. The subject of drugs has been mentioned tonight. Those are serious matters. Lower disciplinary standards and the failure of moral education will lead to ever more appalling effects unless we seek to reverse the trends. I am sure that there is consensus throughout the country that that is the direction in which we need to move.

The Government are addressing themselves seriously to the problems of youth and will continue to do so if we push them in the right direction. Our young people will have, and will be able to provide, the energy and leadership for their children in the future. Therefore, I am happy to support the Government's amendment and to oppose the Opposition's overstated motion.

9.22 pm

Mr. Gareth Wardell (Gower): The Government's White Paper "Education and training for young people" contains at least one interesting sentence. On page 4, it states:

"Yet, for all these developments, much still remains to be done."

The word "much" can cover a multitude of sins, as can the word "very" and many others. When the Minister replies I should be interested to know whether he considers that the problem of what needs to be done in our education system for youth is massive, enormous or a crisis that desperately needs attention and not just a sentence in a White Paper which merely states:

"much still remains to be done."

As a teacher of many years' standing, I want to concentrate upon some of the features of our education system which have been covered in various documents such as "Better Schools" and that excellent report from the Select Committee on Science and Technology in the other place on education and training for new technologies.

The environment in our schools creates a problem for young people, in that they are worried by the impression created and the urges given to them by teachers and parents. There is a feeling that they must work harder so that in future they can somehow achieve the paradise of high-wage employment, as a result of which they will throughout their working lives enjoy a high salary combined with job security, marvellous holidays, trips abroad and so on.

In reality, school buildings are deteriorating, buckets are provided to catch the leaking water from the roofs and library facilities are denied. A recent report showed that very few chartered librarians work in our state schools, as

[Mr. Gareth Wardell]

a result of which very few children learn how a good library works within the school system. Many pupils do not know how to use the reference and cross-reference facilities that a good library provides. In addition, book stocks are now suffering from prolonged use over many years.

When my little boy comes home from school he asks, "What is the point of working hard? When I see Mr. Davies in my classroom, I think to myself, 'If that is the sort of job I will have when I finish my school career I would rather not bother'." That is the type of discrimination that has been built into our education system.

Morale among teachers is low, and the Government are not helping. Paragraph 4.27 of the report of the Select Committee of the other place stated:

"In schools there is a shortage of teachers in specialist subjects, notably mathematics and physics".

It said that the Cockcroft committee, looking at mathematics in secondary schools,

"estimated . . . that the 'hidden' shortage of mathematics teachers in secondary schools was about 9,000."

Yet this country prides itself on an education system that is supposed to be the best in the world.

According to the Select Committee of the other place, teachers seldom have experience of applied science in industry and commerce. There is an inbuilt tendency among teachers to be inward-looking. They do not have the necessary work experience to pass on to their pupils. A fundamental change in the secondary school curriculum is necessary. The Open University system, under which material is made available through radio and television programmes and units provided to students, is a model that could be repeated in our schools. That would avoid the sad situation which still exists, whereby teachers trot out dictated notes day after day. The notes which teachers used in their colleges are passed on to their students with no additional input. There must be a fundamental change so that the Open University system is repeated in our schools.

I welcome the training and vocational education initiative, but I believe that companies should increase their efforts to interest local and head teachers in their enterprises. In liaison with schools, companies are doing very little to ensure that our young people are prepared for the changes that are now taking place in our economy.

The former chairman of the Manpower Services Commission, now Lord Young, stated in evidence to the Select Committee that in 1983 the youth training scheme cost the Government about £850 million. German employers, not the Government, pay about £7·5 billion per year towards apprenticeships. The Government have said that much needs to be done and have outlined some proposals in their White Paper. I hope that they will rectify the fact that, according to Lord Young, the expenditure on training and the proportion of the working population holding vocational qualifications was lower in the United Kingdom in 1983 than it was, for example, in West Germany.

Relevant knowledge is critical. It is a sad reflection on our education system that most young people in our schools not only have no link with local industry but do not know the difference between the roles of their local community council, the district council, the county council and their Member of Parliament. A serious look needs to be taken at a school system which churns out young people ignorant of the roles of the important decision-makers in our system. If we do not combat that ignorance, we shall be in serious trouble.

The decline in our standard of living is shown by the GDP per head for the United Kingdom compared with other industrial countries. We are slipping year after year. Before long, we may not be able to describe ourselves as an advanced industrial economy at all.

In a recent oral answer to me, the Prime Minister expressed complete confidence in Her Majesty's inspectorate of schools, but what experience do the inspectors have of life? Is there any guarantee that they have done other than been educated in our schools, passed on to our universities and colleges, then gone back to our schools and then been appointed as inspectors to advise others on the best way forward? In Wales, the inspectors churn out papers such as "Home-School Links", which is just chat about the way in which teachers should mark reports. There is no mention of solvent abuse, under-age drinking, crime, pornography and the rest. That is a pretty bad show on the part of the inspectorate. On the subject of obscenity, I hope that orders will shortly be brought in to bring the video recordings Act into operation. That will be of at least some assistance to our youth.

In West Glamorgan there has been a massive increase in the percentage of young people among the long-term unemployed. The DHSS research report No. 11 on the cohort study of unemployed men states that the relationship between long-term unemployment and illness in our society is a fruitful area of research for the future. I hope that the Secretary of State for Employment and other Secretaries of State will consider setting up a research study for that purpose.

I am deeply perturbed that the effects of long-term unemployment among young people will be seen after a time lag. The eminent professor of gynaecology and paediatrics at Edinburgh university, Professor Baird, has examined longitudinal studies of the effect of long-term unemployment on infant mortality rates 15 and 20 years ahead. I wonder what the effect on young people in terms of neonatal and perinatal mortality will be and what other consequences and hardships will appear after the time lag. The Government must set up a research project to find out what evidence exists and to ensure that the young girls who will be giving birth to children in 15 or 20 years' time will not have such problems.

The two-year YTS scheme worries me, as it does other Opposition Members, because the youngsters do not believe that they are part of a proper work force. Indeed, they do not know where they belong. They are neither one thing nor the other. Youngsters who want independence and who wish to live away from home will be forced by the Government's new board and lodging regulations to move from place to place to find homes. I wish that the public had given the same attention to that change as they did to the cut in education grants, which forced the Secretary of State for Education and Science to change his mind.

I am extremely angry about the present education system. The priority of all hon. Members should be to talk to youngsters and to listen to what they say. The message that I have received from them is that the Government do not care. Unless we start to embrace those youngsters and stop leaving them in ignorance, in terms of income per

head of the population and the quality of life; Britain will be doomed to slip down the international table of standards of living. In the end, we shall say that we are lucky to be ahead of some of the most under-developed countries in the world, but we should be saying that we wish to be one of the great countries in terms of our progress and development.

9.37 pm

Mr. Geoff Lawler (Bradford, North): A motion phrased in such generalised, negative terms, which lumps together those who have done well, including the 20-year-old football stars and people who have started their own businesses, with the unemployed, is an insult to those who have done well and glosses over the special needs of the disadvantaged. After hearing the speeches made by Opposition Members tonight, I am not surprised that youngsters are much more cynical about politicians and politics than is the rest of the population. They believe that they are being manipulated by politicians.

One thing that youngsters have in common is that they do not like general statements about their having no hope or no future. Nor do they wish life to be run for them. They want the opportunity to control their destinies. It is no coincidence that two main themes of the International Year of Youth are development and participation. Traditionally, youngsters have looked to education and employment for development. But what development? We have heard the praises sung of the old apprenticeship system, but hon. Members have ignored the fact that many youngsters could not enter the system. Indeed, many youngsters who obtained jobs had no training at all. The majority of youngsters—it is estimated to be 60 per cent.—who left school and went into employment received no training, whereas in competitor countries the reverse was the case. They went into dead-end jobs with low wages and minimum security, which is one reason why Britain has more youth unemployment than do its competitors.

We are now moving into a new world where youngsters have the opportunity to learn skills that will be of real use to them. There will be an end to those wasted school years when youngsters could not wait to leave school. Nowadays, the headmaster of a TVEI school will say that youngsters are queueing to get into school in the mornings and that they cannot get rid of them at the end of the day. We are creating a generation of people who can look forward to qualifications, real skills and security of employment, and the economy will benefit as a result. Those who doubt that young people want this ought to talk to them. We have heard about young people wanting this and wanting that.

When the hon. Member for Liverpool, Broadgreen (Mr. Fields) talks to his pushchair revolutionaries, one wonders how many other people he talks to. If one talks to those who are taking part in the technical and vocational education initiative and to those who are in youth training schemes, one finds that the majority are happy about being in those schemes. They believe that they are receiving a worthwhile training. The youth training scheme is taking those who were written off at school. They played truant because they found that the school course was entirely irrelevant. Having been written off by their teachers, they went into the youth training scheme and discovered that they possessed talents that they did not know they possessed. After nine months on a YTS course they have written computer programmes. Before YTS they had no future. Now their future is bright. They find that they can contribute something to society.

To those who purport to have the interests of young people at heart I say that every time they deter, by politically motivated propaganda, young people from going into the youth training scheme they destroy their self-advancement. There must be many 17-year-olds who wish that they had never been misguided by professional critics. They look at those who did not listen to the professional critics but went instead into the youth training scheme and find that they have jobs, or at least that they have received some experience and training.

The youth training scheme is developing into the major avenue between school and employment. It is being incorporated into longer-term craft training, as is happening with the electrical contractors, but the vital point about the new scheme is that it must remove the distinction between employed and unemployed trainees. It must not remain the second best, the alternative to a proper job. It must be the accepted destination of those 16-year-olds who want to acquire a skill when they leave school. That distinction must be removed if the stigma of YTS being the second best is to be removed. It must not be regarded as the avenue for the unemployed.

There are still too many young people over the age of 18 who are still unemployed and who have been without work ever since they left school. They have to look for other avenues of self-development. That is dealt with by the youth service. My hon. Friend the Member for Norwich, North (Mr. Thompson) referred to the youth service. I wish that the Opposition recognised the valuable role played by paid and, more often than not, unpaid people who dedicate themselves to the development of young people.

The positive approach of the youth service to the problems of large scale unemployment has led to new initiatives and new ideas. It has provided young people with the self-confidence that they would not otherwise have had. There is a new range of options, from drop-in centres to "instant muscle". It is appropriate that in 1985 this work has been supported and enhanced by means of the youth circular and the formation of the National Youth Advisory Council.

I wish that every local authority was as supportive as are the Government. In 1982-83, 78 out of 96 local education authorities spent less than their grant-related expenditure youth service assessment on the youth service. It means that £35 million—30 per cent. of the total—was lost to the youth service. The Government cannot be accused of failing to recognise the importance of the youth service. They provided a 13·1 per cent. increase in the youth budget for 1985-86.

Many local authorities also failed to recognise the valuable contribution of the voluntary organisations. For every £1 of public money that is put into the voluntary youth sector, a huge amount of money is generated in terms of cash and time. I hope that in this International Year of Youth local authorities will consider their responsibilities, pay heed to the circular and give young people that which is rightfully theirs.

As we debate this motion, hundreds, indeed thousands, of young people are meeting in youth clubs all around the country. They will be planning community work and raising money for charity. There will also be a minority who are smashing telephone boxes and indulging in other

[Mr. Geoff Lawler]

acts of vandalism. We shall read of the latter in the press tomorrow; we shall not read of the former. If it were not for the youth service, there would be much more of the latter than of the former.

Opposition Members make the big mistake of seeing everything as a problem. Young people are, to them, a problem, when in reality they are not. They do not want to be viewed as a problem. They are a major resource in terms of the future, and now, for the first time, there is a guarantee that every young person will have an opportunity to realise his or her full potential. That is the best contribution that the Government could make to International Year of Youth.

9.50 pm

Mr. Sheerman: We have had a full debate and, although I have only a few minutes in which to comment on it, I must deal with three points of fact following the Minister's remarks. He challenged me about the saving of £5 billion to £7 billion. I have with me a copy of the *Unmployment Bulletin* containing the figures, which I will let him have.

The hon. Gentleman was unhappy when I referred to half of those leaving YTS getting jobs. I refer him to an article entitled

"Half YTS leavers find jobs"

in *The Times Higher Educational Supplement*. He also challenged the veracity of Youthaid information. I hate to embarrass the hon. Gentleman, following the altercations that took place about discontent with bad youth training schemes, but a few months ago, replying to a parliamentary question of mine, the Minister accused Youthaid of inaccuracy. I challenged him on that, but received from him no example of inaccuracy in Youthaid reports.

Youthaid has catalogued many misleading statements that various Ministers, from the Prime Minister down, including Lord Young, have made about the number of people getting jobs following YTS training, the Youthaid figure being not 70 but 40 per cent. That information is on the record and I will let the Minister have that, too.

I got the feeling as the Minister spoke about the YTS that he was really discussing the philosophy of "Never mind the quality, feel the width." My hon. Friends and I have been indulging in positive and constructive criticism of the YTS. We want it to be a training scheme, not job experience, whatever the quality of that job experience. We want it to be the sort of training that will match the training received by youngsters given by any of our industrial competitors. That is palpably not what it is now.

Mr. Alton *rose*——

Mr. Sheerman: I do not have time to give way.

If we are to compete with our major competitors, we must perform in training and education, and I refer the House to an interesting written answer yesterday by the Secretary of State for Education and Science to my hon. Friend the Member for Denton and Reddish (Mr. Bennett), who asked about the age participation and training in European countries, in the United States and in Japan. *[Interruption.]* There is no need for carping criticism from Conservative Members. The table contained in the answer given by the Secretary of State ends with Spain, followed by the United Kingdom at the bottom of the league. We are at the bottom of the league as a result of the Government's education and training policies. We in the Labour party have ideas that the Government palpably do not have.

Prior to this debate we had a fascinating discussion about famine in Africa and under-privilege in various parts of the world. A range of schemes is needed and a Government with imagination could harness the idealism of our young people—the wonderful youngsters that we have in Britain—to fight under-privilege and poverty and to carry out the constructive tasks that need to be performed. The potential is there. The Government lack the will to do anything for our young people.

9.49 pm

The Parliamentary Under-Secretary of State for Education and Science (Mr. Bob Dunn): I must start by telling the hon. Member for Huddersfield (Mr. Sheerman) that I am not deaf, that I listened intently to what he shouted and that, if he wants to quote Disraeli, I wish that he would get it right. In "Sybil", published in 1845, Benjamin Disraeli said:

"The Youth of a Nation are the trustees of Posterity."

Mr. Sheerman: That is what I said.

Mr. Dunn: The hon. Gentleman did not; he said "prosperity".

Mr. Sheerman: If the Under-Secretary of State reads *Hansard* tomorrow, he will see that I said "posterity". I said that the words could be updated today to include "prosperity".

Mr. Dunn: I accept the hon. Gentleman's apology.

We have had a stimulating debate, with contributions from my hon. Friends the Members for Beckenham (Sir P. Goodhart), for Norwich, North (Mr. Thompson) and for Bradford, North (Mr. Lawler) and comments by the hon. Members for Liverpool, Broadgreen (Mr. Fields), for Liverpool, Mossley Hill (Mr. Alton) and for Gower (Mr. Wardell). I enjoyed the speech of the hon. Member for Gower, who made some very sensible points to which I shall certainly give my attention.

I accept that schools can do much to increase young people's chances of finding employment or of creating jobs for themselves and others. The House must accept that our schools have a duty to prepare pupils effectively for working life. I am very much afraid that the standards now generally attained by our pupils are not as good as they need to be for the competitive world of today, still less of tomorrow. Schools must promote enterprise, adaptability and the qualities and skills needed for work in a technological age. They must seek to develop the attitudes that will help young people to find their way in modern society. To do this, changes are needed, in what schools do and how they teach. That is why my right hon. Friend the Secretary of State for Education and Science has launched his initiative to improve standards. That is why we need national agreement, as the hon. Member for Gower said, about the objectives of the school curriculum. That is why the Government are spending £250 million on the technical and vocational education initiative.

During the early part of the debate, we were challenged to list Labour authorities that had refused to participate in TVEI. The non-participants are the Inner London education authority, Manchester, Sheffield and, of course, Liverpool. I hope, because bids for the final round of the TVEI allocation are not due until the end of July, that those

authorities will decide to join the initiative for the benefit of the children for whose education they are responsible. I welcome the fact that the hon. Member for Kingston upon Hull, East (Mr. Prescott) condemned those authorities that were not taking part because of their political animosity to the scheme.

I believe that the hon. Member for Broadgreen was trying to make a helpful speech—at least, helpful to his hon. Friends on the Labour Front Bench—but I must express concern that a Member of this House, when giving advice to impressionable young people, should advise them to break the law rather than to take advantage of the opportunities that may or may not be available to them.

It was indeed welcome that the hon. Member, in the honesty with which he expressed his views, left us in no doubt whatever where he and his colleagues will stand when they form a majority on the Opposition Benches. *[Interruption.]* They certainly will not form a majority on the Government side of the House. The hon. Gentleman's attempts to influence and infiltrate the young people of Liverpool will be seen for what they are—a cynical abuse and misuse of the feelings, motivation and anxieties of young people. I wish him no success whatever in the evil campaign that he and his colleagues are embarked upon.

I welcomed the comments of the Leader of the Opposition, the right hon. Member for Islwyn (Mr. Kinnock) when he said:

"those who support the youth trade union rights campaign are a bunch of dafties".

I welcomed those words, and the approbation given to them tonight by the Opposition Front Bench.

The hon. Member for Mossley Hill asked some specific questions about the youth training scheme, and listed seven or eight of them for the attention of the House. He will be pleased to know that the Manpower Services Commission, via its inspectorate, already checks and monitors schemes as they are created, and makes regular visits accordingly.

The hon. Gentleman asked for an improvement in consultation between the applicants and those providing the scheme. The careers service already offers advice to youngsters about the YTS, and regular consultation is available.

The hon. Gentleman asked about the allowance. He knows as well as I that the allowance is a training allowance and does not pretend to be a wage.

Mr. Tony Banks *rose*——

Mr. Dunn: The hon. Member for Mossley Hill called for training in life skills—something that I see very much as a future role for the schools themselves. He will know also that training in life skills is already part of the YTS.

Mr. Banks *rose*——

Mr. Dunn: I give way to the chairman of the GLC.

Mr. Banks: Will the Minister tell the House whether the Government have any proposals to make the youth training scheme compulsory?

Mr. Dunn: That is a matter that I shall come to later.

Mr. Banks: Will the Minister answer yes or no?

Mr. Dunn: I can say a great deal in the course of a minute.

With regard to training for relevant skills, to which the hon. Member for Mossley Hill referred, he and I know that schemes are approved by the area manpower board, comprising employers, trade union representatives and representatives of the community, and that such schemes are based in the community itself.

As for staying-on rates, over 30 per cent. of 16 to 19-year-olds are now in full-time education, half of them in further education colleges. Here, as before, we seek improvement. We shall continue to raise standards and to raise the quality of what is taught.

The answer to the question by the hon. Member for Newham, North-West (Mr. Banks) is, briefly, no.

Question put, That the original words stand part of the Question:—

The House divided: Ayes 182, Noes 274.*

Tellers for the Noes:
Mr. Michael Neubert and
Mr. Peter Lloyd.

*See Mr. Speaker's ruling at column 898.

Question accordingly negatived.

Question, That the proposed words be there added, *put forthwith pursuant to Standing Order No. 33 (Questions on amendments), and agreed to.*

Mr. Ian Mikardo (Bow and Poplar): On a point of order, Mr. Deputy Speaker. I have just walked through the Lobby and come out, and found that the Tellers have disappeared. The exit door of the Lobby was open, but the tellers had gone. I do not know on what basis my vote has not been counted. Can you help me?

Mr. Deputy Speaker (Sir Paul Dean): I am slightly surprised to hear the hon. Gentleman saying that, because four Tellers appeared, and as far as I am aware the Division has been correctly recorded. I shall look into the hon. Gentleman's point.

Mr. Mikardo: I am obliged, Sir.

MR. DEPUTY SPEAKER *forthwith declared the main Question, as amended, to be agreed to.*

Resolved,

That this House recognising that 1985 is the International Year of Youth congratulates the Government on the action it is taking to improve the prospects for young people and, in particular, for introducing through the Youth Training Scheme the most imaginative and far reaching training programme since the last war; recognises the tremendous opportunities the scheme has created for young people and look forward with confidence to the introduction of the two-year Youth Training Scheme in April 1986; and welcomes the initiative being taken to provide more effective education for young people.

BUSINESS OF THE HOUSE

Ordered,

That, at this day's sitting, the Enduring Powers of Attorney Bill *[Lords]* may be proceeded with, though opposed, until any hour.—*[Mr. Durant.]*

Orders of the Day

ENDURING POWERS OF ATTORNEY BILL *[LORDS]*

As amended (in the Standing Committee), considered.

Motion made, and Question, That the Bill be now read the Third time, *put forthwith pursuant to Standing Order No. 58 (Third Reading), and agreed to.*

Bill accordingly read the Third time and passed, with an amendment.

Historic Churches (Northern Ireland)

10.14 pm

The Parliamentary Under-Secretary of State for Northern Ireland (Mr. Chris Patten): I beg to move,

That the draft Historic Churches (Northern Ireland) Order 1985, which was laid before this House on 22nd May, be approved.

This is a short order, but it is no less important because of its brevity. It enables the Department——

Mr. J. Enoch Powell (South Down): On a point of order Mr. Deputy Speaker. May we be enabled to hear the Minister?

Mr. Deputy Speaker: Perhaps hon. Members who are leaving the Chamber would do so as quickly and quietly as possible.

Mr. Patten: I am as surprised as the right hon. Member for South Down (Mr. Powell) that so many hon. Members should choose to leave the Chamber when this important order is being discussed. Its purpose is to enable the Department of the Environment for Northern Ireland to make grants or loans towards expenditure incurred in the repair or maintenance of churches in current use for ecclesiastical purposes and which have been listed as being of special architectural or historic interest.

The order also gives us the power, should we require it, to extend listed building controls to historic churches in current use from some future date. The order brings matters in Northern Ireland into line with what has been the practice in Great Britain or the past nine years.

Hon. Members will be aware that, in Great Britain, grant aid to churches was not prohibited, as has been the case in Northern Ireland, but there was an arrangement under which churches undertook not to ask for state aid for the maintenance of their buildings, in return for which they were exempted from some of the provisions of planning legislation.

In 1975 it was announced that, following studies by the churches in consultation with the Department of the Environment, the Government had accepted in principle the case for some state aid for historic churches. The experimental scheme has now been in operation for 10 years. In Northern Ireland, we are prevented from making a grant to listed buildings which are being used for ecclesiastical purposes by article 83 of the Planning (Northern Ireland) Order 1972. These buildings are also exempted from listed building control for works or alteration or extension, but not for demolition. The churches in Northern Ireland have experienced problems similar to those experienced in Great Britain—rising costs of repair and maintenance. They therefore made strong representations to the Department of the Environment in Northern Ireland for a scheme to provide financial assistance towards the upkeep of listed churches, similar to that which obtains on this side of the water.

I realise that there are strong arguments against grants for that purpose. It is said with some force that parishioners should bear the costs of repair. Nevertheless, on balance, I believe that there is an even stronger case for acceding to the representations of the Church authorities and for making grants. Therefore, on 5 July 1983, I announced that a suitable scheme would be introduced in the Province. After a great deal of consultation with all of the interested parties, including various churches, the legislative proposals have been drawn up.

As the House would expect, we have discussed these matters extremely thoroughly with the Church authorities during the past 18 months. The draft order was also debated in the Northern Ireland Assembly. The report of the Assembly approving the proposal was laid before the House on 15 March. I note the absense of one or two hon. Members, doubtless for good reasons.

Hon. Members will see that the order provides first, for the making of grants or loans towards expenditure incurred in the repair and maintenance of listed churches currently in ecclesiastical use. Secondly, it allows us to extend listed building control to listed churches in current use from a day to be appointed. Thirdly, it gives us power to appoint committees of the Historic Building Council to advise my Department on the operation of the scheme.

Hon. Members may wish to be aware of the Department's proposals for the administration of the scheme of grant aid. The initial annual budget will be £150,000. I realise that that is necessarily a small crock of gold. We arrived at that sum by extrapolating from Scottish experience, which seems adequately sensible. Scotland has a budget that is about four times the size of ours for about four times as many buildings. The Church authorities were aware of that sum from an early stage, at least from the time of our meeting with the Irish Council of Churches in December 1983. Their understandable wish that that sum should be larger has not detracted from their support for the order.

Grant aid will be fixed at 33·33 per cent. of eligible costs subject to a limit of £25,000 for any particular scheme in a single year. Schemes that would attract grants in excess of £25,000 should be phased over a period of years.

Mr. Peter Bruinvels (Leicester, East): Can my hon. Friend tell the House how many historic churches and historic buildings are to be considered for such grants, because, as he said, it is a small sum of money?

Mr. Patten: Initially, we are talking of about 85 churches that are A or B-plus listed. That number may increase as we carry out, with the Historic Buildings Council, a review of all the churches that are listed. But at least initially the figure is 85. I accept that the amount of money that we can afford is not as great as most of us would like. It is therefore all the more important that we should concentrate the money with respect to both the number of churches and the work that we can do on those listed buildings.

Grant aid will be restricted to repair and maintenance of the external fabric of church buildings and associated works such as the treatment of dry and damp rot, which underlines the point that I have just made to my hon. Friend. Bells, stained glass windows and internal furnishings will not be included. Again, we are rightly following the practice on this side of the water.

We shall not take the denominational aspect into consideration in any way in making grants. It will be a matter of first come, first served, for the limited funds available, though the church authorities, in consultation with the Historic Buildings Council, may wish to agree on a sensible way of controlling the queue of about 85 potential recipients of aid. I stress that the operation of the scheme will be carefully monitored, and reviewed if necessary in the light of experience.

It is not the Government's early, let alone immediate, intention to make churches in Northern Ireland subject to

listed building control. That would be done only following careful consideration and widespread consultation. There is no question of our taking such a step unless it is taken on this side of the water. There is equally no question of our automatically following in the wake of whatever is done in Great Britain. I wholly accept that were we to consider with the Church authorities—and with hon. Members, for that matter—any move in that direction, we should have to face up, among other things, to the considerable financial consequences.

I realise that the order would be even more cheerfully received in some quarters were we able to spend more money on the grants available under it. We have stepped up our activities in conservation and listing, but we still have a long way to go, and I fear that we may disappoint almost as many people as we can satisfy for some time to come. Nevertheless, I believe that the order is a small step in the right direction. I repeat that it is welcomed by the Church authorities, and, indeed, was pressed on us by them.

Against that background, noting again that I regard this as an experimental scheme which we may need to modify in the light of experience, I commend the order to the House.

10.24 pm

Mr. Norman Hogg (Cumbernauld and Kilsyth): May I apologise for the absence of my right hon. and learned Friend the Member for Warley West (Mr. Archer) and my hon. Friend the Member for Middlesbrough (Mr. Bell)? They are tonight in the Province. May I also apologise for being a little late? I am afraid that we must speak to the Attorney-General and tell him to nod a little more slowly. I hope that the House will accept my apologies and the fact that I am making my maiden speech from the Dispatch Box. I am happy to say that the Labour party will not be opposing the order.

The order would enable the Department of the Environment in Northern Ireland to make grants or loans towards the expenditure incurred in the repair or maintenance of churches. These churches, of course, must be in current use for ecclesiastical purposes and should have been listed as being of special architectural or historic interest. It would also bring such historic churches within the system of limited building control. It has always been considered an anomaly that listed churches in Northern Ireland are treated differently from those in England, Scotland and Wales, where specific grant aid schemes have been in operation for the past eight years. I have some experience of the situation in Scotland.

That anomaly is somewhat accentuated when one considers that there are about 560 listed churches in a total of 6,500 listed buildings throughout Northern Ireland. If we are to have league tables, it is accurate to say that the Church of Ireland, as the press has pointed out, comes top of the table with 195 listings. That is followed by the presbyterians with 174, and the Roman Catholic Church with 135. I should like to ask the Minister why the order does not come into force for another year—until April 1986. I note that the order will not be retrospective. However, as the provision for listed church buildings in Northern Ireland is now to be brought into line with that in the rest of the United Kingdom, we should be thankful that the order is before us at all. I note that the Northern Ireland Assembly has carried out its usual useful function of scrutinising the order before its appearance in the House. The Environment Committee recommended that the proposals contained in the order be approved, although it made some comments upon it.

I shall not weary the House at this late hour—that would be completely inappropriate for a Deputy Chief Whip deputising as a Northern Ireland spokesman—with a recital of the recommendations. I shall merely content myself with noting the comments of the Speaker of the Northern Ireland Assembly, the hon. Member for North Down (Mr. Kilfedder), that the Assembly was concerned with administrative arrangements and broadly welcomed the proposals. That is the view of the Opposition.

10.27 pm

Mr. J. Enoch Powell (South Down): I am sorry that we have temporarily lost the presence of the Leader of the House, because I was going to address to him a word of gratitude for having provided, by suspension of Standing Orders, for extra time whereby this Government measure could, if necessary, be discussed at large by those who wished to debate it. It is not a subject upon which, in recent memory, the Leader of the House has always been so generous. I hope that it is a habit that he will continue and extend.

From that commendation, I turn to something short of commendation on the performance of Her Majesty's Opposition. It is true that one Secretary of State can act for any other Secretary of State, but it is unheard of for one shadow to act for another shadow especially as that shadow of a shadow is a Deputy Chief Whip.

I have to say to the absentees—I hope that my words will reach them in due course—that it is no excuse for absence from debates in the House on Northern Ireland to be in the Province. It would be more proper for hon. Members representing Northern Ireland constituencies to seek on that ground from time to time to excuse themselves. The House has first claim upon the attention of its Members, not least upon those who represent their own party from their respective Front Benches.

While I am on this topic, let me offer a friendly word of advice to the shadow Northern Ireland spokesmen. If they are very inquisitive about circumstances in Northern Ireland and want to know what to look at and when, it is no bad idea to consult—occasionally, at any rate—those who know and who are elected to represent Northern Ireland in this House.

There has been a notable lack of communication between the present Opposition Front Bench Northern Ireland team and hon. Members representing constituencies in the Province. It is no substitute for that kind of consultation to be absent in the Province when Northern Ireland affairs are debated in this House. I hope that these remarks will be noted in the quarters where action can be taken upon them.

When I studied the order, an aspect of the commencement clause at first struck me as curious. Article 6*(a)* comes into operation on such day as the Minister—I am translating into direct rule terminology—may by order appoint, whereas the remainder of the order, apart from articles 4 and 6*(a)*, comes into operation

"on the expiration of 2 months from the day on which it is made."

It is curious that an article which repeals article 33(1) of the 1972 order should come into effect upon the fiat of the Minister, whereas article 3 comes into effect upon a predetermined day—two months after the making of the order.

At first I was incautious enought to think that this was a curiosity which might owe something to that carelessness which the examiner of statutory rules occasionally detects in his valuable work of examining Northern Ireland statutory instruments. However, further reflection convinced me that there was a more sinister explanation to this apparently curious phenomenon.

The Bill, or rather the order—I correct myslf. I hope that my reference to a Northern Ireland Order in Council as a Bill is an unconscious anticipation of the future. The order does two completely separate and unconnected things. First, it abolishes the exemption on buildings in ecclesiastical use from the planning provisions limiting the alterations and so on that may be carried out on those buildings. That is the purpose of article 4. Secondly, it makes it possible in Northern Ireland, as in the rest of the United Kingdom, to pay grants to listed buildings, even though they are in current ecclesiastical use.

These two effects have no logical or necessary connection with one another. The Minister informed us that there was no early prospect that the abolition of the exemption of listed ecclesiastical buildings would be brought into effect. Indeed, in a letter to my right hon. Friend the Member for Lagan Valley (Mr. Molyneaux) on 11 May, following a ministerial meeting with two of my colleagues, who are present tonight, and myself, the Minister said:

"There is at present no legal constraint on applicants to prevent them from altering listed churches".

That is an understatement. There is at present no legal constraint on anyone altering listed churches. He went on to discuss the consideration being given to removing that exemption in the rest of the United Kingdom.

I agree with the Minister that the removal of that exemption is a serious course of action which should not be taken without considerable prior consultation and reflection and that it could act as a deterrent to those responsible for listed churches seeking to preserve them in the immediately coming years.

In those circumstances, I do not think that it is a proper use of legislation to enact the abolition of exemption and then to leave it suspended with power for a Minister to bring it into force. If such legislative provision is to be made, it should be made in its own right. We should not have to discover by examining the commencement article of an order that such a power is being enacted now and that the exemption is being abolished now subject to commencement on such date as the Minister may by order appoint. I do not believe that that is the right way to go about the matter.

If there is no present intention to remove the exemption, and we may be forgiven for being somewhat hesitant about assuming this, there would have been no inconvenience whatever in not enacting the abolition of the exemption in this order but coming forward with a separate proposal at the proper time. At the least, in any proper form of legislation the giving of effect to article 4 should have been reserved to some procedure that was subject to proceedings in this House. I appreciate that that is difficult to accomplish due to the restrictions under which we labour with direct rule, as the vast majority of subordinate legislation in respect of Northern Ireland in no way comes before the House, but that merely illustrates how much better legislation for Northern Ireland could be framed and effectuated by means of a proper Bill. The provision could then have been contained in the Bill, with an arrangement for it to be brought into effect by an affirmative order, which would bring the matter to the attention of the House once again.

I therefore register our complaint at this advantage—an improper advantage, we would argue—of the Order in Council procedure to enact now a provision that is not to come into effect until some undetermined date.

The question of what Iain Macleod and I used to call "needs and means" was dealt with at some length, though perhaps not at fully adequate length, by the Minister. The incompatibility between the needs and the means will

cause the main difficulties that the order and its adminstration will encounter. The facts of the matter were set out by the Minister and have already been rehearsed today. No fewer than 545 churches in Northern Ireland are listed buildings. In relation to a total of that magnitude, an annual budget of £150,000 is nugatory.

Mr. Chris Patten *rose*——

Mr. Powell: Perhaps I can just conclude this part of my remarks, as I may anticipate the Minister's intervention. He has stated that a short list is to be compiled, comprising the present A and B grade churches but to which others may after consideration and investigation be added. He estimates that the total size of that effective list for consideration may be about 85 churches. I still believe that 85 churches on a short list for an annual budget of £150,000 is completely unrealistic. If that unrealism is not to be completely disastrous and cause more ill will than good will among those whom the measure is intended to benefit, some stern administrative measures must be taken. The idea that there can be a painless subdivision or distribution of £150,000 among a short list of 85 listed ecclesiastical buildings is completely unrealistic.

Some suspicion of the difficulty is revealed in the Minister's explanation, in the letter to which I referred, of how he intends to marshall the queue. Perhaps I might read what he said in that letter, although I noticed that he qualified it in his speech this evening. He said:

> "Various methods of ordering the short listed churches were considered, including selection by greatest need, by the number of listed churches in each denomination or by the architectural or historic 'worth' of the individual churches, before it was decided that applications should be dealt with strictly in the order in which they are received."

This first-come, first-served rule was justified on the ground that,

> "to do otherwise would be to introduce an unacceptable degree of subjectivity which would inevitably lead to disharmony."

It is ludicrous to say, when there are 85, or 545—whichever way one looks at it—potential bidders for grant, and when one does not even know when the starting pistol will go off, that first come will be first served. Will there be arrangements such as one finds in competitions organised by newspapers, so that the first application opened by the junior clerk in the Department of the Environment will be deemed to have been received first, or will it be the postmark on the envelope, or will it be the date on the letter? What will be the rationality in this unseemly scramble, which is to be the only method proposed for marshalling the queue?

It is ridiculous for the Government to say that, of all the possible contenders, it will be first come, first served, but we have no ideas—at any rate, we have not explained them to those most concerned—how to set out in this race to be first in the queue. In the House, for private Members' Bills or private Members' motions, we have a system of ballots. Why did not the Government think of a ballot, which might be conducted by the Clerks of the Assembly? It might be the last act that they will perform before disappearing into oblivion. Why were they not asked to conduct a ballot among the 85 applicants and arrange them in the order that the names were drawn from the hat?

That conclusion was reached—I hope that it will not be maintained—after rejecting methods that one might have thought were reasonable. I am sure that it will have occurred to you, Mr. Deputy Speaker, that selection by greatest need was not an irrational method of selection. Admittedly, it was selective, but selection by greatest need is something for which Governments and Ministers take responsibility all the time. One might almost say that the allocation of resources to greatest need is what we keep Ministers for. That method was considered, only to be rejected.

Then there was the criterion of the architectural or historic worth of churches. If the object is to preserve buildings which are of architectural or historic worth, one would have thought that that might be a sensible criterion to apply when deciding which of the claimants should have the highest priority. Judgment is needed. It is a dereliction of judgment and inconsistent with the claimed purposes of the order to throw the reins on the horse's neck and say, "There are the 85; let's see which of them turn up first, and it will be the first three or the first six who turn up who will get the first slice of the cake."

The Under-Secretary of State will land himself in much more trouble by doing it that way than by applying a more rational criterion. Ulster people are not so irrational that they cannot understand that grants for the preservation of listed buildings bear some relation to the need for expenditure upon particular buildings and the worth and architectural value of those buildings. That idea is not absolutely impossible for the well disposed to sell, even among competing claimants. But there is a need for judgment. That is perhaps greater and more difficult to exercise in Northern Ireland than it is on this side of the water.

The historic and architectural value of the churches of different denominations can be different in kind. A judgment between the Roman Catholic cathedral in Newry and the Church of Ireland cathedral at Downpatrick in my constituency is a judgment of items which belong to different categories and different standards of value and merit. If one supposes that both are listed buildings, I am not suggesting that it would be easy to establish a common scale against which both buildings could be measured. The same could be true of the very many distinguished dissenting meeting houses. I apologise to my Ulster colleagues for the grating sound of Anglican vocabulary, but that is what they were when they were first erected, so perhaps I shall be excused upon that ground.

Rev. Martin Smyth (Belfast, South) *indicated assent.*

Mr. Powell: I am glad to have obtained the approval and pardon of my hon. Friend the Member for Belfast, South (Rev. Martin Smyth) for my chosen adjective.

Many of those meeting houses are extremely distinguished buildings. There is an extremely distinguished meeting house at Kilmore in my constituency—as it happens, only two or three miles from Downpatrick cathedral. I should be interested to know how one would set about judging the respective architectural or historic worth of that meeting house, which I am sure is a listed building of a high category, and of a Church of Ireland building such as that to which I have referred. These judgments ought to be made and ought to be seen to be made, and they will have to be made if the money, such as it is, which is to be spent upon this purpose is to be administered in a way that is rational and defensible. If we were to ask the Under-Secretary of State why the first slice of grant was given to the Kilmore Presbyterian meeting house, it would be unsatisfactory if we were told that it got

[Mr. Powell]

in first and that its application was received a whole week before the application of the Roman Catholic church in Strangford which, in its way, is an equally remarkable and interesting building which may, for aught I know, be of high architectural value.

The practical solution that I offer to the Under-Secretary of State to assist his purposes is that he will have to be responsible, or he will have to find someone through whom he can be responsible, for genuine acts of judgment which will have to be performed with great severity. Unless we are to fritter away in penny packets, or almost penny packets, this small annual budget, it will have to be spent upon urgent and important work, and acts of difficult judgment and discrimination will have to be made. They should be acts of judgment which can be defended and be seen to be rational.

The Minister is making provision in article 5 of the order for afforcing the Historic Buildings Council. The suggestion was made in discussion elsewhere that representatives of the churches might be put on that council, and probably the Minister was wise to be cool towards that suggestion and to say that his prime object in afforcing the council was to increase the degree of historical and architectural expertise that was available in the council.

However, the Minister will have to go further than that and set up a specific advisory body to make, to be seen to make and to show public cause for making, exactly those difficult judgments that at present he is threatening to spurn by using the method of first past the post or first at the head of the queue.

The Minister must safeguard and husband the relatively small finance that is to become available for ecclesiastical listed buildings in Northern Ireland. He must husband it not only by preventing it from being frittered away in small packets but by being sure that there is genuine outstanding merit and need in the applicants which are chosen for early receipt of what I hope will be large single grants under the order. By "single", I do not necessarily mean not spread out over several years. I mean really large projects which might absorb a considerable part of the annual budget for several years.

In restricting the scope of these grants as they are restricted in Great Britain, to the external fabric, a mistake is being made, as so many mistakes in relation to Northern Ireland are made, by failure to understand, appreciate and be sensitive to some of the peculiarities and merits of Northern Ireland.

There are some distinguished Church of England churches in this country of which the principal historic interest is their internal fittings. I can think of a Shropshire church which has absolutely intact the Commonwealth fittings dating from the 1650s. They are objects of great interest and are preserved on that account, and that is by no means unique. However, I do not think I would be contradicted in saying that in Great Britain, and certainly in England, the fabric of the churches is essentially their lasting glory and that element of them that calls for protection and preservation.

I am far from sure that that assertion could be made with the same confidence of the churches in Northern Ireland which, as listed buildings, will mainly come under the scope of the order, and I will give two examples to illustrate the significance of two of the deliberate omissions from the scope of the grants. I shall first give an example of furnishings.

I do not know whether the Minister, who is a voracious and active traveller in Northern Ireland and a rubber-necked Minister when he is in the Province, has had the good fortune to visit St. James's—I hope that I have given the correct name—in Waringstown and has seen the magnificent Jacobean furniture which was recently restored and lovingly preserved. It would be impossible to distinguish between the merits of the church furniture and the fabric of that church. Indeed, the fabric was made for the furnishings more than the furnishings were made for the fabric. I dare say that my hon. Friend the Member for Belfast, South, if he catches your eye, Mr. Deputy Speaker, will later confirm that that could be true especially of the meeting houses of the Presbyterian and other Non-Conformist denominations where the building is ancillary to the internal arrangements and yet where the internal arrangements are of architectural and historic value. That is an example showing why major schemes, which are the proper way to get full value out of the available finance, should not exclude furnishings in appropriate cases.

My second example is stained glass. That might seem a strange nomination for a Northern Ireland Member to make, since the glories of stained glass as we know them in some churches in England which were lucky enough to escape the rage of Puritanism have no corresponding representatives in the Province where the work of destruction was carried out much more by war and rebellion than by Puritan and Reformist prejudices. That does not mean that the windows in the churches in Northern Ireland are not equally part of the building and, in some ways, more part of the buildings than the 15th-century stained glass windows for which the perpendicular south aisles were added to many churches, particularly but not exclusively in East Anglia.

I was going to give an example from my constituency, but I shall give another from the vicinity of Waringstown, since the Minister and the House, if it is accompanying me in these examples, were last in Waringstown looking at St. James's church. One need only go to the mother church in Waringstown which—as all good mother churches in Northern Ireland should — has a Gaelic name, Donaghcloney, and one will find a remarkable edifice. It is not beautiful to the eye. Indeed, it was erected as a village hall by the Lyttle family which owned and ran the mill which, for many decades, was the lifeblood of Donaghcloney.

That hall has been brought into use to replace a tin tabernacle which stood on the basis of the erased pre-Reformation church. It has been brought into use as the parish church in Donaghcloney. It has a splendid set of —I confess it—Victorian windows, brought there from a Church of Ireland church in the Republic which was demolished. I am prepared to say that those windows have a value of their own kind in the Northern Ireland context which ought to be taken into account.

I do not want to dwell too long on this imaginary peregrination. I invite the Minister, when next in Downpatrick, to go—or to go again—into St. Patrick's, the parish church, and look at the east window. The structure itself is late 16th or early 17th century, but I think he will agree that, as in so many Wren churches in the City

of London, the east window in that church is an essential part of the church, and forms part of that for which the preservation of the church is desirable.

I make a plea to the Minister—since there is nothing in the terms of the order which excludes reconsideration—not to be so rigid, in the circumstances of Northern Ireland, in defining the outer limits of what it is that calls for preservation and assistance under the order.

Although I believe that the purpose of the order is probably wise, as on balance the corresponding legislation in Great Britain has probably been wise, we shall run into disaster unless the Minister changes his mind about the method of allocating priorities. We shall run into disaster unless, recognising that he has a limited budget, he deliberately uses that limited budget in a way which will do really big and distinguished things, although that means there can b only a few really big and distinguished things done for the listed buildings in Northern Ireland which are in ecclesiastical use.

I hope that the debate will be, as it is intended to be, of use to the Minister, who showed himself understanding and open-minded about the difficulties and dangers which he would encounter when he had a useful discussion with my hon. Friends and myself some weeks ago.

11.1 pm

Mr. William Ross (Londonderry, East): The House has listened to a very fine speech from my right hon. Friend the Member for South Down (Mr. Powell), who covered many of the salient points of the order.

We are being brought face to face with the question whether a public interest in a building brings with it the need for a public liability in respect of that building. It would seem that there is general agreement that that public interest imposes a public liability, the only question being what the extent of the liability should be. In such cases there is always a balance of interests between the user and the viewer, and I am not sure that we have managed so far to get dead right what that balance should be.

There is, of course, the very real difficulty for the owners of listed churches that they are now to lose some of their freedom of action by virtue of being listed. In looking through the total number of churches involved, to which my right hon. Friend referred, I was most surprised. I managed to find 84 A listings, but I understand, from what my right hon. Friend said, that there are 85 A and B-plus listings. There are 24 Church of Ireland A buildings and eight B-plus buildings. The Roman Catholics have four A and 24 B-plus buildings. The Presbyterians have four A and seven B-plus buildings. The Methodists have four A and seven 3B-plus churches. The Non-Subscribing Presbyterians, surprisingly, out of a total of 20 churches, have three A and five B-plus buildings. The Society of Friends has one A, and the Moravians have one A.

One is led immediately into the question of the division of money among the churches. My right hon. Friend covered that point in great detail. The Minister should look at it again, because the figures that I have quoted are an absolute nest of worms in this context. I hope that the Minister will take account of what my right hon. Friend has said, because I would be very worried about the first-come-first-served principle.

In my inquiries I have also noticed that the listed categories for Scotland and Northern Ireland are the same, in that they are A, B-plus and B, whereas in England and Wales the gradings are 1 and 2. When the Minister replies to the debate, will he be kind enough to tell us exactly what the differences are between those various gradings? It is relevant to the question how a church listed in Northern Ireland compares with a church listed in England. It may be that wholly different criteria apply. The listing may depend upon the context of the building rather than on a common level throughout the United Kingdom.

I was surprised to hear the Minister say that he had only a quarter of the money for Scotland, and that Scotland had roughly four times as many such buildings. Can he go further and tell us how many B, B-plus and A graded buildings there are in Scotland compared with similar groupings in Northern Ireland? I understand that the total number of listed churches is in the ratio 4:1, but I am curious about the merit that is attached to them, which should be revealed by the listing. If the ratio is more than 4:1, perhaps the Minister should reconsider the decision to give one quarter of the money for one quarter of the listed buildings.

I should like a clear explanation of what the ecclesiastical exemption consists of. The case of the Howard United Reform church upset people's understanding of the position, and seemed to turn the haycock upside down. The owner of churches in Northern Ireland would like to be told what use the ecclesiastical exemption now is. Can one use it to demolish a building which is no longer in use or needed?

A large problem regarding redundant churches is building up steadily in Northern Ireland. Many people seem to think that churches have become redundant only in Belfast because of the vast movement of the population during the past 15 years, mainly because of terrorism, but that is not the case. Many rural churches, of practically all denominations, although mainly of Protestant denomination, are in areas where the population has greatly decreased. I can think of Presbyterian churches and churches of my own denomination, whose congregations are much smaller than they were 150 years ago. That is not to say that the total number of people has decreased, but there has been a tremendous amount of movement from rural areas to towns, with a corresponding drop in church population. It causes enormous difficulties for some congregations and parishes. I hope that we shall not get into the rut of thinking that redundant churches occur only in larger urban areas. The problem extends across the Province.

All denominations continually make the case that there should be some sort of appeal procedure against the listing of a church. That may be difficult, because the Churches may have reasons for not listing it, usually regarding disposal or lack of use of the church, whereas there may be architectural merit that demands that it should be listed. If there were an appeal procedure, it would be welcomed by everyone, because we need to have all the facts of each individual case brought into the open so that people know exactly why a building is listed.

I have studied the listings of the various churches, especially those in my own area, which I know well. In some instances, the reason for the listing is plain, but in others I have some difficulty in identifying the outstanding merit that has led to the placement. It seems that most of the churches have found their way on to the list in one way or another. When I tabled a parliamentary question, the Minister was unable to tell me how many churches had

[Mr. William Ross]

been inspected and left off the list. I hope that we shall be told what percentage of the churches in Northern Ireland have been put on the list.

I am concerned about the loss of ecclesiastical exemption, but my fears may be allayed to some extent when the Minister gives an explanation of the benefit that will accrue to Churches from the exemption in the light of the Howard United Reform Church case, which was taken to another place. I make a plea that the grant or the loan should not mean automatically the loss of ecclesiastical exemption. The exemption must give some benefit to the Churches that come within it. I should not like to see a small grant or loan used as an excuse for tying a Church's hands and those of the denomination for all time.

Everyone who has read the order accepts that a grant or loan of £150,000 will be a drop in the ocean. There must be some Church involvement in the listing procedures, and we must endeavour to determine how we marshal the applicant Churches in order of priority. There must be a system which is acceptable to the Churches which belong to the various denominations that are affected, so that they do not feel that they are being hard done by.

In inquiring into the order, I took the precaution of writing to the four major denominations. They all kindly replied to me setting out their views. There is deep concern about the way in which the money is being distributed. That concern can be allayed only if there is a Church involvement. It is feared that that would lead to an unwieldy committee which would include representatives of all Churches. If it is only an advisory committee, that unwieldiness might well be acceptable.

A consultation document has been drawn up by the Department of the Environment and a similar paper has been circulated in Scotland. When the Minister replies, I ask him to tell us what effect the document is having upon the future of listed churches in Northern Ireland and the rest of the United Kingdom. There is bound to be a spin-off from Great Britain to Northern Ireland, or vice versa. The issue runs right across the sea and we should not close our minds to the consultation paper.

That leads me to sections 16 and 19 of the paper. Section 16 states:

"The internal structure, decorations and fittings of a church may be of fundamental importance to its liturgical and other religious purposes. It may be argued that to apply normal listed building controls to church interiors would risk impinging on the churches' freedom to decide on the form of their worship. However, some interior alterations, particularly those involving structural work, may damage the aesthetic quality for which a building has been listed. In that case, it can be argued that the Government has a duty to safeguard the interiors as well as the exteriors of buildings included in the statutory list."

Section 19 tell us:

"In some cases, however, this would exempt from control those very features for which a church had been listed; many buildings with plain exteriors contain a wealth of important church fittings which would thus be totally exempt from listed building control".

A building with a plain exterior that required considerable money spent on it would not be eligible for a grant if the internal features were not taken into account. That would not be acceptable. A building has to be looked at as a whole, interior and exterior.

My right hon. Friend the Member for South Down commented on Jacobean furniture. I have been in two churches which are plain buildings with a seating arrangement based on the family unit, so that the pews are all built in a square. There may be other such churches in Londonderry. Such features are well worth preserving, because, although they are not modern looking, they are a tie with the past. Such churches should not be left out of the running just because of the plainess of their outsides.

My right hon. Friend also spoke about stained glass windows. I cannot understand how windows can be left out of this order, because most stained glass windows embody in their structure a considerable amount of stonework that can be seen from the outside and is part of the architecture of the building. One should not leave such windows aside. My church has stained glass windows, with stonework visible from the outside, and that is very much part of its character.

Article 83 of the Planning (Northern Ireland) Order 1972, which is being altered by this order, says that grants and loans for the preservation of listed buildings should be for

"the repair and maintenance of any objects ordinarly kept in the building."

If we are changing that order, we should do so in a way that takes account of that provision, which covers the point made both by my right hon. Friend and me.

In that order, article 31(2) (*b*) refers to

"any feature of the building which consists of a man-made object or structure fixed to the building or which forms a part of the land and which is comprised within the curtilage of the building."

I am curious as to what that last phrase means. How does that include walls and gates, which in many cases seem to be the only reason why a building is given listed status? I should have thought that the boundary line runs down the middle of the wall, and I cannot see how the outside of it could be taken to be within the curtilage of the building.

Whenever we talk of churches, most people think of a building, but a church in the true sense is not a building, but a body of people. It is a body of worshippers and believers joined together in a congregation. That may not be as true of the Anglican tradition, of which I am a member, as it is for the tradition of my hon. Friend the Member for Belfast, South (Rev. Martin Smyth). However, it is still a basic ingredient of a church that it is a body of people. A church is not always the same size, or the same shape; nor does it have the same distribution of people at all times. It is a living and changing body of people, and it is there with a job to do.

That brings me to what concerns me most in the order — the preservation of buildings. The Church is not about the preservation of buildings. Its essence is teaching the Gospel of Jesus Christ, which is a quite different matter. I fear that the application of the order will hang a massive millstone around the neck of many congregations and stop them from carrying out their basic function as Christians and believers in the Gospel of Christ.

When I was a boy, all Presbyterian churches were known as meeting houses. During my teens, however, they gradually became known as Presbyterian churches. The change did not meet with universal approval from the congregations. I liked the original term, and still use it quite often. It seems to be generally acceptable to my many Presbyterian friends and neighbours.

In the order, we are taking the first exploratory steps towards securing the right balance between the interests of the user and those of the viewer. I do not believe that we have got it right. When we produce orders such as this I always fear that some people will attempt to get something

on the cheap. My experience of life is that nothing is got on the cheap — someone, somewhere, has to pay. It seems that the Treasury will not put any more money into the Northern Ireland coffers and that the £150,000 comes out of existing money. If so, someone else will go £150,000 short. I should be glad if the Minister would say that there is more money.

As a result of the order, I believe that the interests of the viewer will overtake those of the user and that the Church might lose out in the long run, and none of us wants that.

11.22 pm

Mr. A. Cecil Walker (Belfast, North): I welcome the order because it brings Northern Ireland into line with the rest of the United Kingdom.

The explanatory document says that the order will bring historic churches within the system of listed building control, but that is already the case in practice. Part III of the explanatory document says that the order will not lead to an increase in overall public expenditure. Having regard to the derisory amount that is to be provided, one could be forgiven for wondering whether approvals for expenditure will be controlled by the amount available and whether the Churches will find that they are worse off than before.

Even worse is the fact that churches in class B, which do not qualify for grant aid, must maintain their buildings for the benefit of others. My right hon. Friend the Member for South Down (Mr. Powell) gave a vivid description of what will happen. The situation should be considered in conjuction with the well-known case, which my hon. Friend the Member for Londonderry, East (Mr. Ross) mentioned, concerning Bedfordshire county council *v.* Trustees of Howard United Reform Church in May 1975. In that case the other place defined an ecclesiastical building in such a way as to render the Churches unable to demolish their churches if they wanted to without listed building consent.

As a result of the factors that I have outlined, the Churches are not free to redevelop their sites to meet the demands of their work or changed circumstances, nor can they realise the full asset value of their sites for use elsewhere, should they consider that the word of God requires such action. In other words, they have lost their rights in their property, without compensation, and are now saddled with a perpetual commitment without redress. That appears to be contrary to British constitutional law, but it is unlikely that any Church, certainly in Northern Ireland, would have the resources to bring such a case before the House of Lords.

Despite the consultations between the Northern Ireland Department of the Environment and the Irish Council of Churches on the subject of the order, the Churches have been put in a virtually impossible position and little regard seems to have been paid to the implications for their future. In the Planning (Northern Ireland) Order 1972 there is provision for compensation for refusal of listed building consent in certain circumstances. The contrary view under article 69 is discretionary, not mandatory, and, to my certain knowledge, there is at least one case of a Methodist church in central Belfast where that has been applied, with the result that no compensation has been paid. It is my view, and that of the trustees of the church, that the reasons given and the contrary case presented by the Department of the Environment were spurious.

The original application to demolish the existing building and erect another on the same site, with church premises within the new building, was expressly to provide a Methodist place of worship and witness for the foreseeable future, together with a rental income to enable that worship and witness to be carried out. As my hon. Friend the Member for Londonderry, East said, in that church in the centre of Belfast we are all going through a traumatic experience. During the last war, that church was open 24 hours a day to minister for the ex-service men, the service men, the ARP and everyone involved in the war effort. Before 1969, the church was also open 24 hours a day to look after young people in the area and people who needed help. During the troubled times, that church was also there, providing succour for the police and the Army who were carrying out their difficult job in the centre of Belfast. Even today it is open for several hours day and night to cater for the down-and-outs, the unemployed and people who need help and succour in difficult circumstances.

That application was refused, on the grounds that the building was to be listed. All the proposals in the contrary view under article 69 of the 1972 planning order, put forward by the Department of the Environment and fully admitted by its officials, were incapable of providing a place of worship and ancillary premises alongside the notional commercial development, which formed the basis of a refusal to pay compensation.

While I welcome the order, as far as it goes, which is not very far, it is my opinion that the case that I mentioned should be reconsidered and that the House ought to undertake a review of the law in relation to planning legislation and the Churches to safeguard the rights of the various Churches. I hope that the Minister will give my suggestion his serious consideration.

11.28 pm

Rev. Martin Smyth (Belfast, South): I am speaking in the debate because, in a fit of generosity, the Leader of the House has allowed us at least another hour and a half. Accordingly, I should like to use some of that time, although I am amazed as to why, when we are dealing with an order that we cannot change and must accept, we are given such latitude of time, when on other occasions we would have liked to make changes to legislation, which would have been helpful, and for the good of the country, but we were not allowed time to do so.

I should like the Minister to clarify the point mentioned by the hon. Member for Cumbernauld and Kilsyth (Mr. Hogg) about the date upon which the order takes effect. If it is to be April 1986, is that an acknowledgement that there is no money available but that money will be released in the next financial year, or is it because someone in the Department is aware that in the near future some work will be done on a building for which no money is available and that, rather than face that difficulty, the Department has put it on the long finger?

As the Minister will be aware, the historic St. George's church in the centre of Belfast has recently completed a major scheme to preserve its witness. There has been a great deal of controversy over that building. If the order is passed tonight, and as the Minister has discretion, I cannot understand why it is proposed to wait until April 1986 before it takes effect. We look forward to receiving an assurance that it will come into effect sooner.

[Rev. Martin Smyth]

I support the points made by my right hon. and hon. Friends for consideration by the Minister and others who will have to implement the order and the scheme. Rather than merely consider the point made by the churches and the Northern Ireland Assembly, there should be a representative of the churches on the decision-making body.

I understand that one of the objections to that is that such people will have a theological point of view only. I do not believe that that is necessarily so. Within the churches there are people who have the historical and architectural expertise to deal with the subject dispassionately. It is not necessary to have a representative from each of the major denominations because, contrary to what many folk have said, I believe that there is greater collaboration between the churches in Northern Ireland than exists centrally in England and Scotland. It is not beyond anyone's capacity to nominate someone to represent the churches dispassionately.

I take up the concept of need to which my right hon. Friend the Member for South Down (Mr. Powell) referred. The need for structural work on the building has been emphasised. As I understand it, the force of the order is to provide finance to help that work. My hon. Friend the Member for Londonderry, East (Mr. Ross) suggested that a small congregation which has been given a legacy of an historic building that it can no longer maintain in a good structural condition may be in greater need than those with a love of history and architecture believe.

I happen to be a philistine.

I share the views of the hon. Member for Londonderry, East about the functions of a church. In an age when there are greater demands upon church members, many people who believe in worldwide evangelism and helping the needy are torn between choosing to help mankind or pouring money into maintaining a building. As well as a need to carry out architectural work on a building, there may also be a need to provide the finance required to do so, because local people are no longer able to supply the tremendous finances that are often required for modern building schemes.

My right hon. Friend the Member for South Down referred to what is locally known as the redemptionist meeting house in Kilmore, and reminded me of the story of the preacher who went to kill rats in the morning and to Kilmore at night.

There are meeting houses through the Province where intrinsic beauty and historic interest lie within. For example, there is exterior architectural merit in the Presbyterian meeting house of Sinclair Seamen's in the constituency of my hon. Friend the Member for Belfast, North (Mr. Walker), but the real historic and architectural beauty lies within. The pulpit is in the shape of a ship's prow, signifying the heritage of that meeting house and its links with the sea. I therefore hope that in interpreting the order, attention will be given not only to the exterior of a building but also to the interior which often has an historic value.

In church buildings throughout Northern Ireland, England and other parts of the kingdom, a new revolution is taking place about how an interior should be arranged for the proper exercise of worship. That was no doubt one of the concerns in the minds of those who framed the order, but if its purpose is to preserve historic buildings, we must be prepared to say that finance will be made available.

My right hon. Friend the Member for South Down spoke of the absence of Opposition Front Bench spokesmen. For some time, a pattern has developed whereby Ministers who visit Northern Ireland constituencies inform the Members concerned either the day after or the day on which they are in the constituency. If constituency Members are expected to welcome such visitors, we should like to know earlier, so that we can plan accordingly.

I also regret to say that a habit is developing whereby Northern Ireland Members no longer need to know what is happening in their constituencies. Ministers may be security conscious, but it is tragic if they cannot trust hon. Members, whereas from now on they will have to trust Sinn Feiners in local councils.

11.39 pm

Mr. Chris Patten: First, I welcome the hon. Member for Cumbernauld and Kilsyth (Mr. Hogg) to our debates. I think that his speech today was his first contribution to a Northern Ireland debate, and I congratulate him on his maiden speech from the Front Bench. I am sure that it will not be his last speech from that Bench, although if we are unlucky it may be the last time that we hear from him on the affairs of the Province. I share the hon. Gentleman's gratitude for the sensible and thoughtful comments of the Assembly, which includes some who are also Members of this House.

The hon. Gentleman referred to the figures for the denominations of churches which are listed buildings in all categories, but I think that it is more relevant to consider those in categories A and B-plus, a breakdown of which was given by the hon. Member for Londonderry, East (Mr. Ross), to whose comments I shall return later.

The right hon. Member for South Down (Mr. Powell) made as interesting and informed a speech as one would expect from him. I hope that it will not be taken as too critical an observation or suggest that I am overly thin skinned about this if I say that his speech and some others reminded me of how much trouble one can heap on one's head by trying to do a small amount of good, although as a Tory I am not at all surprised by that. One just has to take a little care in these matters.

The right hon. Gentleman referred to the removal of the exemption and suggested that taking these powers might act as a deterrent to people concerned to obtain listing for a building in which they are interested. We have no evidence to suggest that that is the case. I think that the right hon. Gentleman was on more substantial ground when he developed his argument about the type of power that we have taken in this respect, but, given the undertakings that I set out in my opening speech, I think that the situation should be regarded as reasonably tolerable. The churches certainly regard it in that way, and I hope that the House will take the same view later today.

The right hon. Gentleman and others properly referred to resources, and I accept that £150,000 is a small crock of gold, but if it is an unrealistic figure for Northern Ireland it is equally unrealistic for the rest of the United Kingdom because we have tried to arrive at a figure by extrapolating from experience elsewhere. I shall return to that aspect when I respond to the speech of the hon. Member for Londonderry, East.

I am anxious that we should do more in terms of conservation of both the built and the natural environment, but resources are limited as I am discovering—without, I hope, too many constraints on my discoveries — in attempting to implement both the letter and the spirit of the extremely important and well-received Balfour report. I repeat that £150,000 is not much, and certainly not so much as the Churches would have liked, but there were moments during the debate when some Members seemed to be saying that we would do better to provide no funds at all if we could not provide more. I accept the criticism that we ought to find more, although I am not sure where it could come from, but I am sure that it is better to do this with limited funds than not to do it at all. I repeat that that has been the consistently held view of the Church authorities in the Province, which we have fully consulted.

The question emerges as to what criteria one should apply in allocating those unfortunately but necessarily limited resources. The right hon. Gentleman's Pevsneresque journey round the Province and beyond showed the difficulties in reaching wholly rational, objective and defensible judgments on these issues. I do not wish to heap criticism on the heads of colleagues or of civil servants in Scotland or in England and Wales, but I am bound to say that rationalism has sometimes had a pretty difficult run there. Of course, that is precisely the sort of area on which we shall want to keep an open mind. It is precisely the sort of area on which we shall wish to keep in close touch with the Church authorities, and I believe that our good faith on this issue can be judged by the extent to which we have consulted the Churches consistently and fully during the past 18 months. If, with the council and the Churches, we can work out a more rational way of allocating the funds, so be it. But there are some difficulties in being as rational as the right hon. Gentleman suggests.

As to whether we should include fittings, bells and stained glass windows, I thought, when I heard the right hon. Gentleman developing his interesting case for the differences of the position in Northern Ireland, that I could have made, in terms of my constituency, a speech on both sides of the argument. I could have argued the case for including the fittings of churches, and I could have argued the case against. My principal consideration was that, in concentrating on wind and weather-proofing, we were doing something which was probably imposed on us anyway by the limited funds available.

Given that the funds are limited, we are probably better served by following Great Britain practice. But here again I wish to make it clear to the right hon. Gentleman that we must review our progress as we moved forward. If it seems to us clear that there is a case for including fittings, bells and stained glass windows as well as the fabric of a church, we must make those adjustments and extend our architectural agenda. But I hope that if I or anyone else reaches that decision, we shall have more resources to hand in order to do so.

The hon. Member for Londonderry, East, who has taken a special interest in the provisions of the order, and whose interest has, as always, been helpful, not least in obliging Ministers and officials to look keenly at what they are trying to do, asked several questions. First, he asked me to compare the criteria that we apply in Northern Ireland with the criteria that are applied in England and Wales. As the hon. Gentleman will recall, I set out the criteria that we apply in a parliamentary answer to a question from him on 27 February 1985. The exact scales of listings in Scotland and Northern Ireland are slightly different from those which apply in England and Wales, but, broadly speaking, we are applying the same criteria as are applied in England, Wales and Scotland.

I am afraid that I do not have the precise number of A and B-plus churches in Scotland. It was a perfectly fair question, and I should have come armed with an answer to it. I shall provide the hon. Member for Londonderry, East with an answer as soon as possible. However, I repeat that on a rule of thumb basis our understanding was that we were giving to churches in the Province as reasonable a deal as was being given to churches in Scotland, where at least some of the same problems occur.

The hon. Member also asked me about the existing ecclesiastical exemption. He has referred on previous occasions to the House of Lords judgment in 1975, in the case of the trustees of Howard United Reform Church in Bedfordshire, that a church that was about to be demolished could not be considered to be in ecclesiastical use. This point was also mentioned by the hon. Member for Belfast, North (Mr. Walker). Following that judgment, it has been accepted that no exemption from listed building control could be enjoyed by any church where total demolition was involved. It was that judgment, among other matters, which provoked the interest which led to the issue of discussion documents in England, Wales and Scotland. The discussion document was issued in January 1984 in England and Wales and comments were received by July 1984. A similar document was issued in January 1984 in Scotland, and comments were received by March 1985. Comments on the two documents are being considered by my right hon. and hon. Friends and we shall keep in close contact with them while they consider them. We shall want to take account of the decisions that they reach on Great Britain, but I repeat that I do not feel that our hands ought to be bound by whatever decision is reached for Great Britain, although it will be relevant to Northern Ireland.

The hon. Member for Londonderry, East also asked about the percentage of Northern Ireland churches that had been listed. I cannot provide him with an answer to that question. The listing process in Northern Ireland is not, alas, yet complete, so it is not possible to say how many churches will eventually be rejected. I hope that the increase in the number of staff will mean that the listing process can be completed more rapidly. I regret that there is a backlog and I hope that it will be cleared as quickly as possible. It relates not only to churches but to all other buildings.

The hon. Member for Belfast, North referred to a particular case which he has followed with his customary diligence. He has quite properly chased both me and my predecessor up hill and down dale over it. The problem in that case does not arise just because we are referring to a church. The various planning and listed building problems would relate equally to any type of building. However, we are prepared to review the listing of the building in question and examine whether it can reasonably be given a higher classification, and whether it will qualify for grant. I accept that that does not satisfy all the arguments that the hon. Gentleman put forward, but I hope that he will take it as an earnest of our concern.

The hon. Member for Belfast, North referred to a point that had been made by the hon. Member for Cumbernauld and Kilsyth about when the order would come into force.

[Mr. Chris Patten]

order, with the exception of articles 4 and 6*(a)*, will come into force two months from the day on which it is made, and I hope that we shall be able to start spending money this year under the terms of the order if it passes through both Houses.

I have attempted, within those funds for which I answer in this House, to ensure that during this financial year, we shall have funds that we can start to use. The problem, given how late in the year we shall be starting, will be to spend all of the £150,000 in this financial year. Nothing would please me more than to be able to make substantial progress in spending that money and, before the end of the financial year, to know clearly that we would not have enough. However, because of the time of year at which we shall be starting, I doubt whether we shall find ourselves faced with that problem.

I note what was said about ecclesiastical representation on the sub-committee of the Historic Buildings Council. What we need on that committee, as on the council and on other advisory bodies in the environmental sphere, is vigorous and independent-minded expertise, and I accept that we may be able to secure that expertise from among those who are active leaders of Churches as well as from churchgoers. If so, we will all be the beneficiaries. The important point is to acquire the expertise, from wherever it comes.

I have attempted to deal with the points raised by right hon. and hon. Members in this interesting debate. I hope that the arguments that I have put have been relatively convincing; convincing enough to ensure that the order is made and that, as a consequence, churches in Northern Ireland can benefit from its provisions, albeit not on the scale that hon. Members understandably would wish.

Question put and agreed to.

Resolved,

That the draft Historic Churches (Northern Ireland) Order 1985, which was laid before this House on 22nd May, be approved.

Soccer Violence

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Donald Thompson.]*

11.58 pm

Mr. Robert Parry (Liverpool, Riverside): I am sad to have to raise on the Adjournment the question of soccer violence. Now that the dust has settled and temperatures have dropped after the tragic European cup final between Juventus and Liverpool, perhaps we can take a cooler look at the causes of the disaster.

Let me, at the outset, make my position clear about the terrible rise of soccer violence and state unequivocally my condemnation of hooliganism at football games or anywhere else. I speak not as a Liverpool supporter but as a lifelong Evertonian. Like a true sportsman, I have for many years marvelled at and envied Liverpool's magnificent record in domestic and European football and its unique record of 22 successive years in European competition. In none of those years were Liverpool fans involved in any violence on opponents' grounds. On 1 March 1984, following violence at the France-England international, I told the Minister that I was concerned about football hooliganism at home and abroad and referred to the examples set by Liverpool and Everton football supporters over the years. The Minister replied:

"I pay tribute to the hon. Gentleman and endorse his statement I am confident that on 25 March the two great clubs from that great city will continue with their excellent behaviour." — [*Official Report*, 1 March 1984; Vol. 55, c. 396.]

That was prior to the Milk Cup final, when Liverpool played Everton.

On 4 April 1984, following a question asked by my hon. Friend the Member for Stalybridge and Hyde (Mr. Pendry)—he is the chairman of the all-party football committee—I congratulated both Liverpool and Everton supporters on their outstanding behaviour at the two finals. I said that I wished that Everton would reach Wembley in the FA Cup. The Minister replied:

"I must refrain from partiality, but I pay the highest tribute to the football supporters and spectators from both clubs, not only for their exemplary behaviour in recent weeks, but for their continuing good behaviour over many years." — [*Official Report*, 4 April 1984; Vol. 57, c. 955.]

In view of those replies, one must now ask, how did this great Liverpool reputation get trampled in the dust at the Brussels stadium? The name of Liverpool football club and its supporters, the name of our great city and its citizens were knocked by the media hastily in days of tension following the tragedy.

UEFA's decision to ban English teams from competing in European competitions was a panic decision, but FIFA's decision to ban all English teams from playing in foreign countries was a shattering blow to most sane football fans, including the Football League. I understand that the chairman of the Football League, Mr. Jack Dunnett—a former Member of Parliament—has made his feelings clear. The Football Association has also let its feelings be known.

I am not speaking as a Johnny-come-lately football supporter or a know-all, like some of the commentators who made wild statements following the tragedy. I played amateur football for many years in the Liverpool boys' association league, the Catholic men's society football league and the Liverpool and district Sunday football

league. When I was 17 I played in trials for the Everton football club. I have been a lifelong Everton supporter and have a great love for the game.

I had the misfortune to fracture my right ankle and break my nose when playing for my local team of Holy Cross. I am therefore aware of football violence in the field, not off the field. For the past 14 years I have acted as president of the Liverpool and district Sunday football league—the biggest league in Europe.

Now that temperatures have cooled, UEFA and FIFA should think again and allow innocent teams to compete in European competition. A small team like Norwich City, which has been relegated from the first division of the Football League but which would have had its first taste of European football, should not be penalised or its fans prevented from seeing their team play in Europe.

A team like Everton, which won the first division championship by a record number of points, should not be banned from the champions' cup. We all recall that Everton played in Rotterdam only two weeks before the Brussels disaster, and 20,000 Everton fans attended the game. The Dutch police made it quite clear that they felt that the Everton fans were the best supporters they had ever seen. Everton football club went to Wembley not once or twice but four times last year, and there was no trouble whatever among Everton fans at any of those games. Therefore, a team such as Everton and its fans should not be penalised.

I believe that appropriate measures should be taken to ensure that there is never again a disaster such as the one in Brussels, and I hope that the Government will give deep consideration to the question of sensible measures to prevent such a disaster.

I have given my deepest condolences and sympathy to the families of the Italians who were killed. I also offer condolences on behalf of scores of thousands of my constituents and Liverpool citizens who grieve deeply for the people of Turin. Recently there were services at the Roman Catholic cathedral and the Anglican cathedral in Liverpool. Both those great cathedrals were full to overflowing. At the latter service the Italian ambassador and the Secretary of State for the Environment were present, together with other people showing their deep distress at the Brussels disaster.

I am greatly concerned—as are many of my hon. Friends—about the large number of National Front supporters who were present at the game. I have here a book called "Hooligans Abroad". It is a first-class book and I urge the Minister to read it. On the front cover it shows a Fascist thug with a Union Jack painted on his face. Anyone who has watched football on television in recent years will have seen those people, in different parts of the country, carrying Union Jacks with them, sometimes with Union Jacks tied round their necks, and shouting racist slogans from the terraces at coloured footballers. I am sure that those people played a part in the Brussels disaster.

In a ground with 60,000 people the tensions are very high. It does not take many people to get others excited. Unfortunately, when flags are flying all over the ground, people tend to become nationalistic or patriotic. The chants and the shouts then tend to bring out the baser instincts of ordinary, decent football supporters.

I believe that the Brussels stadium was in a very bad and dangerous condition. There should be a full investigation into it. I hope that the Government will take a keen interest in the state of the ground. Indeed, the chief fire officer of the London fire brigade has made it clear in a recent report that the ground was not suitable for staging the match and would not have been licensed even for a friendly game in England, let alone a cup final between teams from two different countries.

I should like to read the conclusion of the report, which was given by a professionally qualified person with no axe to grind. It says:

"The stadium is 50 years old and all the installations (in section Z)"—

that is where the trouble arose—

"appear to be of the same age. There is no evidence of any recent repairs to the barriers, walls, fences or terraces. The general impression is that of long-term neglect, with the exception perhaps of the pitch perimeter fence which appears to be fairly new. Under our legislation the stadium would not have been allowed to operate. It appears that while the attack by Liverpool supporters caused the panic and the resulting stampede, the main direct cause of the deaths was the collapse of the safety barriers near the bottom of the terraces."

I make a plea to the media to realise that the majority of Liverpool supporters are decent people. Anybody who knows the Liverpudlians or the Scousers knows that they are warm-hearted, good people with a sense of humour. We feel this tragedy, and I hope that we shall not be blamed as animals; in fact, I would not even call some of the thugs animals, because that would be an insult to animals.

I hope that the Government will seriously consider supporting the football league and football associations in appealing against the hasty ban by FIFA and especially UEFA in view of the fact that there appear to be other factors involved in the terrible disaster. It is wrong that English football should be isolated from the world football stage, and that we should be considered as the football lepers of the world. I hope that in the near future we shall see English football taking its rightful place in Europe, that both we in England and UEFA have learnt from this terrible tragedy, and that in future all major matches will be played on first-class grounds, which are examined and inspected regularly and policed by professional policemen who are properly equipped and have experience in dealing with riots and big crowds. I hope that the Minister will not speak from a prepared brief but will answer my points.

12.11 am

The Minister of State, Home Office (Mr. Giles Shaw): The hon. Member for Liverpool, Riverside (Mr. Parry) is to be warmly congratulated on raising this issue. I am sure that hon. Members will wish me to refer to the fact that the hon. Members for Liverpool, Garston (Mr. Loyden) and for Liverpool, Mossley Hill (Mr. Alton) are present, showing the concern of Liverpool Members of Parliament on this sad occasion.

We are discussing an event the like of which no one would have foreseen. It is of such a scale and magnitude that during its aftermath many decisive measures must be taken and much thought must be given to restoring the position both nationally and internationally.

I fully respect the view of the hon. Member for Riverside that certain actions taken are detrimental to the standing of English football and to the prospects for English clubs. However, in all seriousness, the scale of the event in Brussels requires action to be taken on a scale which will impose some penalty on English football clubs so that we may put our house in order. That is what the UEFA and FIFA bans are about.

[Mr. Giles Shaw]

I shall now deal with certain constructive measures. First, the Belgian Government have appointed an inquiry into events at the Heysel stadium on that ghastly evening. A parliamentary commission of inquiry consisting of nine members of the chamber of deputies has been set up to investigate the causes and circumstances of the disaster and the lessons to be learnt from it. The House will be interested to know that it is intended that it should report by 6 July. The commission includes deputies from the four Government parties in Belgium and from the three biggest Opposition parties. It will therefore be a commission of broad representation, as is suitable for such an investigation.

The House will also be aware that UEFA is conducted an inquiry into the events, and will recognise that we cannot prejudge its outcome. There is no question, however—the hon. Gentleman was fair enough to make his opinion clear on this—but that English supporters played a significant part in the tragic events. Immediately after the scenes in Brussels the United Kingdom Government offered the fullest condolences to the bereaved relatives of those who tragically died and the fullest assistance in the aftermath. The hon. Gentleman will realise that I have responsibility for the police, and the police in Kent offered the Belgians any assistance that they required. I know that the hon. Gentleman will be aware that the Merseyside police were subsequently in touch with the Belgian police to offer any assistance required in their investigation. Both the Merseyside and Metropolitan police forces are examining film of the riot to ascertain whether they can identify any of the troublemakers. A number of people have so far been positively identified on the film, and they will be interviewed by police officers.

Mr. Parry: I am glad to hear that the Metropolitan police are involved in the investigation. In tonight's edition of the *Liverpool Echo* there is a full supplement on the disaster in Brussels, based on the evidence of those who were there. I shall give the Minister a copy at the end of the debate. There are clear signs that Chelsea, Arsenal and other London supporters were involved. It seems that they had strong London accents and that they were obviously supporters of the National Front. These hooligans must be eradicated from English football.

Mr. Shaw: Many allegations have been made about the presence at the match of those not connected with Liverpool football club or its bona fide supporters. I assure the hon. Gentleman that any evidence that can be provided —I shall be grateful for a copy of the *Liverpool Echo* to which he has referred—will be used as source material to secure, if at all possible, the positive identification of those responsible and the organisations to which they belong. The hon. Gentleman will understand that this will require considerable assessment, as well as police inquiries, and that I cannot prejudge that. However, that assessment must be followed up.

Mr. David Alton (Liverpool, Mossley Hill): I am grateful to the Minister for allowing me to intervene and to the hon. Member for Liverpool, Riverside (Mr. Parry) for initiating the debate. Did the Merseyside police give any advice to the Belgian authorities before the match was played? If it was given, what notice was taken of it? Can the Minister say anything about the availability of alcohol, especially on the duty-free ferries, on the way to the match and the condition of some of the supporters when they entered the Huysel stadium?

Mr. Shaw: I can confirm that there were visits by police officers from Brussels to the Merseyside police at, I believe, the invitation of the Merseyside police force, to discuss the latter's experience and knowledge of policing football crowds. I cannot answer the second part of the hon. Gentleman's question on the availability of alcohol. He will appreciate that what goes on in a foreign country or outside territorial waters is different from that which occurs in the United Kingdom. I accept the relevance that the hon. Gentleman places upon alcohol in terms of football hooliganism.

Film in addition to that which has been seen already is being sent to the Merseyside policy by the Belgian authorities and Belgian police officers are expected to visit Merseyside police shortly, possibly even this week, in an attempt to identify those involved. I assure the hon. Member for Riverside and his colleagues who are present that every possible step is being taken by the police to provide the assistance that those from Merseyside and elsewhere would wish to see in the aftermath of the scenes in Brussels. Anyone who has evidence that the National Front or any other organisation was involved in organising the violence in Brussels should make it available to the police, who will consider it carefully. That would be the most appropriate step for individuals to take.

Hon. Members will be aware that, in the aftermath of this tragic event, the Government have seen fit to take certain immediate steps, a list of which bears repetition. We recognise that, as a consequence of this event, firm action to deal with hooliganism has been taken on various fronts, by the Government, the police and the courts, the Football authorities and the football clubs to control this cancer that is affecting the game.

Mr. Parry: Does the Minister accept that it is wrong for British football to be completely isolated? Is there any way to ensure that at future European cup games, no fans from here can go to the other country, so that the other team can have its supporters in both legs of the game? There must be some other way than isolating English football from the rest of the world, and allowing ourselves to be treated as football lepers.

Mr. Shaw: I understand the hon. Gentleman's conviction, but there is no way in which the English football crowds, or the English football clubs, can assume that, in the aftermath of what has occurred, the bans imposed by UEFA or FIFA are either unexpected or unacceptable. The hon. Gentleman must note that the football authorities have recognised that these bans are virtually inevitable and have accepted them in the knowledge that the condemnation of international football organisations is a verdict passed on the quality of the English game and its supporters, to enable the English football clubs in time to justify their re-admission to the full competition abroad. This is a severe penalty, but it is a penalty in the light of severe circumstances, which every hon. Member fully understands.

Mr. Eddie Loyden (Liverpool, Garston): We accept the serious nature of what happened in Brussels, and no one can condone the action of those responsible for the tragedy. The House will be grateful to my hon. Friend the

Member for Liverpool, Riverside (Mr. Parry), because there is now an opportunity for cooler minds to look at the position. My hon. Friend is saying that many people in the city of Liverpool, its clubs and supporters, believe that the problem of hooliganism, which is a decade or more old, has been passed on to the city. The city is suffering a great deal as a consequence of accepting the guilt for something that, as the Minister will know, is not a problem of yesterday or last week, but of two decades—we have seen the thing growing. I hope that everything will be done to contact those who were at the stadium, to ensure that the truth of the tragic circumstances there comes out, and that the guilt that belongs to football as a whole will not be placed wholly on the shoulders of Liverpool.

Mr. Shaw: I respect the way in which the hon. Gentleman has made that point. I can assure him that we are concerned with a cancer that has afflicted football in this country for far too long. I amplify that by saying that in the Metropolitan police district alone, in the 1984-85 season, some 1,600 people were arrested either inside or in the vicinity of grounds, and a further 1,800 persons were ejected for breach of the ground regulations. Therefore, 3,400 people in the Metropolitan police district alone were in one year involved in hooliganism in football grounds.

I accept that we are not dealing exclusively with the Liverpool clubs, or any individual club, but with a range of increasing violence all over the country year in and year out. Hon. Members present recognise that the problems have occurred with Birmingham, Luton, Millwall, Chelsea and Leeds. With this disaster, the problem has reached such a level that we can no longer delay purging the problem from the football system. We therefore have to take action.

The Government's action is on many fronts. We must remember the tragedy of the Bradford fire when considering stadiums and safety. A ban on alcohol is shortly to be introduced through legislation. All grounds in the third and fourth divisions are to be designated in terms of safety. There are extensive police inquiries here, in Belgium and in UEFA into what happened at the Heysel stadium. Discussions with the football authorities are in train. They will resume tomorrow when my right hon. Friend the Prime Minister will try to encourage them to find means, through membership schemes and providing proper access, to isolate supporters who are clearly not part of the normal supporting activity of the game.

As for the operation of the law, we must ensure that hooligans are identified and brought to justice. The House will be aware that telecine equipment being provided through the generosity of the Football Trust to about 30 clubs will help to control crowds. Much investment must be made in the security and safety of grounds. Separation of fans is important, and alcohol on transport must ve eliminated so that fans arrive in safety and sobriety and so that arrangements in grounds can be more effective.

There must be progress on all those fronts to restore normality to the game. Football is a national game and should command a substantial family audience. We want to make it once again a normal event to which people can go in perfect safety with their children. We must ensure that there is a national will to do what I have described.

In the wake of the disaster at Bradford, the Government initiated a judicial inquiry under Mr. Justice Popplewell which, among other things, will have terms of reference broad enough to take evidence about the Brussels event. The primary purpose of the inquiry is to see whether the Safety of Sports Grounds Act 1975 is up to the standards that are now required to deal with the problems that have beset the game. I accept entirely the need for a broad assessment of changes to the game, so that we can——

The Question having been proposed after Ten o'clock and the debate having continued for half an hour, MR. DEPUTY SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned at twenty eight minutes past Twelve o'clock.

House of Commons

Wednesday 12 June 1985

The House met at half-past Two o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

NEW WRIT

For Brecon and Radnor, in the room of Tom Ellis Hooson, Esq., deceased.—*[Mr. Wakeham.]*

PRIVATE BUSINESS

NOTTINGHAMSHIRE COUNTY COUNCIL BILL *[Lords]*
Considered.
Amendments agreed to.
To be read the Third time.

BIRMINGHAM CITY COUNCIL BILL *(By Order)*
Order for consideration read.
To be considered tomorrow.

BRITISH RAILWAYS (TROWSE BRIDGE) BILL *[Lords] (By Order)*
Order for Second Reading read.
To be read a Second time tomorrow.

Oral Answers to Questions

ENVIRONMENT

Sports Council

1. **Mr. Pendry** asked the Secretary of State for the Environment when next he plans to meet the new chairman of the Sports Council to discuss the future development of the Sports Council.

The Parliamentary Under-Secretary of State for the Environment (Mr. Neil Macfarlane): I meet the chairman frequently and will be meeting him next week. A meeting to discuss the council's corporate plan has been arranged for 4 July.

Mr. Pendry: Is the Minister aware that his appointment of John Smith as chairman of the Sports Council is popular in sporting circles, and that we wish him well? Does he recall the remarks of the new chairman on his appointment, when he said that he would take the appropriate initiatives to heal the wounds between the Central Council of Physical Recreation and the Sports Council and to bring about the unity necessary to rebuild sport in the United Kingdom? Will the Minister use his best endeavours to assist Mr. Smith to bring about that desirable aim?

Mr. Macfarlane: I am grateful to the hon. Gentleman for his comments about the new chairman of the Sports Council, who will be an admirable successor to Mr. Jeeps. Obviously, the House is aware that the rapport between the Sports Council and the CCPR has been of major concern to the hon. Gentleman. He has rightly identified a most important issue. The governing bodies can take courage from what the new chairman said at the inaugural press conference as a most constructive way forward. I am happy to tell the House that the new chairman has already met the chairman of the CCPR to discuss effective measures for future co-operation. I am at their disposal to help in any way that I can.

Mr. Denis Howell: Can the Minister tell us anything about the progress of the Government, with or without consultation with the Sports Council, in dealing with the football violence that besets the entire country? Is he aware that it is now 13 weeks since the Prime Minister took her initiative and that in that time none of my hon. Friends, nor anyone with responsibility in the Labour party, has been consulted, despite our offer of help and the plea of the Government in seeking help? When will we be consulted? When do the Government intend to introduce legislation? Bearing in mind that there are only 11 weeks before the season starts, how on earth can we pass legislation and get the money and the work done in time for next season?

Mr. Macfarlane: I am at the disposal of the House. The question refers to the future development of the Sports Council. I am more than happy to discuss these important issues. A meeting is to take place later this afternoon with my right hon. Friends the Secretary of State for the Environment and the Prime Minister, other Ministers and the football authorities. Next week I am chairing the third meeting of a working party to assess the cost and effect of the work that will have to be done before August and the kick-off for the new season. I have concluded the first round of a meeting with Ministers of the eight countries in Europe to decide how we can improve and develop the importance of football within Europe. This series of measures is designed to ensure that recent tragic events are never repeated.

Oil (Onshore Drilling)

3. **Mr. Wainwright** asked the Secretary of State for the Environment whether he will make a statement on the environmental implications of current and planned onshore drilling for oil.

The Minister for Local Government (Mr. Kenneth Baker): My Department's circular 2/85 provided guidance to mineral planning authorities in preparing development plan policies and deciding individual applications. On 3 June we published a booklet setting out the environmental safeguards at each stage of development. These seek to achieve the right balance between the nation's need for oil and its concern to protect the environment.

Mr. Wainwright: I welcome the booklet, but can the Minister give an assurance that the damage to the quality of local life in all future drillings will not be any greater than that splendidly achieved at Lockton in north Yorkshire during the past 10 years? Does the right hon. Gentleman agree that if he applies the Lockton standard firmly, there need not be any public alarm or significant damage to the quality of life?

Mr. Baker: I thank the hon. Gentleman for his most helpful comments. Many people are quite rightly

concerned about the environmental implications. If we are to maximise this country's potential wealth and oil reserves there must be drilling, but it must be done in an environmentally acceptable way. The hon. Gentleman has drawn our attention to a way in which it can be done very well, and it is our objective to extend those standards.

Mr. Ward: Is my right hon. Friend aware that drilling for exploratory wells is about to commence in Poole harbour? We accept its necessity and appreciate the co-operation and planning on the part of BP in all its operations both in my constituency and that of my hon. Friend the Member for Dorset, South (Viscount Cranborne) at Wytch farm. If the Wytch farm standards are applied elsewhere, the public interest will be served both from the point of view of recovering oil and of protecting the environment.

Mr. Baker: Again I am grateful to my hon. Friend. I know only too well the pressures placed on Members of Parliament as a result of such developments, but it has been shown that such developments can be carried out in an environmentally acceptable way. I, too, commend the arrangements that BP has made, together with Dorset county council. Indeed, I am glad that this has not become a party political matter, because it is in the interests of the country as a whole.

Mr. Gareth Wardell: When cases go to the Secretary of State on appeal for his consideration, will the Minister ensure that some degree of equivalence is applied to them? Will the right hon. Gentleman ensure that the Secretary of State gives the same consideration to the people of south-east England when they find a few nodding donkeys near their gardens as was given, for example, to applications for opencast coalmining in south Wales, with its consequent ravaging of the environment?

Mr. Baker: I appreciate the hon. Gentleman's point. There are three stages to the development of oil: exploration, appraisal and development. At each of the three stages there has to be a separate licence and a separate planning application. We also insist upon proper restoration and after-care. However, I have some sympathy with the hon. Gentleman's remarks. If we had imposed some concern for restoration and after-care on the industrial development that took place in the 19th century, we would not have so many of the industrial scars that we see today.

Mr. John Mark Taylor: In the context of mineral extraction, if my right hon. Friend has a chance to speak to his right hon. and hon. Friends in the Department of Energy, will he put it to them that if it is their intention to proceed with turning Solihull into a coalmining community, it must be done with the maximum environmental sensitivity——

Mr. Speaker: Order. I remind the hon. Gentleman that the question is about onshore drilling for oil, and his point seems rather wide of that.

Improvement and Repair Grants

4. **Mr. John Fraser** asked the Secretary of State for the Environment if he collects information on how many local authorities are currently giving discretionary improvement and repair grants.

6. **Mr. Cohen** asked the Secretary of State for the Environment how many local authorities currently have a block on accepting or processing new improvement grant applications; how many of those are in urban areas; and if he will make a statement.

The Parliamentary Under-Secretary of State for the Environment (Sir George Young): Responsibility for administering the home improvement grant system rests with local authorities. The Department does not collate information in the form requested on the grant approval practices of individual authorities.

Mr. Fraser: The Minister's answer shows how little interest the Government have in repairs. May I inform the hon. Gentleman that only a handful of local authorities now deal with new applications for improvement and repair grants because of the cuts in housing investment programmes and the freezing of capital receipts? There was a pre-election boom in improvement grants, but there are now thousands of disillusioned people—many of whom are poor—who cannot have any repairs carried out because they cannot obtain help from the local authority. If Environment Ministers are to be more than just the Treasury's errand boys, when will there be a resumption of a reasonable level of repair grants? According to the Minister's own figures, there are 3·5 million unsatisfactory dwellings in this country.

Sir George Young: The local authority is obliged by law to process and award mandatory grants. In Lambeth, discretionary grants are being considered by the local authority. I remind the hon. Gentleman that this year the likely spend on improvement grants will be well in excess of the £90 million spent when he and his Government were last in office.

Mr. Cohen: Is not Waltham Forest, which incidentally is Tory-controlled with Liberal support, one of the increasing number of local authorities putting a block on improvement grants? Does that not mean that many people in Leyton are having the vital means to combat dilapidations cut off? What action will the Government take to restore grants, or will they openly confess that their policy is that good housing is expendable?

Sir George Young: As I am sure the hon. Gentleman knows, the Government make an allocation available to Waltham Forest for housing, and it is up to the authority to decide how much to allocate to improvement grants and how much to other aspects of housing policy. We have made it clear that we hope that it will give priority in improvement grants to those on low incomes, the disabled, and those living in statutory improvement areas. The expenditure on improvement grants in Waltham Forest is likely to be substantially in excess of that six years ago.

Mr. Michael Morris: Is my hon. Friend aware that there is a problem in the midlands as well as in London? In the light of the Green Paper, which talks about loans, will my hon. Friend have another look at the basic implementation of improvement grants, and in particular at what the late Anthony Crosland introduced in the late 1960s, because that system worked and people who applied for grants got them?

Sir George Young: As my hon. Friend knows, we have recently issued a Green Paper outlining some new proposals for improvement grants and that will provide the opportunity, which my hon. Friend is seeking, to inject some helpful comments on how we might improve the

system. Until the system is changed, people are entitled to apply under the legislation as it is; and, as I have shown, that is a fairly generous regime.

Mr. Cartwright: Does the hon. Gentleman believe that the deteriorating condition of our housing stock will be adequately tackled through the system proposed in the Green Paper of replacing grants by loans that must be repaid when the owner moves? Will that not simply be a tax on moving and make it even more difficult for the unemployed to get on their bikes?

Sir George Young: An essential component of the Green Paper is the suggestion that the private sector should play a far greater part in restoring the housing stock, together with the owner-occupier. It is not right to expect the public sector to bear the burden of modernising the housing stock. At the end of the day, the responsibility should rest with the owner of the property.

Mrs. Currie: Does my hon. Friend agree that the Green Paper on improvement grants contains much that is immensely worth while, particularly, for example, on the simplification of the designated areas and the definition of what is an unfit property? Therefore, is there any likelihood of early legislation on this important subject?

Sir George Young: My hon. Friend will have to await the Queen's Speech to see our legislative proposals, but she is right to draw our attention to the suggestions in the Green Paper. The abolition of the rateable value, for example, will bring entitlement to many more people who are denied it at the moment, and there is a suggestion that there should be more generous compensation for those affected by clearance. There is much in the Green Paper that is worthy of support.

Mr. Hardy: Is the Minister aware that in the Rotherham metropolitan borough more than 600 applicants for improvement grants have been disappointed in recent months, and that that is happening at a time when hundreds of building workers are unemployed? Does the hon. Gentleman accept that Green Papers are no answer to the urgent need for the improvement of Britain's housing stock and the creation of jobs?

Sir George Young: It is up to the hon. Gentleman's local authority to decide how much of its resources to make available for improvement grants. I hope that it will take note of the hon. Gentleman's view that it should give greater priority to this than to other aspects of the programme. As to the Green Paper, if its proposals were followed up there would be better use of public money in that it would be targeted at the people and the buildings that need public sector help.

Asbestos and Toxic Substances

5. **Mr. Tom Clarke** asked the Secretary of State for the Environment what steps he will take to ensure that local communities, community councils and local councils are consulted prior to the dumping of asbestos or toxic substances in their areas.

The Parliamentary Under-Secretary of State for the Environment (Mr. William Waldegrave): Deposit of such wastes is already subject to licensing by county councils in England and by district councils in Scotland and Wales. All authorities can be expected to take account of local opinion in their decisions. In England, county councils are obliged by law to consult district councils.

Mr. Clarke: Does the Minister consider it reasonable that his Department should have exploited a licence which was granted to deal with the dumping of domestic asbestos in Glenboig so that it will now have to cope with the whole of the Trident project and the vast quantities of asbestos arising from it? Is it fair that mining communities, which have already had more than their fair share of pneumoconiosis and other problems, should now have to put up with such dangers to their health and that of their families?

Mr. Waldegrave: Whatever is done with asbestos waste, it must be done safely in regard to local communities and any other people in the area. I gather that the PSA's contractor, Shanks and McEwan, was asked on Monday by the sheriff court to have further consultations with the Monklands district council, and it will do so shortly.

Mr. Chapman: Has my hon. Friend had time to consider the implications of and opportunities provided by the new technological process of vitrification of asbestos waste, following the Adjournment debate which I introduced two months ago? Does my hon. Friend appreciate that, if it can be done economically, it will remove the anxieties of hon. Members on each side of the House as well as those of local authorities and communities?

Mr. Waldegrave: The process is indeed relevant to the problem raised by the hon. Member for Monklands, West (Mr. Clarke) and is under study.

Mr. Weetch: Is the Minister aware that there is a great deal of disquiet in my constituency about the burial of asbestos waste? Is he aware that 100 tonnes of asbestos waste have been buried by the Central Electricity Generating Board on the site of Cliff Quay power station? Is he satisfied that the regulations governing the burial of such waste are adequate? Will he not hesitate to come before the House and seek to alter the regulations if he has any doubts in his mind arising from evidence from Ipswich or any other part of the country?

Mr. Waldegrave: I am sure that any Minister must give that assurance. We have had the recent Doll inquiry into asbestos dangers, and the regulations seem to be satisfactory, but if any serious doubts were brought forward my Department would treat them as a matter or urgency.

Dr. Cunningham: Can the Minister tell the House whether there is any truth in the rumours that several hundred thousand tonnes of asbestos waste are to be dumped in Glenboig? Is it not curious that a contract which was let for the disposal of domestic waste is now apparently turning into one for the major disposal of asbestos from the nuclear submarine programme? Is that not a very unsatisfactory state of affairs?

Why does the Secretary of State not call in this proposal to dump large amounts of asbestos in the way proposed, especially bearing in mind what he said when publishing the report of the hazardous waste inspectorate? The Secretary of State then said that the report

"shows a disturbing situation. It describes a level of performance in both public and private sectors which too frequently falls below acceptable standards."—[*Official Report*, 5 June 1985; Vol. 80, c. 166.].

concerned about the environmental implications. If we are to maximise this country's potential wealth and oil reserves there must be drilling, but it must be done in an environmentally acceptable way. The hon. Gentleman has drawn our attention to a way in which it can be done very well, and it is our objective to extend those standards.

Mr. Ward: Is my right hon. Friend aware that drilling for exploratory wells is about to commence in Poole harbour? We accept its necessity and appreciate the co-operation and planning on the part of BP in all its operations both in my constituency and that of my hon. Friend the Member for Dorset, South (Viscount Cranborne) at Wytch farm. If the Wytch farm standards are applied elsewhere, the public interest will be served both from the point of view of recovering oil and of protecting the environment.

Mr. Baker: Again I am grateful to my hon. Friend. I know only too well the pressures placed on Members of Parliament as a result of such developments, but it has been shown that such developments can be carried out in an environmentally acceptable way. I, too, commend the arrangements that BP has made, together with Dorset county council. Indeed, I am glad that this has not become a party political matter, because it is in the interests of the country as a whole.

Mr. Gareth Wardell: When cases go to the Secretary of State on appeal for his consideration, will the Minister ensure that some degree of equivalence is applied to them? Will the right hon. Gentleman ensure that the Secretary of State gives the same consideration to the people of south-east England when they find a few nodding donkeys near their gardens as was given, for example, to applications for opencast coalmining in south Wales, with its consequent ravaging of the environment?

Mr. Baker: I appreciate the hon. Gentleman's point. There are three stages to the development of oil: exploration, appraisal and development. At each of the three stages there has to be a separate licence and a separate planning application. We also insist upon proper restoration and after-care. However, I have some sympathy with the hon. Gentleman's remarks. If we had imposed some concern for restoration and after-care on the industrial development that took place in the 19th century, we would not have so many of the industrial scars that we see today.

Mr. John Mark Taylor: In the context of mineral extraction, if my right hon. Friend has a chance to speak to his right hon. and hon. Friends in the Department of Energy, will he put it to them that if it is their intention to proceed with turning Solihull into a coalmining community, it must be done with the maximum environmental sensitivity——

Mr. Speaker: Order. I remind the hon. Gentleman that the question is about onshore drilling for oil, and his point seems rather wide of that.

Improvement and Repair Grants

4. **Mr. John Fraser** asked the Secretary of State for the Environment if he collects information on how many local authorities are currently giving discretionary improvement and repair grants.

6. **Mr. Cohen** asked the Secretary of State for the Environment how many local authorities currently have a block on accepting or processing new improvement grant applications; how many of those are in urban areas; and if he will make a statement.

The Parliamentary Under-Secretary of State for the Environment (Sir George Young): Responsibility for administering the home improvement grant system rests with local authorities. The Department does not collate information in the form requested on the grant approval practices of individual authorities.

Mr. Fraser: The Minister's answer shows how little interest the Government have in repairs. May I inform the hon. Gentleman that only a handful of local authorities now deal with new applications for improvement and repair grants because of the cuts in housing investment programmes and the freezing of capital receipts? There was a pre-election boom in improvement grants, but there are now thousands of disillusioned people—many of whom are poor—who cannot have any repairs carried out because they cannot obtain help from the local authority. If Environment Ministers are to be more than just the Treasury's errand boys, when will there be a resumption of a reasonable level of repair grants? According to the Minister's own figures, there are 3·5 million unsatisfactory dwellings in this country.

Sir George Young: The local authority is obliged by law to process and award mandatory grants. In Lambeth, discretionary grants are being considered by the local authority. I remind the hon. Gentleman that this year the likely spend on improvement grants will be well in excess of the £90 million spent when he and his Government were last in office.

Mr. Cohen: Is not Waltham Forest, which incidentally is Tory-controlled with Liberal support, one of the increasing number of local authorities putting a block on improvement grants? Does that not mean that many people in Leyton are having the vital means to combat dilapidations cut off? What action will the Government take to restore grants, or will they openly confess that their policy is that good housing is expendable?

Sir George Young: As I am sure the hon. Gentleman knows, the Government make an allocation available to Waltham Forest for housing, and it is up to the authority to decide how much to allocate to improvement grants and how much to other aspects of housing policy. We have made it clear that we hope that it will give priority in improvement grants to those on low incomes, the disabled, and those living in statutory improvement areas. The expenditure on improvement grants in Waltham Forest is likely to be substantially in excess of that six years ago.

Mr. Michael Morris: Is my hon. Friend aware that there is a problem in the midlands as well as in London? In the light of the Green Paper, which talks about loans, will my hon. Friend have another look at the basic implementation of improvement grants, and in particular at what the late Anthony Crosland introduced in the late 1960s, because that system worked and people who applied for grants got them?

Sir George Young: As my hon. Friend knows, we have recently issued a Green Paper outlining some new proposals for improvement grants and that will provide the opportunity, which my hon. Friend is seeking, to inject some helpful comments on how we might improve the

system. Until the system is changed, people are entitled to apply under the legislation as it is; and, as I have shown, that is a fairly generous regime.

Mr. Cartwright: Does the hon. Gentleman believe that the deteriorating condition of our housing stock will be adequately tackled through the system proposed in the Green Paper of replacing grants by loans that must be repaid when the owner moves? Will that not simply be a tax on moving and make it even more difficult for the unemployed to get on their bikes?

Sir George Young: An essential component of the Green Paper is the suggestion that the private sector should play a far greater part in restoring the housing stock, together with the owner-occupier. It is not right to expect the public sector to bear the burden of modernising the housing stock. At the end of the day, the responsibility should rest with the owner of the property.

Mrs. Currie: Does my hon. Friend agree that the Green Paper on improvement grants contains much that is immensely worth while, particularly, for example, on the simplification of the designated areas and the definition of what is an unfit property? Therefore, is there any likelihood of early legislation on this important subject?

Sir George Young: My hon. Friend will have to await the Queen's Speech to see our legislative proposals, but she is right to draw our attention to the suggestions in the Green Paper. The abolition of the rateable value, for example, will bring entitlement to many more people who are denied it at the moment, and there is a suggestion that there should be more generous compensation for those affected by clearance. There is much in the Green Paper that is worthy of support.

Mr. Hardy: Is the Minister aware that in the Rotherham metropolitan borough more than 600 applicants for improvement grants have been disappointed in recent months, and that that is happening at a time when hundreds of building workers are unemployed? Does the hon. Gentleman accept that Green Papers are no answer to the urgent need for the improvement of Britain's housing stock and the creation of jobs?

Sir George Young: It is up to the hon. Gentleman's local authority to decide how much of its resources to make available for improvement grants. I hope that it will take note of the hon. Gentleman's view that it should give greater priority to this than to other aspects of the programme. As to the Green Paper, if its proposals were followed up there would be better use of public money in that it would be targeted at the people and the buildings that need public sector help.

Asbestos and Toxic Substances

5. **Mr. Tom Clarke** asked the Secretary of State for the Environment what steps he will take to ensure that local communities, community councils and local councils are consulted prior to the dumping of asbestos or toxic substances in their areas.

The Parliamentary Under-Secretary of State for the Environment (Mr. William Waldegrave): Deposit of such wastes is already subject to licensing by county councils in England and by district councils in Scotland and Wales. All authorities can be expected to take account of local opinion in their decisions. In England, county councils are obliged by law to consult district councils.

Mr. Clarke: Does the Minister consider it reasonable that his Department should have exploited a licence which was granted to deal with the dumping of domestic asbestos in Glenboig so that it will now have to cope with the whole of the Trident project and the vast quantities of asbestos arising from it? Is it fair that mining communities, which have already had more than their fair share of pneumoconiosis and other problems, should now have to put up with such dangers to their health and that of their families?

Mr. Waldegrave: Whatever is done with asbestos waste, it must be done safely in regard to local communities and any other people in the area. I gather that the PSA's contractor, Shanks and McEwan, was asked on Monday by the sheriff court to have further consultations with the Monklands district council, and it will do so shortly.

Mr. Chapman: Has my hon. Friend had time to consider the implications of and opportunities provided by the new technological process of vitrification of asbestos waste, following the Adjournment debate which I introduced two months ago? Does my hon. Friend appreciate that, if it can be done economically, it will remove the anxieties of hon. Members on each side of the House as well as those of local authorities and communities?

Mr. Waldegrave: The process is indeed relevant to the problem raised by the hon. Member for Monklands, West (Mr. Clarke) and is under study.

Mr. Weetch: Is the Minister aware that there is a great deal of disquiet in my constituency about the burial of asbestos waste? Is he aware that 100 tonnes of asbestos waste have been buried by the Central Electricity Generating Board on the site of Cliff Quay power station? Is he satisfied that the regulations governing the burial of such waste are adequate? Will he not hesitate to come before the House and seek to alter the regulations if he has any doubts in his mind arising from evidence from Ipswich or any other part of the country?

Mr. Waldegrave: I am sure that any Minister must give that assurance. We have had the recent Doll inquiry into asbestos dangers, and the regulations seem to be satisfactory, but if any serious doubts were brought forward my Department would treat them as a matter or urgency.

Dr. Cunningham: Can the Minister tell the House whether there is any truth in the rumours that several hundred thousand tonnes of asbestos waste are to be dumped in Glenboig? Is it not curious that a contract which was let for the disposal of domestic waste is now apparently turning into one for the major disposal of asbestos from the nuclear submarine programme? Is that not a very unsatisfactory state of affairs?

Why does the Secretary of State not call in this proposal to dump large amounts of asbestos in the way proposed, especially bearing in mind what he said when publishing the report of the hazardous waste inspectorate? The Secretary of State then said that the report

"shows a disturbing situation. It describes a level of performance in both public and private sectors which too frequently falls below acceptable standards."—[*Official Report*, 5 June 1985; Vol. 80, c. *166*.].

Mr. Stanbrook: On a point of order, Mr. Speaker. Is it not out of order for an hon. Member to make a quotation during Question Time?

Mr. Speaker: Order. The question was rather a long one. It is not in order for the hon. Member for Copeland (Dr. Cunningham) to read the passage, but he may paraphrase it.

Dr. Cunningham: Has not the Secretary of State's own inspectorate reported that the methods currently employed for the disposal of such wastes are very unsatisfactory? Will he now call in the proposal?

Mr. Waldegrave: I am sure that the hon. Gentleman is familiar with the outcome of Monday's hearing. As was shown, the licence is adequate, but the sheriff has asked for further discussion between the contractor and the Monklands district council. My own Department is considering all the options. Understandably, this scale of operations was not envisaged originally, and we must see that the matter is dealt with properly.

System-built Housing

7. **Mr. Fatchett** asked the Secretary of State for the Environment if he will institute an inquiry into the problems of system-built local authority housing and its implications for future housing investment.

The Minister for Housing and Construction (Mr. Ian Gow): The Building Research Establishment has carried out studies into problems associated with prefabricated reinforced concrete houses designed before 1960 and has published reports. It is now making a study of more recent large panel systems of construction. My Department has written to all local authorities asking them to let us know what work they believe is needed to renovate the houses and flats which they own, including system-built dwellings. When I have the results of this inquiry, I will consider the implications for future housing investment.

Mr. Fatchett: Is it not necessary for the Government to give a clear commitment that they are prepared to make financial resources available to deal with this massive problem? If the Government do not make those resources available, they will condemn many thousands of people to live in housing that is environmentally and socially unfit in many respects. People look to the Government for action. What action will the Minister take?

Mr. Gow: I have already explained to the House that the Building Research Establishment is inquiring into this matter. Sixteen full-time members of the staff at BRE are engaged in the study. I prefer to defer a decision on future investments that will be needed to deal with the problems to which the hon. Gentleman referred until after we have studied the reports from local authorities. I look forward to my meeting, which has been arranged for today week, with the hon. Gentleman and the chairman of Leeds city council housing committee.

Mr. Heddle: Does my hon. Friend agree that the Government have already taken action with the implementation of the Housing Defects Act 1984? Does my hon. Friend welcome the agreement which appears to have been reached between the Building Societies Association and the National House Building Council? Building societies are to recommend to their vendors the fact that building societies will now be able to lend mortgages on PRC houses, thereby enabling people whose houses have been blighted to take advantage of the grants under the Housing Defects Act and once again restore a free market to this vital section of the community.

Mr. Gow: I am grateful to my hon. Friend for that question. He might have reminded the House, although he did not, that the Labour party voted against the Second Reading of the Housing Defects Bill. I welcome the progress that has been made by the NHBC and the building societies to arrive at an acceptable method of repairing defective houses. We do not yet have those acceptable methods of repair, but I hope that they will be in operation before the summer.

Housing Standards

8. **Mr. Meadowcroft** asked the Secretary of State for the Environment what is his most recent estimate of the number of homes in the United Kingdom regarded as being below tolerable standards.

Sir George Young: The 1981 "English House Condition Survey" estimated that 1·1 million dwellings in England were unfit for human habitation. An updated estimate will be provided by the next survey to be held in 1986.

Mr. Meadowcroft: Does the hon. Gentleman accept the point made earlier by the hon. Member for Northampton, South (Mr. Morris), that only by providing proper improvement grants to private owners will we keep pace with the deterioration in housing stock? Is he aware that people in local government well remember what happened some years ago in the cities when the rate of grant was reduced from 75 to 50 per cent? Suddenly, private owners were unable to carry out the necessary renovations of their houses. Unless proper improvement grants are made available to those people, will we not be faced with having to demolish and rebuild some properties at far greater cost?

Sir George Young: I must question the assumption at the beginning of the hon. Gentleman's supplementary question, that it is up to the taxpayer to maintain the condition of privately-owned houses. In the first instance, it must be the responsibility of the owner-occupier to maintain his house in good condition. Where that has failed, there is a case for public sector intervention in certain cases. It would be wrong to imply, as the hon. Gentleman did, that the emphasis on restoring the condition of private housing stock rests with the taxpayer.

Mr. Hirst: Does my hon. Friend agree that the substantial reduction in the number of houses below a tolerable standard north of the border owes a great deal to the success of the Government's policy on housing improvement grants? Does he also agree that, judiciously used, housing improvement grants can do a great deal to improve housing stock and to create employment in the construction sector? Will my hon. Friend and his colleagues press the Treasury to make appropriate resources available for this important grant?

Sir George Young: I hope that my hon. Friend agrees that the Department of the Environment has done well in relation to improvement grants. The figure increased from £90 million to £900 million over six years at a time of

restraint on public expenditure generally. I hope my hon. Friend also agrees that, within public expenditure constraints, we have tried to make improvement grants a priority. I was encouraged to learn of the good results in Scotland. I am sure that the policy over the past five or six years has resulted in large numbers of houses in England being improved.

Mr. Chris Smith: Does the Minister agree that the Government's only response to the problems of deteriorating and defective housing has been to cut local authority investment programmes by more than half in cash terms in the last five years and to prevent local authorities from using their own capital receipts to assist with the problem? Is he aware that that demonstrates yet again the Government's contempt for the badly housed, of whom there are hundreds of thousands?

Sir George Young: I reject that analysis entirely. The policy of the Government has been to engage the resources of the private and public sectors to tackle the housing problems and to generate a large volume of receipts for local authorities from vigorous sales as a result of the right to buy, which was opposed at the time by Labour Members. I repeat that the answer to the problems caused by poor housing conditions does not rest solely on more public money being provided. We must also get the resources of the institutions and owner-occupiers.

Mr. Nicholas Winterton: Will my hon. Friend accept, however, that it is far cheaper to improve a house than to knock it down and build another? Is he aware that where clearance has taken place the social problems that have resulted have far outweighed any savings that my hon. Friend thinks there may have been in terms of improvement grants? Will he reconsider the importance of improvement grants, which I believe are good for the community, good for first time house-buyers, good for the country and ensure good value for money?

Hon. Members: Hear, hear.

Sir George Young: If my hon. Friend will re-read the Green Paper——

Mr. Speaker: Order. I am sure that hon. Members on both sides want to hear the Minister's reply.

Sir George Young: If my hon. Friend re-reads the Green Paper on improvement grants which we published a few weeks ago he will see that the Government share his desire to maintain the housing stock in good condition. However, we say that it is more important in the future to engage the resources of the private sector as well as those of the public sector so as to make even faster progress than we have so far made. I hope he will agree that the Government's commitment to getting the private institutions—building societies, pension funds and the building industry — to put more into it is wholly consistent with our philosophy and will enable us to make faster progress than we would were we to rely solely on publicly funded improvement grants.

Mr. Cowans: The Minister should be deeply ashamed to stand at the Dispatch Box and announce to the House and, more importantly, to the country, that 1·1 million houses are not in a tolerable condition, especially at a time when he is cutting not only improvement grants but the financial wherewithal to solve the problem. Is it not patently obvious to him, even at this stage, that his policies have failed? Will he go back to the drawing board and re-think the whole issue, not just because of what Labour Members think about his policies, but on behalf of the people who are living in the houses in question? Is he aware that if he does not do that he will be condemning them to living in the sort of intolerable conditions in which he would not be prepared to live? Will he please have a re-think and produce a new solution, knowing that his policies have patently failed?

Sir George Young: I remind the hon. Gentleman that the figure of unfit houses that was revealed in the 1981 survey was lower than the figure shown in the 1976 survey. *[Interruption.]* The 1976 figure showed fewer unfit houses than there were in 1971, and the 1981 figure showed fewer unfit houses than there were in 1976. It is not true to say, therefore, that there are more unfit houses. The answer to the rest of the hon. Gentleman's supplementary question is that we have recently outlined some fresh initiatives in relation to home improvements to enable faster progress to be made, and I look forward to seeing his response to our Green Paper.

Rent Acts

9. **Mr. Dobson** asked the Secretary of State for the Environment when he expects to complete his review of the Rent Acts.

The Secretary of State for the Environment (Mr. Patrick Jenkin): The Government hope to introduce legislation to encourage the supply of more homes for renting in the private sector, but probably not during the lifetime of this Parliament.

Mr. Dobson: In view of newspaper rumours that the Cabinet has decided not to go ahead with the lifting of all rent restrictions, can the Secretary of State confirm that this is because the Prime Minister suddenly realised what the electoral consequences would be for her personally in Finchley if she lifted all rent controls in a constituency where no fewer than 23 per cent. of the households are living in privately rented accommodation, compared with 12 per cent. in the rest of the country?

Mr. Jenkin: I do not think that anyone other than the hon. Gentleman is talking about lifting all rent controls from privately rented property—*[Interruption.]* The fact of the matter is that the Labour party has done all that it can over the years to undermine the private rented sector and is determined to do nothing whatever to help it in the future. A heavy load of responsibility rests upon the Labour party.

Mr. Maples: Does my right hon. Friend agree that there are a substantial number of empty dwellings which were previously privately rented, particularly in London, which, if brought back into use, would go a long way towards solving the housing problem, and that the best way of achieving this aim would be to revive the private rented sector?

Mr. Jenkin: I agree with my hon. Friend, but the fact is that to restore the private rented sector so that it can play a proper role in housing the people of this country requires the confidence of landlords. Whatever proposals we introduced before the next general election would

Mr. Yeo: Does my right hon. Friend agree that expenditure arising from improvement grants is a very cost-effective way of maintaining the quality of our housing stock from the taxpayers' point of view and that it gives rise to a great deal of labour-intensive activity, adding demand to the British economy? In the light of that, does he agree that it is not the most appropriate area in which to seek savings?

Mr. Jenkin: I hope that my hon. Friend will have taken comfort from the most recent figures published by the Department, which suggests that in the first quarter of this year total expenditure on repairs, maintenance and improvement was 10 per cent. up on the previous quarter and 8 per cent. higher than for the comparable period of the previous year. *[Interruption.]* I hope that the Opposition will applaud that, because that is how to get houses repaired and improved. Even more significantly, that increase in total expenditure comes at a time when the peak of expenditure on improvement grants has already passed. I take much comfort from that.

Dr. Cunningham: Does the right hon. Gentleman agree that the statement on page 1 of the Green Paper that there are 3·5 million unsatisfactory houses is a damning indictment of Government policy in the last half dozen years? Why will the Government not come clean about the proposed changes? There are no figures in the Green Paper relating to compatibility with the social security review, and no figures are given in the social security review either. Does the right hon. Gentleman admit that the Government are trying to disguise the fact that they intend to make major savings in this area in which investment is desperately needed? Will he also publish figures, as the Secretary for Wales has recently done, giving an analysis of renovation grants? Is he aware that the analysis shows that the system is working quite well in Wales, in that the average household income for recipients of grant is just over £5,000 and 72 per cent. of those who received grants had savings of less than £1,000, so people on low incomes are clearly benefiting from the system?

Mr. Jenkin: We intend to publish the full results of the English distribution of grant inquiry in the autumn. Annex 1 to the Green Paper sets out the main findings in some detail, but I can give the hon. Gentleman an undertaking that the full figures will follow later.

Mr. Meadowcroft: The Green Paper rightly includes an annex about improvements and adaptations for the disabled. Does the Secretary of State intend that that should also cover improvements and adaptations for the elderly? Is he aware of the splendid "Staying Put" scheme sponsored by the Anchor housing association, and will he encourage the provision of loans for work of that kind?

Mr. Jenkin: I am well aware of the excellent work of the Anchor housing association through that scheme. I hope that the proposals in the Green Paper can be used to reinforce that work. I must, however, put it firmly to the House that it makes no sense for the taxpayer to have to put his hand in his pocket—we are always being told that people pay tax at far too low a level of income—to finance work on other people's houses when those other people could well afford to do the work themselves. We shall help those who need help, but not those who can afford to do the work themselves.

Water Supplies (Nitrate Content)

14. **Mr. Teddy Taylor** asked the Secretary of State for the Environment if he has now come to a decision on the applications from water authorities for exemption from the regulations limiting the nitrate content of public water supplies.

Mr. Gow: The Council of European Communities' Ministers has laid down, with effect from the 15 July, a maximum concentration of 50 mg of nitrate per litre of water. Under article 9 the directive allows for derogations to be made and I have received 49 applications for derogation. I will announce my decision shortly.

Mr. Taylor: Will the Minister accept my sincere congratulations on having so far resisted the enormous pressure on him and the Secretary of State to approve derogation,s which would be an environmental disaster and a potentially serious health hazard? Does he agree that it would be unthinkable for the Government to agree even to a temporary derogation, against the clear views of the World Health Organisation, without steps being taken to reduce the appalling use of nitrate fertilisers on farm land, which merely pollutes public water supplies?

Mr. Gow: My hon. Friend will know that the advice of the World Health Organisation does not accord with that which we have received in the report of the joint committee on medical aspects of water quality, which was published in April last year. Nevertheless, as my hon. Friend knows as well as any hon. Member, this is an extremely serious matter. I would want to give it more careful consideration. I shall meet our principal medical advisers before I come to a decision.

Mr. Kilroy-Silk: Why should we allow farmers to continue to use large quantities of nitrogen fertilisers which pollute our water supplies, endanger health and threaten wildlife, merely to produce large quantities of unwanted food, which must be stored at great expense to the taxpayer? We would not allow manufacturing industry to get away with that, would we? Would it not be more sensible for the hon. Gentleman to put pressure on the Minister for Agriculture, Fisheries and Food to stop farmers from using excessive quantities of nitrogen?

Mr. Gow: The House will know that, under the Control of Pollution Act 1974, a water authority can prosecute in appropriate cases when there has been pollution of a water supply. I remind the hon. Gentleman that, following discussions between my right hon. Friend the Minister of Agriculture, Fisheries and Food and me, a code of good agricultural practice, which deals with nitrates among other things, was issued in January. I hope that farmers will follow that advice. In conjunction with my right hon. Friend, I shall continue to monitor the situation.

Viscount Cranborne: My hon. Friend has told the House how important this matter is. Can he therefore explain why the Government are cutting the subsidy for research at the Freshwater Biological Association, which is in my constituency, when such an important part of its research is concerned with the effects of nitrates on water supply?

Mr. Gow: Although there might be some reductions in my noble Friend's constituency, there is an increase in other research, notably at the universities.

House Building (North-West Region)

15. **Mr. Terry Lewis** asked the Secretary of State for the Environment if he will make a statement on the house building programme in the north-west region.

Sir George Young: About 20,050 dwellings were completed in the north-west region in 1984, compared with 18,250 in 1983 and 17,450 in 1982.

Mr. Lewis: Is the Minister aware that those figures are pathetic when set against the need for housing in the north-west region? When the Secretary of State visits the north-west next week, and especially when he visits the city of Salford, will he please listen intently to the representations that will be made by that authority about the devastating effect on its housing programme of the severe cuts in housing investment programme money during the past six years?

Sir George Young: My right hon. Friend is looking forward to his visit to the north-west in a few days' time. He will, of course, listen attentively to representations made by local councillors about the gravity of the housing situation there. I hope the hon. Gentleman agrees that the figures that I gave show a welcome increase in the number of completions in the north-west region.

Mr. Holt: Does my hon. Friend agree that, although it is important to consider the house building programme in the north-west, the building programme in the south-east is equally important? A planning application in the south-east region had a public inquiry two and a half years ago, and one single inspector has yet to make up his mind one way or the other.

Local Authorities (Services)

16. **Mr. Campbell-Savours** asked the Secretary of State for the Environment whether he will carry out a survey of all local authorities to establish the changes in support for: home helps, nursery education, capitation, revenue support, mentally handicapped, the elderly, concessionary fares, adaptations under the Chronically Sick and Disabled Persons Act, community facilities, industrial promotion and repairs and maintenance to local authority property.

Mr. Kenneth Baker: I have no plans to extend the surveys already undertaken by my Department to collect information on local authority expenditure on these services.

Mr. Campbell-Savours: If a genuine survey were conducted, would it not reveal that support for home helps, nursery education, capitation, revenue support, mentally handicapped—[HON. MEMBERS: "Reading."] Yes, it is a long list—the elderly, concessionary fares, adaptations for the chronically sick and disabled, community facilities, industrial promotion budgets, repairs and maintenance to local authority properties—for everything affecting local authority programmes—has been cut to shreds? Why should Labour-controlled authorities, which were elected with a mandate to retain services, feel compelled to implement cuts imposed on them by the Government which offend the spirit of their manifestos?

Mr. Baker: The hon. Gentleman claims that there have been cuts in social provision in his area. By 1983-84, there were 10 per cent. more home helps than there were four years previously and 3 per cent. more nursery pupils, over the same period. Expenditure on concessionary fares increased by 90 per cent. over the same period. In the area covered by his district council, concessionary fares have increased by 89 per cent. Nursery school expenditure in Cumbria increased by 38 per cent. and home help expenditure increased by 69 per cent. I hope that he will personally thank the Prime Minister for the increase in social provision in his area.

Division (Member's Name)

3.30 pm

Mr. Speaker: Last night, after the 10 o'clock Division, the hon. Member for Bow and Poplar (Mr. Mikardo) complained that, after having passed through the Aye Lobby, he found that the Tellers had already left. Mr. Deputy Speaker undertook to inquire into the matter. Inquiries have shown that the hon. Gentleman was in no way to blame. Accordingly, I direct that his name should be added to those recorded as voting in the Aye Lobby and that the total number should be corrected.

Mr. Ian Mikardo (Bow and Poplar): I am deeply grateful for what you have said, Mr. Speaker. I am sorry for any trouble that I may have caused to anyone.

Pensioners' Heating and Communications

3.32 pm

Mr. Jeremy Corbyn (Islington, North): I beg to move,

That leave be given to bring in a Bill to guarantee supplies of gas and electricity to pensioners and to abolish standing charges for pensioners for gas and electricity and to abolish telephone rentals.

Last winter was an especially cold and unpleasant one and many people used extra heating during the winter to maintain some degree of comfort in their homes. I am sure that Members of this place did so, along with many pensioers throughout the country. Those hon. Members who did so will have no problem in paying last winter's gas and electricity bills, but many pensioners have been in some fear ever since the end of the winter, as they do not know how they will be able to pay their bills. The bills will be especially high because the winter was particularly severe.

It is important that we discuss the effects of the high costs of heating and cooking on pensioners and try to do something to alleviate them. Many statistics are available, but one that stands out a mile is that the deaths of the elderly are greater by 22 per cent. during the winter months than they are in the summer months. This is because the elderly cannot cope with the cold. Unfortunately, because of the high costs, many of them do not heat their homes to the level that they should. Many suffer from hypothermia and tragically many die as a result. The House should consider this matter seriously.

The number of pensioners whose gas or electricity supply is cut off as a result of inability to pay the bill is considerable. During December 1983 to December 1984, there were 92,825 electricity cut-offs. The most recent estimate suggests that about 4·5 per cent. of that number were pensioner households, which means that over 4,000 pensioners had their electricity supply cut off during that period.

The electricity and gas boards both claim that the number of cut-offs has reduced since the introduction of direct payment schemes, whereby pensioners and other poor people have their gas and electricity bills paid direct. That may be a satisfactory way for the boards to collect their money and to make the enormous profits that they now enjoy, but it results in a squeeze on the household budgets of pensioners and others who are the poorest in our society. This means that they lose out in other directions. For example, they may not eat properly and they may be unable to go out or do anything else to support their standard of living.

The aim of the Bill is, first, to guarantee supplies of gas and electricity for pensioners so that they cannot be cut off in any circumstances. That aim is based on society recognising that pensioners hold a special place in society and have special needs and that cutting off their gas or electricity is dangerous and could lead to their death.

I also suggest that we go some way towards alleviating pensioners' hardship by abolishing standing charges for them. The system of standing charges has been in operation for some years. It was supported by a report from the Price Commission on gas prices in 1979 and 1980 which claimed:

"The economic rationale for a separate standing charge for domestic credit customers is that it ensures that prices charged are more closely related to costs than would be the case if a single rate per therm were charged at all levels of usage. The supply of gas involves fixed costs per customer unrelated to the volume supplied."

I object to the fact that the report says that the introduction of standing charges would protect the largest consumers of gas and electricity, whereas I believe that we should be protecting the smallest consumers. The standing charge system means that the smallest consumers pay the most for gas and electricity. Because of that, a rebate system was introduced which meant that no consumer would pay more than half the bill in standing charges.

The problem with the rebate system is that it has not necessarily exclusively benefited pensioners. A report from the South of Scotland electricity board, and a number of others, shows that the main beneficiaries of the rebate scheme have not been pensioners but have been the owners of second homes which are the cause of great anxiety in Wales, Scotland and some parts of England.

Although the boards concede that the standing charge falls unfairly on the smallest consumers, they are now trying to withdraw it on the grounds that the only people who have benefited to any great extent are the owners of second homes. The boards are deliberately and callously ignoring the plight of pensioners and other small consumers who have to pay far more because of the standing charge system.

My Bill therefore proposes to end the rebate system and abolish standing charges for pensioners only so that the owners of second homes, who can well afford to heat their first home and probably their second home, do not benefit on the backs of pensioners and the good campaigning that the pensioners' organisations have done over the years.

The cost of standing charges varies, but added to the standing charges for gas and electricity and the telephone rental, they can easily amount to between £20 and £40 per quarter for a pensioner household. That is a scandalous amount and a major attack on living standards.

It is important that if the Bill is passed into law, as I hope it will be, hon. Members realise that I am not proposing to abolish standing charges for pensioners merely to increase the unit costs of gas, electricity and telephones for every other consumer—that would also obviously affect pensioner households—but that the Government should use public funds to ensure that there is no further increase in those prices for anyone because of the abolition of standing charges for pensioners.

Any examination of the financial results of both fuel boards in the past year would show that they could well afford to do that. In the year 1983-84, the Electricity Council returned a profit of £623 million, the British Gas Corporation returned a profit of £668 million and, over the past six months alone, British Telecom returned a profit of £684 million.

According to the Government's figures the cost of abolishing standing charges for gas and electricity would be only £300 million in one year. The British Gas Corporation levy last year was £522 million. The Government could well afford to abolish standing charges, and it would be a major benefit to pensioners.

I do not believe that the Bill would end the horror and poverty that many pensioner households face day in, day out, and the fear that many of them have about heating their homes adequately or even cooking a hot meal on a cold evening because they cannot afford the bill. However, it would go some way towards alleviating that poverty.

It is amazing that, in a few moments, the Secretary of State for Defence will be telling us of the bottomless pit that defence expenditure has become. The cost of just one quarter of the Trident programme will be £2·5 billion. The cost of abolishing standing charges for pensioners could be paid for by not proceeding with the ludicrous proposal to build a major international airport at Port Stanley. There are hundreds of other examples in the defence Estimates that could be used to pay the cost of my Bill.

It is unlikely that any hon. Member will rise and oppose the Bill. In some ways, I should be glad if hon. Members opposed it, because at least we would hear their arguments for charging pensioners and poor people more than wealthy people for gas and electricity.

Many pensioners' groups throughout the country have written to me enclosing copies of letters received from their own Members of Parliament who say how much they support the abolition of standing charges for gas and electricity for pensioners and the abolition of telephone rentals. Some of those letters come from surprising quarters. I shall not detain the House by reading out the names of the hon. Members involved, but when I have completed my researches I shall publish all the names and I think that we shall find that they make up a majority of the House. The nearer we get to the general election, the larger the majority will be.

I am sure that you will be glad, Mr. Speaker, to give me the opportunity to read out those names and to prove that there is a majority — albeit many of the hon. Members in that majority are practicing self-imposed silence — for the abolition of standing charges for gas and electricity for pensioners.

I hope that the House will take the problem seriously and will support the Bill to end the fear that many old people face as they try to meet last winter's bill and their trepidation about their inability to keep themselves warm or adequately fed next winter.

Question put and agreed to.

Bill ordered to be brought in by Mr. Jeremy Corbyn, Mr. Tony Benn, Mr. Tony Banks, Mr. Bob Clay, Mr. Harry Cohen, Mr. Dennis Canavan, Miss Joan Maynard, Ms. Clare Short, Mr. Dennis Skinner, Mr. Chris Smith, Mr. Robert N. Wareing and Mr. David Winnick.

Pensioners' Heating and Communications

Mr. Jeremy Corbyn accordingly presented a Bill to guarantee supplies of gas and electricity to pensioners and to abolish standing charges for pensioners for gas and electricity and to abolish telephone rentals: And the same was read the First time; and ordered to be read a Second time on Friday 5 July and to be printed. [Bill 157.]

Defence

First Day's Debate

3.42 pm

The Secretary of State for Defence (Mr. Michael Heseltine): I beg to move,

That this House approves the Statement on the Defence Estimates 1985, contained in Cmnd. 9430.

Mr. Speaker: I announce to the House that I have selected the amendment in the name of the Leader of the Opposition.

In view of the number of right hon. and hon. Members who wish to take part in this important debate, I intend to impose the 10-minute limit on speeches between 7 o'clock and 9 o'clock. However, I hope that those who are called before 7 o'clock will also bear the limit in mind.

Mr. Heseltine: The White Paper provides both the background to Government policy and the essential facts which underlie it.

The House will be grateful to the defence Select Committee for its first and third reports, which have been published this week. The House will understand if I do not address today the issues raised in the first report on merchant shipping. It would be premature to do so, and the Committee itself has made it clear that it accepts this view.

On the third report, I welcome the Committee's comments on the presentation of the White Paper and I will ensure that they are passed on to those responsible within my Department.

I shall attempt today to address some of the issues raised by the Committee. In particular, I shall address two of its main themes: the absence of any major change in policy in the White Paper and whether in the long term we can sustain our present commitments within the sums of money likely to be available.

This year has seen a major reorganisation of the Ministry, which came into effect on 2 January. It is, I think, well established that we have concentrated on the output we get from the rising defence budget and on the enhanced value to be derived from a policy of increased competition. My right hon. Friend the Minister of State for Defence Procurement will be commenting in detail tomorrow on this aspect of our work.

In this year's White Paper, while continuing the emphasis on value for money questions, we have also sought to look in depth at defence policy. Chapter 2 of the White Paper addresses the United Kingdom's role within NATO, the Alliance's defence posture, including the application of new and emerging technology, and Britain's interest and responsibilities outside the NATO area. In chapter 3, we look at the European contribution to the Alliance and how the Europeans might strengthen their co-operation with one another. The White Paper includes an essay on NATO's strategy of flexible response and alternatives to it.

That is a formidable weight of material. It points to the considerable success of these policies. I would argue that that success is the best case for stability. If it is not necessary to change, why should we contemplate it? The Defence Committee acknowledges the consistency of policy but seems to be searching for a longer-term political and strategic prospect. It seems to be arguing for a review

[Mr. Heseltine]

of policy priorities. I would not wish to appear complacent, but we should not indulge in a destabilising process of review unless the case for such a review is proved. To imply that change is needed, without suggesting the direction that it should take, carries with it the risk that confidence will be jeopardised because those in positions of responsibility lack belief in their own policies.

The starting point, therefore, for addressing the case for a new approach to strategy must be to address the adequacy or otherwise of NATO's present strategy of forward defence and flexible response. Has it served us well? Does it remain relevant to today's strategic circumstances? It is likely to be invalidated by developments we can already see, not just in technologies, but much more important, in political relationships?

It is the direct consequence of the strength and cohesion of the North Atlantic Alliance that Europe enjoys continuing peace and prosperity today and in such marked contrast to the circumstances of 40 years ago, which we are remembering this year. In those 40 years there have been enormous changes in the economic circumstances of Europe, but the underlying strategic realities, which developed in the immediate aftermath of the war, remain the same. In western Europe we must face the weight of Soviet military power, and the reality of a country which has been prepared to use that power in support of its political influence over the territory of others. We must deal with a country which combines the long-standing Russian obsession with secure borders with a much more modern mission to bring the world to communism, which is over-armed beyond the point of any rational assessment of its defence needs, and which has shown in the 1950s and 1960s in eastern Europe and in the 1970s and 1980s in Afghanistan a willingness to use those arms.

The clear lesson of the last 40 years is that the Soviet Union is prepared to extend its influence worldwide when low risk opportunities present themselves. It is not prepared to do so in every case. The Soviet leadership is cautious and careful. The risks will be carefully weighed. The essence of NATO strategy has been to ensure that there were no risk-free opportunities of aggression against a member of the North Atlantic Alliance. Its success then and now rests upon the Russians being in no doubt about both our ability and our will to defend ourselves and our allies.

I do not wish to exaggerate the Soviet military threat, but neither should we see it as less than it is. In this year's White Paper we have expanded the analysis of the balance and included the necessary caveats about the comparisons we make. The underlying military reality remains as daunting as ever: in conventional forces, in chemical weapons—about which the defence committee expresses its concern — and in the Soviet Union's huge and growing nuclear arsenal. There are chilling comparisons there for all to see. The White Paper sets out the facts very carefully. There has been no shift in Soviet policy except in its intensification.

The task then remains as it has done over the past three and a half decades: to maintain a credible deterrent within a coherent alliance. A wholly European alliance today could not provide an effective deterrent. What, then, are the prospects for sustaining the present uniquely successful alliance between the north American and the European peoples? There are, of course, those who suggest that the United States may turn its back on Europe as the balance of population and of interest in America increasingly turns to the Pacific. There is nothing new in this argument—it is not even just a post-war argument—but it ignores the huge American political and economic interest in Europe, as well as the closest historical and cultural ties.

Provided that we in Europe are prepared to sustain our commitment and contribution, we believe that a transatlantic partnership is the logical outcome of enlightened self-interest. The decisions taken by NATO defence Ministers in December about infrastructure and stock levels, and in May about the follow-up on conventional defence improvements are important, demonstrating the support for the Alliance not only of Britain but of the rest of the European allies.

Our commitment to the Alliance is not simply a matter of money, or of conventional effort. Every member of the Alliance enjoys the benefits of the peace provided by the mix of forces underpinning NATO's present strategy. The nuclear element of that mix has to be sustained and modernised, no less than the conventional element. Only the most catastrophic consequences will follow if individual countries pick and choose between those elements of our strategy that they are prepared to sustain, those risks that they are prepared to share and those that they would prefer to leave to others. Of course, no one can prevent them from pursuing such a policy, because each of us is a sovereign nation, but the process of opting out and leaving others to take up the strain, and to carry a higher share of the responsibility, is a policy calculated to whet the appetite of a Soviet Union watching for the weak link and the risk-free opportunity.

Dr. Keith Hampson (Leeds, North-West): Does my right hon. Friend agree that the Alliance and all its partners have been determined to modernise and to continue to improve their nuclear capability and that it is that which has brought the Soviet Union, at long last, to meaningful negotiations to try to achieve arms control?

Mr. Heseltine: To all except the most narrow-minded, that is self-evident and I shall return to that point later.

Mr. Tam Dalyell (Linlithgow): Is Ascension Island being used as a target area for cruise and MX missiles?

Mr. Heseltine: When I referred to all except the most narrow-minded, I had not realised how quickly that would be demonstrated.

Mr. Dalyell: Will the Secretary of State answer the question?

Mr. Heseltine: That is——

Mr. Dalyell *rose*——

Mr. Heseltine: I am not giving way to the hon. Gentleman. That is why the policies put forward by——

Mr. Dalyell *rose*——

Mr. Speaker: Order. I think that the Secretary of State is not giving way.

Mr. Heseltine: That is why the policies put forward by Labour Members represent just such a recipe for undermining the cohesion of the North Atlantic Alliance. Labour's policy of removing all American nuclear bases and weapons and of abandoning Britain's independent

deterrent, and its search for a continentwide European nuclear-free zone would leave this country and Europe defenceless against nuclear blackmail; defenceless, that is, unless we are to look to the United States to protect us from the huge Soviet nuclear threat while we sit smugly in some cosy haven of moral superiority. The truth is that the abandonment by Britain of the basis of our defence policies since the war would be such a dramatic shock to the Alliance as to call the whole enterprise into question — which is, of course, exactly what a significant number of Opposition Members would like to achieve.

Mr. Eric S. Heffer (Liverpool, Walton): I am sure that the right hon. Gentleman knows full well that paragraph 105 of the Defence Estimates says of the Soviet Union:

"The roots of Soviet policy are complex. The Soviet Union . . . is a country obsessed with its own security".

If the Government accept that the Soviet Union is obsessed, as I believe it is, with its own security, is it not clear that its policies — I do not accept its internal system—towards the border countries and Afghanistan have resulted from its concern for its security? Will the right hon. Gentleman address himself not to some narrow issue but to the wider question of why the Soviet Union has arrived at its policy?

Mr. Heseltine: The House should listen carefully to the hon. Gentleman, because he is right. Every advance that the Soviet Union makes has been based upon an assertion of its own insecurity. However, the consequence for those into whose country the Soviets advance has been suppression by the Red Army. The logic of the hon. Gentleman's argument is that we should always withdraw, step by step, to leave a vacuum so that the Soviet Union can fill it. That is an intolerable assessment for any hon. Member.

Mr. John Powley (Norwich, South): Does my right hon. Friend recall the strategy employed in the 1930s by the Hitler regime, and the domino effect of picking off one weak nation after another, which inevitably led to the 1939-45 conflict? Is that not similar in many ways to the strategy being employed by the Soviet Union, which is trying to pick off weak nations to advance its own ideology, both political and military, in the 1970s, the 1980s and, possibly, the 1990s?

Mr. Heseltine: My hon. Friend is right, and it is precisely because the Labour Government of the 1940s saw clearly the dangers of repeating what happened in the 1930s that they helped to invite the Americans to join the NATO Alliance. They were right to do so.

I have no apologies for offering no new policies, and for not seeking to change the strategy that had served us well. I advocate continuity because the policies have brought success. This is not an argument for complacency. Our security policy rests not only upon the military forces necessary for a deterrent, which must be kept up to date, but on achieving agreements with the Soviet Union that would enable both sides to enjoy security with lower levels of armaments. These are not two separate aims; they are inextricably linked. The Soviet Union will not negotiate seriously if it believes that its interests can be achieved by other means. We saw between 1979 and 1983 a sustained propaganda campaign over the potential deployment of intermediate range nuclear forces. Before that, the Soviet Union had already deployed its SS20 intermediate nuclear threat, but when it did that, there was little protest on the streets of this country.

When we gave notice that we had to maintain the NATO deterrent, we were told by the Labour party, and by the protest groups so closely associated with it, that the Government's determination, and that of its Allies, to introduce Pershing II and cruise missiles, had destroyed the prospect of arms control. We were told that, if we proceeded with the modernisation of our intermediate range weapon systems, the Russians would walk out, and that the peace of Europe would be threatened.

However, the truth is that today the Soviet Union is back at the conference table, not because the West indulged in any one-sided gestures but because the Soviets realised that we had the will to go through with the necessary modernisation of our forces in the absence of arms control agreement. That is particularly because the one-sided disarmers had lost the democratic debate in the West. Once again, our policies worked, and the forecasts of the Left were revealed for the simple media fodder they really were.

The White Paper sets out the British Government's efforts in support of arms control. We must prevent the erosion of existing arms control agreements on strategic nuclear missiles and on anti-ballistic missile systems. We shall in that context strive for new agreements in Geneva.

If nations were to adopt the view that arms treaties and agreements are short-term pauses between technological breakthroughs of different weapon generations, then the arms control process would simply come to a halt. America has proved, in the SALT II context, that she has a wider vision. I believe that the whole House will wish to commend the announcement by President Reagan that the United States will continue to observe the SALT II constraints. It is a vivid demonstration of the seriousness with which the United States approaches arms control. We look to the Soviet Union to show an equally scrupulous attitude to its obligations and to negotiate seriously at Geneva towards real reductions in nuclear arsenals.

Our approach to the strategic defence initiative was set out in the four points agreed between the Prime Minister and the President of the United States at Camp David, and which were reaffirmed in February this year. The British Government support the need for research under that initiative, which is only prudent in the light of long-standing Soviet research in similar fields. We are at present discussing with the United States Administration British participation in the research. Such participation must bring clear benefits for our own defence effort and certainly must not represent a one-way traffic in expertise and technology. I agree with the Defence Committee that those issues need urgent consideration, which they are receiving—and that we should work closely with our European allies on them. We intend shortly to define the way forward.

Mr. Dick Douglas (Dunfermline, West): One of the arguments in favour of our participation is a transfer of technology. Why should the United States expect to share the fruits of research and development in this area when it was so reluctant, in other areas such as the gas pipeline, to share technology with West European nations?

Mr. Heseltine: As I think the gist of the Select Committee report — I fully accept it — is that no

[Mr. Heseltine]

European country, and certainly not the United Kingdom, will negotiate with the United States on the basis of one-way traffic in technoloy in this context, the answer to the hon. Member's question is clear. That thought will be at the forefront of the consideration that we as Ministers bring to the issue. It is already very much on the table in the dialogue between the United Kingdom and the United States. I have no doubt whatever that exactly the same thoughts will occur to our European allies.

Returning to the strategic defence initiative, the more fundamental issue of whether such systems should be deployed, although they are now being widely debated, is a deciso for the future. It raises the profoundest strategic as well as technical issues. The United States Administration have set out the criteria which would need to be met in judging the feasibility of new technologies which may emerge from SDI research. They recognise that the defensive systems would have to be survivable in order not themselves to become tempting targets for attack They recognise that they must be cost effective at the margin, so that they are not simply countered by the other side adding offensive capability necessary to overcome the defence. Those are in themselves demanding criteria.

Above all, as the Select Committee recognises, the question which has to be addressed is the circumstances in which the deployment of SDI defences would enhance deterrence. What measures would be needed in other areas, particularly to rectify the conventional imbalance, in order to achieve this, and would they be in fact and in practice negotiable? The British Government's interest in those issues relates to the wider strategic questions which are at the heart of the alliance strategy.

As a nuclear power we have, of course, a particular interest and expertise, but that is not the driving force of our concern. I particularly welcome the Defence Committee's recognition that a new era of strategic defences would be unlikely to arrive while Trident is in service. The case for Trident is set out in the White Paper and I do not intend to expand on it today. I repeat that which perhaps needs no repetition — that the Government's commitment could not be more certain. We intend to take the steps necessary to maintain Britain's independent deterrent.

Mr. Andrew F. Bennett (Denton and Reddish): I have been looking through the White Paper and trying to find the costs which are allowed for in the Trident programme for the communications system between the sea-based submarines, which could be up to 6,000 miles away, and the politicians, to ensure that there is effective control. I realise that that is an extremely expensive system. It does not appear to be in the accounts in the White Paper.

Mr. Heseltine: I assure the hon. Gentleman that neither the Labour Government that presumably he would have supported in an earlier generation nor this Government would be so inept as to have inadequate communication systems on such a critical aspect of our defence capability. That Labour Members should laugh at such a statement merely reflects their naivety, because the Opposition have consistently supported the concept that Britain should have a Polaris independent nuclear deterrent.

Mr. Bennett *rose*——

Mr. Heseltine: If there is some specific breakdown of costs about which I can help the hon. Gentleman, I shall try to do so, but I assure him that the communication systems between our submarines and the Government will be impeccable.

I have concentrated so far on the problems of East-West relations and on our contribution to NATO. The Alliance is the foundation of our security, and about 95 per cent. of our defence budget is devoted, directly or indirectly, to alliance tasks. But neither we nor our allies can shut our eyes to the world beyond the NATO area. We still have some residual direct security responsibilities for the remaining dependent territories. We therefore retain garrisons in such diverse locations as Hong Kong, Gibraltar and the Falkland Islands. Our determination to continue to fulfil those responsibilities could not be more clearly illustrated than by the new Mount Pleasant airport in the Falklands, recently opened by His Royal Highness Prince Andrew.

The construction of the airport—a truly astonishing civil engineering feat—will enable us to reinforce the islands rapidly in the event of a crisis, to achieve savings in the cost of the garrison, and play an important role in the economic and social development of the Falklands. But our interests outside NATO are not restricted to those direct responsibilities. We must be prepared to bear our share of responsibility for protecting trade routes and for promoting peace and stability in those areas where local conflicts could spread and risk wider East-West confrontation.

Mr. Gerald Malone (Aberdeen, South): As my right hon. Friend is talking in the context of our naval forces, he may well be aware of recent press speculation about the future of two types of vessel, known as OPV2 and OPV3. Those vessels were perhaps of some interest to a shipyard in my constituency, Hall Russell, which was hoping to bid for them. As there is considerable uncertainty about them, can my right hon. Friend say whether there is provision for either vessel in his programme, and specifically whether it is the case that, if there is no such provision, they have been deleted at the instance of the Royal Navy or for some other reason?

Mr. Heseltine: No, that offshore patrol vessel is a subject that the Royal Navy is exploring. It has been having conversations with industry. It may or may not wish to make a bid for the cash to pay for it. At the moment, no such cash provision has been made available. In any case, the appraisal of such a project would have to go through the central evaluation processes of the Ministry of Defence. That has not happened, and there is no way in which I have approved that the programme shall proceed. But it is perfectly healthy and reasonable that individual parts of the Ministry of Defence should have dialogue with industry about what possibilities may exist.

Several Hon. Members *rose*——

Mr. Heseltine: I think it is more a matter for my right hon. Friend the Minister of State for Defence Procurement. It is not a project in our main programme, and I do not think we want to be diverted into the minutiae of possibilities which are a considerable way from my decision-making process. If it is convenient to the House, we shall follow up that matter in the debate tomorrow.

We must be prepared to bear our share of responsibility for protecting trade routes and promoting peace and stability in those areas where local conflicts could spread and risk wider East-West confrontation.

The White Paper describes the various ways in which we contribute to these objectives — for example, our world wide network of defence facilities, our military assistance programmes and our contributions to peace-keeping forces. Ultimately, we maintain a capability to intervene militarily, either to protect our own interests or in response to a request for help from our friends. Drawing on the lessons of the Falklands conflict, we have made great strides in enhancing the mobility and flexibility of our forces to deploy rapidly at long range in a crisis. The use of such forces would be regarded very much as a last resort, but if they are to be effective in any crisis, they must be not only properly equipped but well trained.

We plan, therefore, to conduct a major strategic mobility exercise next year to demonstrate the ability of our forces to respond rapidly to a crisis outside the NATO area and to test the improvements we have made in our command and control arrangements.

Mr. Robert C. Brown (Newcastle upon Tyne, North): The right hon. Gentleman has mentioned the savings that will be made by building the Mount Pleasant airport and the costs involved in maintaining the Falkland Islands. How many years will it take to recoup the enormous cost of building the airport?

Mr. Heseltine: I do not think that I can give that answer, because this is a military commitment which is essential to the original commitment to free the islands. Once the Labour party joined the Government in supporting the decision to send the task force, there was a defence commitment. Anyone with responsibility cannot now renege on that commitment. It is therefore part of our defence determination that we should have this defence facility. It will enable us to do the job much more rapidly and at a lower cost. The hon. Gentleman tries to have it both ways in suggesting that there is a practical alternative. The criticism, if there is one, is that Governments of both parties did not provide an effective airport in the Falklands many years ago.

Mr. Jerry Wiggin (Weston-super-Mare): While on the subject of mobility and the lessons of the Falklands conflict, does my right hon. Friend accept that one of the lessons learned from the Falklands war was the great importance of the helicopter on the battlefield? Is it not amazing that the appropriate military departments within the Ministry are taking another nine months to assess air staff target 404, which can readily be filled by the W30 helicopters that are manufactured in and around my constituency?

Mr. Heseltine: My hon. Friend's concern for Britain's defence interests is well known. Perhaps he will forgive me if, in the present circumstances, I do not become too deeply drawn into those matters. *[Interruption.]* The hon. Gentleman understands the sensitivity of this issue. The Army is reviewing the requirements. It must be my responsibility as Secretary of State for Defence to be sure that the Army is satisfied before I take any decisions. I am not trying to impose a political judgment upon the military requirements in these circumstances.

I turn now to the scale of the defence programme. In 1985-86, the defence budget will be about £18 billion— an increase of more than £1 billion in cash terms over 1984-85. By the end of this financial year, we shall have completed an unprecedented period of seven years of consecutive real growth in the defence budget. British defence expenditure is the highest in total and per capita of the major European members of the Alliance. The proportion of the budget spent on equipment is the highest of any NATO country. I cannot help wondering sometimes, as I read the critics of our defence policy, just how uneasy they might feel if they lived in one of our neighbouring Alliance countries, facing much the same threat but having so much smaller a defence budget with which to counter it.

But what are we getting for the money we spend on defence? Chapter 4 of the White Paper sets out in detail the equipment that is coming into service or being developed for the armed forces. Let me pick out some of the highlights.

For the Army, the re-equipping of armoured regiments with the Challenger tank continues. I am able to announce today that an order for further Challenger tanks is being placed with Royal Ordnance plc, to equip a sixth Challenger regiment. The infantry's mobility and protection will be improved by the introduction of the MCV80 and Saxon armoured personnel carriers, and it is already being issued with the new SA80 small arm.

The artillery supporting these troops will receive the multiple launch rocket system. In the same time frame, we will be replacing the ageing 105 mm Abbot with the collaborative 155 mm SP70 self-propelled gun. The artillery's target acquisition will be improved with the Phoenix remotely piloted aerial reconnaissance vehicle, and the battlefield artillery target engagement system will enable us to employ our artillery resources to the best possible effect. In air defence, Rapier is being improved and work is going well on the new short-range high-velocity missile to complement Javelin.

Finally, we will get the best possible value from all these weapons through the introduction from this year of Ptarmigan, a secure field trunk communications system unmatched anywhere in the world, and Wavell, our first major venture in computer-assisted command and control.

The majority of the RAF's front line assets are being replaced with new aircraft and new weapons. Nine Tornado GR1 squadrons have now formed and will eventually build up to 11 squadrons. The Tornado GR1's armoury will include the JP233 cratering and area denial weapon, deliveries of which will begin later this year, and the ALARM defence suppression weapon, planned to enter service in two years. Deliveries of Tornado F2, the air defence variant, have begun and the operational conversion unit was formed on 1 May this year. The number of air defence squadrons in the United Kingdom will be increased from seven to nine. In the ground support role, the Harrier GR5 will replace the Harrier GR3 and will be armed with an improved version of the BL755 anti-armour weapon, which will enter service with the GR3 this year.

Mr. John Wilkinson (Ruislip-Northwood): My right hon. Friend did not mention a replacement for the Jaguar. The House will be very much aware of the ministerial meeting to be held on 18 June in this city on the European fighter aircraft. Will my hon. Friend assure the House that, in those important ministerial discussions, he will ensure

[Mr. John Wilkinson]

that the RAF's key operational requirement and the industrial considerations which are so crucial to this country are met?

Mr. Heseltine: I am grateful to my hon. Friend. Perhaps he will allow me to come to that point a little later.

Since entering office in 1979, we have ordered 45 ships for the Royal Navy. In the last year and a half, we have ordered or set in hand procurement action for five completely new classes. The first class of the type 23 frigate and the type 2400 conventional submarine are on order. We have invited or received tenders for the single-role minehunter, the auxillary oiler replenishment vessel and the Trident ballistic missile submarine.

The highlight of the next few years will be the entry into service of the type 23 frigate with Harpoon, vertically launched Sea Wolf, Sonar 2050 and the EH101 helicopter — all advanced equipment of the highest quality and capability.

I note the concern expressed by the Defence Committee on the ordering rate of destroyers and frigates. Our commitment remains to a force level of about 50 in the longer term. We intend to sustain an ordering rate of broadly three new frigates a year from the first follow-on type 23s. Since 1979 we have spent over £2 billion more in real terms on the conventional Navy — excluding Falklands replacements — than if spending had been maintained at the 1978-79 level.

Important though our equipment plans are, the capability of our forces rests equally upon the quality and motivation of those in the armed forces and of the civilians who work alongside them. I will certainly ensure, as the Select Committee has requested, that more is said about this area in next year's White Paper.

It may be helpful if I say a word about recruitment and retention in the armed forces.

Sir John Biggs-Davison (Epping Forest): What decision has my right hon. Friend reached about the replacement of the existing specialised ships for 3 Commando Brigade, Royal Marines? If we are to reinforce the northern flank in war, it is important to be able to get there.

Mr. Heseltine: I shall be coming to that subject later.

Several Hon. Members *rose*——

Mr. Heseltine: I hope that hon. Members will agree that I have given way sufficiently. I have much more to say, and I wish to make progress.

I come now to recruitment and retention in the armed forces. Volume 2 of the White Paper shows that, between April 1979 and January 1985, the strengths of trained United Kingdom regular forces increased from about 284,000 to about 297,000. The figures do not support the more extreme reports of increasing overstretch that have appeared in the press. Recruitment is generally good, except in some technical areas where there is fierce competition from the civilian sector.

Outflow from the armed forces is certainly increasing as the economy picks up. *[Interruption.]* If opposition Members do not understand that in large parts of British industry there is now a significant scarcity of skilled and trained people, they have no idea of the rate of change in the industrialisation of the western world.

Although there has been an increase in the outflow as the pressure from industry increases, the figures must be seen in perspective. The outflow in the last financial year, at about 34,500, is up on the previous year, but it is also about 15,000, or 30 per cent., lower than the figure in 1978-79, before we came to office.

The Government are committed to maintaining the remuneration of the armed forces at a level sufficient to meet the requirements for trained manpower arising from our defence policy. The announcement by my right hon. Friend the Prime Minister last week of the Government's response to the 1985 armed forces pay review body report showed in the clearest and most tangible way the considerable commitment that we have made and have maintained.

We attach equal importance to the strength of our volunteer reserve forces. The Territorial Army currently stands at 73,500, compared with 59,000 six years ago, and the planned expansion to 86,000 by the end of the decade continues to progress. We are pressing ahead with the expansion of the home service force, initially to a strength of about 5,000.

Recruitment to 38 new home service force companies formed earlier this year is going well. We are proceeding with plans to increase the strengths of the Royal Naval Reserve, the Royal Marines Reserve and the Royal Naval Auxiliary Force. This expansion of our volunteer reserves represents a particularly cost-effective way of augmenting the front line capability of our regular forces.

I come now to the defence programme in the longer term, to which the Defence Committee devoted much of its report. I say straight away that there is much in the report with which I agree. It provides a useful historical perspective on the Government's commitment to the aim of increases, in the region of 3 per cent. a year, in defence expenditure in real terms.

Given the background which I have described, of the substantial increases in defence expenditure since 1978-79 and of our position relative to our allies, the Government have made it clear for a number of years that after 1985-86, we should seek a stable level of defence expenditure. This is a British decision in a British context. We continue to subscribe to the resource guidance of the Alliance as a whole, which includes the 3 per cent. aim as a general guide. Many members of the Alliance have a long way to go before the effort begins to approach that of the United Kingdom.

That said, I agree with the view expressed by the Defence Committee that more emphasis should be placed in the future on outputs rather than inputs as a public and political measurement of defence effort. Personally, I believe that the conduct of many other areas of public policy would benefit from such a change. As the Committee points out, a financial increase is not by itself a measure of increased efficiency, and greater efficiency may enhance military capability at no additional cost. It is to this prize of increased efficiency that our efforts in the years to come must be increasingly directed.

In addressing the implications for the defence programme of the ending of the 3 per cent. aim, it is also important to recognise that this change has been assumed in our plans for a number of years. The Committee recognises that 3 per cent. growth has never been the basis for expenditure plans after 1985-86. The programme set

out in the White Paper "The Way Forward" in 1981—which included provision for Trident—assumed such a growth rate only until that year.

I cannot say precisely how the defence budget will develop in volume terms in the next few years. This depends on a range of factors, some positive, some negative. I cannot engage in a detailed line-by-line, figure-by-figure analysis of the gloomy picture painted by the Defence Committee.

On the Defence Committee's assumptions, it foresees a potential squeeze on the defence budget in real terms, postulating a worst case in which the budget would be £970 million lower in real terms in 1987-88 than in 1985-86. Later in its report, the Committee points to possible offsetting efficiency savings amounting, again on its assumptions, to some £700 million. Although the pluses almost equal the minuses, the conclusion is drawn that they will not be enough to redress the balance; but on the Committee's own arithmetic, the figures are marginal in terms of a total defence budget of some £18 billion to £19 billion a year.

The Committee justifies its concern by reference to the policy to which I am wholly committed, of maintaining flexibility in the defence programme. It must be said that it is seen in a sinister light, as preparing the way for a defence review by stealth.

The truth is less dramatic. The truth which guided my Department's response to the committee's requests for information on our future programme was not new. The Ministry of Defence pointed out to the Committee in 1981, for example, that it was not possible to provide details about the equipment provision in our long-term costing. The Ministry said then that over a 10-year period, the costing becomes increasingly speculative the further forward one tries to look, and that in many cases the assumptions used can be no more than conjecture by officials about how Ministers will settle issues which have still to be clarified and have not yet been put to Ministers.

The status of these planning documents has not changed in the intervening period. My ministerial colleagues and I have sought in the last year or so to institute management arrangements for the programme which fully reflect the increasingly speculative nature of the costing and properly differentiate between the extent of ministerial commitment to individual projects and to the stages within them.

We have also taken account of the politics of defence budgeting, which is like the politics of all other kinds of public expenditure planning. It will, I suspect, come as no surprise to the House to hear that my Department's forward programme is changing constantly for a variety of reasons — changes in military specification, technical difficulties, industrial slippage and so on. These adjustments attract little attention and only the major ones ever come across the desks of Ministers.

All these changes are described as adjustments, but there is one category of adjustment which is different. That is where a Minister changes a programme assumption to take account of whether there is actually the cash available to meet everyone's aspirations. That is called not an "adjustment" but a "cut". Such language is the time-honoured practice of every interest seeking to extend or maintain its programme.

Frankly, the only significant change in the Ministry of Defence is that I have joined that club on behalf of the taxpayer. We now plan our programmes to live within the cash available to meet them. Just because a Department is large and its budget huge, there is no excuse for ignoring the basic rules of prudence that characterise the private sector but not public expenditure planning.

There is, then, no hidden motive behind my reluctance to disclose all the assumptions being made in 1985 about the programme stretching 10 years ahead and beyond. We are continuing properly to plan on a long-term basis to sustain our commitments and the defence roles identified in the 1981 and 1982 White Papers. The resources which can realistically be postulated for defence in the longer term are sufficient to sustain these roles and to provide for the major re-equipment programmes of the services, currently foreseen. Whatever the pressures arising from cash planning, the fact remains that defence expenditure is now some £3 billion higher than when we came into office. We have a steep increase which we know only a Conservative Government would have provided.

Of course I know of the understandable and legitimate concern of my right hon. and hon. Friends on the Select Committee for the proper defence of this country, but as I read the Select Committee report I could not help wondering about the role of the Opposition Members on the Select Committee, when only two years ago the Labour party went into a general election seeking to reduce defence expenditure by one third. Now they tell me that £3 billion a year more is not enough. The protestations of the Opposition about the defence programme are, in truth, humbug.

Mr. Robert Banks (Harrogate): One way in which savings can be made is through greater co-operation between our European partners in NATO. Can my right hon. Friend say a word about the work of the independent European programme group and how it can be worked into the programme to our advantage?

Mr. Heseltine: My hon. Friend is most kind in anticipating what remains of my speech. I shall not give details of numbers and in-service dates stretching 10 years ahead. They would, in any case, be overtaken, for a variety of reasons. Nor do I see any case for rushing decisions to replace capabilities until the military requirements and options for meeting them have been properly studied and set alongside other priorities. It is these considerations, rather than funding difficulties, that have governed our approach to future amphibious capability, upon which the Select Committee has commented. The right way forward is to release cash progressively on new equipment against tightly drawn contracts, to maintain a careful balance between commitment and cash and to keep options open in the longer term in order to take account of strategic circumstances, technological opportunities and cash availability nearer the time.

I must say a little more about the amphibious capability replacement, about which I have told the House the precise story. If the idea should once get about in the Ministry of Defence that that part of each individual armed service was likely to get preferment over all the rest of the priorities by leaking its concern either to the press or to hon. Members in order to embarrass Ministers in the Ministry of Defence, it would bring our legitimate planning process to a grinding halt. That is precisely what has happened in this case. I am not prepared to be sucked into that process.

Mr. Douglas: That is a terrible accusation.

Mr. Heseltine: If the hon. Member wants to call it a terrible accusation, so be it but if he should ever serve in a Government, which I doubt, he would find that life is not so rosy as it looks from the Opposition Benches.

Let me say a word, finally, about our programme to improve efficiency. My right hon. Friend the Minister for Defence Procurement will no doubt discuss tomorrow our efforts to increase competition in defence procurement. The problem of defence equipment inflation at a faster rate than elsewhere in the economy, to which the Select Committee on Defence rightly draw attention, is, I believe, a product of our practice in defence contracting in the past, with too many contracts being placed on some form of cost-plus arrangement.

If one wants to ensure that one's prices move up ahead of inflation, cost-plus contracting is the surest way to achieve it. I do not want to minimise the difficulties in moving towards more competition, particularly in areas of high technology. It is difficult to offer a global figure for savings when so few contracts placed in one year are comparable with contracts placed in the next year, but the results to date have been most encouraging.

I told the House recently that, as a result of competition, we were able to buy the Royal Air Force's trainer replacement at a saving of about £60 million, or 35 per cent. less than the estimates upon which the Department had previously worked. Today I am able to announce a decision to place an order for 1,048 mechanised combat vehicles with Guest, Keen and Nettlefold and Sankey. The total programme cost of about £725 million shows a saving of over £100 million against our internal estimates and is a direct result of our policy of increasing competition throughout our procurement policies.

The House may wonder just where, in practice, the concept of a defence price inflater came from. This is not a policy which will win universal acclaim from defence contractors, but their long-term viability depends upon their ability to remain competitive. It depends also upon their capacity to continue to match American defence technology.

I do not believe that, in the years ahead, this will be feasible on a national basis, with one European country competing with another. The search for increases in collaboration is not simply concerned with achieving economy. The hugely fragmented European defence industry will not be a match for the competition, particularly with the likely impact in America of the strategic defence initiative programme, unless urgent efforts are made to eliminate wasteful duplication and to enhance co-operation on research and development. The meeting in London, to which my hon. Friend the Member for Harrogate (Mr. Banks) referred, of the independent European programme group next week will be an important test of the willingness of European defence Ministers to take concrete measures in these areas rather than simply to articulate aspirations and aims.

Next week will also see a further meeting of defence Ministers, another matter about which my hon. Friend asked me, involved in the five-nation European fighter aircraft programme. It would be quite wrong of me to say that no differences remain between the collaborative partners. There are still very large differences of view, but I cannot emphasise too strongly the desire of the United Kingdom to bring about a successful collaborative fighter aircraft programme that meets the air staff's requirements, and with equitable industrial arrangements. We in this country seek a true partnership.

I would not expect my colleagues in Germany, France, Italy and Spain to attempt to explain away in their countries a deal that was against their national interests. I will certainly accept no such arrangement on behalf of this country. However, the longer that European resources are frittered away on overlapping research, development and production facilities at a national level, the longer we allow the major world powers to widen the technological gap that is already an awesome chasm.

Finally, I draw attention to a third plank in our effort to make the most efficient use of defence resources: our drive to prune overheads and, to the maximum extent possible, to direct resources to the front line. The army's exercise Lean Look moves 4,000 men to the front line from the administrative tail. The Royal Navy is to find by increased efficiency the men necessary to man those eight destroyers and frigates which, under previous plans, were to have been placed in the standby squadron.

Mr. Robert Atkins (South Ribble): Will my right hon. Friend give way?

Mr. Heseltine: Perhaps my hon. Friend will forgive me if I do not; I am nearing the end of my speech. In the case of civilian staff, numbers at 1 April 1985 stood at about 174,000, some 74,000 lower than when this Government came to office, and some 7,000 lower than a year ago. The scale of this reduction and the willingness of our civilian staff to adapt to change in accordance with the Government's priorities are insufficiently appreciated. I am immensely grateful for the efforts that they make.

The measures I have described to improve efficiency and to improve the competitiveness of our defence industrial base are of major importance, but they are not, and they never could be, my key responsibilities. Those responsibilities are to sustain the professionalism and the fighting power of our armed forces and to work with our allies to maintain a uniquely successful and long-lasting alliance for peace. The policies set out in the 1985 statement on the Defence Estimates are designed to achieve those aims. I commend them to the House.

4.39 pm

Mr. Denzil Davies (Llanelli): I beg to move, To leave out from "House" to the end of the Question and to add instead thereof:

'believes that the plans outlined in the Statement on the Defence Estimates 1985, Cmnd. 9430, in particular the Government's policies of buying, at an ever-increasing cost, the Trident nuclear system, will inevitably lead to further damaging cuts in Britain's real defence and in our conventional contribution to the North Atlantic Treaty Organisation; believes also, that in view of the North Atlantic Treaty Organisation's present strategy of "first use" of nuclear weapons, a reduced conventional contribution will increase the risk of a nuclear war in Europe; calls upon the Government to cancel Trident, to remove all nuclear bases from the United Kingdom and work within the North Atlantic Treaty Organisation for a substantial reduction in, and eventually the elimination of, battlefield nuclear weapons; notes with alarm the decline of the Merchant Navy; and urges the Government to take positive and immediate steps to arrest and reverse that decline.'.

The Secretary of State made the speech that I had expected him to make. Indeed, it was not greatly different from his speech last year. I do not complain about the fact that he took an hour to make it, because there were many interventions. However, he failed to answer two questions

put to him by Opposition Members, and I hope that the answers will be forthcoming before the end of the debate. During that hour, the Secretary of State had a bash at the Russians, as he did last year. Then he started on the Labour party. Then we went to the Falkland Islands and to Hong Kong. We spent some time on the strategic defence initiative and arms control, and he spent about five minutes on the Select Committee's report about future programmes. The Secretary of State said that he would not attempt a line-by-line, figure-by-figure analysis of all the gloomy reviews. He has better things to do than that. He told us that, in the long term, everything would be all right. We do not know about the long term, but in the shorter term, which we can see easily, the Secretary of State will have serious problems with his defence budget.

I agreed with the right hon. Gentleman about one thing. He made the point clearly that it is for the sovereign nations of NATO to make their decisions about their defence policies within the Alliance. He instanced the ending of the commitment to increase spending by 3 per cent. Indeed, President Reagan made a sovereign, unilateral decision, which turned NATO's strategy upside down, in relation to the SDI. We do not agree with it, but we accept the right of a sovereign Government to determine their own strategy.

The White Paper, like last year's White Paper, does not deal with the real problems of defence policy and expenditure that will occur in the next few years. The only difference between last year's White Paper and this year's one is that another year has gone by and the time for difficult decisions is getting closer. It is no good the Secretary of State trying to hide behind MINIS, contracts and tenders. Difficult decisions will have to be taken by him or by his successor.

It will come as no surprise to the House or to the Secretary of State if I say that the White Paper did not receive rave notices. An editorial in the *Daily Telegraph* the day after the White Paper was published stated:

"Heseltine's Fudge. If the statement on the Defence Estimates were the accounts of a public company they would have at best sent the share price sliding and at worst been qualified by the auditors. The picture which Mr. Michael Heseltine . . . is trying to present to the world has only a passing resemblance to reality."

During the same week, *The Economist* said:

"This bland document has avoided all important decisions and contains no signposts to future defence policies . . . Mr. Michael Heseltine gives the impression that he does not grasp the problem."

That is unfair to the Secretary of State. He grasps the problem in the sense that he understands it; he does not grasp it in the sense of having the courage to do something about it.

Those were the first-night reviews. They have become worse. Yesterday morning, an editorial in the *Daily Mail* stated:

"When two plus two makes three—are Britain's Defence Estimates a confidence trick?"

It comes to the conclusion that they are.

The worst condemnation comes from the Select Committee on Defence, over whose report the Secretary of State skated. The Committee, chaired by the right hon. Member for Spelthorne (Sir H. Atkins), bitterly criticised the Ministry of Defence for giving vague and evasive answers, and for not giving the Committee any information about future requirements. From my reading of the report, I have the clear suspicion that the right hon. Gentleman is up up to his old game of hiding behind national security when trying to avoid political embarrassment to himself, to the Department and to the Government. It is not the first time that he has tried to do so in respect of Select Committees and inquiries in the House.

The Secretary of State knows what the problem is. He may not be as brilliant at reading balance sheets as is the former chairman of the Conservative party and former Secretary of State for Trade and Industry, the right hon. Member for Hertsmere (Mr. Parkinson). We heard the other morning that he is extremely good at doing that. But the Secretary of State knows the score. He knows that he does not have enough money to pay for Trident and to maintain an adequate conventional capability in our defence. Although the right hon. Gentleman would not analyse the problem, I shall do so. It comes from two sources, the first being the public expenditure White Paper that was published in January. The phrases in his speech, including "value for money", "fighting for the taxpayer", and "making sure that the taxpayer gets a good deal", are a smokescreen for cuts. The problem also stems from the Government's decision to buy Trident.

Last year, the Secretary of State lost the battle with the Chancellor, and we wait with interest to see what happens this year. We hear on the grapevine around the Palace of Westminster that this year will be stand-and-fight year. I have heard phrases such as, "Doing a Pym". That is not a reference to the recent footballing activities of the right hon. Member for Cambridgeshire, South-East (Mr. Pym). It is a reference to his time at the Ministry of Defence, where the folk memory is that he resisted cuts in conventional defence, thereby sowing the seeds, some people say, of his eventual demise. I do not know whether it is wise to adopt similar procedures, and no doubt the Secretary of State will decide for himself.

However, once the Secretary of State conceded a zero growth budget for the years after this, it was inevitable that there would be cuts in defence expenditure. I shall try to show why.

Dr. Hampson: Where are the cuts, and what are the alternative policies proposed by the right hon. Gentleman?

Mr. Davies: That was not up to the usual standard of the hon. Gentleman's interventions. I shall try to explain the cuts in a moment.

After 1985-86, Britain will have a zero growth budget based on Treasury assumptions. The crucial assumption is the Treasury's figure for inflation, which is called the GDP deflator—I see the right hon. Member for Spelthorne nodding, so I must have got that right. The GDP deflator is not a forecast but half assumption, half forecast. This year, the figure is 5 per cent.; for next year, it will be 4·5 per cent.; and for the year after, it will be 3·5 per cent. I am talking about general inflation in the economy, not about defence inflation. If inflation exceeds those estimates, there will have to be cuts in defence expenditure, unless the Treasury changes the figures or it gives the Secretary of State more money, which is unlikely, since the figures relate not only to the Ministry of Defence but to all public expenditure by the Government.

Let us assume that the Treasury figure is not exactly right and that inflation will be 5 per cent. this year, 5 per cent. next year and 5 per cent. the year after. That is a fairly reasonable assumption. On the basis of those figures that will take away an extra £900 million, or 6 per cent.,

[Mr. Davies]

from the defence budget next year and the following year. That is where the cuts will come from, and the margin need only be 1 to 1·5 per cent. each year.

Those figures do not take account of what is called defence inflation. All we can say about that is that generally in the past the increase in the cost of equipment has tended to be greater than the rise in inflation in the economy. I do not know why, but I suspect that the right hon. Gentleman has a point when he says that it is partly due to inefficiency and other reasons. I do not dispute that.

Let us then assume that defence inflation for those two years is only 1 per cent. a year greater than the rate of inflation. That will put at least another £500 million on the defence budget in those two years—*[Interruption.]* The Secretary of State mutters, "No," but he should bear in mind that the Select Committee assumed a 2 per cent. defence inflation figure. Assuming that the general inflation targets in the economy are met, that 2 per cent. amounts to a reduction of £960 million. Again, that is around 6 per cent.

Indeed, the chief of the general staff, Sir Edwin Bramall, said that it would be between about 4 and 7 per cent., and Mr. David Greenwood, a distinguished defence analyst who has not yet been attacked by the chairman of the Conservative party for heresy—I can therefore quote him—said that there will be a funding loss in excess of £2,000 million by 1988-89. It may not be as high as that, but even on different Conservative assumptions it is clear that the Secretary of State or his successor will be faced with a funding deficit—quite apart from Trident—of between £1,000 million and £2,000 million purely because of inflationary assumptions.

That is a horrendous problem, but what about Trident —the Tory party's sacred cow, Trojan horse or cuckoo in the nest? Apparently we are to have a zero growth defence budget. In my view it will be a minus growth defence budget for the reasons that I have just given. But even a zero growth defence budget does not solve the problem of Trident. Over the next three years the costs of Trident will escalate, and by the end of the decade will rise by about £1,100 million a year.

Mr. Heseltine *indicated dissent.*

Mr. Davies: The Secretary of State could have denied that had he wished, because it was in the Select Committee report.

Mr. Heseltine: I could stay on my feet a long time denying the rubbish to which we are listening, but when the right hon. Gentleman reads *Hansard* he will see that he said that the cost would go up by £1,100 million a year. In the peak year, the highest estimates for all the costs of Trident are about £1,000 million.

Mr. Davies: I said that the cost would go up to that figure—[HON. MEMBERS: "No."] Well that is what I meant to say. But it does not invalidate my case. The costs of Trident are now increasing rapidly, and it is no good the Secretary of State smiling because he thinks he has made a debating point. The fact remains that over the next few years the costs of Trident will escalate rapidly within a zero growth increase in the defence budget.

If the defence budget increases by nothing and the costs of Trident increase rapidly, the money will have to come from elsewhere in the defence budget. I should have thought that was pretty obvious, even to the Secretary of State. That money will have to come from the rest of the defence budget, and it can come only from hardware, equipment, stores, and supplies relating to conventional forces or from military and civilian manpower. The money cannot come from anywhere else, and the Secretary of State knows it.

We have been told in the past that it was perfectly possible to accommodate Polaris and Chevaline—[AN HON. MEMBER: "It was the Labour Government who proposed Chevaline."] I do not deny it. I clearly mentioned it and I expected that sort of reaction. The Secretary of State said that in the past we managed to pay for Polaris out of the defence budget. The total cost of Polaris and Chevaline at 1984-85 prices came to £4·5 billion. If one compares exactly like with like, the total cost of Trident at 1984-85 prices on Government figures will be £9·2 billion. Therefore, Trident costs twice as much as Polaris, and it will account for a much greater proportion of the defence budget than Polaris and Chevaline ever did.

Sir Antony Buck (Colchester, North): Does not the right hon. Gentleman agree that the reasons that caused the Labour Government secretly to go for Chevaline are exactly the same as those that have caused the present Government—many of us believe rightly—to mantain a new independent nuclear deterrent?

Mr. Davies: I am sorry that I raised this matter. That intervention was wholly irrelevant to the point I was trying to make. I thought that we would have a fairly serious debate on the Defence Estimates and the White Paper, and the point I am trying to make is that Trident costs vastly more than Polaris.

We have been told several times that although Tornado cost more than Trident the Government managed to pay for that. But Tornado was never paid for out of a zero growth defence budget. At the time when money was spent on the Tornado aircraft, we did not have a zero growth defence budget. Had that been attempted, there would have been the horrible problems which the Secretary of State will now have to face when the costs of Trident begin to escalate.

Mr. Heseltine: As Tornado was largely financed out of a budget that was much smaller than the present budget, and as that cost much more than Trident, why is it so impossible to pay for Trident out of a much larger budget?

Mr. Davies: The Secretary of State again misses the point. It is certainly possible to finance Trident out of the budget. All I am saying is that it cannot be financed without deep cuts in our conventional forces and our conventional contribution. In the case of Tornado, the budget was increasing every year. We shall now have a zero growth budget—effectively a minus growth budget —and it will not be possible to finance Trident out of it without substantial cuts in our conventional defence.

We are not comparing like with like when we compare expenditure on Tornado with expenditure on Trident. Trident is a last resort weapon. It is an extraordinary defence policy when apparently the Secretary of State will have to reduce expenditure on front-line weapons of first resort such as tanks, ships and submarines in order to finance a weapon of last resort. That is a topsy-turvy way of running a defence policy.

The money will have to come out of the conventional budget — from equipment, spares, stores, fuel or manpower. If it came entirely from equipment it would mean a 15 per cent. to 20 per cent. cut in the equipment budget. If it came entirely from manpower, it would mean a drop of about 30,000 in civilian manpower and 50,000 in military personnel, roughly equivalent to the British Army of the Rhine. I accept that it will not be done in that way, that there will be an attempt to spread the misery, but there will be manpower cuts and jobs losses. The Secretary of State talks about efficiency, but since the Government came to power, despite 2·5 to 3 per cent. growth in the defence budget, nearly 100,000 jobs have been lost in the military and civilian industries and areas of defence policy. If the cuts take place, that figure will almost certainly double in the next few years. There will be pay restraints, cuts in fuel and stocks, slowing down on acquisitions, and a running down of equipment beyond its economic and military life span.

Viscount Cranborne (Dorset, South): Is the Labour party advocating an increase or a decrease in defence expenditure?

Mr. Davies: We are advocating the cancellation of Trident because we do not believe that it can be financed without cutting the conventional defence budget and our conventional contribution to NATO.

The greatest burden will still fall on the Navy. The Navy will suffer again as it has suffered in the past because in many ways it is easier to reduce expenditure on the Navy. It is not possible to withdraw the British Army of the Rhine and in any case there would be no public expenditure saving. If the Secretary of State gets his European fighter aircraft, or 25 per cent. of it, at a cost of £6 billion or whatever, he will not want to cut that, so the cuts will fall on the Navy—on frigates, landing ships, submarines and all the equipment used by the Royal Navy.

The Secretary of State said that he intends to maintain orders for three type 23 frigates per year. That will cost almost £500 million. The Government will have to do a great deal better than they have done in the past five years, because that is twice what the Government ordered between 1979 and 1984. In addition, there will be £850 million for amphibious ships required by the marines in Norway as well as the cost of replacing out-of-date equipment and conventional submarines which have become too noisy. We are being asked to believe that all this can be done with a zero growth defence budget, while the cost of Trident escalates rapidly at the same time. No one believes that and it is unworthy of the Secretary of State to pretend that he can do it by means of various devices or wheezes.

The Navy is easy to cut because, unlike the Army and the Air Force, it has never fitted easily into NATO's overall defence strategy.

Sir Patrick Wall (Beverley): That is ridiculous.

Mr. Davies: Perhaps the hon. Gentleman will listen to my argument before saying that it is ridiculous. NATO's strategy has always been and still is that conventional war in Europe will be short. The massive superiority that the Soviet Union is supposed to have——

Mr. Stefan Terlezki (Cardiff, West): It does have massive superiority.

Mr. Davies: Perhaps the hon. Gentleman will contain himself for a moment. He can challenge me later if he wishes.

The massive superiority that the Soviet Union is supposed to have means that conventional war in Europe is estimated to last no more than six or seven days, after which we use the battlefield nuclear weapons. If that is so, there is no point in having a navy because it takes 10 days for the transport ships to come over from the United States, by which time the war will be over at least in its conventional form. That has been NATO's thinking for a very long time and the Navy does not fit well into that kind of thinking.

The reality is quite different. Although there is superiority in certain areas, there is not any great overall superiority in the Warsaw pact. I believe that if war ever comes—we hope that it never will—it will be a war of attrition in central Europe and will last much longer than the five to 10 days currently envisaged by the NATO planners. In a war of that kind, a navy and especially a navy in the Atlantic is extremely important.

Sir Geoffrey Johnson Smith (Wealden): The hon. Gentleman is basing his argument on completely wrong hypotheses. As a member of the NATO Assembly, I have spoken to a great many people and I know, as the hon. Member for Sheffield, Attercliffe (Mr. Duffy) will confirm, that no one in NATO is making such assumptions. If the hon. Gentleman will put forward a sensible argument, we are quite willing to have a sensible debate.

Mr. Davies: Of course such assumptions are made. The situation may be changing now, but that was the original reason for the battlefield nuclear weapon—to make up the difference between Stalin's hordes and Western conventional defences. If the hon. Gentleman thinks that I am wrong, he can make his own arguments in his own speech.

The Navy will therefore suffer again as it has suffered in the past.

Sir Patrick Wall: Is the hon. Gentleman aware that in the Eastlant, NATO is 80 per cent. dependent on the Royal Navy, particularly in the first three days? Has he never heard of the GIUK gap or the 190 nuclear submarines in the Soviet northern fleet? All those things are at the heart of NATO's strategy. The hon. Gentlenan clearly has no concept of NATO's maritime strategy.

Mr. Davies: I understand that very well, but I know from my conversations with the people concerned that they do not have enough ships. Because the Navy does not fit easily into that kind of strategy for a continental war, it is always easier to impose cuts on the Navy.

Mr. Heseltine: I do not want to get the signals to the Fleet wrong on this. When we are fighting this land war in Europe, how are we to get the stores across the Atlantic to support the armed battle without ships defended by the navies of the Western Alliance?

Mr. Davies: That is exactly my point. That is the case for the Navy. The Secretary of State is in no position to talk about stores because he will be cutting conventional defence so we shall not be able to make that kind of contribution by positioning stores in western Europe so that it is unnecessary to bring so much across the Atlantic.

[Mr. Davies]

The motion also refers to the decline of the Merchant Navy. My hon. Friend the Member for Clackmannan (Mr. O'Neill) will deal with that aspect tomorrow. I wish to deal with the subject of battlefield nuclear weapons because they are extremely dangerous and, as the Secretary of State admitted in evidence to the Select Committee, they are at the core of NATO's strategy. On this issue, this year's White Paper is as distressing as the White Papers last year and the year before. We believe that over a period NATO should get itself into a position to change its present strategy of first use of nuclear weapons. We agree with the article published by General Sir John Hackett in the *International Defence Review* last year. He said:

"I am totally persuaded that the defence of Western Europe must be, however it is conceived, conventional."

In the past few years, there have been signs of some movement within the NATO bureaucracy to try to move away from reliance on battlefield nuclear weapons. General Rogers has made a number of speeches emphasising the need to strengthen conventional defence and some action has been taken. Some of us, perhaps naively, saw this as a small step away from reliance on battlefield nuclear weapons. At Montebello in 1983 NATO ministers agreed to reduce these weapons by 1,400 to 4,600 and to remove completely all atomic demolition mines.

Mr. Edward Leigh (Gainsborough and Horncastle): Does the hon. Gentleman accept that the concept of first use is made necessary by the conventional imbalance? Is he suggesting, therefore, that the NATO countries should spend the same proportion of their economy on defence as the Warsaw pact countries spend?

Mr. Davies: I am grateful for that intervention. We can argue about how it should be achieved, but if there were a conventional balance there would be no need for battlefield nuclear weapons. The Secretary of State would not agree with that, and nor would Lord Carrington or General Rogers. I detect a feeling—the Secretary of State said this to the Select Committee—that we must still have battlefield nuclear weapons, even if we had a conventional balance between the Warsaw pact and NATO.

Some of us thought that there would be some relaxation on the nuclear side as a result of speeches by General Rogers and of the Montebello agreement. I might be being unfair, but it looks as though that was a smokescreen for strengthening and increasing the lethality of battlefield nuclear weapons and was not a genuine attempt to move away from their use and closer to a better conventional balance.

Apparently, the new weapons are far more lethal and have a much greater range than the older ones. The atomic demolition mines, which are to be taken away, were a greater danger to the German population and our soldiers than to the enemy. I understand from newspaper reports —perhaps the Secretary of State will confirm this—that the Government are considering another mine which is to be called the advanced atomic mine, or ADAM for short. It is extremely sophisticated because it can be carried in a rucksack. I hope that the right hon. Member for Bosworth (Mr. Butler), the Minister of State for Defence Procurement, will resist bringing another ADAM to the Ministry of Defence.

I do not know whether the Government are thinking along these lines, but they should tell the House far more about their plans for battlefield nuclear weapons. The Secretary of State mentioned the new 155 mm atomic shell. Will the Government decide whether to accept it for the British Army of the Rhine? Perhaps the Secretary of State could tell us whether the matter is under active consideration. Perhaps he could tell us what decision will be taken. Many members of the United States Congress have said that we have agreed to the modernisation of those weapons.

Mr. Keith Speed (Ashford): Does the right hon. Gentleman include nuclear depth charges in those strictures? If he does, how will he deal with modern Soviet submarines which are virtually unsinkable by conventional weapons?

Mr. Davies: I fully understand that, in terms of tactical nuclear weapons, what has been suggested is included. I was considering battlefield nuclear weapons in that central zone of Europe where they are especially dangerous. Both sides have them, and we argue that both sides should remove them as far away from the border as possible because of the danger of war breaking out and of those weapons being used.

Mr. Heseltine: If the right hon. Gentleman understands the tactical need for these weapons, will he ensure that the Americans are still allowed to base none of them in Britain for the protection of our submarines?

Mr. Davies: We have said clearly that we will not accept American nuclear weapons on British soil. Such a decision must be taken by a sovereign British Government. I agreed with the Secretary of State when he said that it is ultimately the prerogative of sovereign Governments to take that decision.

Mr. Heseltine: If the right hon. Gentleman agrees that there is no legitimate deterrence against this form of Soviet weapon and that our submarines cannot be protected except by this nuclear capability, what sort of protection will he offer our submarines?

Mr. Davies: I did not say that. I said, in regard to battlefield nuclear weapons in central Europe, that there is a serious problem because Warsaw pact and NATO troops are so close together. If war broke out in that part of Europe, it could easily become a nuclear war, which would raise the problems of political control.

Mr. Speed: Does the right hon. Gentleman accept the need for nuclear depth charges?

Mr. Davies: We have said clearly that we will not accept American nuclear bases on British soil.

Mr. Robert Atkins: So what protection will the right hon. Gentleman give?

Mr. Davies: We understand NATO strategy, which is based on flexible response. The weapons that the hon. Gentleman talks about are part of NATO strategy. My party has made it clear that it wants to work in NATO to change that strategy because we believe that it is out of date.

Mr. Peter Viggers (Gosport): Will the right hon. Gentleman give way?

Mr. Davies: No. My speech will be as long as the Secretary of State's if I continue to give way. I should like

finally to consider the strategic defence initiative. I believe that it will be extremely difficult to prevent the star wars initiative from becoming an arms race in space. We agree with the Government's analysis and with the analysis in the lecture that the Foreign Secretary gave about the dangers and the philosophical inconsistencies in star wars. I do not believe that it will be easy to stop star wars. I do not accept the rather simplistic distinction that the Government try to draw between research and development. If anybody believes that American industry will stop at research and not go on to development, they have not read about or understood what has happened in the arms race during the past 30 years.

Star wars fits perfectly into the American psyche because it tries to wrestle with difficult moral problems. I respect that side of it. It is an enormous moral problem to base defence policy on mutually assured destruction. Stars wars rejects that, the Government's policy, and therefore NATO strategy. Star wars is part of the American dream and the belief that technology can solve moral and political problems. Moreover, a lot of money will be made out of it. I find it extremely difficult to believe that, when those three factors come together, the star wars project will be stopped at research.

Many people who have created star wars regard it as an attempt on the part of the United States to return to the golden age of the 1950s when that country had superiority in nuclear weapons. Caspar Weinberger said it clearly. He is reported to have said:

"If we can get a system which is effective, we will be back in the situation we were in when we were the only nation with a nuclear weapon".

That is quite clearly an attempt to gain nuclear superiority. It cannot be gained on earth any more because Russia will try to catch up. I should like the Government to show a little more resolution and to come out with other European Governments in NATO and say, "We do not favour star wars and are not prepared to participate in the research and we believe that it will lead to another nuclear arms race."

Perhaps I might conclude by quoting a distinguished American scientist, Professor William E. Burrows, who wrote in the *Spectator* of 30 March:

"But where is this race likely to end? American fighting mirrors, laser battle stations, space planes and manned attack platforms will sooner or later co-inhabit the heavens with their Soviet counterparts. Orbiting lasers made in California will be closely followed by space mines made in Yaroslavl, and although the lasers may be technically superior to the mines, that will count for little or nothing if the mines do their job at the crucial moment. It will therefore be deemed imperative to develop weapons that can attack the mines before they attack the lasers that are supposed to attack the ICBMs that are launched to attack the cities and silos. The prospect—now nearly at hand—of extending the vast and intricate network of super-sensitive warning systems and hairtrigger explosives hundreds and thousands of miles straight up is stupefying. The earth itself will have been turned into a gigantic orbiting bomb."

That is an extremely realistic assessment of what will happen, and I hope that the British Government will say that they will have no part in it.

The choice presented by the White Paper is clear and simple. We can have strong conventional forces and no Trident or weak conventional defences and Trident. The Government have chosen to have Trident. We believe that that choice diminishes the defence and security of Britain and increases the risk of nuclear war in Europe.

5.20 pm

Sir Humphrey Atkins (Spelthorne): When my right hon. Friend the Secretary of State opened the debate he referred to the fact that the Select Committee on Defence, of which I am Chairman, had commented that he did not devote very much space in the White Paper to broad policy issues. However, he spent quite a bit of the first part of his speech doing that, for which I was grateful. I hoped we might hear something of the same from the right hon. Member for Llanelli (Mr. Davies) but we heard nothing of the kind. I do not have the faintest idea what he thinks about policy except that he does not understand NATO policy at sea. The right hon. Gentleman did a good deal of reading from newspapers—whether they form the basis of Labour party policy or not, I do not know. There was some questioning of my right hon. Friend, perfectly properly, but the right hon. Gentleman quoted many figures and got most of them wrong. He would do much better to stick to the figures in the Select Committee report, which are correct. It is unfortunate that his are not. He should follow our figures rather than invent some of his own, which are demonstrably wrong.

Mr. Denzil Davies: Demonstrate that they are wrong then.

Sir Humphrey Atkins: The right hon. Gentleman said that three type 23 frigates would cost £500 million. They do not, and this is stated in the White Paper. They cost £110 million each. If he cannot multiply 110 by three he should not be sitting on the Opposition Front Bench. According to the Opposition's amendment, the Labour Party's policy is to cancel Trident, to remove all nuclear bases from the United Kingdom and not to allow nuclear depth charges anywhere near the country, to do away with battlefield nuclear weapons and do something about the Merchant Navy.

I did not hear the right hon. Gentleman say one word about our conventional forces. Does he think they are the right size, too big or too small? He should have spoken about that. No doubt when the debate is wound up by one of his hon. Friends we shall be let into the secret. That is all we know, at the moment, about Labour party policy —cancel Trident, get rid of nuclear bases, and hope for the best. At least the amendment which has been tabled by the leader of the SDP, the right hon. Member for Plymouth, Devonport (Dr. Owen) does not go quite as far as that. He also wants to cancel Trident but he wants to strengthen Britain's conventional defence. I am sure that he will tell us, if he is called, by how much he thinks it is necessary to strengthen Britain's conventional defence to provide the same level of deterrence that is provided by Trident. How many divisions, how many ships and how many aircraft will that involve, and what will be the cost? If that is his proposition, he owes it to the House to elaborate it, and I hope and believe that he will.

My right hon. Friend spoke about the comments made in the report by the Select Committee, but before I refer to those comments I want to speak about something that was not in our report. Nowhere in our report do we quarrel with the Government's assessment of the level of defence that it is necessary for us in the West to maintain.

Annex A of the defence White Paper, which I do not think the right hon. Member for Llanelli has read, sets out starkly the balance of forces between the Warsaw pact and NATO. In every area except one, the Warsaw pact

[Sir Humphrey Atkins]

countries have a superiority over NATO. In nuclear terms, they have more strategic systems, more intermediate systems and more short-range systems. In conventional terms they have more soldiers, twice as many tanks, twice as many aircraft and more than twice as much artillery. At sea, they have twice as many submarines. In surface warships in the north and in maritime aircraft, NATO enjoys, for the time being, a marginal superiority. The Warsaw pact has total superiority in chemical weapons. It has hundreds of thousands of tonnes and we have none.

If ever there was an example of the futility of unilateral disarmament gestures, this is it. Nearly 30 years ago—I think it was in 1957 — Britain decided not to use chemical weapons and disposed of all that it had. We threw them into the Atlantic. The only response was the continuation of the Russian research, development and production of these fearful weapons, so that we are now at a total disadvantage. If anyone seriously believes that gestures of unilateral disarmament work, I can only say that he needs his head examined. History shows that such gestures do not work.

Mr. Willie W. Hamilton (Fife, Central): Is the right hon. Gentleman in favour of manufacturing the same gases and chemical warfare weapons that the Russians possess?

Sir Humphrey Atkins: No, Sir. I am in favour of preventing them from being used. The West has prevented those or any other weapons being used against it for 40 years by employing the nuclear deterrent. The idea that, with a grand gesture, one can throw away a weapon and expect a potential enemy to do the same has no basis in history. We all wish that this state of affairs did not exist, but it does. It is the height of irresponsibility to seek to diminish the level of defences that is set out in the White Paper.

The second point I want to make, which is not spelt out in our report, is that we recognise and applaud the efforts that the Secretary of State is making to improve efficiency and to obtain better value for money. He mentioned a number of them and they are noted in our report.

The transfer of manpower from tail to teeth is still proceeding. The contracting out of functions has produced some savings and will produce more. The increasing number of purchases of equipment by competitive tendering, which my right hon. Friend spoke of, is increasing, although I must confess to a doubt as to what level that has reached. The White Paper speaks of something like 60 per cent. but the only figures I can find suggest a level of about 38 per cent. No doubt that is something with which my hon. Friend the Under-Secretary of State for Defence Procurement can deal later. There are prospects of savings by international collaboration and no doubt the reorganisation of the Ministry of Defence will produce some savings too. I accept that it is too early to judge the extent of the savings that will flow from these efforts but they could and should produce useful ones, thereby enabling us to have more defence for the same money, which is what we all want.

The Government told us in the 1984 public expenditure White Paper that after the current year, no extra money will be available for defence. That was the starting point of the Select Committee's inquiry. The Committee took the Government's statement to mean that there would be no growth in real terms or, to put it another way, that there would be level funding in real terms. That leaves aside Falklands-related expenditure, which has always been additional and which will be declining. The Select Committee took evidence to try to determine what the Government's policy would mean in terms of trying to defend ourselves. As my right hon. Friend the Secretary of State observed, pounds do not defend us; we are defended by the weapons and the manpower that the pounds buy.

The Committee discovered, as it has reported and as everyone knows, that level funding in real terms does not mean what many take it to mean. We were given three reasons for this, and they were not those elaborated by the right hon. Member for Llanelli. First, the cash which is available each year is adjusted from year to year by means of the GDP deflator. That involves a guess or an estimate of or an allowance for increases in the retail price index. I am sure that in theory that mechanism can produce the same level of funding.

However, what the right hon. Member for Llanelli may have missed, but what my right hon. Friend knows only too well and has spoken about, is that the prices of tanks and guns increase more quickly than those of motor cars and cookers. I do not know why that is so, but my right hon. Friend has given some reasons why this happens. Over the past 10 years, the increase in price over the RPI, which is called the relative price effect, has been nearly 2 per cent. That involves a great deal of money and the difference that it makes in any year is over £500 million. My right hon. Friend spoke about the Committee's figures. They are not the Committee's figures. They are his. Every figure that the Committee quoted was given to it in evidence by him or his officials. The Committee has merely written them down and added them up.

The second reason, of course, is the fact that the defence budget is sensitive to the exchange rate. The document before us today assumes a rate of $1·38 to the pound. We are all aware that the rate today is about $1·26. That makes a difference of £180 million.

The third reason is the cash allowance for pay. That is at a figure of 3 per cent. per annum. The Committee was told in evidence that every 1 per cent. above that costs £31 million at 1983-84 prices. Last week's events precisely illustrate our anxieties. My right hon. Friend the Prime Minister announced last Thursday that as from 1 April this year service pay would be increased—as recommended by the Armed Forces Pay Review Body—and would add 7·3 per cent. to the pay bill. No one grudges the services a penny of that increase, but where will the money come from? The Prime Minister gave the answer. She said:

"The additional costs . . . will be offset by economies or reductions elsewhere in the defence programme."—[*Official Report*, 6 June 1985; Vol. 80, c. *194*.]

At 1983-84 prices, the additional costs over the 3 per cent. allowed come to £133 million.

Perhaps I might remind the House——

Mr. Douglas: One type 23 frigate.

Sir Humphrey Atkins: I was going to remind the House that it is rather more than the cost of a type 23, which is given as £110 million, or, if the House prefers, it is slightly more than the cost of the 130 Tucano trainers that the Royal Air Force is buying from Short Bros Ltd.

Dr. Hampson: My right hon. Friend raised an interesting point yesterday in his questioning of Mr.

Levene. It is a pity that the point was not pursued. At the end of five years, Mr. Levene was hoping to have a 10 per cent. reduction in his budget which, on a cumulative basis, means savings of billions of pounds on procurement at a time when he is running a budget of £8 billion to £9 billion.

Sir Humphrey Atkins: My hon. Friend may have been looking over my shoulder when I was making my notes. I wonder whether he will allow me to come to that point in a moment.

Mr. Denzil Davies: Was the figure of £960 million, which the Select Committee used as a deficit figure, arrived at on the basis of the Treasury's GDP deflator assumptions on inflation or on higher figures? Did the Committee assume that there will be no slippage in terms of general inflation?

Sir Humphrey Atkins: I hope that the right hon. Gentleman will do me the courtesy of reading the document. The figure is not £960 million; it is £970 million. He will find on page 32 how we arrived at that calculation. It is not difficult.

The Committee used the figures that it obtained from the Treasury with the assumptions that the Committee made about the GDP deflator. It would be much quicker if the right hon. Gentleman would do me that courtesy. I mentioned the frigate. The Committee expressed anxiety about the rate of frigate ordering. My right hon. Friend mentioned it. It gave us enormous satisfaction last year when he announced that he was reversing the policy of his predecessor, Sir John Nott, and was going to keep 50 frigates in the active fleet. The trouble is that many of them are becoming old.

I understand that frigates last 25 years. By 1991, 18 of our fleet of destroyers and frigates will be that old. There are 11 on order at the moment. To keep up our numbers, a further seven must be ordered, not before 1991 but in time to be in service by 1991. I think that I am right in saying—I am open to correction—that they take the best part of five years from ordering to joining the fleet. That means that they must be ordered by the end of next year if my right hon. Friend is to live up to his undertaking. He may say that he only needs to order five because we have 52 and he undertook to keep 50. That is a point that I should like my hon. Friend the Minister to elaborate a little further when he replies, because that was my right hon. Friend's undertaking and we are anxious that it is apparently not being met at the moment. We should like to hear that it is.

I should like to return to the subject of level funding, which we are asked to accept and which turns out to be a diminution in the money available, as best we can calculate, of £970 million—6·1 per cent. of the total.

There seem to be three ways in which that gap can be covered. The first is a further reduction in the number of civilians employed. My right hon. Friend has announced his target of reducing the number of civilians employed by a further 8,000 by 1988. That will save him something under £100 million. The second is a further contracting out. I do not know how much of that can be done. It may be a little but I question whether those two together come to more than £200 million. We therefore fall back on competition.

My right hon. Friend recently appointed Mr. Peter Levene as the chief of defence procurement. He gave evidence to the Committee yesterday afternoon in public—anyone could have come to listen and some people did—and he was asked how much he could save by introducing policies of futher competition. Naturally, he could not give a figure as he had not been in position long enough to make such a projection.

If about another £800 million in savings are needed, that is almost 10 per cent. of the procurement budget. My right hon. Friend will agree that not all the procurement budget is susceptible to competition, although he is an enthusiastic supporter of competition. This is an enormous saving, and my right hon. Friend believes he can make it. I hope that he can, but I hope he realises the considerable task that he has set Mr. Levene.

Theoretically, it would be possible to save money on manpower. However, the Committee took evidence from many people, including the principal military adviser to the Government, the chief of the defence staff, Field-Marshal Sir Edwin Bramall, who told us several times that he could see no room for further reductions in manpower. If the Government accept the field-marshal's advice, all the saving must come from equipment. As I have said, my right hon. Friend appeared confident that he could make this saving, and I only hope he can.

Finally, little has been said in the debate or in the White Paper about service men and women. There are not many of them, but they carry a tremendous burden. This country is different from others. The Committee members were recently in Norway and we visited neutral Sweden. Both those countries have what they call the concept of total defence. That means that the defence of the country is everyone's business. They have compulsory national service, but everyone, whether in the services or not, regards it as their business to lend a hand with defence in the military sector or, when they grow older, in the civil defence sector.

That has never been the case in this country. Defence in this country has always been the business of the few people we hire to carry it out for us—the services. We have fine services and we must make sure that they get the best equipment and training, proper pay and all the support that we can give them. Our services are small, but I often recall the story, which may be apocryphal, of two naval ships passing in mid-Atlantic. The American ship signalled to the British ship, "Greetings from the largest navy in the world." The reply came back, almost at once, "Greetings from the best."

We have the best Navy and the best forces, and it would be wrong not to pay tribute to them.

5.40 pm

Dr. David Owen (Plymouth, Devonport): I have no difficulty joining the right hon. Member for Spelthorne (Sir H. Atkins) in paying tribute to all three of our armed services. The quality of our service men and women is exceptional.

We can all be pleased that since 1977 we have fulfilled our obligations to improve the conventional forces of NATO better than any other country in western Europe. However, the debate focuses on the main issue facing this country, which is what is to happen to our defence spending after 1986.

The Select Committee will have done a great service if it has awoken the House and the country to the reality that stares us in the face. As the right hon. Member for Spelthorne said, decisions have been announced in public

[Dr. David Owen]

expenditure White Papers for the past two years and some of us have been trying to draw attention to the problems that will face this country in a year's time.

The House now has the opportunity to face the reality. The Select Committee's report is devastating. Let us be under no illusions and let us have no more talk about level or stable funding. It is clear that from 1986 onwards the defence budget will be falling inexorably and remorselessly.

If we pursue the Trident nuclear option, the cuts in our conventional defence spending will be even greater. The Secretary of State inherited the Trident decision, but he must realise that if the Government or the country wish to pursue that decision—I believe that it was a mistake and I have opposed it since 1977—they must find the extra resources to maintain our conventional defence forces. We cannot duck that choice.

The Select Committee concludes that planned defence commitments cannot be met within planned levels of spending. It says that beyond 1985-86, the defence budget will fall in real terms by 0·5 per cent. in 1986-87 and 0·7 per cent. in 1987-88, on a Falklands-exclusive basis. The Committee believes that the ending of the 3 per cent. real increase in spending will lead to

"cancellations, slowing-down of acquisitions and the running on of equipment beyond its economic life span."

The report concludes that better management and savings through efficiency reforms will not be sufficient to avoid a decline in "overall capability" and the possible

"elimination of a major commitment."

The report comes before the House with all-party support and, by any standards, it is a devastating criticism. The Secretary of State should have devoted much more of his speech to grappling with the issues. The report highlights a major gap between what is planned for defence spending and what the Government are making available. It estimates that the real reduction in defence spending by 1987-88 will be £970 million, compared with the 1985-86 budget—a cut of 6·1 per cent. on a Falklands-exclusive basis. That is made up of a sterling-dollar depreciation of 2 per cent., pay awards exceeding the Government's target by 1 per cent. and a higher rate of inflation in defence equipment costs—the relative price effect—of 3·1 per cent.

The right hon. Member for Spelthorne was right to remind us that the report is, if anything, unduly optimistic, despite presenting the figures that I have given as a worst-case scenario. We heard last week of the armed forces pay award of 7·3 per cent., costing £200 million per annum and exceeding by 4 per cent. the Government's target; the Select Committee report assumes only a 2 per cent. overshoot.

The Select Committee report also assumes a sterling-dollar exchange rate of $1·26 and the rate last week fluctuated between $1·24 and $1·26. I agree that it is almost impossible to predict exchange rates, but the figure in the Select Committee's report was a fairly generous assumption.

The report assumes increases in defence equipment costs of 3·1 per cent. above inflation, but many senior and serious figures who have examined the escalation of defence expenditure pitch the figure much higher. One does not have to go all the way with David Greenwood —whose unit in Aberdeen has done some good work—who claims that the figure should be 6 per cent., but I am sure that 3·1 per cent. is an underestimate.

The Secretary of State is right to claim some credit for his drive for cost-efficiency savings. We all recognise that a long overdue extra effort has been put in into that area. I have been violently critical of the way in which Mr. Levene was appointed. It was a disgrace to the Civil Service and to the House, but he is there and we had better accept him. We must hope that he can produce savings to justify his salary and the manner in which he was appointed.

Let us examine where our existing spending on conventional defence has brought us, even with the extra money that has been put in over the past 10 years. I do not agree with all the strictures in a recent article in *The Economist*, but it is worth considering how a fairly objective source views our defence effort. It said:

"The . . . Army is already the most poorly equipped of all the main armies on NATO's Central Front. It has less heavy artillery than the Dutch; fewer tanks than the French, the West Germans or the Americans (in Europe); and a lop-sided anti-aircraft system based entirely on missiles—no guns at all. It needs more equipment than is now in its long-term plans—not less."

Many people will be arguing for a replacement for our fighter aircraft, but it is not even in the long term costings. That is the undisclosed problem. All the senior service men know that they cannot have, on current plans, the fighter aircraft. The Secretary of State and his officials are right to negotiate for a European replacement, but the aircraft is not in the long-term costings. If that is to go in, what will come out?

The Secretary of State has refused to answer questions about the replacement for Fearless and Intrepid. He seemed to think that the Royal Marines were putting undue pressures on him, but many of us saw in 1980 and 1981 that the Royal Marines were nearly taken out during the Nott review and we are not prepared to sit back and say nothing about our fear that a squeeze will be put on an element of our armed forces which often does not have strong support in the Ministry of Defence.

We have the right to say that we believe that the amphibious wing is an essential element of our defence forces. We want reassurance that there will be a replacement for Fearless and Intrepid. Perhaps it will have to be a cheaper ship, because it is hard to see how we can replace those ships with another of the same type.

The *Herald Tribune*, which is usually reliable, carried a report of the recent meeting of NATO's Defence Ministers. It said:

"The ministers also reaffirmed, as expected, their long-standing goal of increasing each member country's military spending by at least 3 per cent. a year after inflation."

I could not believe that, so I got hold of a copy of the communiqué of the meeting of Ministers. The Spanish Minister put in a reservation and I was sure that our Secretary of State must have done so. Not a bit of it. Indeed, the right hon. Gentleman has the brass neck to come to the House and tell us that he still reaffirms that commitment.

The resource guidance in the communiqué says:

"Notwithstanding the above efforts to improve the output from existing expenditures it will be necessary to increase the allocation of resources to defence in real terms with most nations achieving rates of real increase higher than those in the past . . . The 3 per cent. formula is confirmed as a general guide."

It is not fair, reasonable or honest for the Secretary of State to be a signatory to that communiqué without making the facts clear to his allies and friends.

Last Monday, when I visited Congress, I asked some of the senior people there whether they knew what was happening to the British defence budget. They had not a clue. They had not absorbed what would happen between 1986 and 1988. *[Interruption.]* I talked to senior people there. They all paid tribute to the fact that during the past 10 years Britain had been the best contributor to NATO's defence budget. Now there will be absolute reductions.

Mr. Michael Mates (Hampshire, East) *rose——*

Dr. Owen: The hon. Gentleman can make his speech in his own way, if he has different information on that.

Mr. Mates: I do not know who the right hon. Gentleman saw in Washington, but two months ago our Committee was there and we met the Armed Services Committee of the Senate and the House, which were fully aware of what we were about to do. Indeed, we discussed the fact that the Americans were about to have to do the same.

Dr. Owen: If the Americans make defence cuts as deep as those we are making in Europe, we in Europe shall have to face serious effects. I repeat my remark that the senior people of Congress to whom I have spoken have not faced up to the reality of how deep the cuts will be. When they do, there will be a serious backlash. Indeed, it is only recently that this House has begun to face up to that.

This is the last year in which we can make a decision not to go ahead with Trident without effectively pouring money down the drain. The Government must reassess the Trident decision. *The Economist* stated about the cancellation of Trident:

"If the government fails to do it, it will be condemning the conventional forces to damaging cuts in both numbers and effectiveness. There is no sensible alternative to solid conventional forces, whereas there are sensible-if-second-best alternatives to the Trident nuclear deterrent."

I have never denied that if one compares Trident with other systems in terms of sophistication, capacity to penetrate anti-ballistic missile defences, and having sea room for submarines, Trident is the best system available. There is no question about that. I am extremely glad that the United States has the Trident submarine missile system, as we all should be.

The United Kingdom however, will pay a heavy price if we pursue the Trident system. We must face up to that for many reasons.

Dr. Hampson: What about the *The Sunday Times?*

Dr. Owen: *The Sunday Times* can have its views. All quotes are selective, and the hon. Gentleman must know that. We can produce many different newspapers and, indeed, we could start quoting from the *Morning Star*, if we really wanted to.

The House must assess the best balance of defence spending for a country which faces serious economic difficulties, and which is no longer a super-power. Many of us see a value in retaining a nuclear deterrent, if we can possibly afford it, have supported and will continue to support Polaris, but are prepared to admit that Trident is not a natural follow-on from Polaris. It represents a substantial increase in cost, megatonnage and warhead numbers.

There are other options, which must be studied. There is the straight option of replacing Polaris. Although that is difficult, British Aerospace believes that it could do that. *[Interruption.]* The hon. Member for Woking (Mr. Onslow) can make his own speech. I would not choose that Polaris option. We must discuss the matter with the French. It is outrageous that we in western Europe can pursue western European defence in the Western European Union in complete isolation. The present dialogue between Germany and France is more intimate, with far greater exchange of information and even strategic thinking, than that between Britain and France. We should certainly study the M5 missile, which the French will order to replace their M4 missile. I doubt whether there will be much difference in cost. The United States navy is already using another option, which is to have cruise missiles and to put them on to submarines. Further options are land-based or air-launched cruise missiles. They are all serious options.

Mr. Cranley Onslow (Woking): No.

Dr. Owen: The hon. Gentleman can shake his head and disagree, but he was party to the original decisions. Many hon. Members and people in the armed services, such as admirals, generals and air marshals, believe that it is time that the issue was reassessed because the price is so formidable.

I fear that if we cling to the belief that it is Trident or no other nuclear deterrent in the United Kingdom, we may end up with nothing. If we want to be reminded of that, we need only read the motion in the name of the leader of the Labour party. I do not find it difficult to understand why he signed the motion, but I have difficulty in understanding why the right hon. Member for Birmingham Sparkbrook (Mr. Hattersley) signed it. After the election he seemed to be aware that there were reasons for the Labour party's defeat. In an article in *The Times* in July 1983 he wrote:

"the notion that we might give up our nuclear protection if others did not do the same was overwhelmingly rejected.

Opposition to our policy was intensified by the confusion that surrounded our proposals. We said that NATO remained our protection. But we refused to accept our NATO obligations."

In July 1984 an article in *The Times* stated that when the right hon. Gentleman commented on the new Labour Party defence paper he said:

"for Britain to play a non-nuclear role and remain a proper member of NATO, as provided for in Labour's defence policy, contained 'a certain ambiguity which we have got to resolve'."

It appears that he has resolved that ambiguity by giving up. He has put his name to a resolution that we should remove all nuclear bases from the United Kingdom.

The devastating consequences of that need to be faced. It is reasonable and understandable to argue, as many people will argue, that we cannot afford to remain a nuclear weapon state. But to argue that NATO should not retain nuclear weapons and, as a principal ally of the United States, to argue that we should not facilitate the United States remaining a nuclear weapon state, and that we should back away from the nuclear deterrence of NATO is an outrage.

When the right hon. Member for Llanelli (Mr. Davies) who tried to weave his way through an impossible task, was asked about nuclear depth charges, he was completely floored. I am talking not only about United States nuclear depth charges, but British ones. Are we not to allow the Navy to use British nuclear depth charges, which is about

[Dr. Owen]

the only weapon system capable of dealing with deep-diving Soviet nuclear submarines? They are one of the most serious threats to merchant shipping in a war. The right hon. Gentleman argues that a war in Europe will continue for a longer time than was thought. If that is so, we must ensure tht we have stores and conventional back-up to sustain Europe. He was right to point out that, if that happens, our Navy will need not only ships, but the weapon systems to deal with the Soviet Union and its ever-increasing weaponry sophistication. Does the right hon. Gentleman genuinely believe that the Navy should not be allowed to use nuclear depth charges?

There is the extraordinary question about battlefield nuclear weapons. I have long argued against them, and that we should withdraw them from within 150 km of the East-West frontier. That should be done as a British and NATO decision. Britain should argue for it, but it should be a collective decision within NATO. One can afford to take battlefield nuclear weapons out if one has intermediate missiles in Europe. We must face that. We cannot possibly withdraw battlefield nuclear weapons from a 150 km zone and have no United States based nuclear deterrents in Europe.

We should recognise that, having taken the NATO modernisation decision, it allows us to withdraw battlefield nuclear weapons. The criticism of NATO strategy is that although it almost accepts the worry that many of us have about the early use of nuclear weapons and the problem of "use or lose" by having nuclear weapons close to what could be an accidental border incident, we have the capacity with cruise missiles to remove battlefield weapons. As the House knows, it should be possible to take out Pershing II as part of negotiations on our intermediate range nuclear forces. It was always part of the modernisation decision that it was neccessary not merely because of the SS20, but for a United States presence in Europe with nuclear weapons.

Thus it was always slightly false to say that, if the Soviets withdrew all their SS20s, we would withdraw all our cruise and Pershings. In the arms control negotiations it would be much better to return to the "walk in the woods" formula.

The Secretary of State was right to praise President Reagan's recent decision to continue SALT II. If President Reagan is going for a serious arms control agreement, he will have to take several decisions that Mr. Weinberger and his hitherto Right-wing Republican friends will not like. It was important that, in keeping to the numerical limits of SALT, President Reagan not only made that decision, but said the he was prepared to dismantle the Poseidon submarine. The negotiations in Geneva will be very difficult, and every pressure will be put on the western members of Nato in order to split them apart. But as long as the United States is negotiating seriously, and is not breaking the SALT II treaty limits, and as long as the President—who never supported that treaty anyway—is within those limits, we are in the serious ball park of proper negotiations. Of course, the Soviet Union will use propaganda. In many senses, the United States does the same — *[Interruption.]* Of course it does, and everybody knows it. There is a propaganda battle going on for public opinion on both sides.

But the serious negotiations will be those that we do not hear about. They will be back-channel negotiations, and they will not come until the middle of next year. We probably will not hear much serious output until the end of next year. But it is vital that we should keep to the strategy of negotiating for deep cuts, and that the SDI should be seen as something that is done for research and development way into the future. The United States and the Soviet Union have been carrying out such research for more than 15 years, but because it was hyped up by the so-called star wars speech, everything has got out of proportion.

It is perfectly clear to most people that the deep cuts negotiating strategy is still viable and credible, and an essential step in creating confidence in the United States that there could never be any Soviet first strike potential. It is very much in NATO's interest that we should hold the United States to that negotiating strategy. Moreover, it is very much in the interests of western Europe that we should not be seduced into supporting the Reagan concept of the SDI—the impervious defence—by being sucked into the research and development. We shall not get any of the serious research and development anyway, as most of it will be highly classified and kept in the United States.

It was a good decision to support the EUREKA programme, which is a predominantly civilian programme. It was also a good decision to invest in science and technology that is co-ordinated throughout western Europe. Indeed, the Secretary of State rightly attaches great importance to that. Hon. Members would be most unwise to feel that we were strengthening the Alliance by pursuing and supporting too enthusiastically a mistaken policy initiative in terms of the SDI. Let us have research and development by all means — *[Interruption.]* I believe that one should not, under any circumstances, deploy. Hopefully, we could give some confidence to the Soviet Union by amending the ABM treaty so that there can be no deployment unless there has been at least a four to five year warning. Under the present ABM treaty, one is perfectly entitled to carry out research and development, but one is not allowed to deploy. However, the problem is that only six months' notice has to be given. If we could suggest an amendent to that treaty, it would be the best way of ensuring that the effective research and development carried out by the United States and the Soviet Union could go ahead with no risk of deployment for at least four to five years. That would be a sensible strategy. As a nuclear weapons state, we have the right to challenge, on occasion, the United States—our friend and ally.

Britain should also be pursuing more vigorously a comprehensive test ban. That is the one negotiation in which Britain is a party to as a direct partner with the United States and the Soviet Union. It was wrong to decide to withdraw and to postpone those negotiations, and the sooner that we get back on track, the sooner we are likely to see some discipline in the non-proliferation treaty. After all, we face the real risk of Pakistan making a nuclear explosion within the next year or so. Thus, a comprehensive test ban should be another of our priorities.

We have much more chance of our voice being heard in the United States if we pay our proper share of the conventional defence of western Europe On present plans, the United States will be extremely worried about our defence policy and about the cutback in our conventional forces.

6.5 pm

Sir Patrick Wall (Beverley): I hope that the right hon. Member for Plymouth, Devonport (Dr. Owen) will forgive me for not pursuing his argument about the financing of our defence policy. However, I agree with him that it is good that that matter has now been thoroughly ventilated in the House. The argument will obviously continue when we come down to brass tacks in the next few years. I also of course agree with what he said about amphibious warfare ships.

My right hon. Friend the Secretary of State made an excellent speech, in which he dealt with the strategic position in the world today. With the advent of Mr. Gorbachev, a new situation now exists between East and West. Mr. Gorbachev is young and intelligent, but he is still a product of the old regime and was put into power by it. We must remember that the attitude displayed by Mr. Gorbachev, the Politburo and the marshals is becoming more and more bellicose. The situation will worsen unless Mr. Gorbachev is allowed to direct money away from arms and towards improving agriculture and the Soviet Union's economy.

We should appreciate that the leadership of the USSR is becoming more aggresive. One need only consider Russia's 25,000-tonne Typhoon submarines, its continual deployment of SS20s, the armoured helicopter regiments or the 30,0000 men in the Spetanaz force who are ready to be dropped from Aeroflot aeroplanes in order to assasinate military and political figures in NATO countries. Furthermore, the Soviet Union's military exercises always end in nuclear war or chemical warfare. As has been said, we cannot reply to the latter. What will happen if the USSR's economy deteriorates even further and if the unrest in the satelite countries and in the component parts of the USSR becomes more violent? I suggest that Mr. Gorbachev may well then have to choose between aggression or disintegration.

The European Community is being undermined in every way by the Soviet Union—by spies and agents provocateurs, through the use of organisations such as CND and even by the use of some trade unions. I believe that there will soon be an effort to woo the Federal Republic of Germany away from NATO. Even more importantly, there will be continued efforts to split NATO America from NATO Europe by means of the arms control talks at Geneva. I suggest that that will be done by the Soviets making minor concessions on IMF, which Europe would obviously like, provided that the United States agrees not to deploy its ABM system when its research is completed.

Even Opposition Members must realise that the United States is the key to European defence. The anti-American remarks of some Opposition Members only provoke those who believe in fortress America. I shall tell the House of some remarks made at a recent Pacific caucus in Hawaii. We were told that 60 per cent. of American people do not care what happens outside the United States and that because of continual criticism from abroad, they are turning more and more inwards. We were also told that the United States does 25 per cent. more trade with the Pacific basin than with Europe. Furthermore, it was said that with a major Soviet build-up in the Pacific, the NATO area could no longer have priority. It was also said that the United States had created 14 million more jobs in the same time as Europe had lost 4 million jobs. We were told that the EEC was frozen into rigidity and was squabbling over minor matters. Finally, we were told once again that Europe must do more for its own defence. We were reminded that the Nunn-Roth amendment was lost by only eight votes.

We must remember that we depend on the United States. If the Opposition policy set out in the amendment were adhered to, I fear that we would have little support from the United States, and we should be out of NATO. We depend on the United States because today the United States ICBMs are obsolete compared with those of the Soviet Union. Therefore, we have MX, Midgetman and the Trident D5. As the right hon. Member for Devonport has said, the latter is probably the best weapon in the world. Tactically, we rely on the United States for Pershing II, ground-launched cruise missiles and cruise missiles in submarines and surface ships. Conventionally, we shall rely on new detection, ranging and weapons systems which will, probably in the next decade, render tactical nuclear weapons obsolete and unnecessary.

There is a weakness. We all know that USSR now has sufficient ICBMs and submarine-launched ballistic missiles for a first strike. What is not realised is that they have been spending the equivalent of $2 billion a year on civil defence. That is apart from anything that they have spent on anti-ballistic missile equipment or research. They have had an ABM system for over 10 years, and Marshal Sokolov has said publicly that the USSR has been conducting space research for quite a long time, which is why it will eventually give way on SDI research, but will do everything that it can to prevent deployment of any successful anti-ballistic missile system produced by the Americans.

This means that, in certain circumstances, the Soviets might risk a first strike, believing that they can absorb the American second strike because of their civil defence expenditure and the excellent provisions that they have for civil defence. As most of their launchers are re-usable, they could then make a third strike. This is why they are opposed to the SDI and an anti-ballistic missile system. No one would launch a nuclear attack in the knowledge that only a small percentage of their missiles would get through. That is only common sense.

If the Americans can put men on the moon, they will eventually find the answer to the ballistic missile. After all, this will protect Europe as well as America. If an ICBM is fired from central Russia, no one knows whether it will be directed at Washington, London or Paris, so if it is brought down at the boost stage, which is the easiest stage to attack it, both Europe and the United States will be protected from that missile.

The term "star wars" has been bandied about the House already, but this should refer to ASATS—anti-satellite satellites. SDI is quite a different matter. In ASATS, the Soviets are well ahead of the West, but SDI is a non-nuclear defence, which I should have thought would logically be supported by the Opposition and the CND if it were not for their anti-Americanism. It is neither destabilising nor decoupling. I agree with the right hon. Member for Devonport that whatever happens we must join in at the research and development stage.

A vast new technology will be provided from this research, continuing for the next few years. If Europe is not in it, it will become second class in all these important phases of advanced technology. We now have a real chance for co-operation because we can offer something.

[Sir Patrick Wall]

Europe is ahead in electro-optics and in some aspects of radar and particle beams. We can offer something in technological exchange with the United States. We must seize this opportunity.

I turn to economic strategy and I shall repeat to the House some of the words that I used in my presidential speech to the North Atlantic Assembly:

"We believe that it is increasingly evident that Alliance security is composed of three independent parts — political, military and economic. We have managed a broad consensus on the first two, but we have not even begun to approach consensus on economic strategy. NATO must have an effective resources strategy in spite of individual nationalism."

For 10 years, a sub-committee of the North Atlantic Assembly, under the chairmanship of the hon. Member for Sheffield, Attercliffe (Mr. Duffy), has been meeting the armed services committee of the House and the Senate in Washington. We have made some progress, but once the military industrial pressures are exerted on the American Government, progress becomes slower and slower.

I will give some examples of lack of Alliance economic strategy. First, we sell the Hawk to the United States for naval training but we buy Brazilian aircraft for RAF training and so lose major European orders for weapons systems. Secondly, we insist on building Nimrod AEW instead of participating in the NATO AWACS project, thereby losing millions of pounds. Thirdly, we go on talking about the European fighter aircraft, knowing that the French will sabotage the programme unless they get a major part in it. This has already happened with the Franco-German helicopters which the Germans will now get only in the mid-1990s, when they expected to get them in about three years.

NATO now has four main battle tanks—Challenger, Abrams, the MX and the Leopard 2. Any commander of NATO will say that he would take any one of the tanks, but only one and not four, with different weapon systems and different ammunition and all the supply difficulties that that will necessitate in time of war.

I will give two more examples. We have the best lightweight torpedo in the world in Sting Ray, which the United States navy will not touch. America is inventing its own advanced lightweight torpedo, which will not be ready until the mid-1990s. Meanwhile, they have obsolete lightweight, air-launched torpedoes for the rest of this decade.

Furthermore, I am told that our latest aircraft, the Tornado, cannot re-arm on German airfields, and that the German Tornados cannot re-arm on British airfields. I hope that this is not true, and I hope that this point will be dealt with in the winding-up speech.

No one can deny that an Alliance economic strategy is essential. Industry is prepared to co-operate, but European Governments—I am not talking about our Government —put nationalism first and may well lose world war 3 should it ever come about. At present, they are losing billions of pounds in duplicating research and development. As the Select Committee on Defence has pointed out, "structural disarmament" will play havoc with our forces in the next few years. All this is in spite of the fact that the NATO nations have a gross domestic product two and a half times that of the Warsaw pact. My right hon. Friend the Secretary of State has already taken a number of steps in the right direction in trying to get an Alliance economic strategy, but I think that he will agree that the Alliance has still a long way to go.

On the maritime strategy, I am glad that the Government are maintaining their promise to continue a force of 50 frigates and destroyers, but that means that, with no reserves, only about 42 to 45 will be operational at any one time. As has been said, to keep a total of 50, three type 23s must be ordered each year. My right hon. Friend the Secretary of State has confirmed that this will be done, but when will it start? That is the key to the problem. We have not yet ordered the first of the type 23s. When will that be? Some say that it will be two years hence, and if that happens we cannot maintain the promised frigate force.

I have another question that would probably be better asked tomorrow. Why are we not ordering more Goalkeepers instead of the Vulcan Phalanx, particularly for the batch III type 42 destroyers? They have a greater range and are more effective than two Vulcan Phalanxes. I should like to see them in our aircraft carriers. As the Secretary of State will know, I have been pressing for years for Seawolf. I am very pleased that they will be in the type 23s, but I believe that our aircraft carriers still lack proper protection, and I should like to see Seawolf mounted on sponsons in our aircraft carriers.

Amphibious warfare ships had almost been phased out, and then came the Falklands campaign. Without Fearless and Intrepid, the Falklands campaign could not have been mounted. Those who are interested in amphibious warfare and know something about it have a right to be heard in this House. A decision on their replacement should be made this year. If a decision on replacing Fearless and Intrepid is not made this year, my fear is that there will be further procrastination. If the fears of hon. Members on each side of the House that there is to be retrenchment in defence expenditure are well-founded, we shall never get those replacement vessels, and that will be disastrous for maritime nations such as Britain. It will also be disastrous for NATO policy on the northern flank.

Some years ago, in answer to a question in this House, I was told that there are only three hards in northern Norway where roll-on, roll-off ferries can land, so we have to have amphibious ships to land Royal Marines or soldiers on the northern flank. I hope that my right hon. Friend will once again study the lessons of the 1940 conflict in that part of the world.

I suggest that the next five years will be dangerous years. Defence should not be cut but expanded; otherwise we and our children will suffer the consequences. Should we ever have the misfortune to have a Socialist Government again, it is clear from their amendment today that we would be out of NATO and well on the way to becoming a Soviet satellite.

6.21 pm

Mr. John Silkin (Lewisham, Deptford): In one respect the House owes a debt to the hon. Member for Beverley (Sir P. Wall). Despite my disagreement with his analysis, his speech, like the admirable speech of my right hon. Friend the Member for Llanelli (Mr. Davies), attempted to give us an overall strategic view, and the first day of the White Paper debate should in particular concentrate much more on that aspect.

I remember the Secretary of State, when I had the pleasure of shadowing him a little while ago, promising

that he would give us this year an overall philosophical commentary; he was not prepared to do it last year. I found it notably lacking in his speech today.

I shall start not with the future but with the past. Five weeks ago today we were celebrating the 40th anniversary of VE day, and inevitably those of us who took part in the second world war felt the stir of old memories. I remember that on VE day, when the Japanese launched a particularly violent kamikaze attack upon our ships in the Pacific war, my leading telegraphist, who had been listening to the BBC, turned to me and said, "Do you know, sir, it's a public holiday in England."

It is all very well to boast, as the defence White Paper does, that we have had over 40 years of peace in Europe. That, in a sense, is Europe's public holiday, but in a very real sense our public holiday has been paid for by turmoil in other continents.

In the White Paper, the first section, headed "Forty Years of Peace", says about the second world war:

"it had begun in Europe but engulfed the world."

Let us get our history right. The second world war effectively started in Asia, when the Japanese invaded Manchuria in 1932, and it spread to Africa when Ethiopia was invaded by Mussolini in 1935. The European engagement was the sequel to those acts of warfare in other parts of the world. If we look at things from that perspective, the boast of 40 years' peace becomes startlingly irrelevant.

Since the second world war there have been 140 armed conflicts in other continents, all of them continents in which the Third world dominates, and it does nobody any good to boast of our public holiday while the poor and the weak of other nations are paying the price for our complacency. Taken at any level, surrogate wars fought by the clients of the super-powers in the poorer parts of the world may yet escalate into life and death struggles by Europeans, just as the invasion of Manchuria by the Japanese empire led inexorably to the domination and destruction of Europe itself.

The peace of Europe has to rest on something much more than the relative strength of NATO or the Warsaw pact. Over 50 years ago, Winston Churchill warned:

"A United States of Europe might revive on a scale more terrible the rivalries from which we have suffered so cruelly in our own age. A day of fate and doom for men will dawn if ever the old quarrels of countries are superseded by the strife of continents."

Churchill's day of fate and doom has already arrived. It is so much part of our lives that the military strategists see it as a safe and stable system. It is not a healthy system; it is Orwell's 1984 in embryo. But the trend continues, assisted as it is by high technology. As the rivalries between the super-powers and their super-blocs become more intense, so too does the spread of the weapons of high technology to the Third world. It is not the technology of peace, of peaceful industrialisation, but the technology of warfare. In that, the clients of the super-powers can boast a scientific expertise unknown in history.

The tragedy is that the vast regional military alliances have not made the world more secure; they have contributed to the increasing danger in which all of us find ourselves. If we are to protect ourselves, every nation—particularly every small nation—in the world has to be protected, too. Therefore, there remains a role for the United Kingdom well outside NATO, not as an imperial power but as the friend and safeguard of smaller nations. But such a task is too great for one country alone. It is here that the United Nations should be playing a much fuller part. If it is not doing so, some of the responsibility must rest with us.

We have a tolerably good record, under successive Administrations, of response to United Nations' resolutions and requests. We have not so good a reputation in creative thinking or in assisting the United Nations to make the kind of change that Dag Hammerskjold, for example, would have wished.

Yet high technology today could be playing its part in giving the security that smaller nations require. The French, for example, are very keen on pressing forward the idea of UN surveillance satellite systems. They would have the beneficial effect of ending the monopoly powers of the United States and the Soviet Union. They would give even the smallest member of the United Nations the same access to satellite intelligence as is now available to the super-powers.

The tragic absurdity of the present position was well illustrated during the Falklands war. It is said that the United Kingdom was dependent for much of its intelligence upon the United States satellite intelligence, while at the same time the Soviet Union, with its own satellite military intelligence, was supplying the Fascist junta in Argentina. The same generous assistance is available for the clients of the super-powers in the Middle East, in Africa and in Asia—but only, of course, when the super-powers deem it wise to do so. This can have tragic consequences, most notably in the 1973 Middle East war.

Would the 1973 war have even started had not the Americans denied intelligence on Arab troop movements to the Israelis? Once started, it could certainly have been stopped sooner had President Sadat known the true position of Israeli forces in the Sinai. It was that ignorance that led him to turn down a peace proposal from Dr. Kissinger. The war continued and more men died.

It is time that, as part of our own defence policy, we were encouraging the United Nations to develop along the lines that the French have suggested. If such items of intelligence were available to all UN nations equally, the world could be spared many of its tragic conflicts, and the power of the super-powers cut down accordingly. But we should go further. We should be encouraging the provision of permanent United Nations peace-keeping forces to prevent all dangerous military developments and to take action when necessary.

As everybody knows, a peace-keeping force is envisaged in the charter itself. Of course, the apologists for the super-powers will tell us that it is not practical; that the Soviet Union and United States would be so fearful that UN forces would be used against them in their acts of aggression that they would veto any such proposal. The super-pessimists would add that the cost of keeping millions of men under arms is so high that none of the possible paymasters would be willing to foot the bill. In fact, the cost is much less than was originally envisaged, since we are talking about a relatively small force capable of rapid deployment for use in damping down the fires of small armed conflicts before they burn up a whole continent.

In this way, the Security Council veto becomes an important safeguard, since it enables the super-powers to feel that their existence is not threatened. Small forces of this kind could easily operate from strategic areas all over the world, including the Falklands, Belize, Gibraltar and

[Mr. John Silkin]

many other colonial and former colonial territories to which importance was first attached because of their strategic position but whose economic future is in doubt. Of course, this will not bring perpetual peace. As Thomas Jefferson said:

"An association of men who will not quarrel with one another is a thing which never yet existed, from the greatest confederacy of nations down to a town meeting or a vestry."

Quarrels do not have to lead to war, and it is with the elimination of war that defence is directly concerned.

Until the world is prepared to trust its own global institutions to preserve peace, nations will have to look at their own defences, either in concert with others or, where necessary, alone. Whether as a member of NATO or, in its global role, as part of the greatest association of nations — the Commonwealth — or in defence of its own territory, Britain must look to her maritime capability. It is here also that the defence White Paper is so worrying. In paragraphs 458, 459 and 460, the defence statement implies that our Merchant Navy is sufficient to meet all our defence needs. By studying the wording carefully, one sees that it is even doubtful that the Merchant Navy meets our NATO obligations. We have been told that an internal study began in 1984, although we have not been promised that the study will be published.

Could the magnificent part played by the Merchant Navy during the Falklands war be repeated 8,000 miles from our shores? Many of us doubt it. Could the Merchant Navy ever feed and supply this island in a prolonged war? Many of us doubt that too. We must remember that the highest rate of casualties of all the belligerent forces in world war 2 was suffered by the Merchant Navy—one in three did not come back alive. We ignore our Merchant Navy at our peril.

What applies to the Merchant Navy applies in equal measure to the fishermen; yet, of the five trawlers that took part in the Falklands war, only two now remain in British ownership. The statement says:

"with the exception of large deep-sea trawlers for MCM operations, there are sufficient ships in each category to meet our defence needs."

Even ignoring the conclusions of the Defence Committee's report, that is a pretty large exception.

I hope that Britain will play its part in leading the world to a saner and more peaceful future, but, whatever our future role may be — as a supporter of the United Nations, as a member of NATO, in defence of the Commonwealth or alone—it remains true today, as it always was, that our safety chiefly depends upon the men and ships of our country. That is what the Secretary of State for Defence has neglected, and therein lies the major weakness of the defence White Paper.

6.33 pm

Sir Edward du Cann (Taunton): The background to this debate are the Defence Estimates, in the massive, well-argued and well-written White Paper, and the third report of the Select Committee on Defence, chaired by my right hon. Friend the Member for Spelthorne (Sir H. Atkins). My right hon. Friend and his colleagues have done the House a great service in their admirable analysis. I hope that I do not offend the right hon. Member for Plymouth, Devonport (Dr. Owen) by saying that he got the matter exactly right in pointing out that the financial questions raised by the third report must be answered. If there is one Secretary of State who is capable of handling this difficult matter and the escalation of costs, it is my right hon. Friend the Secretary of State for Defence. We wish him success.

Select Committees are very much at their best when they concentrate on the financial aspects of the Government's actions. If we who are privileged to be the representatives of the people wish to exercise some control over the Executive, we can do that best by concentrating on the financial results of the Executive's proposals. The fact that my right hon. Friend the Member for Spelthorne and his colleagues have been concerned with this point is a healthy and admirable sign.

The speech of the right hon. Member for Llanelli (Mr. Davies) was muddled in the extreme. It must be difficult to be an Opposition spokesman on defence. Apart from that, the only part of the debate so far which I have not understood was what followed from the speech of the right hon. Member for Devonport. Again, I hope that I do not offend him by agreeing with him. I thought that much of what he said was cogent and important, but I fail to understand how he squares it with his alliance with the Liberal party. The SDP and the Liberal party seem to be not merely poles apart but worlds apart in their approach to defence. It was engaging to watch the right hon. Member for Devonport being cheered on by the assembled cohorts of the SDP—there are at least four of them here — while the Liberals behind him sat in embarrassed silence. While the alliance is divided on this important matter, I fail to understand how they can present themselves as an alternative Government or even, as they modestly beg to do, as possible partners in a political compromise at some time in the future.

Mr. Paddy Ashdown (Yeovil): Will the right hon. Gentleman give way?

Sir Edward du Cann: The hon. Gentleman will have an opportunity to speak in a moment. We shall look forward to hearing him.

Mr. Ashdown: Give way.

Sir Edward du Cann: I give way to the hon. Gentleman.

Mr. Ashdown: I am grateful to the right hon. Gentleman for giving way. Will he cast the mote from his own eye? Does he not recognise that there are substantial differences within his party on defence—for example, the Conservative party is by no means united on the Trident issue. Does that not reveal significant problems within the Conservative party, from which he wishes to turn our attention? Will he recognise that the differences between the SDP and the Liberal party on defence are significantly fewer than the differences in either of the other two parties?

Sir Edward du Cann: I hoped, by refusing to give way immediately, to save the hon. Gentleman from making an ass of himself. There are no differences in the Conservative party with regard to defence. We agree with the right hon. Member for Devonport that it is appropriate to examine alternatives. Of course all the options must be considered all the time. It is the business of government to be pragmatic, to be ready to examine alternatives if necesary. The Liberal party wants unilateral disarmament——

Mr. Ashdown: Nonsense.

Sir Edward du Cann: —and the SDP properly professes that Britain should be sensibly defended. The conflicts between the two parties are vast. It is no good pretending otherwise.

Like the right hon. Member for Lewisham, Deptford (Mr. Silkin), I wish to make two points. One is a local point, to which the first report of the Select Committee on Defence referred—by a curious irony that report was published after the Select Committee's third report—and the other is an international matter. The first point relates to the Merchant Navy. The substantial and continuing decline in the British merchant fleet puts the British economy, in peace as well as in wartime, in deadly peril. I believe that action to remedy the position is overdue and urgently needed.

In paragraphs 458, 459 and 460, the defence White Paper made three important statements on the Merchant Navy. It said that a continued reduction in the fleet's size "could" endanger our ability to fulfil our NATO obligations. As the right hon. Member for Deptford said, that commitment is in jeopardy today. The White Paper stated:

"with the exception of large deep-sea trawlers for MCM operations, there are sufficient ships in each category to meet our defence needs."

I believe that statement to be, at best, highly questionable and, at worst, untrue. The United Kingdom fleet consisted of 686 ships at the end of last February. Ten years ago, at the end of 1975, there were 1,600 ships. The deadweight tonnage last February was 18 million. Ten years ago it was 50 million. The latest bulletin of the General Council for British Shipping states:

"no major change is seen in the rate of decline in the United Kingdom fleet, which, since 1978, has been about 100 ships per annum."

In wartime, the merchant fleet has special tasks. Apart from bringing to the UK essential cargoes—energy, food and raw materials—it has other duties, such as the reinforcement and resupply of our forces, the need to provide ships for special military tasks in support of the Royal Navy and as, as they say, "forces' multipliers" to add to the Navy's strength. There are also auxiliary tasks. If there were a conflict, heavy losses would have to be made good. They have been estimated at between 40 and 50 per cent. initially.

In terms of numbers of ships, tonnages and classes of vessels, what is required can easily be quantified. Thus, we are speaking of facts; we are not dealing in abstruse calculations. We can calculate easily and quickly what we need and what we have, and the conclusion is inescapable. In wartime, Britain would have too few ships to support a war economy and supply and reinforce our forces.

I have not commented on the shortage of seafarers, of personnel. The present total of those at sea is about 40,000. In 1939, the year war broke out, the number was four times that, about 159,000. The number of trained officers and men going ashore has now reached 5,000 a year. Again, this is fact, and it is much to be regretted. So, even if the required number of ships could be found—say, by requisition, charter or purchase—there is the gravest doubt whether sufficient numbers of trained men would be available to man them, and shortly we shall have no reserves of manpower.

An immediate matter was referred to by the right hon. Member for Lewisham, Deptford. If there were, next week, another Falklands conflict—which we pray there will not be—it is unlikely, as the right hon. Gentleman said, that Britain could find the merchant ships necessary. This morning's *Lloyd's List* contains news of another old Falklands ship being sold. That is a measure of the recent decline in our country's maritime strength, and it is continuing.

Inadequacy in time of conflict is serious enough. In peacetime the implications are equally horrendous. Employment in the industry, as I have illustrated, continues to fall. There is a smaller contribution to the balance of payments than there should be—currently £1 billion a year, with import savings in addition, although that is not a small sum by any means.

Employment in associated industries is increasingly at risk. Insurance, charter, through the Baltic, engineering, ship design, ship repair, shipbuilding and electronics are all involved. Worst of all, British exporters and importers are now increasingly dependent on their competitors' fleets.

The White Paper's third important statement affecting the Merchant Navy was that factual studies into the situation would be completed this summer. It repeated, in effect, what the Minister of State said in a debate on the Royal Navy on 29 November last year, as many hon. Members now present will recall. How is that study progressing and when will it be completed?

I hope that my right hon. Friend will agree what Ministers so far have not been willing to agree, that when it is available it should be published. The subject is of such importance that we need the widest possible debate on it so that we may propose remedies. If my right hon. Friend the Member for Spelthorne and his colleagues could produce this admirable document in a matter of weeks, I do not see why we should have to wait any time for the Government's report to be ready. The situation is so grave that, as I have suggested to her, the Prime Minister should appoint a single Minister to oversee the present situation and to propose remedies.

What is so worrying about my right hon. Friend's Select Committee report is that it discloses a complete lack of clarity and purpose on the part of Ministers. It appears that this subject has been relegated not just to the second or third division but to the fifth or sixth division. It should be brought up to the first division.

The report finally refers to

"the risk to national security inherent in loss of independence in the carriage of seaborne commerce."

It suggests that it would be dangerous should this country become vulnerable, because that would be a temptation to a would-be aggressor. It states:

"The striking contrast between British, and indeed Allied, maritime resources and those of the Warsaw Pact countries, in inverse proportion to the relative dependence of each alliance on sea communication, is extremely disturbing".

I am surprised that my right hon. Friend used such moderate language because, as the White Paper points out, the Soviets have moved from being a coastal to a blue water force. The Soviets have now overtaken Britain and the United States as a merchant shipping power. In the early 1970s, the United Kingdom had about twice the merchant shipping of the Soviet Union. By the 1990s, the Soviet fleet will be twice the size of the merchant fleet of the United Kingdom, and all those serving in it will be auxiliaries for the Soviet navy. The situation is extremely serious and we must deal with it. To paraphrase what Churchill said in another context, we need and shall demand action this year.

[Sir Edward du Cann]

There is a parallel with the state of the merchant fleet in the deplorable state of the British air cargo industry, in which I have an interest, which I have previously declared to the House. I have raised the subject on a previous occasion. I never understand why it takes us so long to see what is going wrong with our merchant fleet and appreciate our lack of carriers in the air. On a parallel point, I hope that my right hon. Friend will ensure that an early decision is made about the Army's need for helicopters. Westlands is badly in need of work. In addition, it has the ideal solution in the W30 helicopter. I hope that my right hon. Friend will see that an early decision is made about that, too.

The other main point that I wish to raise also parallels what the right hon. Member for Lewisham, Deptford said. It concerns the nuclear threat to peace. The right hon. Gentleman was right to say that large conflicts often begin from smaller incidents in faraway places which we in this country may not take too seriously. He was also right to point out the great dangers that derive when surrogate wars are being fought. The Soviets do that all the time, particularly in Africa. Angola is a notable example. One could give others.

Much popular anxiety relates to the apparently implacable positions of East and West—indeed, that is the theme of the White Paper — with the tyrants confronting those who live in freedom and who are prepared to defend it. My right hon. Friend spent much of his speech on that point. Most attention, therefore, is focused on negotiations between the Soviets and the West for limitations or reductions in the nuclear strength of both, and it is right that that should be the case.

At the extreme end of the argument there are those who propose that our country should unilaterally abandon its nuclear defences altogether. The Liberal party does that, apparently. There is a precedent in contemporary experience, for this argument. We had it during the time of Hitler's rise to power in the years before 1939, with frightful consequences. There was, among other factors, the expressed longing of the British people for peace, of which one could give many examples—the notorious Oxford debate, the Fulham by-election in 1933. That longing for peace, though honourable, undoubtedly led the Nazis to believe that they would be safe in pursuing aggression in the Ruhr, Austria and Czechoslovakia and that there would be no opposition in Europe. Our inaction, as we now know, was a fearful error. The White Paper is right to remind us of a lesson that too many people are ready to forget. I hope with all my heart that we have learned that lesson.

I believe that, just as the use of the nuclear weapon in 1945 shortened the war against Japan, to which the right hon. Member for Lewisham, Deptford referred, and saved many tens of thousands, if not hundreds of thousands, of British, American, Australian, allied and Japanese lives, so the possession of nuclear weapons by East and West has kept the world safe, in most of my adult lifetime, from serious conflict. That point was made by my right hon. Friend the Secretary of State for Defence, and I agree with it. I do not believe that their possession by East and West —even though their stockpiling is worrying—has made conflict more likely. The chief threat, in my view, lies elsewhere and it is high time that we gave it more attention. It lies, in a word, in proliferation.

What are the facts? The spread of nuclear technology since 1945 has been extensive and it is continuing unchecked. Five countries are known to possess nuclear weapons: Russia, the United States, the United Kingdom, France and China. However, there are commercial nuclear power reactors—about 350 of them—in 26 countries. More than 50 nations have nuclear research facilities. Perhaps a dozen countries can physically reprocess nuclear fuels; that is, they have the capacity to produce the materials needed to make nuclear devices. The areas involved are often potentially, in conflict terms, the most volatile: Pakistan and India, to which the right hon. Member for Llanelli referred, Iraq and Israel, and Libya, for example. Inevitably, too, there is the lurking spectre of the nuclear terrorist. It is to this developing and fearsome scene that I believe that we should now give our careful attention in the nuclear debate.

The United Nations sponsored nuclear non-proliferation treaty of 1968, mentioned in the White Paper, expires in 1995. It will be discussed in Geneva in the autumn of this year by almost 100 countries. It must be renewed. The inspection apparatus of the International Atomic Energy Authority needs urgent reinforcement. That strengthening must be made available and confidence in its competence, which at present seems to be much lacking, restored.

The whole purpose of the expenditure which these Estimates represent is the maintenance of peace. The influence and experience that, as the right hon. Member for Lewisham, Deptford suggested, we possess in our country and which this House, broadly speaking, endorses, should not only be used for the physical defence of these shores—that is the conventional understanding of defence — but must be used more widely and constructively to curtail proliferation of the nuclear capability and to control it.

I hope that the work that my right hon. Friend the Secretary of State for Defence is doing will provide the foundation upon which the Government can build and take the initiative in what I believe to be as important a matter as any that has to be discussed, decided and acted upon by this House.

6.54 pm

Mr. Robert C. Brown (Newcastle upon Tyne, North): The right hon. Member for Taunton (Sir E. du Cann) will forgive me if I do not deal with his speech in detail, but I was extremely interested in the amount of time that he devoted to the Merchant Navy. He was right to do so. If I understood the right hon. Gentleman correctly, he suggested to the Treasury Bench that it was high time that we as a maritime nation had a maritime policy and a maritime Minister. If he did, he has my full support as he prods his Government from time to time. I wish more power to his already powerful elbow.

I begin my contribution to the debate by quoting from the personal message I gave my constituents in Newcastle upon Tyne, North during the last general election campaign:

"The awful prospect of a nuclear holocaust appals every thinking person. We must, in concert with our allies, work towards multilateral disarmament, nuclear and non nuclear. We simply cannot afford to embark on the Trident missile programme costed at 1981 prices at ten thousand million pounds, which, with the enormous escalation of sophisticated weapons systems, I know from my experience, will cost no less than 50 per cent. more, long before the system is ready for use. The only

way in which we could afford such a programme would be to deny the British Army of the Rhine the weapons they would need should the unthinkable war in Europe happen. Equally, the Royal Navy, on which we rely to keep the Western approaches and the Northern Atlantic open to our merchantmen, would have to be run down as indeed the Tories intended prior to the Falklands War. Had Argentina stayed her hand for a few brief months, the planned naval rundown would have already gone so far as to make the action we rightly took, impossible to carry out."

I do not retract one word of my message two years ago to my constituents on Trident. It was prophetic, because the escalation in cost to which I then referred was achieved in 24 months. Nobody can say that as a prophet I was exaggerating. My prediction of an increase in cost of over 50 per cent. before Trident comes into use has already been proved to be very much of an underestimate. The final increase in cost will be much nearer 100 per cent., or £20 billion, I stand firmly by everything that I said in 1983. The third report of the Select Committee on Defence heavily underlines all the points that I made to my constituents in 1983. I am more than delighted that my 1983 statement on defence issues has been supported by such an august body as the Select Committee on Defence. The whole House is indebted to it for the excellence of its report.

In its reports, the Select Committee states that there is the gravest possible threat that our conventional defence forces will be weakened if this Government continue down the lunatic road towards the deployment of a nuclear weapons system that we cannot hope to sustain within the constraints of our defence budget. And constraints there are. I am sure that, like each of his predecessors, the Secretary of State for Defence is only too painfully aware of these constraints. Apart from the perils of inflation for the defence budget there is, as he knows, the added burden of defence inflation which applies in full measure not only to the Trident programme but to all of the sophisticated equipment that is needed by our troops in the field.

That problem worries me most of all because, as I have said many times in defence debates, the sharp end for the British forces will be the central German plain. Our prime duty is to provide our forces there with the quality and quantity of hardware and software that they will need to ensure, by their own defence, the holding of that part of the front, which is so vital for the defence of Western Europe. That is where any conflict will take place, and that is where our commitment should be emphasised.

Therefore, why should we risk our forces by committing an ever-increasing amount of our limited defence budget to pursuing the Trident system, whose major purpose is to send American defence contractors laughing all the way to the bank? British contractors will get precious little from the thousands of millions of pounds that will be spent on the programme.

Naval orders will have a great influence on the well-being of many of my constituents employed by British Shipbuilders. I am anxious to know how, when and where those orders will be placed, and how the orders will be used. I must ask bluntly—I hope that the Minister who will reply to the debate will take this point on board—whether orders will be used to make some yards attractive to private investors for what I would call the Prime Minister's obsession—privatisation. Conversely, will the denial of orders be used to decide which yards will be set up for closure? The Secretary of State has the power of life or death over shipbuilding communities, as Mr. MacGregor does over coal-mining communities. The Secretary of State frightens me, because he is essentially southern-based and does not see much further than Potters Bar or, to be fair to him, British Aerospace at Hatfield and Welwyn Garden City.

I have said in the House previously that shipyards such as those on the Tyne, not least Swan Hunter, cannot survive without significant naval orders. I hope that the Secretary of State will, in reaching decisions in the future, remember that the north-east of England has largely been bled to death by the Government's policies. Those decisions will determine the future of or continuance of shipbuilding on the Tyne.

I should say something about President Reagan's star wars—the strategic defence initiative. To his credit, the Foreign Secretary quickly saw the dangers in undermining arms talks between East and West but, sadly, since "Her Parliamentary Majesty" has now spoken, Britain will back the President in research into star wars. Nothing could be more calculated to signal a move into another major arms race, which is not the way to world peace. With all the horror of the Third world, which we have seen on our television screens with monotonous regularity in recent months—the starvation of many thousands of children in Africa—there is a greater need than ever for nation to speak unto nation with a determination to find a way to break the lunacy of ever-increasing expenditure on arms. We must progressively, in tandem, reduce the burdens of armaments on East and West so that we may make progress on the road to a world where the constant fear of war no longer prevails.

7.4 pm

Mr. Cranley Onslow (Woking): I am glad that the right hon. Member for Plymouth, Devonport (Dr. Owen) is still in the Chamber, because I owe him an apology. We all know him as the inventor of the wheel and the holder of the original patent on sliced bread, but of course we should not laugh at him, and I am sorry that I was moved to do so during his speech. When he mentioned being in a serious ball park, I asked one of my hon. Friends sitting beside me, "What does one talk about in a serious ball park?" His answer was so apposite and humorous that I had to laugh out loud. The right hon. Gentleman will probably work out what my hon. Friend's reply was, and I am sure that my hon. Friends will get there presently.

My right hon. Friend the Member for Taunton (Sir E. du Cann) told us of his doubts about the adequacy of the British merchant fleet to meet the strains that might be put on it in time of war, as well as the obligations and opportunities to which it must respond in time of peace. I understand and accept that my right hon. Friend the Secretary of State could not reply today to the report of the Select Committee on Defence. I also know some of the reasons for the decline to which my right hon. Friend the Member for Taunton drew attention. They include the deliberate policy adopted for many years by the Eastern bloc of trying to steal our trade; the activities of previous Governments in lending money to Eastern bloc and Third world countries so that they could buy ships to undercut our merchant fleet; and all the other pressures, including the 40-40-20 policy. I am not sure that the decline is reversible. It would be interesting to know what it might cost to reverse it.

Against that background, we must consider maritime re-supply in time of war. The alternative of pre-positioning food and fuel for the civil population as well as of warlike

[Mr. Cranley Onslow]

stores for our forces must be examined, and we should also consider the priority of airlifting many of the stores that we need. I hope that when the Department has received its consultants' report and when Ministers report to the House on it, they will take those points into account, because they may open the way for the redeployment of scarce naval surface resources that we have available in the north Atlantic.

Whatever happens with re-supply, it is essential that our home base should remain inviolate. Home defence is enormously important. I was glad to see in the White Paper that exercise Brave Defender will be held this September, in which our home defence forces will be tested. I hope that as many Members of Parliament as possible will be invited to witness that exercise. I am far from certain that our home defence resources are adequate. I do not know how many vital installations we have, but I suspect that there are enough to tax the 100,000 regulars and reservists whom we are told we have available, let alone the 65,000 of them who will take part in the exercise.

I hope that the Government are serious when they say that they are considering the possible expansion of the Home Service Force, which at present has only 5,000 members. That really is not enough. If the Select Committee were to examine the matter, I suspect that it would discover that, in the words of my right hon. Friend the member for Spelthorne (Sir H. Atkins), plenty of people in Britain regard defence as "everyone's business", and would be prepared to give up some of their time voluntarily to release our invaluable regular service men and women for other tasks and to strengthen our ability to keep the home base secure.

The reasons why we must do that are admirably set out in paragraph 410 of the White Paper, which states:

"The importance of defending the United Kingdom goes beyond even the fundamental need to protect our own country and its people. . . it is therefore in the interests of the whole Alliance that we should be capable of deterring such an offensive or, if it were launched, of defending ourselves and our territorial waters against attack."

We must have adequate home defence.

The Labour party's policy would destroy the Alliance and thus make home defence irrelevant. The policy is well expressed in the following terms: we have an Opposition who are committed

"to outright unilateral disarmament. The United States is to be kicked out of our aircraft bases and ports in the UK which they have been using as part of our NATO commitment to the nuclear deterrent."

I am paying the right hon. Member for Devonport the compliment of quoting from a document which seems to have been circulated by the SDP to most of the 14-year-olds in my constituency. It is rather like some of the circulars householders get on solar heating—superficially convincing, but not at all strong on costs. But that is the SDP's policy in a nutshell.

Two things emerge from what the right hon. Gentleman said. First, it is impossible to envisage the SDP combining with the Labour party in a hung Parliament. It is also wholly impossible for the right hon. Gentleman or his hon. Friend the Member for Yeovil (Mr. Ashdown) to pretend that there is not an enormous divide within the so-called alliance on the question of defence. Indeed, the right hon. Gentleman is not too clear about what he himself wants. He simply throws a whole lot of options in the air—some serious balls, if I can put it that way—even though he knows that they are all dismissible. For example, there is the question of continuing with Polaris or converting our submarines to cruise. The right hon. Gentleman never quantifies or costs these things. He just tosses them in the air. In so doing he displays the same kind of naivety that runs through so much of the SDP's approach to often serious matters.

For instance, on the Falklands, the document from which I have already quoted states:

"the SDP believes that the Government should bring an end to the spending of hundreds of millions of pounds on Fortress Falklands and should open a dialogue with the new democratic government of Argentina."

And if they did, it would be from a position of utter weakness. Just about the same strength is inherent in that position as there would be if we went to the French and said, "May we please you join you in your M5 missile?" That is an incredibly naive and unsustainable approach to such serious matters. When people consider what the SDP has to offer, I hope they will realise that solar heating might actually be a better bargain.

There is one final matter that I hope the Government have understood. It is the RAF that is responsible for the air defence of the United Kingdom—not the French air force. If we are to purchase a replacement aircraft for our air force, it must match our needs. Such a purchase should not be dictated by the siren claims of European collaboration or the ambitions of the French aircraft industry in the field of international sales. We need an aircraft that suits the RAF, and a British design must be best.

Several Hon. Members *rose*——

Mr. Speaker: Order. I should have reminded the House that the 10-minute rule is operating until 8.50 pm.

7.11 pm

Mr. Eric S. Heffer (Liverpool, Walton): The White Paper was right to refer to the fact that it is 40 years since the end of the second world war. I mention that because it seems that the strategic attitude of the Government, the United States and the western Alliance is automatically to assume that the only enemy in the world is the Soviet Union.

Since my youth I have never agreed with the internal regime in the Soviet Union. I have protested probably more than most hon. Members about the internal suppression of those in the Soviet Union who want to create free and independent trade unions and institutions and wish to see democracy in that country. I was probably the first Labour Member to protest about what happened when the Soviet Union moved into Afghanistan. I protested about Hungary and Czechoslovakia. I shall continue to make it absolutely clear that the internal regime in the Soviet Union has nothing whatever in common with democratic Socialism. Indeed, it is the very antithesis of what we believe in.

The commemoration of 40 years of peace has stirred old memories. I was very young when I joined the RAF. During my four years in that service I spent 18 months with the United States 8th Army Air Corps. I wish to make it clear that today we are able honestly to debate and argue our points of view because of the deaths that unfortunately occurred during the war. As well as our own people, 20

million Russians died. We must never forget that, nor should we forget the devastation that took place in that country.

We must never forget that their cities were razed to the ground, that whole areas were overrun by the Nazis and that the Russian people were subjected to untold horrors. We must never forget that millions of Russian people were sent to the various prisons and concentration camps. We therefore owe a debt to those people in the Soviet Union who fought so hard to enable us to be free.

At the end of the war the Soviet Union became obsessed with security. It created buffer states, suppressed the democracy that was beginning to develop in many of those countries, and has expanded in other directions since—all because of its obsession with security and the belief that never again will 20 million Russian people be destroyed.

There is now a new leader in the Soviet Union. Some say that he is a hard-liner, while others say that he is a soft-liner. I do not know. Indeed, it is difficult for any of us to know. When Khrushchev took over as leader—and he was not a democrat—he began to open the doors of the prison camps. He also made it clear that the Stalinist regime was not acceptable for the future. There are those who would like to return to Stalinism, but my point is that we cannot continue in the way that has been suggested by some hon. Members who say that the Soviet Union is the enemy and should be more or less destroyed. [HON. MEMBERS: "No."]

In the event of a nuclear war there will be no winners. We shall all be losers. Arthur Koestler said that when the atomic bombs were dropped on Hiroshima and Nagasaki, the character of war changed totally and that from then on we were talking of the possibility of war which would destroy the world. That is the prospect with which we are now faced, and that is what we must understand. That must be borne in mind when we discuss our defence policy.

I agree with those hon. Members who have said that we must have genuine defence. I am not a pacifist. I believe in genuine defence. Those who believe that nuclear weapons are the only means of maintaining peace are honest in that belief, but they should accept that others who believe that we should get rid of nuclear weapons are equally honest. We are not Soviet agents or subversives. We simply believe that so long as nuclear weapons exist and we do nothing to get rid of them, we shall build them up until one day some idiot will push the button, and that will be the end of society for ever. All our ideological discussion about capitalism and Socialism or whether we are Christians or Moslems or anything else will mean nothing. That is why we argue our policy as we do.

The document setting out the policy carried at last year's Labour party conference states:

> "We are also committed to the unconditional removal of all US nuclear weapons and nuclear bases from British soil and British waters . . . Labour will therefore take appropriate action to ensure that the US Government removes its nuclear weapons and nuclear delivery systems from British territory and British territorial waters."

We are then accused of wanting to sell out to the Soviet Union and become a satellite of Russia, but that is not so. We are saying that we must begin somewhere to get rid of nuclear weapons. It would be marvellous if, at the international level, the great powers could sit down and agree that from tomorrow all nuclear weapons will be abolished, but as the right hon. Member for Taunton (Sir E. du Cann) has said, that is not likely to happen—what is happening is proliferation.

Somebody somewhere must begin the process of removing nuclear weapons. That is why my right hon. Friend the Member for Chesterfield (Mr. Benn) and I raised the issue of NATO. *[Interruption.]* It is difficult to argue a case properly when one is limited to 10 minutes. How many minutes do I have left? [HON. MEMBERS: "One."] There is a contradiction about our policy and if we carry it through we shall undoubtedly run into difficulties with the United States and our allies in NATO, but we must face that fact because we must try to change NATO policy. If NATO policy cannot be changed, in the end we shall have to come out of NATO. In the process we must try to start to get rid of nuclear weapons so that our world, our grandchildren and their grandchildren will have a future. If we do not do that, there will be no future.

7.22 pm

Mr. Peter Viggers (Gosport): I am glad to follow the hon. Member for Liverpool, Walton (Mr. Heffer) as my own comments will follow exactly the line that he followed. I am fully conscious of the difficulty of comparing forces as between the Warsaw pact and NATO. It is not easy to compare weapon with weapon. Nevertheless, by any standards the Warsaw pact forces are superior to those of NATO. We can make all possible allowances for Russia's traditional sensitivity about being encircled by potential enemies. We can make allowances for the fact that a staggering 20 million Soviet citizens were killed in the last war and for that country's determination that that should never befall it again. We can also make allowances for the technical superiority which still exists in many sectors of the NATO forces. After allowing for all those factors, however, the preponderance of military might in the Warsaw pact cannot realistically be attributed to self-defence. The threat is there and it is real.

It is generally assumed that an attacker needs three times the forces of the defender to be successful in an attack and the Warsaw pact is within that range in a number of key areas such as tactical aircraft, tanks and artillery. NATO does not need parity. We have said time and again that none of our forces will ever by used except in response to attack. Nevertheless, we need to be near enough to the one-to-three relationship to be certain that we shall not be attacked and that there is no risk of our forces being underestimated. We cannot safely let the balance swing too far away from us. I therefore support the Government's action in increasing our spending by 3 per cent. per year in line with NATO targets, which we have achieved through to this year. I also strongly support the commitment to NATO by the United States in the deployment of cruise and Pershing II missiles in Europe and I support the continuation of the independent nuclear deterrent through the purchase of Trident.

A great deal of the sometimes rather fruitless dialogue about peace and how to achieve it stems from the fact that many people misunderstand the nature of peace and talk as though peace were something for which we should strive. I give a short but telling quotation from Henry Kissinger. He said:

> "Many people seem to regard peace as a kind of terminal state in which nations live in harmony and the need for further effort

[Mr. Peter Viggers]

disappears." Unfortunately this conception doesn't correspond to the reality. In our time peace is a process not a condition. There are no final happy endings."

That is important, because so often people who campaign for peace seem to project peace as though it were some kind of secret, enchanted garden to which they alone have the key. The reality is quite different. Peace is what we have now. It may be a rather unhappy peace, but peace it is and we must work to maintain that measure of stability.

Maintaining peace is a time-consuming, expensive and frustrating activity requiring patience, skill and the avoidance of provocative acts. The true peace campaigners who keep the peace for us are the men and women of our armed forces. We are at peace, but various factors could destabilise the situation. I shall identify three of them.

The first is Russian militarism. I have already referred to the weight of the Warsaw pact forces, but the disturbing fact is that recently they have been growing much more rapidly. The deployment of SS20 missiles in Europe left NATO no alternative but to proceed with its dual track decision in 1979 and to deploy cruise and Pershing missiles. Cruise missiles are a symbol of American determination to support NATO rather than a matching of missile for missile. Russia must surely also realise, and the hon. Member for Walton must realise, that launching a new submarine every five weeks when Russia has no maritime routes to protect cannot be regarded otherwise than as an offensive act and something from which the Soviet Union should desist.

As the hon. Member for Walton said, we are all heartened by the appearance of Mr. Gorbachev as the Russian leader. His interest in industrial and civilian matters in this country was encouging, but there have been no signs of any change in ideology and it may be asking too much to expect that. What we can perhaps hope and negotiate for is a reduction in the military manifestations of that idealogy, and I believe that that is entirely appropriate.

Recently I had the honour to attend a conference on disarmament convened in Mexico City by the United Nations and the Inter-Parliamentary Union at which most of the leading nations of the world were represented. I was surprised to see how few friends Russia had among the non-aligned countries. It is bereft of friends, apart from those countries which are politically subservient to it. That should be encouraging to us as a democracy and it should give Russia cause for thought.

The second destabilising factor is identified in the public mind as the strategic defence initiative, star wars. The United States and Russia are both working on new technology, but the media concentrate on the American efforts. Russia has the world's only operational anti-ballistic missile system, which defends the Soviet civil and military command authorities around Moscow. Russia has also been proceeding with a much larger high-energy laser programme than the United States, with about 10,000 scientists and engineers working at six research establishments, and Russia has developed prototype laser weapons. Moreover, 80 per cent. of Russian space launches are purely military. The United States and the United Kingdom cannot stand aside from this new technology.

I support completely the considered and thoughtful line taken by my right hon. and learned Friend the Foreign Secretary in his major speech on this subject. I should like to add only that the strategic defence initiative is defensive as regards ballistic missiles and it may have many other applications which do not relate to nuclear and ballistic weapons. I anticipate that the strategic defence initiative will throw up a great deal of technology which will be extremely useful with conventional military weapons.

The third destabilising factor is those who work from within the country to weaken our defences. Some people who are concerned with pacifist issues and anti-nuclear campaigning are non-political, though any person of independent mind would be disturbed to find so many Communists and Trotskyists working within the Campaign for Nuclear Disarmament and allied activities. CND is active in trade unions, churches, schools and local government.

There are many examples of local government activity, such as the development of nuclear-free zones, which are hostile to the basic thrust of our defence strategy. I could quote many examples, some of which are trivial and others which are frivolous. For example, South Yorkshire county council has erected 21 nuclear-free zone boundary signs at a cost of £100 per sign, and Sheffield city council sent a councillor and two officers by air to an international conference on nuclear-free zones in Cordoba, Spain. Such activity goes on throughout Europe and I therefore welcome the fact that the North Atlantic Assembly is considering means of stepping up our information services in NATO so that people in NATO can see the importance of the defence effort put in on their behalf.

I was impressed by my right hon. Friend the Member for Spelthorne (Sir H. Atkins) who spoke about the total defence concept in Norway and Sweden, where everyone is responsible for defence. We do not have such a policy but we cannot afford to relax when so many of our citizens undermine the main thrust of our defence effort. I believe that we are winning the battle, but we cannot afford to be complacent.

7.32 pm

Mr. Robert Atkins (South Ribble): I am extremely grateful for being called. I do not intend to delay the House for long and I apologise for raising an industrial procurement matter. I am lucky to have a chance to speak at all.

I want to talk about the European fighter aircraft, which decision is due next week, or ought to be. There are several constraints on its development. First, there is an in-service date requirement of 1995 for the Royal Air Force and other European air forces. Unless the go-ahead is given very soon, we shall not meet that in-service date. The letter sent to my right hon. Friend the Secretary of State by companies in various industries suggesting that the European staff target would be met does not meet the agreement of many in the British aerospace industry. I hope that he will consider that carefully and take advice from the British aerospace industry, as he has done till now.

Secondly, there will be a threat to jobs if the fighter aircraft project does not go ahead. There will also be a threat to the continuity of the British aerospace industry if we do not get something working swiftly. I refer not simply to my area and the rest of Lancashire but to the whole of the United Kingdom.

The third constraint concerns sub-contractors who must look to their future interests. They are already faced with the prospect of having to take bilateral decisions to involve themselves in contracts to ensure their future. That would damage the strength of the consortium which hopes to gain the European fighter aircraft project go-ahead.

The fourth constraint is French intransigence. I have raised this matter many times in the House and do not apologise for doing so again. Their lack of interest is clear from the evidence that is available to those who take an interest in these matters. I recently went to Munich and was at the Paris air fair last week, where I was able to talk to people in the industry and the armed services, all of whom believe that the French are being deliberately intransigent and are not interested in getting involved in the project. The French have recently suggested to the armaments directors that there should be an evaluation of a navy version, which would delay discussion for yet another six months or so and enable them to demand more than their fair share of the jobs.

I have a copy of a document, circulated at the Paris air show, from the French trade unions which states:

"This is why the Federation of Metal Workers, CGT and all of the Unions in the French Aeronautical and Avionic Industries demand that the future defence aircraft be manufactured entirely from products currently under construction by various French Companies."

The document continues with a diatribe against the British aerospace industry and European industry as a whole. That confirms my information that French industry does not want to be involved in the project.

We are not being intransigent or chauvinistic. Although we have the fallback of the P-120, which will be a British version, with our European colleagues—West Germany, Italy, Spain and perhaps the Netherlands and Belgium—we are offering to build an aeroplane which we would like the French to be involved in. We want the French to be involved, provided that they recognise that they must come in on equal terms and share the work fairly. If they are not prepared to do that—they have shown that they are not—we must be prepared, with our partners, to tell the French at next week's meeting in London that the French can join us or stop mucking us about. We need a decision, and swiftly.

We must bring pressure to bear at a political level on West Germany. It is clear from my information that the West German industry is extremely keen to continue its involvement along the lines of Panavia and MTU, which have been responsible for manufacturing the Tornado and the engine for it. The industry has already said that, unless a decision is taken in July, it will have to make further decisions and involve itself in further discussions with American industry. There are already discussions with Northrop and Rockwell about the possibility of fulfilling their requirement. That must not happen, so we must persuade the West German Government to commit themselves to us, as they have until now, and to persuade the French to participate. If they do not, they must be told next week that time has run out.

We must have a commitment next week and the project must get off the ground as soon as possible. I am grateful for this chance to emphasise the strength of the anxieties.

7.37 pm

Mr. Gavin Strang (Edinburgh, East): I should like to concentrate on disarmament issues. The first page of the Defence Estimates says:

"Given the present scale of NATO's defences, we have no reason to believe that Soviet leaders have any immediate intention of attacking NATO countries; but we cannot ignore the fact that those same leaders continue to improve the Soviet capability for such an attack."

There will be broad agreement that the Soviet Union does not intend to attack Western Europe. In the main, I agree with the analysis of my hon. Friend the Member for Liverpool, Walton (Mr. Heffer), who described how the Soviet Union extended its hegemony over Eastern Europe through military force.

It will also be common ground that we cannot base our defence policy on our view of Soviet intentions. We must base it on Soviet capability. However, that also applies to the United States. We must consider how the Soviet Union perceives the United States — as the most powerful military power in the world, especially in terms of nuclear technology. It is ringed with nuclear weapons in Europe and nuclear weapons are being developed in China.

We must understand the Soviet leadership's attitude in terms of that country's history, which my hon. Friend the Member for Walton described, and in terms of the huge military arsenal with which it is confronted. The Reagan Administration was elected on a ticket of massively expanding the United States's military budget. The nuclear arms race has been tremendously exaggerated by the United States. In November 1983, the CIA said that it had exaggerated the increase in the Soviet Union's military capability. More recently, in 1985, it acknowledged that it had overestimated the increase in the Soviet Union's military capability.

We have seen the destabilising development of nuclear weapons systems. In reply to a question from the hon. Member for Davyhulme (Mr. Churchill) — this is referred to in the evidence of the Select Committee on Defence which was published yesterday—the Secretary of State said that the policy of mutually assured destruction had been of incalculable value. However, that policy was not planned. It was one at which the two super-powers arrived. That policy has long since been undermined by technology—for example, the development of accurate counter-force weapons, which by definition are first-strike weapons. As counter-force weapons such as the Trident D5 system have undermined the deterrence element in mutually assured destruction, so is the strategic defence initiative enormously destabilising.

I assert categorically that there is a consensus of leading scientists and physicists in the United States who do not believe that it will be possible to achieve the SDI's ultimate objective of complete protection for the United States population from the Soviet Union's ICBMs. What is more likely to be attained in a decade or two is an imperfect system of protection basically for United States missiles. This involves a further element of destabilisation, at least in the transition phase. That is why we must recognise that the strategic defence initiative, as perceived by the Soviet Union, represents a dangerous escalation of the nuclear arms race.

Many prominent members of the Reagan Administration are on record as opposed to arms control. In the main, the record of that Administration has been one of opposition to arms control. What has been the record of the British Government? It gives me no pleasure to say that anyone looking objectively at what the Government have done in this area over the past five years cannot describe their actions as anything but deeply depressing.

[Mr. Gavin Strang]

First, Britain has been at the forefront in Europe in supporting Reagan's escalation of the nuclear arms race. The White Paper refers to the partial test ban treaty that was negotiated by Lord Stockton. The stance of Lord Stockton must be contrasted with that of the Prime Minister. In December, she described herself as President Reagan's greatest fan. She went to the United States and gave strong support to the star wars policy.

What is our record in the United Nations? I have a document which sets out the voting records of the various member countries last December on nuclear disarmament issues. In the limited time at my disposal I shall take only a couple of examples. Resolution 39/52 is headed:

"Cessation of all test explosions of nuclear weapons".

The resolution begins:

"Convinced that there are adequate existing verification measures to ensure compliance with a nuclear-test ban and that the alleged absence of verification means is nothing but an excuse for nuclear proliferation".

That was carried by 112 votes to three with 23 abstentions. It is no surprise to learn that the United Kingdom was one of the three member countries who opposed the resolution. The document from which I am quoting shows that that was frequently the case.

I shall give one more example. Resolution 39/61 is headed:

"Implementation of the Declaration of the denuclearisation of Africa."

The resolution includes the words:

"Appeals to all States that have the means to do so to monitor South Africa's research on, and development and production of nuclear weapons, and to publicise any information in that regard."

The resolution was carried by 147 votes with five abstentions. Again, the United Kingdom was one of the member countries which abstained. At the same time, the Government call themselves multilateralists.

The current disarmament talks are referred to and listed in the White Paper. Included in the list are the MBFR talks in Vienna. The parties to the talks are NATO and the Warsaw pact. I had the privilege last week, with some of my hon. Friends, of discussing these issues with Lord Carrington and other NATO personnel. It seems that there is a feeling in NATO that we should reconsider our position and accept that there is a discrepancy between our estimate of the Warsaw pact's forces and the strength which the Warsaw pact is prepared to acknowledge in central Europe. We should accept the disparity. Rather than pursue a reduction in force numbers—a goal in which no progress has been made over the years—we should go for fixing a ceiling on the number of forces in central Europe and try to make some progress in arriving at an agreement on conventional forces.

The British Government's contribution to the crucial bilateral disarmament talks in Geneva between the United States and the Soviet Union cannot be described as helpful. It is certainly not helpful to come out strongly in support of the strategic defence initiative. It is not helpful to insist that in no circumstances will Britain's nuclear weapons be included within the ambit of these important talks.

I raised in the House last Friday the non-proliferation treaty review conference that will take place in September and progress towards a comprehensive test ban treaty. A debate was initiated on Thursday evening by the hon. Member for Bristol, East (Mr. Sayeed) and the Minister of State for Foreign and Commonwealth Affairs, the right hon. Member for Shoreham (Mr. Luce) replied. He sought to argue that progress on the NPT review conference had nothing to do with progress towards a comprehensive test ban treaty. That was absolute nonsense, as anyone who knows anything about the subject must acknowledge.

When I initiated an Adjournment debate on the comprehensive test ban treaty, the Government came up with the stale response of verification problems. Everyone knows that that is not the problem. The United States pulled out of the comprehensive test ban treaty talks because it did not want an agreement. It is a subterfuge to argue that we do not have the technological means to police underground nuclear tests and to monitor them down to a few kilotonnes. United States scientists have acknowledged that we have the technical means to do so. We have the means to achieve an effective test ban treaty involving the Soviet Union, the United States and Britain, and with the 120-odd non-nuclear power, signatories, we can improve the non-proliferation treaty. Let the British Government take an initiative for progress in this area at least.

7.48 pm

Sir Geoffrey Johnson Smith (Wealden): I hope that the hon. Member for Edinburgh, East (Mr. Strang) will forgive me if I do not take up his final argument in detail. I shall concentrate on Trident, the British nuclear deterrent, European collaboration and the strategic defence initiative and their impact on Europe.

I acknowledge that any defence expenditure imposes strains on all services when they are subjected to the financial constraints that are set out in the White Paper. However, I object to the assumption that one item of defence expenditure must go to pay the penalty of such financial constraint. That one item, as seen by the Opposition, is Trident.

Trident is cheap. It is the most economic and cost-effective piece of defence equipment that Britain could possibly have. The cost will be spread over 15 years. It is argued that if we did not have it we would have to strengthen our conventional weapons. What could be bought with about £10 billion? Over 15 years it would buy us about three armoured divisions, and it is a darned sight more expensive to run armoured divisions than to have nuclear equipment. I do not accept that the cost argument has been made out.

I suspect that for political reasons it does not suit the Labour party in its present mood to have a British nuclear deterrent. For reasons that I do not wish to go into because of the limited time that is available, the Liberal party is choosing to face both ways. The Liberal party and the alliance know that if they were to come down heavily on one side or the other they would find themselves in one hell of a row. Of course, it is easy to fudge the issues. However, I ask them to bear in mind the suggestion that has been made by some of their spokesmen that cruise missiles or an extension of Polaris offer a way out. I have never met a serious military expert who takes the view that they provide an effective deterrent. The economies that would be involved in such a policy would be minimal. If we are to address ourselves to economies, the argument is reduced to shreds. We must grasp the nettle. We either want to remain a serious nuclear power or we do not. I believe that we should. There are strong reasons why there should be a deterrent in European hands. If the Opposition want to surrender that, they have the choice of leaving the

supreme decisions in these matters to the United States —always assuming that the United States will see our quarrel as its quarrel and will always wish to put its cities at risk to defend us—or they must recognise that the only European deterrent would be in French hands. I do not find that acceptable.

One way of overcoming the difficulty as we begin to look to the future is to see how we can extend European collaboration and have a European deterrent, while such a thing is regarded as necessary. In that context, European collaboration takes on a wider dimension. It is ludicrous to have one deterrent which is solely British and one which is solely French. There can be significant savings if we pool our resources. That is for the longer term. In the meantime, the Government are correct to stick to Trident.

The strategic defence initiative is another sphere of collaboration. My reaction to it, with that of other people, was somewhat unfavourable. I thought that star wars was just an extension of nuclear war into space. How wrong I was. It was argued that the concept jeopardised the arms contact talks. That could not be further from the truth. I believe that it was the SDI concept which bought the Soviet Union to the negotiating table.

What I find interesting about the initiative is that in the long term it offers the hope of making nuclear ballistic missiles obsolete. In the short term it will mean a shift of emphasis away from deterrence based upon nuclear retaliation to a greater reliance on non-nuclear defence systems. Surely we can all unite on that.

The hon. Member for Edinburgh, East (Mr. Strang) said that we could not rely on SDI because some weapons would get through, and that the idea of having a type of balloon over the United States which would make it impervious to nuclear attack is crazy. I agree with him. I cannot see that happening, but who knows? There are plenty of experts in the United States who believe that it is possible to develop a defensive system which would make impossible a pre-emptive first strike which would destroy the United States military capability. Although some weapons would get through, not all would. That would seriously question the Soviet Union's ability effectively to destroy the United States.

An effective strategic defence system which would enhance the survival capability of our present nuclear deterrent forces should be supported because it would ensure that a growing proportion of Soviet missiles would no longer reach their targets. For that reason, I believe that a strategic defence system is important.

There is another reason for supporting the initiative. Why should we let the Soviet Union monopolise the system? Why should Western Europe not have some idea of the technology involved in the strategic defence initiative, because it will have tremendous implications for civilian industry? It will give European technology an insight into the new technologies and will provide advantages for industry.

The alternative is to be left out—that surely is not good for us—and increasingly to become a second-class partner in the NATO Alliance.

We should look to see how far we can evolve new defensive techniques which would benefit our industry through co-operation with our Western European partners. The French EUREKA concept seems somewhat vague. It has yet to be spelt out. It does not concentrate, as the United States initiative does, upon strategic defence, but it is a concept that we should welcome.

I see no conflict in this country embracing the invitation of the President of United States to involve ourselves with SDI and the French offer to all Western European nations to co-operate in providing a wider basis for European technological co-operation.

On the narrow point made by my hon. Friend the Member for South Ribble (Mr. Atkins), it seems to me that the significance of the EFA project is that if we in Europe cannot get together on something that we know to be vital to conventional defence and for employment in our respective countries, and which has important civil applications for our industry, what hope have we of being able to co-operate in the wider spheres to make it possible for us to have realistic and cost-effective defence budgets? That is the challenge thrown down by the White Paper and the report of the Select Committee on Defence.

7.57 pm

Mr. Paddy Ashdown (Yeovil): The hon. Member for Wealden (Sir G. Johnson-Smith) said that the Liberal party and the SDP were somehow undecided about Trident. He is confusing his party with ours. Both parties have clearly stated their opposition to Trident. It is the Conservative party that is divided on the issue.

I should like to deal with a small procurement issue and some more general points. This will come as no surprise to the Minister. I appeal to him to give us a decision soon on the air staff target 404. He is aware of the value of that contract and the input of Westland plc to the services. He is aware that the Secretary of State for Trade and Industry has invested in the project and that we could obtain significant orders from abroad. It has been one and a half years since the proposals were put to the Minister. It is time that we heard what was to happen. Any decision would be better than none. We naturally hope that he will go for Westland plc and the AST 404. If he does not, I hope that he will at least give us the imprimatur of saying that the Ministry of Defence believes that Westland plc can provide the appropriate aircraft. Even if he cannot do that, will he tell us when he will make the decision?

On the broader issue, a sensible defence policy comes out of a rational assessment of the facts. In a free democracy it is vital that the public have access to the facts so as to provide a rational defence policy with public support. It is especially important that the House of Commons is presented with a true picture and is not misled.

A key element of our present defence policy is NATO's declared readiness to use nuclear weapons first in the case of a conventional attack by the Soviet Union. Many regard that as militarily dangerous and normally reprehensible. However, the Government case is that the superiority—a point made by the hon. Member for Gosport (Mr. Viggers)—of the Warsaw pact is so great that such a policy is necessary. The key question is: are they right?

The central element of the Government's argument is that the gap in the NATO and Warsaw pact conventional forces is so large that we cannot bridge it and that therefore it is necessary to use nuclear weapons to offset the disadvantage. The consequence is that instead of the deterrents at two levels that I should like to see—one to deter at the conventional level and one at the nuclear—we have left ourselves with only one response to any Soviet action—the nuclear one.

With low and inadequate conventional forces, and a sole response—the use of nuclear weapons—to any

[Mr. Paddy Ashdown]

Soviet aggression we have a policy the consequences of which are nuclear weapons constantly held on the hair trigger and a threshold to nuclear war which is dangerously low.

Whether such a policy is necessary depends on the real balance of conventional forces between the Warsaw pact and NATO. One would imagine that the Government would give us the true facts on that. However, it appears not. They seem to prefer to misrepresent the facts to the House and to a wider public—some people might even say, distort and mislead. That appears to be the case in serious documents such as the Defence Estimates and annex A to the Estimates.

I shall first deal with the issue of money spent on defence. The Estimates tell us that some 14 to 16 per cent. of the Soviet Union's income as a nation goes on arms, and that is about three times the NATO average. That is true, but it is misleading. NATO spends more on arms than the Warsaw pact. According to the Stockholm International Peace Research Institute's figures the Warsaw pact spends about £151 billion as against NATO's £307 billion. We may not accept the SIPRI figures, but what about those of the International Institute for Strategic Studies in its document on the military balance 1984-85? It gives the Warsaw pact as spending £278 billion and NATO £308 billion. NATO spent more on defence than the Warsaw pact.

As a percentage of GDP, the Warsaw pact's spending may well be higher than NATO's, but we do not win wars on a high percentage of GDP spent on defence. Strong defence systems are based upon the total amount of money that is spent on defence Even on the IISS figures, NATO spends about 1·6 times the amount spent by the Warsaw pact. NATO is stronger in othe, areas as well; it has 1·6 times the manpower and 2·5 times the gross national product of the Warsaw pact.

The disparities are not confined to national statistics. More glaring examples of misleading statistics appear in annex A of the Defence Estimates. The figure on page 54 shows the nuclear weapons held by each side and the Warsaw pact column is substantially higher. No overall figure is given, but the implication is that the Warsaw pact has massive superiority. However, the chart uses missiles and not warheads. Now that we have multiple independent re-entry vehicles—independently targetable warheads—would it not be better to use those instead of missiles? The document "British Defence Policy" is even more exaggerated in giving superiority to the Warsaw pact.

If we look elsewhere we can obtain more honest representations of the balance. For example, the United States congressional budget office study "Modernising US Strategic Offensive Forces" uses individual warheads in its calculations because, it claims — more honestly than ourselves—that that

"indicates the potential targets which can be struck."

That approach is fairer, but it seems that it does not create the impression of Warsaw pact superiority which the British Government want to create.

The United States figures show that NATO is superior. The Warsaw pact has 9,000 warheads compared with the 11,000 of the United States. In addition, our Estimates exclude the capability of Trident. The congressional study includes "hard target capability" — the capacity to deliver a nuclear weapon with a 50 per cent. chance of a hit at a point close enough to exert 4,000 tonnes per sq in overpressure at a certain point—presumably, the missile silo. The report says that there will be no sea-based capacity for such hard target capability for the Americans until Trident D5 is delivered. Indeed, the report goes further:

"The sea-based forces will have to await the introduction of the Trident II(D5) missile in the 1990s to achieve a hard-target capablity."

That is a vital report, because it shows that Trident will give Britain a first-strike capacity. I accept that the Government have no intention of striking first, but they will have that capacity and we cannot blame the Soviet Union if it takes that into account in its calculations.

The United States Under-Secretary for Defence told a Mitre conference in 1981:

"Equipped with D5 Missiles, the Trident submarines will have a 'counterforce capability' — even a pre-emptive capability."

That is frightening, but it is at least honest. How different it is from what we are told in our Defence Estimates. Paragraph 10 of the Trident essay says:

"The United Kingdom's deterrent force, when equipped with Trident, will remain the minimum size compatible with cost effectiveness and credibility".

In fact, according to the American statements, Trident gives us a pre-emptive, first-strike capability.

The clever manipulations and deceptive understatements extend to the conventional balance. Indeed, some of the most glaring examples appear in the conventional balance tables in the Estimates. Figure 10 of annex A shows that the USSR has more divisions than NATO It fails to say that a United States division has 40 per cent. more manpower than a Soviet division.

Figure 9 shows the numbers of Warsaw pact and NATO forces. The Warsaw pact is shown as having a superiority of about 150,000, but the figure does not make it clear that all the Warsaw pact forces in Eastern Europe are included, but only the forces assigned to NATO on the mainland are included. Some British and French troops are left out.

The United States is more honest. A congressional researcher, Anthony Cordesman, who has done much work in this area, reckons that about 256,000 men in France and 70,000 soldiers in Britain are excluded from the figures. Anthony Cordesman's figures, backed up by Mearsheimer, show that NATO has a majority of forces on the ground — 1,113 million against the 933,000 of the Warsaw pact.

Figure 9 gives a ratio of fighting units of 1·2:1 in the Warsaw pact's favour, but a different picture emerges in the figures for tanks. Annex A suggests that the Warsaw pact has a majority of 2:1. Here is revealed an especial sleight of hand. NATO chooses to have tanks in balanced units with other forces. The Warsaw pact's theory of victory is to have heavy tank concentrations. We choose our balance of forces according to our theory of victory, but when we represent the balance of forces, we choose the Soviet theory of victory to assess the impact. That is dishonest and it causes the West always to look bad. We simply move the goalposts.

I could develop some technical points about tanks, but time will not allow that. The United States Department of Defence is more honest and straightforward. Using a sophisticated armoured division equivalent, in which it took all divisions on the central front and weighed them against three charateristics—mobility, surviveability and

firepower—it decided that the ratio was not 2·1:1, as suggested in our Defence Estimates, but 1·1:1 — an insufficient superiority to mount a successful attack.

Annex A puts the Warsaw pact's superiority in aircraft at 2·1:1. I begin to wonder whether the Ministry's figures are just sloppy or are deliberately intended to mislead.

Calculations suggest that in bombs and weapons delivered at 100-mile and 200-mile ranges, NATO has a superiority. All this adds up to the fact that the gap between the strength of our conventional forces and those of the Warsaw pact is not so great that it could not be bridged in a way that would give NATO effective conventional deterrents as well as nuclear deterrents.

If that is so, we are much closer than the Secretary of State would like us to believe to the point where we could abandon a defence posture that relies on the fact that we would be the first to use nuclear weapons in a time of conflict. Abandoning that posture would make the world a safer place.

Finally——

Mr. Deputy Speaker (Mr. Ernest Armstrong): Order. The hon. Gentleman has exceeded the time limit.

8.7 pm

Sir Hector Monro (Dumfries): The hon. Member for Yeovil (Mr. Ashdown) made an incredible and irresponsible speech about the nuclear deterrent and his wish for unilateral nuclear disarmament, which would leave us in a weak position.

I welcome and support the Government's policies set out in the Estimates, their strong attitude on the nuclear deterrent and the overall strategies, which are designed to maintain peace.

I have recently returned from a defence visit to Belize where I was reminded of how essential it is for us to have effective helicopters in support of our services. I was impressed by the commander of the British forces, his staff, the Army and RAF units and the resident battalion, the Duke of Wellington's Regiment.

We must come to a conclusion on our medium and long-term strategy towards Belize. We are there to help to defend it against Guatemala and we use the country as a first-class training area for our forces. I hope that we shall be there for a considerable period and, if we are, I hope that the Ministry of Defence will investigate the accommodation for soldiers and airmen in the airport camp. It is too cramped for a tropical climate and way below the standard that we require on a regular base.

The Estimates cover much sophisticated weaponry that involves high technology. We must never forget that the morale of the men and women who form our forces is most important, and that we want it to remain as high as possible — that is, extremely high. We must never become impersonal or remote from their aspirations. Issues such as pay, promotion, postings, and overseas allowances, matter greatly to them. Issues such as local overseas allowances must be presented better than they were this year. It was not only tough on the commanding officers who had to explain the matter to their units, but on the men. Whatever the practical reasons, which were brought out in the Select Committee's report, to find that the allowance in Germany had been substantially cut was tough. Allowances have been increased elsewhere, but when one has had an allowance for a long time, it comes as a surprise when it is removed at short notice.

Ministers must do all that they can to cultivate a personal touch with our forces. Too many skilled men and women are leaving the forces, a point which my right hon. Friend the Secretary of State for Defence touched on. I take his point that as the economy may be picking up and as men in the forces are extremely skilled, it is understandable that they are attracted away. To prevent that we must provide good conditions of service, good pay and a promotion structure which enables them to see a long way ahead. After giving them an expensive training, we do not wish to lose them and, more important, their experience, because industry can offer them better conditions. To look after our men and women is a first priority, which has been highlighted in articles in *The Daily Telegraph*. They reinforced what I have been thinking for many months.

I compliment the Royal Air Force on the remarkably high standard of airmanship that it maintains year by year, supported by a host of ground services and control units. Airmanship of the Hercules, which have been going to the Falklands, and of the Red Arrows, of which I have seen two excellent displays during the past few weeks, is of the highest quality. We have made one decision and must make another, and both are crucially important. The first decision related to training aircraft. I hope that the Ministry of Defence will never again embark on a cheapest tender policy. It may have reduced the eventual price well below what was anticipated, but the Ministry's attitude must be to go for the best buy. It is necessary to take into account the quality, specification, performance and handling of an aircraft and balance that against costs. To go for the cheapest aircraft, even if its performance is acceptable, is not to buy the best aircraft for the Royal Air Force.

I wholly support my hon. Friends the Members for Wealden (Sir G. Johnson Smith) and for South Ribble (Mr. Atkins) about the European fighter aircraft. It is essential in the medium and long term that we in the United Kingdom get the best aircraft that we can and the one that we want. I know that it is a complicated issue and that my right hon. Friend is doing his level best in discussions with our European partners. As my hon. Friend the Member for Wealden said, if we cannot reach an agreement in Europe about this type of issue, the future does not look too bright. The House will wholly support my right hon. Friend if the British aircraft industry is substantially involved in the EFA.

My right hon. Friend touched on the reserves. I am involved in the Royal Auxiliary Air Force. The seven regiment squadrons, the maritime headquarters unit and the handling squadrons have turned out to be a great success in terms of value for money for the Royal Air Force. The fact that the regiment squadrons are now in the line of battle shows that they are trained to the highest standard. They are part of the first-line defence of RAF aerodromes. To maintain the enthusiasm in the Auxiliary Air Force, Territorial Army and home defence force we must ensure that they have plenty of the best possible equipment. Reserve forces undoubtedly like to have good equipment with which to train at the weekend, and take great pleasure in using the highest quality equipment.

Bearing in mind all our operational and financial difficulties, we must continue as best we can to give the squadrons and Territorial Army the opportunity of going abroad every few years for their summer training. That is a great incentive and most important.

[Sir Hector Monro]

Overall, having listened to the debate and the discussion of the Select Committee's report, I am confident that the Government are firmly committed to the best possible defence forces. I welcome the fact that during the past seven years we have been able to increase expenditure in real terms year by year. That is a fine commitment, and one of which Conservative Members are proud. I hope that we shall be able to continue with that in future. Today the Secretary of State gave us a good report, which I warmly support. I look forward to another year of complete support for our forces.

8.17 pm

Mr. Gordon Brown (Dunfermline, East): The underlying theme of the debate, acknowledged if underplayed by most Conservative Members, including the hon. Member for Dumfries (Sir H. Monro), has been the Government's growing revenue crisis. The immediate shortfall in Government funds has not spared the Ministry of Defence and now threatens to engulf it. The shortfall in the defence budget is obvious not only from the report of the Defence Select Committee, but from the Defence Estimates. It is caused by Trident, which Mr. David Greenwood of Aberdeen university says will involve a £4 billion gap in the defence budget by 1988.

The implications of the gap are most obvious in the effectiveness and readiness of the Navy. According to a defence document that I have been given, the Navy will have less money in real terms in the years to come. It will be undermanned and overstretched, with perhaps 11,000 fewer men in the 1990s, possibly 17 fewer escort vessels, and with a wholly inadequate merchant fleet available for logistic support.

If that were not difficult enough, we have a shortfall in new naval building, increasing demands on aging frigates and submarines at sea and, therefore, an increasing requirement for dependable and speedy refits on land. We therefore need more investment in, and more commitment to, the royal dockyards. Yet the Government have chosen to risk everything by proposing to end the centuries-old public stake in the royal dockyards and to throw them to the hazards of a franchise market.

According to the Secretary of State, the defence gap, which we know exists in the funding available to the Ministry, is to be bridged not by a realistic reappraisal of our defence commitments, as promised by the Secretary of State last year but, as the Defence Select Committee says, not yet delivered. It is not to be bridged by cutting the expensive commitment to Trident, which will remain a wholly unusable weapon of indeterminant cost, nor by any enhanced contribution from the Treasury, as the Chancellor of the Exchequer is already hovering on the edge of bankruptcy in other areas.

Under this Government, the gap between our requirements and our resources, between our growing burdens and falling budget, is to be bridged by ideology. There is to be more competition, more contracting out, more privatisation and more franchising. Somehow the gap in our defence budget is to be bridged by what has been called the voodoo economics of privatisation. From what they call open competition, the Government, as the Select Committee reports, hope for savings of £566 million, but admit that it may be only just over £100 million, or nothing. From contracting out services, another of the Government's favourite themes, the Government hope—according to the Select Committee—for savings of £400 million but concede that they may be only £100 million. Indeed, they might be nothing. From these experiments, the Government hope for savings of more than £1 billion. The Defence Committee says that the savings may be less than £500 million or, indeed, they may amount to nothing. The Government hope to cut costs by 40 per cent., but have to concede that the figure may be less than 10 per cent., and it may even be nothing.

The Government are gambling on the outside chance that when it comes to all the support services and the management of the dockyards, the private sector is cheaper simply because it is the private sector. That is not defence economics or even the economics of the grocer's shop, to which we have become accustomed under this Government, but more like the economics of the betting shop.

Nowhere is the Secretary of State's gamble more irresponsible than in the case of the royal dockyards. They are to be subjected to the disruptions of privatisation on the basis, as I have said before, of a sketchy and contemptible document written by the highest paid civil servant in the land, but which would not rate even a bare O-level pass in business studies.

The proposals, which threaten a private take-over of the dockyards, the dispersal of naval refitting work round the country, and a disruption of the integrity of the naval bases at Plymouth and Rosyth, ignore the experience of every country that possesses a nuclear deterrent and discard every respectable report that has been done on the dockyards, including one by the hon. Member for Ashford (Mr. Speed) under this Government.

What evidence can the Secretary of State or the Minister give us for their gamble that as they privatise, they will economise, when the whole assumption of their case is that defence work should be carried out in the public sector only when there are "significant" financial advantages? In other words, if the dockyards are cheaper in open competition, they may nevertheless lose the work because of the Government's dogmatic commitment to privatisation. With no evidence beyond simple prejudice, the Secretary of State and the Minister are gambling on the supremacy of the private sector in the management of our naval refitting, against the contention of all previous reports that the dockyards have a far better and proven track record as being more efficient, cheaper and better in time and quality than the commercial shipyards.

In January, the Secretary of State for Defence announced a comparison exercise between the private and public sectors in the refitting of submarines and frigates precisely because, as he admitted, he could not yet expect the private yards to submit "realistic tenders". The comparison exercise was to take at least two years. Now that we are only a few months into that exercise, which was to test the Minister's theories, we are told in a document entitled "The Rosyth Challenge" the conclusions. They are:

"That the indications are that the dockyards are more expensive"

than the private shipyards and that consequently there must be a 15 per cent. reduction in dockyard costs and a 5 per cent. reduction in dockyard staff. It is said that if the dockyards do not respond quickly by the end of the year, they could start losing large elements of their programmes, including the Leanders and the type 42s.

Hon. Members may find it deeply suspicious that, a few weeks after the Minister announced a two-year long competition, he should be able to announce its results, and that in doing so he should ignore the uncomfortable but clear fact that the private shipyards doing the refit work in that exercise have become wholly dependent on the expertise, equipment and even the personnel of the much despised dockyards. The refitting work has been proved to be beyond their own skills and sophistication.

If the private sector is over-stretched and manifestly inadequate to the task of refitting one submarine and one frigate, how could they cope—if the dockyards were run down—with 46 escort vessels, 24 submarines and even with four Polaris deterrents? The Government have forced the royal dockyards to enter a competition in which the winner and the loser have already been declared, and in which the Ministry of Defence has chosen to add insult to injury by demanding that the public sector should subsidise its competitor in the private sector. Even then, the Ministry's whole philosophy is to say that even if the public sector is cheaper and proves that it can do the job at a lower cost, it will not necessarily get the work.

Surely Admiral Leach should be taken seriously when he said last month that he was very "proud and deeply grateful" for the

"professional alacrity of the dockyards in a crisis".

He added:

"It is a little premature now to kick them in the teeth".

The Defence Estimates, and particularly the dockyards experiment—where dogma matters more than evidence—represent the triumph of ideology over experience. In defence, in particular, the national interest is not the sum of the private interests in the economy. The House should reject proposals for privatisation that are doctrinaire, dangerous, unproven and unpatriotic and that have been discarded in the freest of free economies in America, and which, like Trident, have nothing to contribute to the real defence of this country.

8.26 pm

Dr. Alan Glyn (Windsor and Maidenhead): I support the hon. Member for Dunfermline, East (Mr. Brown) in one respect, and that is in accepting the importance of the role of the Merchant Navy in war. Indeed, my right hon. Friend the Member for Taunton (Sir E. du Cann) also made that point. I was interested in the remarks of the hon. Member for Liverpool, Walton (Mr. Heffer). However, we cannot possibly estimate whether Russian policy, under the titular headship of Mr. Gorbachev, will change. Consequently, our efforts for peace must continue along the same lines until we see some sign of change on his part.

I shall concentrate on the defence of our homeland and installations, as the Government have described in paragraph 448. As I hope to show, there will simply not be enough men, after mobilisation, to man those vital installations.

I think that it is agreed on all sides that the conventional forces of the Warsaw pact are in all cases superior to our own. During exercise Lionheart, it was shown that the time taken for reinforcements was good, but that it would take the United States a considerable time to provide reinforcements. Consequently, we would be entirely reliant on nuclear weapons for our defence.

The third paragraph on page 6 of the Estimates makes it clear that the possession of Trident and of our nuclear capability is likely to inflict unacceptable damage on the Soviet Union. Surely that in itself makes the case for possession of such weapons, helping the peace initiative and strengthening our hand in any negotiations. The Defence Estimates also point out that Trident may result in sacrifices. However, I believe that Trident is so essential that we must keep it. Indeed, it is even more essential given the enormous stocks of chemical weapons held by the Soviet Union. I hope that we shall hear more about what we are doing to protect our soldiers and civilians from any such attack.

Star wars may have helped peace negotiations with the Soviets, but I believe that there are many technological defects which could put that project, as a practical proposition, far into the future. Nevertheless, it may help in our negotiations, as the Soviets are obviously worried about it. We cannot possibly be sure that some of the technicalities such as thermal measurements are perfected, and therefore it may be some time before it is put to practical use.

We have to concentrate on what we have at the moment. We know, and I have tried to show, that the superiority of the Warsaw pact powers means that we are dependent upon our nuclear capabilities. However, we have to remember that when mobilisation occurs, the Defence Estimates show that 100,000 service men will go out of the country. That leaves us bare, in spite of what the Government are doing to create the new home service force. I do not believe that this will be sufficient to guard our installations. It would require only a small number of dedicated people to cripple our strategic installations and we have to face the fact that these people will be disguised. The people who have to detect them should be from the locality.

The Government's policy is to attach members of the new force to TA or regular units. They are all over the country but we should have a force, as has been suggested by Lord Hill-Norton, consisting of local people, perhaps armed with weapons that are inexpensive and not up to date, that can act as an organised and disciplined force to help to catch and, if necessary, to tackle these intruders. They would act as a sort of auxiliary army. With 100,000 troops leaving the country we would be left very thin on the ground.

We do not want a private army, but home defence, as outlined by Lord Hill-Norton, could be an invaluable asset to our army defences and to the Territorial Army and the reserves. The Government should give careful consideration to this and, during exercise Brave Defender perhaps, some experiments could take place. Any force must be responsible and under military authority. The cost would be small, but what it would give to defence would be great. I commend Lord Hill-Norton's proposition and I hope that he will be able to enlarge on it in the other place. I do not ask for an answer today, but we should have this point in mind, and give it serious thought. Perhaps during exercise Brave Defender, we could see how it would work with what we already have.

On a purely domestic level, I thank the Government for helping to expedite the rebuilding of Victoria barracks in Windsor.

8.33 pm

Mr. Andrew F. Bennett (Denton and Reddish) I shall not follow up the arguments put by the hon. Member for Windsor and Maidenhead (Dr. Glyn) about reviving Dad's Army, but I shall follow up the point that he made about

[Mr. Andrew F. Bennett]

Trident being so vital. In doing so, I pursue the question that I put to the Secretary of State about whether Trident is credible if the Secretary of State cannot tell us how political control of the possibility of launching the Trident base missile will be achieved.

The Secretary of State appeared to want to brush that point aside, but it is extremely important. He suggested that there is no difference between Trident and Polaris, and that whatever system is used for communication with Polaris would be suitable for communication with Trident. But that is not true. Part of the point about Trident submarines is that they will have a far greater range and will also operate at a far greater depth. Therefore, it is extremely important to know how we shall maintain political control from this country to wherever the submarines are.

The lessons of the Falklands war show that one of the major problems in war is communication. Commander Lewin in many of his remarks has suggested that. Ministers, in justifying their instructions to the Conqueror and the timing of the sinking of the Belgrano, have always used the argument that they had to worry about communications and had to use a fairly broad-brush approach. I think that everyone will accept that such a broad-brush approach would be unthinkable for Trident missiles. Therefore, it is important that the Government should convince us that they have an effective system of control.

As I understand it, the Government did not have a system of communication with the Polaris submarine down in the South Atlantic during the Falklands war, or with much of the task force, that was not dependent on the United States satellites. We did not have our own independent communications system but were dependent on the United States. Therefore, it is not a question of having an effective system for Polaris that can be upgraded for Trident—we probably do not have a system that will operate over such a range. If Trident is to be credible, we have to have instant political control over it, and it has to be independent of the United States.

I understand that the system for control being considered is based on an extremely low-wave radio system that would involved having aerials strung out over large parts of the countryside. The site would be obvious to everyone because of its size and scale, and to a certain extent it would be vulnerable to enemy attack. Therefore, we must ask some strategic questions.

I also understand that an installation of that size and complexity of technology, with the problems of ensuring that it could not be interfered with by radio waves, would be extremely expensive. What costs have been allowed for that? The alternative is that it would be possible to do this via planes, but we should have to have special planes for the purpose. The difficulty there is that such planes would have to follow a regular pattern, and from that it would be possible to work out the patterns of the submarines and in the end they would be vulnerable to attack. That would be equally, if not more, expensive.

It is possible that we could use the same system being considered by the United States for the control of its Trident, which is to use the Nav Star satellites. However, although the United States is planning to put up 18 of these, it is questioning whether they might not be vulnerable to attack and whether they form the system that it wants. Could we claim that we have a credible independent system if we have to rely on the United States satellites? I should have thought that that was not the case. We could consider putting up our own satellite, but that would have such a disastrous economic impact on the programme that it would not be credible.

Where in the White Paper are the specific sums of money to ensure political control over the possibility of launching missiles? Has the Minister looked at the technical problems involved? Would they not involve reducing the distances that the Trident submarines could travel from Britain, and their effectiveness? How much money will be involved? Unless the Minister can answer these and other questions that have been asked about Trident, we must come to the conclusion that Trident is not credible. The British people do not want it and we cannot afford such a system, which will be disastrous for the country, for our economy and for our moral standing in the world.

8.39 pm

Mr. Henry Bellingham (Norfolk, North-West): I am grateful to you, Mr. Deputy Speaker, for calling me after the hon. Member for Denton and Reddish (Mr. Bennett). I was interested to hear what he said about Trident and communications. Obviously, he has done a good deal of work on the subject. I understand that much of what he said is erroneous but I look forward to hearing what the Minister has to say about it.

The hon. Member for Dunfermline, East (Mr. Brown) talked about Trident being unusable. If deterrence works, of course it is unusable—that is the whole concept of credible deterrence. Before dealing in more detail with Trident, I should like first to mention the local overseas allowance.

As the Member for Norfolk, North-West, I naturally have an interest in LOA because there are many service men in my constituency. There are many RAF bases nearby. There is a strong service tradition in west Norfolk. The Minister will be aware of the grave concern in Germany. I read his speech in the Adjournment debate about four weeks ago. We all know the figures of loss of pay of certain types of officers and soldiers. I believe that the matter was handled very badly and insensitively. The Government's high standing with the services in Germany took a serious knock.

In the Adjournment debate, the Minister said that many of the troops were away from their units when the decision was announced, and heard about it through the media. That is not good enough. It would have been far better if unit commanders had been given a week's embargo on the announcement and had had a chance to tell the people in their units what was to happen.

The Minister knows my interest in the small firms sector. I welcome the document, "Selling to the MOD". I also like paragraph 513 of the defence statement, which mentions that much more attention is being paid to smaller firms, and that the Ministry is looking for greater opportunities for the small firms sector. It mentions that 40,000 copies of the document have been distributed to small firms. Are there any data on how successful the document has been? Are there any figures available? What does the MOD categorise as a small firm? Is it a firm employing under 200 people, under 100, under 50 or under 20? I should like to see figures for the different categories.

I should like to be able to say to the many small firm lobby groups that we have been successful in the policy of trying to help the small firm sector through MOD procurement, but we need more information about it.

The decision on Trident is without doubt the most momentous that any Government have had to make since the last war. The crucial starting point is to ask ourselves whether the United Kingdom needs an independent nuclear deterrent. As the White Paper says, deterrence is a matter of perception, and nuclear weapons in the possession of the United Kingdom greatly complicate the calculations of a foreign aggressor. As the Secretary of State said, we might at some stage in the future—I hope not, and he said that he hoped not — see an Administration in power in Washington that is more isolationist and more Pacific-oriented. If that were to happen, we would be left alone.

I am convinced of the need for an independent nuclear capability, but that capability has to be credible. If it is not credible, it is a complete waste of time and money. I was initially opposed to Trident, which is undoubtedly a Rolls-Royce system. Just as I do not want to see the Secretary of State driving around in a Government Rolls-Royce when a Rover or a Montego will do, likewise, if there could have been a Rover or Montego as a credible alternative to Trident, I should have liked to see that option adopted.

It is incumbent upon anyone who argues against Trident to ask himself about the other options. We have heard tonight what they are. The first is to retain Polaris. I do not believe that that is a sensible option. The submarines will be worn out by the mid-1990s and it will be very expensive to refit them completely.

Although the Chevaline warhead is British, the missile is American, and there would be serious problems in maintaining the production lines in America.

We have heard about cruise from the leader of the SDP, the right hon. Member for Plymouth, Devonport (Dr. Owen). It is accurate and is a much-favoured alternative in some quarters, but its range is very short, and that would lead to problems with the detection of submarines. But the main problem with cruise is its overall lack of credibility as a strategic deterrent, because it would not have the necessary assured penetrability.

I have looked very carefully at all the arguments, and initially I favoured the cruise option, but now I am 100 per cent. against it as a strategic nuclear deterrent for the United Kingdom.

There was some talk of building a new British deterrent, but that would be a much more expensive option than the others. There was mention of co-operating with France. I should like to see that at some stage in the future, but in the short term it is completely unrealistic. Therefore, I am led, albeit reluctantly, but remorselessly and irresistibly, to Trident. Of course its power is unimaginable. We all know that the explosive power of one full submarine complement of 16 missiles is 640 times the power of the Hiroshima bomb. Naturally, that leads to disquiet.

We have heard from the Labour party about escalation in the cost of Trident. We do not need many lessons from Labour Members about the escalation of cost. Recently I looked at Barbara Castle's diaries; under the date 11 November 1974 she described a Cabinet meeting when the decision was taken to go ahead with Chevaline. The figure then mentioned by the Prime Minister was £24 million. By March 1976 it had risen to £584 million. We all know that the final cost is getting on for £1 billion. The Government have been very open about Trident, but the Labour Government were utterly secretive about Chevaline, and also about the initial negotiations that might even have led a Labour Government, had they stayed in power, to adopt the Trident option in 1981. Despite the escalation in cost, I still believe that Trident is extremely good value for money.

Our contribution to Trident research and development is very small — about $116 million. The argument about the exchange rate has often been greatly exaggerated. The Henley forecasting centre said that, even with an exchange rate of 63 cents to the pound, the extra cost would be only about $1·5 billion. We know that that will not happen because the pound looks like remaining a good deal stronger than some people might have expected it to be.

Trident will, of course, have a major impact on the defence budget, and I accept the implications of the Select Committee report, but we have to cater for Trident; we have to go ahead with it. The first duty of any British Government is defence. The first social duty of any British Government is defence. The overwhelming majority of people in Britain want an independent nuclear capability. That is why I firmly believe that, if an overwhelming argument is made for an independent nuclear deterrent, it has got to be credible and it has got to be Trident. If it is not Trident, then that appalling, horrific scenario of a nuclear holocaust, far from being less likely, will become more likely.

8.47 pm

Sir Antony Buck (Colchester, North): It is a pleasure to follow my hon. Friend the Member for Norfolk, North-West (Mr. Bellingham). I apologise in that I was not here earlier. I have been out of the Chamber for a while, because I was tempted away to a NATO reception, organised by the NATO defence college. When the Minister replies to the debate, he may wish to say something about that very interesting organisation, which was responsible for my being absent for part of the debate. *[Interruption.]* I am sure that the hon. Member for Kingston upon Hull, North (Mr. McNamara), who is on the Opposition Front Bench, was invited to the reception. At any rate, he will be glad to learn that his hon. Friends were represented there.

The NATO defence college should be the think tank of NATO, which it is not at the moment. It has a course to which we send people of moderately high calibre. There is room for a considerable expansion of that NATO facility.

I should like to make some general remarks on the defence White Paper. With good Tory logic, it has a blue cover, which is now a continuation of tradition. For the first time, the defence White Paper contains what might be regarded as a child's guide to defence control. The major arms control and disarmament agreements and talks are set out on page 4. I always think that it is important to discuss simultaneously our defence capacity and capability and the arms control initiatives that Britain and the Alliance are taking.

I do not think that we have a monopoly on concern for defence matters, but I do not see many of the unilateralists here. To a large extent, the hon. Member for Sheffield, Attercliffe (Mr. Duffy) shares with me a mutual and

[Sir Antony Buck]

balanced force reduction approach rather than a unilateralist approach. We have had the common privilege of being Ministers with responsibility for the Navy, and I think that we agree that the unilateralists are the enemies of the multilateralists. If the tough men of the Politburo are to be persuaded to have meaningful negotiations around the table on START, SALT, MBFR and so on, it is important to keep up our defensive position. If they see that we are unilaterally tearing down our armaments system, they will never negotiate.

It is useful to consider what has already been achieved in arms control and disarmament agreements and talks as set out in the White Paper. The 1985 Antarctic treaty prohibited military activities in that region. That is significant in relation to the Falklands. I should like an assurance that the treaty's provisions is not being abrogated and will not be under any circumstances by those who are potentially hostile to us. The 1963 partial test ban treaty banned nuclear explosions in the atmosphere, outer space and underwater. That vitally important agreement has been observed by all sides. I do not believe that there are any signs that it will be abrogated.

The 1967 outer space treaty, the 1967 treaty which established a nuclear weapon-free zone in Latin America and the 1968 non-proliferation treaty which inhibited the spread of nuclear weapons to further countries are also significant. I hope that the Government will state the extent to which those treaties have been obeyed. I should like a frank appraisal of the position, because there has been speculation in the newspapers about the possible nuclear capability of several countries. This knowledge is highly relevant to a consideration of our defence policy. I am concerned about the rumours that certain countries have breached the 1968 non-proliferation treaty. We must ensure that the provisions of the treaties are monitored properly and are enforceable. If they are not enforced fully, public opinion must be brought to bear on the Governments concerned.

The sea-bed treaty prohibits the placing of nuclear weapons on the sea bed. The SALT I agreement limits strategic nuclear missiles. The 1972 anti-ballistic missile treaty limits deployment of anti-ballistic missile systems. The 1972 biological weapons convention, the 1977 environmental modification convention, which banned the use of techniques to change the environment for hostile purposes, and SALT II are also mentioned in the White Paper. Some agreements have been of considerable value.

It would be useful at some stage of the debate to have a situation report—in Ministry of Defence terms a "sit-rep"—on the integrity of the agreements and the current position with regard to MBFR talks and the talks in Geneva and Stockholm, which are rightly set out in page 4 of the White Paper. I welcome the White Paper's change in format. I welcome its appraisal, although I should like it to be fuller, of our progress towards what we all want —a reduction in arms on both sides of the iron curtain.

Recently, I returned from a visit to the mid-west of America, which is one of the areas most remote from Europe. It was a personal visit, not one focusing on defence. I know that the hon. Member for Attercliffe shares with me an admiration for many of the facets of the defence efforts of our American allies. I was asked to go to the mid-west under the auspices of the English-Speaking Union, because that area is visited less than certain others. If we ordinary Brits, as we are known, go to New York or other places that are frequently visited, that means virtually nothing. However, in the mid-west —an area that can claim to be the heartland of America — Englishmen and Members of Parliament have a certain rarity value. We should pay high tribute to the people of the mid-west because they are interested in hearing people talk about defence matters. It is remarkable that the people of the heartland of America are not more isolationist than they are because even New York is a long way away.

I pay tribute to our American allies for being prepared to retain more than 100,000 troops in Europe. This is tied up within the points adumbrated in the White Paper.

I have probably one more minute in which to speak.

Mr. Deputy Speaker: Order. The hon. and learned Member has had 10 minutes. He must bring his remarks to a close.

Sir Antony Buck: I welcome the White Paper. It is sensible in its consideration of disarmament as well as armaments. I pay tribute to our armed forces. They are the finest in the world. I have seen them in many theatres, and in Northern Ireland they perform their task with greater restraint than could any other forces. I am glad to have had this opportunity to make those comments.

8.59 pm

Mr. Bill Walker (Tayside, North): I welcome this opportunity to speak in what is clearly a defence debate. I say that because any expenditure that we make is designed not for offensive purposes. We are therefore discussing defence in all its aspects, and the White Paper is concerned with defence.

Throughout the debate, differing views have been expressed about how best we can defend our interests, and I do not doubt the integrity of those whose views differ from mine. Indeed, some of my hon. Friends hold differing opinions about how best we are to achieve value for the money that we spend. Hon. Members are bound also to hold conflicting views according to constituency interests. I have a constituency interest, but I will not home in on that tonight.

I wish, first, to deal with deterrence. It is reasonable in a debate such as this to ask whether the nuclear deterrent has worked. We propose to spend money over a long period pursuing what has been the policy of successive Governments since the nuclear deterrent was first introduced by a Labour Government. Thankfully, successive Labour Governments have pursued that policy. Those who believe in the nuclear deterrent take that view.

To judge whether the deterrent has worked, we must examine the situation in the world. We live in a troubled and dangerous world in which war tends to be the norm. There have been close on 150 wars since 1945. That being the pattern throughout the world, why has there been peace in western Europe? After all, we have forces facing each other and there is a huge political and ideological divide.

Western Europe has been following free world policies and the countries of eastern Europe have been following the policies in which they believe. Those who have visited the Berlin wall, let alone the other side of the iron curtain, will not deny that the divisions are real, not imagined.

Why, then, in a world that has suffered so many wars, have we in western Europe enjoyed peace? It is up to those who wish to abandon the nuclear deterrent policy that successive Governments have pursued to persuade us who believe that the deterrent works that their policies, whatever they are, will not jeopardise peace.

I have homed in on western Europe because it would be unrealistic to suggest that eastern Europe has been at peace since 1945. We cannot ignore the events in Hungary and Czechoslovakia. The tanks rolled and changes were brought about by force of arms. There were opposing forces. Change was being brought through the use of armed might.

What divides people? It is interesting to note that a substantial number of the wars that have occurred since 1945 have their origins in differences in religious beliefs. Listening to some of the bishops, we might believe that if we practise our Christian principles and tell others that we are practising them, those unbelievers or non-Christians will emulate us.

The evidence throughout the world proves the opposite to be the case. People of different religions who cannot agree on how to live in peace normally end up at war. In other words, many wars occur because people hold different religious beliefs. Some occur because people hold different ideological beliefs; the different ideologies come face to face, the people cannot live in peace, and a war results.

What, therefore, convinces those who do not believe in the deterrent that we should abandon policies which successive Governments have pursued and on which they have been prepared to spend sums of money?

Nuclear weapons are the least expensive of all weapons. When one examines the effect of modern warfare and the cost of inflicting damage to the extent that it would deter a would-be aggressor and inflict an unacceptable degree of damage, one has to consider how it could be achieved at a price that we are prepared to pay.

If we decided tomorrow, as some people suggest, to abandon our nuclear capability, how could such an unacceptable degree of damage be inflicted with conventional weapons for the price of our expenditure upon four Polaris submarines? If we believe that deterrence has worked and if we are prepared to continue to invest the amount of money that is necessary to maintain four submarines for the next 30 or 40 years, the obvious choice is Trident.

Some would argue that Trident is too expensive. I have always taken the view that if my children, and my children's children, never see a war in western Europe, Trident will be seen to have been a bargain, because deterrence has worked. It is up to those Opposition Members who wish to abandon the policy that many of them supported when they were in government to convince me, and others, that the risk ratio will not be altered by its abandonment and, more importantly, to convince me that they can put in its place conventional weapons that will deter a would-be aggressor. It will be no use to appeal to my Christian beliefs. I learned as a very young man in Government service that the fact that I was a Christian had no influence upon the Jews in Palestine or upon the Arabs. My Christian beliefs were put to the test at a very early age. I realised that my Christian beliefs were hardly the kind of shield that would prevent me from becoming the victim of an aggressor.

We in Scotland have a particular interest in the Trident programme. First, it will provide much-needed jobs in Scotland. Anybody who recommends the abolition of the Trident programme has to convince me, and other Scots, that after its abolition the base at Rosyth would continue to employ the same number of people and to do the same kind of job as it has done so successfully for so long. The arguments I have heard largely from the Opposition, have not convinced me, nor have they convinced many of my fellow Scots. We believe that the continuation of the Trident programme will mean that jobs are guaranteed. It may come as something of a surprise to Opposition Members that Governments and Opposition parties make promises about which the public are a little sceptical. It is only when the orders are placed that people believe that jobs will be guaranteed. That is why we in Scotland have an interest in Trident.

As an ex-airman, I am interested in what the White Paper says about the Royal Air Force. I, like many other hon. Members, recognise that Europe needs an air superiority aircraft, or call it what you will; all sorts of grand names will be given to it. We are referring to an aircraft that will be capable of surviving the air battles that could develop in western Europe.

Anyone who has studied battle aircraft will know that an aeroplane that cannot survive at below 15,000 or 20,000 ft in difficult conditions and terrain will not do its job effectively. The most recent glaring evidence of that was the destruction of the Syrian air force by the Israeli air force. It was one of the most outstanding air battles of all time. I cannot think of another battle where one air force destroyed so many opposition aircraft without suffering any losses. It was achieved because the Israelis had the right equipment for the job that they wished to do. No matter how good and how well-trained pilots are—RAF pilots are without doubt the finest in the world and the training system produces pilots of outstanding calibre—if, as we learnt to our bitter cost in the 1939 to 1945 war, we ask pilots to fly aircraft that are not equipped to do the job, losses will be substantial and the task will not be carried out.

I approve of our attempts to collaborate on a European fighter aircraft. If Europe is to mean anything, we must learn to live and work together and to make products that do the job. We must bury our nationalist attitudes—we all possess them, not least the Scots. However, we must listen to what the RAF says about its needs for an aeroplane that will fight air battles in western Europe. We ignore its advice at the peril of future pilots, and that is a price that I will not pay. I am sure that we shall find a solution, but I warn Ministers that the French are good at organising things to suit themselves. I wonder whether they are concerned with air battles in western Europe or whether they have other targets.

One aspect of the RAF that has interested me all my adult life is its reserve forces, which for many years have been run down. Recently, we started to reactivate the auxiliary units. I welcome that good move. The evidence from the operation of those auxiliary units and the calibre of the volunteers who have been attracted must convince even the most sceptical that the programme is worth while and is extremely good value for money. More importantly, we have attracted the volunteer services of some of the best people in the country. There must be considerable scope

[Mr. Bill Walker]

for enlarging the air force reserves at a price that we can afford, so that they can do the job that is necessary if they are ever asked to do it.

However, I make the strong plea to the Government to think about reactivating a flying branch. After all, the RAF is about flying; everything else is secondary. Its purpose is to fly to defend the country. If we want people to drive lorries and carry out other tasks, other services and units could do it much better. But no one flies better than the RAF. If, as I hope, we enlarge the RAF reserves and auxiliaries, I would further recommend that they should be under one command. It is a mistake to have different commands, or to have no clear structure of one air officer commanding those responsible for auxiliaries and reserves. I include in that the volunteers who serve the air cadet branch of the RAF, from which a substantial number of RAF recruits come.

The officers who serve those cadet forces, particularly the Air Training Corps and the combined cadet force, have civilian backgrounds that encompass many different professions, disciplines and experiences. I have always been amazed that we have on tap so many willing people who give of their time for nothing, yet we do not list their full-time jobs——

Mr. Andrew F. Bennett: On a point of order, Mr. Speaker. I was wondering whether the hon. Gentleman was aware that at least one other Labour Back Bencher wishes to catch your eye.

Mr. Speaker: That is not a matter for me, but I hope that I shall be able to call other hon. Members.

Mr. Walker: I hear you loud and clear, Mr. Speaker.

These debates largely concentrate on the major issues. I believe that I am the only hon. Member who is a serving RAF volunteer reserve officer, and it would therefore be wrong if I did not raise this subject. I hope that the House will bear with me in those circumstances.

I felt that I had to speak about the nuclear submarines in Scotland because of the Scottish dimension, and I am sure that the RAF would expect me to put some of those thoughts on record.

The many disciplines and experiences of the volunteer reserve officers who serve with our air force cadets could be used in emergencies if they were used on the same basis as the Territorial Army. There is much scope for using those people. I speak as their shop steward, and I know they hoped that I would get that message across loud and clear. They are willing and prepared, and we get them for nothing. There cannnot be a better bargain than that. In fact, the only time that these men draw pay is when they are on full-time service. Their volunteer service is given free.

I thank the Government from the bottom of my heart, because in 1962 I wrote a paper on replacing the gliders in which the cadets were trained. I waited a long time before the money was forthcoming, but I thank the Government Front Bench as well as my noble Friend, Lord Trefgarne. All Defence Ministers contributed to the positive action that resulted in the brand new glider fleet for our cadets. I promise that it will be another 20 years before I ask for more replacements.

9.18 pm

Mr. Bob Clay (Sunderland, North): I wish to raise some questions about the proposed American nuclear-tipped artillery shell and its deployment in Europe. I have corresponded with the Secretary of State about this and have received an interesting reply today.

At defence Question Time on 26 February, Labour Members asked why Dr. Wagner, a senior official in the United States Administration, told congressional hearings that NATO Ministers had agreed to the deployment of the new 155 mm shells in Europe, although Ministers had told the House of Commons that no such agreement had been made.

There were further denials in the House of Commons, but on 1 May Dr. Wagner told Congress that this had been agreed. He said that NATO Ministers endorsed a number of improvements, and listed the new artillery shells as one of them.

Since that denial in the House of Commons, Congressman Fazio has put the record to Dr. Wagner at further congressional hearings. He read the record of what was said in the House of Commons and asked, in effect, who was telling the truth. On that occasion, Dr. Wagner said that the statements of British Ministers must have been made for political reasons and for domestic consumption.

The explanation that I received from the Secretary of State today concludes:

"I am of course not responsible for decisions taken by the United States Government, or evidence given by their officials to the United States Congress. I agree that Dr. Wagner appears to have taken a different view to mine in his testimony. But the facts as understood by the British Government are as I have described them."

It is now clear that a senior American Government official at congressional hearings in the United States is saying something totally contrary to what British Ministers have been telling the House of Commons. There is a direct conflict of evidence. To put it bluntly, the Secretary of State in his letter to me seems to be saying in a polite way that Dr. Wagner is misleading Congress because if that is not so British Ministers must have been misleading the House of Commons. Both sets of statements and evidence cannot be true.

As the Secretary of State now accepts that different evidence has been given in the United States he should explain to the House what steps he has taken to ask the United States Administration to sort the matter out because things are being put on the congressional record which imply that British Ministers have lied to the House of Commons. In those circumstances, one would expect representations to be made to the United States Administration—I should like to see evidence of this—to stop this going on and to clear the matter up once and for all.

This matter is extremely important not just because of the question of veracity and the discrepancy between the records of Congress and of this House but even more fundamentally because this all stems from the claim at the nuclear planning group meeting at Montebello in 1983 that stockpiles in Europe were being reduced, when in fact older weapons were being taken out and replaced by far more dangerous weapons in terms of escalation of the arms race.

Mr. Robert Atkins: Boring.

Mr. Clay: Conservative Members may find it boring, but to me a decision that effectively escalates the nuclear arms race and lowers the nuclear threshold in terms of battlefield weapons in Europe is one which, even more than previous decisions by the British Government, the United States Administration and NATO, endangers the whole future of the world.

Mr. Robert Atkins: Boring.

Mr. Clay: The hon. Gentleman may find it boring but to me it is a serious and terrible matter. It is essential that we should have a clear understanding about whether Ministers have been misleading this House or whether Dr. Wagner has been misleading Congress.

9.22 pm

Mr. A. E. P. Duffy (Sheffield, Attercliffe): When the Secretary of State presented his annual defence White Paper I was reminded of a conjuror. The right hon. Gentleman flourished facts and figures like Paul Daniels plucking aces out of the air, but from the right hon. Gentleman's hat came no mere rabbit but the most sophisticated weapons systems, and one wondered how long he could go on getting away with it. The Navy is to get the latest type 23 frigates and the type 2400 diesel-electric submarine. The Army has the Challenger battle tank and will get new personal arms for the infantry. The RAF has the Tornado interceptor and the prospect of a successor programme. A division-sized unit — 5 Airborne Brigade backed by 3 Commando Brigade Royal Marines — based in the United Kingdom is earmarked for out-of-area capability and deployment.

If all goes as the Government plan, the result will be numerically smaller but better equipped and thus more effective forces. Naturally, Conservative Members seemed excited by what the right hon. Gentleman said and early contributors to the debate described his speech as excellent. Growing scepticism set in later however. According to the Secretary of State, there is to be a host of new and expensive weaponry, enhanced fighting capability, and no change in the plans to go ahead with the Trident strategic deterrent programme. Yet we gathered from the Chairman of the Defence Select Committee, the right hon. Member for Spelthorne (Sir H. Atkins), that there will be a cut in real terms in the resources devoted to defence from 1986-87.

As yet, unlike two years ago, there are no screams of anguish from the Treasury, so we must ask whether the Secretary of State's scenario is realistic. If Conservative Members say yes, we are bound to ask where the money will come from. We can already spot signs of how the trick is being done. Cuts in service manpower levels are being maintained and the services are being made responsible for finding any extra men that they need by economising elsewhere—in the tail, for example.

Mr. Heseltine: Quite right.

Mr. Duffy: I understand that argument, but I wish that the hon. Member for Leeds, North-West (Dr. Hampson), who challenged my right hon. Friend the Member for Llanelli (Mr. Davies) to say where the cuts were coming from, were here to hear the Secretary of State say that.

In the Navy, shore training is being trimmed, flying time for Royal Air Force pilots has been reduced and the Army faces a reduction in the manpower pool that it uses to keep units up to strength when men are sick, away on leave or on courses.

The first concession made by the Secretary of State was his admission to an outflow. In other words, there is a problem of retention. It was revealed that outflow is on the increase — 34,000 last year. Incredibly enough, he blamed competition from industry, yet there is massive unemployment and no sign of employment picking up.

Mr. Robert Atkins: Would Labour give them the pay rise?

Mr. Duffy: Again, it was the right hon. Member for Spelthorne who wrung from the Secretary of State the admission that the pay rise might yet cost the fleet a new frigate. The hon. Member for South Ribble (Mr. Atkins) would not jibe like that if it were to cost him the successor to the Tornado.

There is a growing reliance on Territorials and reservists, not to reinforce the regulars but to bring them up to their war strength. In an attempt to combat rising equipment costs, the Government are making a great effort to increase competition in the defence procurement process. The defence bill will keep increasing while the Treasury demands — and gets — cuts. Nevertheless, the Secretary of State had the effrontery to charge the right hon. Member for Spelthorne and, through him, the Select Committee with a gross distortion of their presentation to the House. They were charged with unnecessary concern for a new policy at the risk of destabilisation.

The right hon. Member for Spelthorne was quite properly concerned about how the defence budget would be managed in the future, especially in the early 1990s. The report says that, although defence spending in 1986-87 and 1987-88 will grow in cash terms by 2·8 per cent. or 1·8 per cent. respectively,

"the outlook in real terms is gloomy",

there being a fall in both years. On the basis of Ministry of Defence data, we find that, within two years, the defence budget, excluding the Falklands, will be £970 million lower in real terms. The outlook in the short term is not too bad, but is this the thin end of the wedge? Alarm bells are not necessarily ringing yet, but are these portents as Trident begins to bite? Shall we see programmes slipping to the right?

Now that the Ministry of Defence no longer needs to spend its annual budget or lose it, there is greater scope than ever for letting expensive new re-equipment programmes drop behind schedule. It is plain from the defence White Paper that the Secretary of State is studiously avoiding firm schedules and timetables. There is a choice example of this in paragraph 206. The issue was taken up in the debate on last year's White Paper. There was anxiety among Conservative Members as well as Labour Members about how we were responding to the pleas of SACEUR — General Rogers — and others to achieve better sustainability, notably in bread and butter items such as ammunition stocks. The Secretary of State sets out specifically in paragraph 306 what the Germans are doing to increase spending. He tells us by how much they plan to increase expenditure and by how much they intend to continue doing so. What about the United Kingdom? It seems that funds have been earmarked over the next few years. No figures are given for the United Kingdom.

[Mr. Duffy]

The management of the defence budget in the 1990s will present major problems. No one who heard the Front Bench opening speeches could possibly doubt that. As the extraordinary report of the Select Committee on Defence states:

"These will lead to cancellations, slowing down of acquisitions and the running on of equipment beyond its economic lifespan."

Given the present equipment programme, there will be enormous scope for the Secretary of State to glaze over the details of procurement.

The Royal Air Force is in the throes of its greatest re-equipment programme for 30 years. The aerospace industry's greatest worry is that it should have a follow-on aircraft. The right hon. Member for Plymouth, Devonport (Dr. Owen) has observed that the successor programme is not even in the long-term costings. The Army's modernisation programme centres on the new Challenger battle tank. We had a further statement on procurement of it this afternoon from the Secretary of State. The Army also has on order new combat vehicles for the infantry. We heard from the right hon. Gentleman that GKN Sankey, quite properly, is to be given orders beyond the initial one of 250 vehicles, for which tenders have been announced. Members on both sides of the House will have been glad to hear that announcement.

It is clear that the Navy will have to fight to maintain its surface fleet of frigates and destroyers at its present long-term strength of 50. The right hon. Member for Spelthorne argued that five vessels will have to be ordered by the end of next year to preserve the present age structure, which is perhaps more important than numbers. When the hon. Member for Beverley (Sir P. Wall) challenged the Secretary of State to say when he would follow on the first order of a type 23, he did not respond. Anxiety was expressed over replacements for the two amphibious landing vehicles, HMS Fearless and HMS Intrepid. We heard about the Government's commitment to the northern flank but we did not hear about the need for a national capability in the event of ruined ports.

There is the sorry story of the delayed entry into service of the Nimrod airborne early warning aircraft, to which reference is made in paragraph 413 of the White Paper. That has not been mentioned so far during the debate, together with the enormous escalation in cost. That reminds us that programmes can slip without the encouragement of the Secretary of State.

What of the other two problem areas that have not been mentioned so far but which I hope will be taken up by the Under-Secretary of State for Defence Procurement? I hope that he will address himself to the delays in the development of the Tornado F2 radar. Has agreement yet been reached on a common new IFF system?

The details of equipment collaboration on an Alliance basis are set out on page 17 of the White Paper. Programmes are in development or in early study phases, such as the multiple-launch rocket system and terminally guided warheads for that system, TRIGAT, ASRAAM, the long-range stand-off missile, the NATO frigate, the naval ASW helicopter and the Harrier GR5 as well as the European fighter aircraft. I recall again the fears of the Select Committee on Defence on

"cancellations, slowing down of acquisitions and the running on of equipment beyond its economic lifespan."

Is there a Member present who is prepared to wager on the survival of the collaborative programme? If there is, I wonder what odds he would lay against the emergence of it in its entirety in the 1990s. The evidence the Select Committee has received from the MOD has not allayed its or our fears.

The Secretary of State was extremely fortunate this afternoon in his right hon. Friend the Member for Spelthorne. The House knows that the right hon. Member is a kind, gentle and courteous man. If his damning report, couched in such blistering language, had been in the hands of some other hon. Members whom we all know, the Secretary of State would have had a much more difficult time. This is not a reflection on but a compliment to the right hon. Member for Spelthorne. If the report had been in the hands of some hon. Members it would have been a much more potent and destructive instrument. I shall give a further quote from the document:

"Our purpose was frustrated by vague and evasive answers and elegant but unhelpful hypotheses especially regarding the planning assumptions, the in-service dates and the phasing of expenditure."

I cannot recall a report like that from a Select Committee. Does it, then, make sense to allot to Trident a large slice of a fixed defence budget with all that means in terms of the dilution of the national contribution to NATO's non-nuclear order of battle?

That is the key question before the House tonight, yet the Government say in paragraph 113:

"it is our firm belief that no alternative use of British resources would provide anywhere near such a strengthening of collective Alliance deterrence to aggression."

Let me repeat that, because it is basic to the Government's position on Trident:

"it is our firm belief that no alternative use of British resources would provide anywhere near such a strengthening of collective Alliance deterrence to aggression."

That claim confuses British policy and commitment with the Alliance's capacity and need. Consequently, Trident threatens to become a wasteful duplicative system within the Alliance, not just within the United Kingdom. Ultimately, as the Select Committee warned in paragraph 102 of its report, it puts the conventional equipment budget at risk.

That is where the Opposition come in, because that is how we see the way forward — through a renewed emphasis on conventional arms and increased co-operation, not just within Europe but within the Alliance, and a renewed strengthening of arms control.

The past year has seen a growing public debate, as the defence statement acknowledges, about NATO's strategy of flexible response and forward defence in the light of changes in the military balance and about the roles of conventional and nuclear weapons. It is to the credit of the Secretary of State that that point has been covered. The Select Committee, correctly, claims some credit for that. Those of us who have taken part in defence debates in recent years will recall that some hon. Members present can claim credit for the new format.

The Opposition believe that if the NATO strategy contained on page 12, and especially its underlying argument of flexible response, is to remain credible and acceptable, there must be an enhancement of conventional forces. We recognise that the two factors of overriding importance to defence planning are the time factor and the force levels. The NATO concept of an integrated forward

defence requires, without a doubt, a crisis management decision-making process which could function rapidly, well and cohesively. NATO's response to the threat requires an improvement of conventional force levels.

Two basic needs cry out for attention. First, there is the need to eliminate existing shortcomings and realise agreed goals, especially in sustainability and infrastructure. Secondly, there is the need to modernise and increase active and reserve forces in quantity and quality.

The Opposition are not asking for much. We are not asking for the most sophisticated and advanced systems. We are, like a growing body of opinion within the Alliance on the professional side, asking for improvement at the other end of the spectrum. Lord Carrington made such a plea at the conference to which the hon. Member for Wealden (Sir G. Johnson-Smith) referred earlier. The hon. Member for Beverley, re-elected as president of that assembly, stated as much in his opening address.

Another matter that we believe that the United Kingdom should pursue more vigorously.—there were urgent calls for this from both sides of the House—is co-operation, on both a European and an Alliance basis. Over the years, European co-operation on defence equipment has become increasingly important and there are three main reasons why closer European arms co-operation has become imperative. The first is the sharp rise in the real cost of weapons systems from one generation to another, which results in most countries buying ever fewer aircraft, ship missiles and other major weapons systems.

Research and development activities in the various European nations overlap, leading to duplication of effort and considerable waste. Moreover, the benefits that could be derived from the economies of scale cannot be exploited. We simply must seek military value for the taxpayers' money spent on defence, particularly as it is unrealistic to expect Governments to spend much more on defence equipment at a time of low economic growth and mass unemloyment. The only course is to get better defence from the resources available, as David Greenwood argues.

Secondly, we need to maintain a healthy scientific, technological and industrial base in Europe. We have heard arguments about the importance of strengthening the independent European programme group.

The most important reason for co-operation is the urgent need for greater military efficiency within the Alliance. There are many examples illustrating a lack of standardisation. For years I have heard pleas in the House for improvements in standardisation, rationalisation and operability. I looked up recently some of the facts that the hon. Member for Beverley gave us about duplication in the Alliance. If hon. Gentlemen check those facts, they will be appalled at the overlapping in the Alliance and the consequent wastage.

The view of the Government, as stated in para. 127 of the Estimates, is that the prospects for arms control in the coming year are, as ever, difficult to predict. I wonder whether the Government are being a little too gloomy. Of course, none of us can deny the difficulties to which they refer, but that does not mean that the Opposition will not be looking for progress in the next 12 months, first, because we passionately desire dialogue and a peaceful, soundly based settlement of disputes, as my right hon. Friend the Member for Lewisham, Deptford (Mr. Silkin) stressed, and, secondly, because, with the arms build-up and the economic crisis affecting not only the Alliance, but the Third world, as my hon. Friend the Member for Edinburgh, East (Mr. Strang) reminded the House, it is vital that if the mad arms race is to be stopped, the balance of forces must be reduced by negotiation. That is not only our wish, but, we firmly believe, the desire of the countries of Eastern Europe.

However, if there are to be genuine discussions, one must stop doubting the other's sincerity, as my hon. Friend the Member for Liverpool, Walton (Mr. Heffer) argued. Nothing is more sterile than the almost systematic rejection of any approach.

The leaders of nations have to give each other more trust, because their peoples want that; they want to overcome fears and insecurity in international relationships. History abounds with examples. We heard an encouraging argument on those lines from my right hon. Friend the Member for Lewisham, Deptford. If the confidence to live and let live is built up on both sides it should not prove impossible to reflect a new-found security by means of progressive disarmament proposals.

Here is a job for all of us, but especially for our political parties and our leaders. The present situation is grave. Those with political power must have the will to discover a better way to achieve peace than through amassing nuclear weapons. The future of humanity depends on it.

9.43 pm

The Parliamentary Under-Secretary of State for Defence Procurement (Mr. John Lee): Before answering the detailed points made in the debate, I shall spend a little time talking about the jobs that are dependent on our expenditure in both the public and private sectors of our economy.

We calculate that the jobs of about 1·2 million British people—about 5 per cent. of the employed labour force—are dependent in some way on defence expenditure. That 1·2 million breaks down as 325,000 in the armed forces, 174,000 employed by the Ministry of Defence, and 700,000 jobs throughout the United Kingdom industry. Of those 700,000 jobs, almost 400,000 stem directly and indirectly from our equipment programme. A further 130,000 jobs are sustained by defence equipment sales overseas, from forecast receipts of some £2,500 billion in 1985-86.

The real increases in equipment expenditure since 1979-80 have not been matched by increases in employment, mainly because of a significant improvement in United Kingdom productivity, but also because of an increasing emphasis on less labour-intensive project areas, such as software.

However, looking to the future, it is not easy to project the jobs trend. On the one hand, the ending of the 3 per cent. real increases, the drive for greater efficiency, and the increasing emphasis on software point to job reductions, but on the other, the savings that we are now seeing from competition provide the resources for additional or enhanced procurement programmes, and increasing international collaboration should theoretically provide an opportunity for greater export sales.

My right hon. Friend the Minister of State for Defence Procurement, when he opens tomorrow's debate, will talk at length about procurement and the increasing success of competition policy and defence sales.

I should like briefly to pay tribute to those civil servants whom we employ, whether they be in the Procurement

[Mr. John Lee]

Executive, in our research establishments — I have visited nearly all our main ones since I have held this office —the dockyards or elsewhere.

Throughout the Ministry of Defence there is a continuing drive to increase productivity and efficiency, and to involve the private sector wherever possible. I make no apology for that. However, that does not mean that we are not deeply appreciative of those who work for us—their loyalty, integrity and skills.

The opening speech of the right hon. Member for Llanelli (Mr. Davies), of whom we are fond, was rather disjointed. He did not seem to have his heart in the subject in the way that the right hon. Member for Lewisham, Deptford (Mr. Silkin) did in his more heavyweight philosophical speech. We had extensive use of the Walworth road cutting service, and selected quotes from the Select Committee report, but two questions from Conservative Members scuppered him.

Early on, my hon. Friend the Member for Dorset, South (Viscount Cranborne) asked specifically whether it was Labour policy to increase or decrease defence expenditure. We received no answer to that. Perhaps the hon. Member for Sheffield, Attercliffe (Mr. Duffy) would care to reply to it. Clearly, he wishes to remain silent. Therefore, we have had no answer to that question.

My hon. Friend the Member for Ashford (Mr. Speed) asked about nuclear depth charges. The right hon. Gentleman gave an extremely muddled answer, which exposed the ludicrous unilateral posture of the Labour party. That was exposed, emphasised and commented on by the right hon. Member for Plymouth, Devonport (Dr. Owen).

My right hon. Friend the Member for Spelthorne (Sir H. Atkins) and the right hon. Members for Llanelli and Devonport talked about the pressure on our budget. By April 1986 we shall have completed seven consecutive years of real growth. The United Kingdom budget is the second highest in NATO in absolute terms and per capita, our gross domestic product percentage is the highest of our major European allies, and the proportion of the budget that we spend on equipment is the highest of any NATO country. On NATO force goals the Select Committee commented:

"high force goals have been set by the United Kingdom and a high proportion of these have been met."

Regarding the future, we never planned to have 3 per cent. real growth after 1985-86. The Select Committee sees "worst case" projection of the defence budget in 1987-88 as £970 million less in real terms than that in 1985-86, but that is based on rather speculative hypotheses. At the same time, the Committee sees potential for £700 million savings by efficiency measures. Even on its own terms, the gap is extremely small in proportion to the £18 billion to £19 billion overall figures for defence. But the benefits of competition could well be greater than envisaged by the Committee. Earlier this afternoon, my right hon. Friend the Secretary of State drew attention to the £100 million or so saving on the MCV80 competition, with the contract going to Guest, Keen and Nettlefold. Of course, we also had the competition for the RAF trainer which produced savings of about £60 million.

But the fact remains that defence expenditure is now at a level that is £3 billion higher per year in real terms than when we came to office. That is an extremely good record, of which Conservative Members can justifiably be proud.

Several hon. Members raised the subject of Trident. Arguments against Trident, which we have all heard before, have been repeated. However, I shall comment briefly on the Government's position. Incidentally, I was particularly grateful for the support of several of my right hon. and hon. Friends, including my hon. Friends the Members for Gosport (Mr. Viggers), for Wealden (Sir G. Johnson Smith), for Norfolk, North-West (Mr. Bellingham) and for Tayside, North (Mr. Walker). We are committed to the maintenance of an effective British strategic nuclear deterrent. It is a policy that has been followed by successive Governments since the 1950s. It convinced them and it convinces us.

The reasons for the selection of Trident to meet that commitment have been fully spelt out in our open government documents and our defence White Papers. I commend to the House the discussion of the case for Trident that is set out on pages 6 and 7 of the 1985 statement on the Defence Estimates that we have been debating.

I turn now to the points raised today and to the question of cost and affordability. The latest estimate is just under £9·3 billion at 1984-85 prices. Trident costs are often referred to in the press and by the Labour party as "spiralling" or "out of control" or, if they are feeling charitable, as just "escalating". Such phrases are repeated ad nauseam, but they are simply not true. Let me say in the clearest possible terms that there has been no real increase in the estimate for Trident D5 since it was first announced — no real increase at all. The difference between the current and original estimates is due entirely to inflation and exchange rate movements. Over the same period, however, the defence budget overall has increased in real terms. Thus, there is room both for Trident and for improvements in our conventional capability.

We listen carefully to the right hon. Member for Devonport when he talks about conventional expenditure. However, his arguments about their being a realistic nuclear alternative to Trident in the 1990s are not very convincing. With respect, it is not satisfactory at this stage to talk about possibly running on Polaris with increasingly expensive refits, or perhaps encouraging British Aerospace to produce a new weapon. *[Interruption.]* I believe that on previous occasions the right hon. Gentleman has mentioned the running on of the Polaris fleet. He also mentioned the possibility of cruise missiles on submarines. In our view, those are not serious or realistic options.

Dr. Owen: The Pentagon has spent money on putting cruise missiles on submarines. That has not been done for no purpose. As far as the Pentagon is concerned, they are not the ultimate deterrent, but they are an adequate deterrent.

Mr. Lee: That would be right as part of a mixed force, but there is no realistic alternative to Trident when it comes to our major strategic deterrent and our weapon of last resort.

Mr. Andrew F. Bennett: Will the hon. Gentleman give way?

Mr. Lee: I am sorry, but I shall not give way.

My right hon. Friend the Member for Spelthorne, my hon. Friend the Member for Beverley (Sir P. Wall) and the hon. Members for Newcastle upon Tyne, North (Mr. Brown) and for Attercliffe mentioned escort numbers. We are committed to maintaining 50 escort vessels. We are talking broadly of ordering three type 23 frigates a year. The order for the first of class, HMS Norfolk, was placed last year with Yarrows, and tenders for the following three —O2, O3 and O4—will be invited in the late summer.

Several hon. Members mentioned amphibious capability. I can say that Fearless and Intrepid will certainly continue in service well into the mid-1990s. Studies are in hand for a capability beyond the 1990s, and decisions will be taken by Ministers in that whole area later in the year.

A number of hon. Members have spoken about merchant shipping, particularly my right hon. Friend the Member for Taunton (Sir E. du Cann), who always speaks about merchant shipping. The hon. Member for Newcastle upon Tyne, North and my hon. Friend the Member for Windsor and Maidenhead (Dr. Glyn) also spoke on the subject. As the House knows, our merchant fleet plays a significant role in our defence planning. Consequently, as the defence White Paper makes clear, the recent decline in the merchant fleet has caused us concern. I repeat that, at present, the overall size of the merchant fleet is adequate to meet our foreseeable defence needs, with the exception of deep-sea trawlers for the minesweeping role. I believe that I am right in saying that the Select Committee acknowledged that. In the case of deep-sea trawlers, we have studies urgently in hand to find alternative ways to meet the requirement.

Because of our concern at the possible prospects for the future, the Department of Transport commissioned its study of future availability of merchant vessels to meet our requirements. That study will very shortly be completed, and as soon as its results are available, they will be carefully examined. I cannot predict in advance what the results of the study will be, but I note the comments on publication made by my right hon. Friend the Member for Taunton, and we shall consider that.

The strategic defence initiative is a research programme intended to investigate the technical feasibility of defences against ballistic missiles. Such research is permitted under existing treaties, and it is entirely prudent that the United States should conduct this work. I am grateful for the contribution made by my hon. and learned Friend the Member for Colchester, North (Sir A. Buck) in supporting our Alliance and our American allies.

As for the broader implications of SDI, the Government's position rests firmly on the points of agreement reached by my right hon. Friend the Prime Minister with President Reagan in December of last year. First, the United States, and Western, aim was not to achieve superiority but to maintain balance, taking into account Soviet developments. Secondly, SDI-related deployment would, in view of treaty obligations, have to be a matter for negotiation. Thirdly, the overall aim is to enhance, not undercut, deterrence. Finally, East-West negotiation should aim to achieve security with reduced levels of offensive systems on both sides. This is the purpose of the resumed United States-Soviet negotiations on arms control, which we of course warmly welcome.

As my right hon. Friend the Prime Minister has made clear, we hope that our scientists will be able to share in this research. We are actively discussing with the United States and with our European allies the details of this complex matter.

The hon. Member for Yeovil (Mr. Ashdown), my right hon. Friend the Member for Taunton and my hon. Friend the Member for Weston-super-Mare (Mr. Wiggin) referred to the problems of Westlands. Obviously, it is of considerable strategic concern to the United Kingdom, and we want the company to continue. The Ministry of Defence has about £150 million-worth of orders with it, for a mix of 29 Sea Kings and 13 Lynx helicopters, which should be completed by around spring 1987. We are discussing further possible orders of Sea King and Lynx.

The W30 has been mentioned, but it would be wrong to buy costly items of equipment from Westlands until the services have established a firm requirement for it. The delay is due to a genuine review of the Army's needs. Its decision on the requirement will not be made until late autumn. Nevertheless, because of the strategic importance of Westlands, we are watching over the situation and the takeover extremely closely.

A number of hon. Members have spoken about EFA —my hon. Friend the Member for South Ribble (Mr. Atkins), as usual, and my hon. Friends the Members for Woking (Mr. Onslow), for Dumfries (Sir H. Monro) and for Tayside, North.

As we are approaching a crucial period of negotiations the House will understand that I cannot say a great deal about the EFA project tonight. There have been differences between the partners over a number of issues. None the less, progress was made by Ministers in Rome towards an agreed position on the size of the aircraft.

The next round of discussions will help to show whether our further requirements — on, for instance, design leadership and work share—can be met. I can assure the house that we would not be prepared to enter into the programme if it undermined the future well-being of British industry.

I take the point made by my hon. Friend the Member for South Ribble about an early decision. As a Lancashire MP myself, I understand the present concern in British Aerospace at Warton and Salmesbury.

Several hon. Members have mentioned problems relating to recruitment and retention. In 1978-79, the total premature voluntary retirement by male members of the Armed forces was just over 12,000—a rate of 4·4 per cent. It fell to 1·7 per cent. in 1981-82, and the latest figures for 1984-85 show a level of 2·5 per cent. I acknowledge that there is a rising trend of applications to leave the forces prematurely, and the House can be assured that we are keeping the question under very close scrutiny.

It being Ten o'clock, the debate stood adjourned.

Debate to be resumed tomorrow.

South-East Dorset

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Major.]*

10 pm

Mr. Robert Adley (Christchurch): I thank you, Mr. Speaker, for the opportunity of raising a matter that is of continuing concern to and in my constituency and throughout the county of Dorset. There are four county constituencies in Dorset, and I do not think that my hon. Friends will argue too much with me if I say that overall mine is the most vulnerable to the matter that concerns me tonight — the persistent and ruthless pressure for development in south-east Dorset.

Therefore, my purpose is to ask the Minister—whom I am delighted to see in his place—a simple question. Will he convey to my right hon. Friend the Secretary of State for the Environment the view of the Dorset Members of Parliament—certainly the four of us who represent the county constituencies — that we look to see a reversal of the Government's policy, which at the moment appears to be one of development at all cost?

My hon. Friend the Minister has today been much concerned with sporting matters. I shall make one sporting allusion, if I may. If he regards this Chamber as a stadium, and his right hon. Friends and himself in the Government as the players on the pitch, those of us behind him, the supporters, in many of the shire counties, are feeling restless over the erosion of the green belt and the constant pressures for development. I hope that he will see his way towards ameliorating the present policy. If he does not, I fear that some members of the supporters club may desert him or, even worse, may eventually come down on to the pitch and demand a change of policy.

The main problem is that the local authorities in my constituency—the Christchurch borough council and a portion of the Wimborne council—feel more and more that they have lost control over their environment. My hon. Friend the Member for Dorset, North (Mr. Baker), who is here tonight, had an Adjournment debate as long ago as 1 July 1981, when he raised, thoroughly and competently, the question of the erosion of the environment and, in his particular case, the gobbling up of agricultural land by development.

We believe—I have the support of my hon. Friend the Member for Dorset South (Viscount Cranborne), who regrets that he cannot be here this evening—that local planning decisions should be respected and overturned only in the most exceptional circumstances. We believe that the exploitation of the planning laws, plus the Department's policy, is rendering our structure plan absolutely meaningless.

Christchurch and Wimborne are small local authorities and are vulnerable to the constant pressure on them. As the chief executive of the Christchurch council said in a letter to me:

"Therefore, every time the local authority is called upon to make a judgment is is not free to do so in the light of just the local situation but always has to have regard to what the Department of the Environment might decide should the matter go to an appeal."

He goes on to say:

"In summary it is my opinion that the appeal situation in planning is objectionable in terms of democratic accountability and is insidious on its effect on elected Members when considering applications."

I do not wish to weary the House with endless quotations, but should like to note a few more. This afternoon, Mr. Malcolm Edwards—in addition to being chairman of the Christchurch housing committee, he is chairman of the Christchurch and East Dorset Conservative Association—said:

"We have the ridiculous situation where councils decide planning applications not on the basis of what is right or wrong, but what is likely to win on appeal. The great problem of the planning situation is that it just is not recognised that there is a level beyond which an area becomes saturated and its infrastructure cannot cope with anything more."

He went on to ask:

"What is the planning process all about if it is not to preserve the amenities of the environment?"

Recently, my hon. Friend the Member for Dorset, North and I had a meeting with members and officers of the Wimborne council. Their pleas are plaintive. They feel that they have virtually lost control of their ability to make strategic planning decisions.

The chief executive of the Wimborne district council said:

"The Authority has felt inhibited from imposing any serious policies of restraint, especially in its local plans, despite public opposition to continued growth, to a large extent because of the tone of the guidance being given by the Secretary of State in circulars, and in public speeches, with their emphasis on meeting demand for housing land, especially as Wimbourne is an area of continuing high demand. This has meant that in all the local plans it has prepared so far, the Council has deliberately proposed growth at the upper end of the range allowed under the South East Dorset Structure Plan.

The Structure Plan is now being reviewed, partly because the intention steadily to reduce the rate of building and the amount of land available for development has not been achieved. However, the tone of government advice again makes it difficult to envisage this review successfully leading to the adoption of any strategy for the restraint of growth, even this should prove well justified."

The 1984-85 Dorset council monitoring report shows that more people are moving to Dorset than to any other county. The county council's reaction is "We need to review the south-east Dorset structure plan." People in my constituency do not agree. We need much stricter adherence to the present plan or the structure plan will be regarded not just as dead but as having been a cynical exercise in public misrepresentation. My hon. Friend the Minister knows full well what was done to seek public opinion on these county structure plans.

Much of south-east Dorset lives under the shadow of the ambitions of Bournemouth, and Bournemouth's interests differ greatly from those of my constituents and my colleagues. If I illustrate the position in two respects, I think I shall clearly point out to my hon. Friend the Minister just how Bournemouth's insidious influence is affecting my constituency. One is at and the other is adjacent to, Hurn airport. Christchurch council is the planning authority for Hurn airport. Hurn lies wholly within the Christchurch council area, yet the airport management committee that runs the airport is dominated by people not from Christchurch but from Bournemouth although Christchurch is represented. The airport management committee has shown an arrogant disregard for not only the Christchurch council's policies but the council's legal role as the planning authority. When the British Aerospace factory closed recently, the Christchurch council policy was simply to keep aerospace-related employment at Hurn airport, on the site and in the

buildings formerly occupied by British Aerospace. The site is zoned already for industrial use and it is the ideal place in which to carry out these activities.

The airport management committee, without any reference to Christchurch council as the planning authority, has leased two of the large hangers for grain storage. Warehousing means a change of use in planning terms, but no reference was made to the legal planning authority. This has had a serious effect, because companies that we are trying to attract to the buildings at Hurn airport—such as Lovaux, which recently took out a lease on some space for aerospace-related purposes—find now that grain is stored there. This is a fire risk and a serious dust threat to high-technology aerospace developments. Lovaux finds this aspect extremely unattractive. It was told nothing about it at the time it signed its lease.

The planning aspect alone is serious enough, but there is a worse implication. Some Bournemouth councillors are desperately trying to aid and abet the creation of an enormous development in my constituency at Hurn by the Carroll group of companies. If Christchurch is successful in attracting aerospace-related employment into Hurn airport, into the buildings that already exist, that will make the Carroll proposition a great deal less attractive.

We have the serious situation, therefore, of councillors not representing Christchurch deliberately trying to thwart the wishes of the elected local authority in its effort to develop jobs and industry in the buildings that already exist.

As for the Carroll development, Mr. Gerald J. Carroll —of the Carroll Group of Companies, Carroll House, 2-6 Catherine Place, London, SW1E 6HF—is a great Dorset philanthropist. Mr. Carroll is a lover of the Dorset countryside, with a humanitarian concern for the employment prospects of my constituents. I say that slightly with tongue in cheek, to put it mildly. In total, 576 acres of my constituency have been subject to persistent and ruthless attempts by the Carroll Group of Companies to obtain planning permission to transform this area of my constituency.

Earlier this evening, I spoke to my hon. Friend the Member for New Forest (Mr. McNair-Wilson), who used to represent the area, and I have his strong support for saying that we look to the Government to do all they can to uphold the planning authority, Christchurch council, in its objections to what is proposed.

As I mentioned, Mr. Carroll is backed by certain interests in Bournemouth, and they have an incentive to ensure the failure of the present policy of Christchurch at Hurn. Mr. Carroll is quoted in the *Evening Echo* as recently as 8 June in relation to his 576-acre scheme as saying:

"It would probably go to appeal."

He went on to say that he believed that in their efforts to assist investment and employment in the region, the Government would approve it.

Mr. Carroll wants housing and shops; the factories in his plan are just makeweight. We have plenty of empty factories in my constituency. In any event, the building of factories does not of itself create jobs. Thus, the great myth is being dangled before my constituents that somehow this development will create an enormous amount of employment. Mr. Carroll's concern for the employment situation in my constituency is purely synthetic and is a quid pro quo for permission to build shops and houses.

Christchurch is implacably opposed to it, as is the Wimborne council and the New Forest district council. It would distort the pattern of life throughout the area.

I said earlier that Mr. Carroll was a lover of the Dorset countryside. I have discovered that the Dorset Naturalist Trust has been offered £10,000 to establish a nature reserve as part of Mr. Carroll's plans. If I were a nice man, I might think what a decent chap Mr. Carroll was. If I were rather suspicious, I might think that that was one way of seeing that a potential objector was bought off. The use of money to influence attitudes on controversial planning decisions is wholly unacceptable. I do not, of course, hold the Dorset Naturalist Trust in any way responsible. I cannot say the same for Mr. Carroll.

In my constituency there is a number of small communities. They are in danger of being swamped. Indeed, some already have been. There is a completely inadequate infrastructure in relation to the police, doctors and so on. The list is endless of facilities which have not been provided in a vain attempt to try to keep up with the endless demands of developers.

The vital point to make in national terms is that this is a north versus south issue. So long as the Government go on allowing, indeed encouraging, developers to develop in the prosperous parts of southern England, so long will those developers not be encouraged to turn their attention towards developments in the northern, and less prosperous, parts of the country.

The Minister should accept, therefore, that this is not just a Dorset problem. Hon. Members who represent constituencies in all parts of southern England are becoming more and more concerned over this problem. My hon. Friend the Member for Poole (Mr. Ward) will, I hope, deal with the question of oil. The Housing (Homeless Persons) Act 1977 has played absolute havoc with housing in my constituency. Again to quote Mr. Malcolm Edwards:

"We haven't got room for our own people and we are obliged to accommodate people who come from elsewhere with no previous contact with the borough."

We have road problems. A number of my constituents in Hampreston lane in Longham now face the appalling prospect of a huge road being built literally on their front doorsteps, and because it is not a trunk road they will probably be unable to claim adequate compensation.

In a speech on 14 March to the County Planning Officers Society, the Secretary of State for the Environment spoke of his presumption "in favour of development." That is uacceptable to Dorset unless—and it is a strong "unless" — the district council concerned is completely in favour of it. Once this land is built upon, the development cannot be undone. In my part of Dorset we are threatened with the policies of the Department of the Environment, the ambitions of Bournemouth and, frankly, the greed of certain big developers. I ask my hon. Friend the Under-Secretary of State for the Environment to take note of the strength of feeling on this issue.

10.16 pm

Mr. John Ward (Poole): I am grateful to my hon. Friend the Member for Christchurch (Mr. Adley) for the opportunity to make a brief contribution to this

[Mr. John Ward]

Adjournment debate upon the environment of south-east Dorset. Those who are familiar with the county of Dorset will be aware of what a delightful place it is. I can well understand the concern about the environment that my hon. Friend the Member for Christchurch has so ably expressed on behalf of his constituents.

In the time available to me, I wish to refer briefly to the environmental aspects of oil exploration, both onshore and offshore, particularly in the area of Poole harbour. Hon. Members will be aware that it is planned to expand the production of the Wytch farm oilfield, which is in the constituency of my hon. Friend the Member for Dorset, South (Viscount Cranborne), from 4,000 barrels a day to 44,000 barrels a day. Dorset county council has recently granted planning approval for four exploration wells on Furzey island, which is in the middle of Poole harbour. We are pleased to know that separate approvals will be needed before production wells can be sunk in the harbour.

I pay tribute to the way in which British Petroleum has worked with the Dorset county council and all other interested parties to ensure that every precaution is taken to protect the environment. This is essential not only for the boat owners and holidaymakers, whom we welcome throughout the year, but for the many fishermen who depend upon the harbour for their livelihood.

We must not, however, overlook the positive side of oil recovery: the new jobs that will be created in Poole and the surrounding areas and the new orders for local firms. Recently, we have heard that BP, having no use for the large house on Furzey island, is prepared to make it available for the use of the local community. A number of local people will investigate ways in which it can be made available for such use without cost to the local community.

Dorset county council had asked the Department of Energy to allocate the two offshore licence blocks in Poole bay to BP because it felt that it was sensible that those two blocks should be dealt with as an extension of the Wytch farm development. I am pleased to say that the Minister has agreed to the county council's request. A certain sense of relief is felt when one deals with people one knows about such matters, particularly when they have shown that they understand the local environmental problems.

The recovery of oil is in the national interest, but that does not mean that there are no legitimate local interests, too. We in Dorset are not complacent about the discovery of oil. We know that the price for the successful recovery of oil without damage to the environment is the exercise of constant vigilance. We shall certainly exercise that vigilance. We are sure that both the Government and the oil companies will similarly recognise their responsibilities.

10.18 pm

Mr. Nicholas Baker (Dorset, North): I congratulate my hon. Friend the Member for Christchurch (Mr. Adley) on raising this matter, which is critical to Dorset and to the south of England. We fully recognise the need to encourage development of the economy and the creation of new jobs and to allow new small industries to tuck into villages and towns to replace the jobs that agriculture can no longer provide. There are limits to the positive efforts that can be made to encourage development in areas that are economically declining, but Ministers can do some things to assist the economically declining areas and to deal with the environmental crisis which my hon. Friend described.

First, local planning decisions, especially those limiting development, should be overturned only in the most exceptional circumstances. The overturning of such decisions creates a decline in morale among councillors and in planning departments, which leads many of them to believe that planning power has been taken out of their hands. Secondly, we should achieve a greater adherence to structure plans by keeping development within the limits laid down in those plans. The rate of growth already provided for in the south-east Dorset structure plan is far below the present rate of population and development in the area. My hon. Friend referred to the Dorset county monitoring report, which produces some frightening figures.

Thirdly, we must protect the environment. The pressures on agricultural land and its disappearance, which I described in my Adjournment debate on 1 July 1981, have become worse in the intervening years. The pressures on farmers, nature and wildlife have also increased. That does not happen without the decision of man. It is the result of planning decisions taken by Governments and local authorities.

Fourthly, a declared policy of favouring development in the north of the country—in counties which are keen to increase housing and industrial development—would have considerable appeal and would be highly relevant to the divisions in the country today. It could be an attractive policy that would help to generate jobs in areas which need them, perhaps even more than Dorset needs them.

I hope that my hon. Friend the Minister will take the matter seriously, and I am grateful to my hon. Friend the Member for Christchurch for having raised it.

10.21 pm

The Parliamentary Under-Secretary of State for the Environment (Mr. Neil Macfarlane): Many people will be grateful to my hon. Friend the Member for Christchurch (Mr. Adley) for introducing this important debate, and to my hon. Friends the Members for Poole (Mr. Ward) and for Dorset, North (Mr. Baker). The subject is clearly of great importance to their constituents, and that is why they have expressed their views forcefully on several occasions in the House, and also to my Department. Obviously, I shall not be able to cover every subject that has been raised, but I shall ensure that my hon. Friends receive replies to the important issues that they raised, including road improvement schemes, inadequate roads and the oil and gas industry. However, I wish to deal with the broader strategy in which we are involved.

The whole of south-east Dorset has considerable appeal as an area in which to live and work and to spend one's leisure. That general attraction is a reflection not only of the area's inherent qualities but of confidence in the future. My hon. Friend's anxiety — it is a concern of the Government, too — is that planning should respond to the challenges that growth poses in the most suitable way.

The local responsibility for planning lies with the county council and the district councils. Those authorities are aware of local conditions and can best take account of local opinion. My right hon. Friend the Secretary of State becomes involved whenever the structure plan is altered, when appeals are made following the refusal of planning

permission or the imposition of conditions, or when he decides that, in the case of any development, he rather than the local planning authority should make the decision.

My hon. Friend the Member for Christchurch mentioned the fact that local authorities are worried that their decisions are too frequently overturned on appeal. I am aware of some, but not all of the cases he has in mind. It would not be appropriate for me to comment on an appeal decision once it has been made. But if my hon. Friends would let me know of such cases that have caused concern to local authorities, I shall examine the circumstances, although I must emphasise that there can be no reappraisal of the decision. However, we should examine in detail some of the issues mentioned by my hon. Friend.

My hon. Friend also mentioned the major development that is proposed at Hurn airport. I understand that an application for planning permission is with Christchurch borough council, and my hon. Friend will appreciate that I cannot comment on the case. To do so could prejudice my right hon. Friend should the matter come before him for decision. Nor can I comment on any reports of negotiations that may be taking place between the prospective developer and any interested parties.

The Government's policy on development control is simple and clear. Planning permission should be granted unless there are sound planning reasons for refusal. I urge my hon. Friend to read the full text of my right hon. Friend's speech rather than what was reported in one of the major newspapers. However, the presumption must always be to allow development to take place unless it can be shown to be harmful, not the other way round.

Development represents economic activity—as my hon. Friend the Member for Dorset, North said—jobs and social benefits such as more and better housing. No unnecessary obstacles should be placed in its way, and the social and economic consequences of a refusal of planning permission must be borne in mind by those in the local planning authority who consider and decide planning applications and plan for their areas.

This policy does not mean haphazard growth, endless urban sprawl or unnecessary losses of countryside and agricultural land. This Government are firmly committed to the policies which conserve and protect green belt land and the countryside and which ensure that the bulk of development takes place within existing settlements, particularly inner city areas and on derelict land. Our planning circulars, which planning authorities must take into account in operating the planning system, have all laid particular stress on this commitment.

In many cases a difficult balance has to be struck between the benefits of development, including to the community at large, and the need to ensure that it takes place in the right places. In some areas there must be a presumption against most development, if the planning system is to serve its prime purpose of securing efficient use of land while ensuring that development may take place. It has to reconcile competing pressures, but it must cater for economic and social progress. No one can afford to prohibit change. That is a recipe for stagnation and decline, and a negative approach will not serve anyone's interests in the long run.

For our part, we have taken concerted steps to encourage new development to look to the inner cities and to the areas of the country where the competing pressures are less, and the social need greater. The urban programme, derelict land grant and land registers, enterprise zones, the urban development corperations in Liverpool and London, and our proposals for simplified planning zones are all positive measures, helping to secure the economic resuscitation and greater prosperity of the areas in great need of new growth and development. We have increased the allocation for derelict land grant in England from £23·5 million in 1979-80 to £76·4 million in 1985-86, and the allocation for the urban programme increased from £93 million to just under £340 million over the same period. Of the 17 enterprise zones that we have established in England, 15 are in the north and midlands.

Mr. Adley: Does my hon. Friend accept the proposition that he would encourage development in the north by discouraging development in the south?

Mr. Macfarlane: That requires a fairly detailed response which the constraints on time would not allow, but I am more than happy to discuss that more fully with my hon. Friend. He, like me, would support the principles of market forces and the market place, and would agree that encouragement and discouragement are essentially for the planning authorities. However, the Government must create the right conditions, and that is why we have spent a great deal of taxpayers' money to try to ensure that there is an effective balance between north and south. It takes time to put that right.

Our planning circulars on land for housing, on industrial development, and on development plans have urged authorities to ensure that sufficient land is available in the right places to enable development to take place without any unnecessary encroachment on the countryside. But the vitality of the economy, both local and national, depends on new development. We must all, therefore, ensure that planning decisions help, not hinder, growth and enable development to take place in a way that brings the best possible balance of advantage to the private and public interests at stake in each case.

My hon. Friend has spoken about the growth of south-east Dorset, and the facts are not in dispute. Between 1971 and 1981 the usually resident population increased by 7·7 per cent., and Wimborne and Poole districts grew at a particularly fast rate. There is no evidence that this growth is slowing down; indeed it is possible that migration into south-east Dorset has increased.

This growth of population clearly creates a demand for houses, but it would not be right to assume that all of the demand stems from newcomers. There is a universal and long-established trend for new households to need separate accommodation. Although the average household size in south-east Dorset is already low, there is nevertheless a continuing demand from this source.

Housing completions in south-east Dorset have been greater than expected within the structure plan. The plan proposed that about 35,000 dwellings would be provided between 1976 and 1996, of which between 20,400 and 26,500 were to be on large sites and 10,500 were expected to be built on small sites, The latest monitoring information shows that at the end of March 1984 some 25,100 dwellings had been completed. This high number of completions has not been because of any disregard of the plan. Development of the large sites identified by the structure plan has proceeded more or less as expected.

[Mr. Macfarlane]

In contrast, many more houses have been built on small sites within the urban areas than the plan assumed. In principle, this kind of development is to be welcomed because it helps to reduce the loss of open countryside.

This growth reflects the needs of industry and banking and insurance services to move into the area. Bournemouth and Poole have successfully attracted new offices. Of recent moves, it is heartening to hear of the relocation to Poole of National Mutual Life of Australasia and the intention of Chase Manhattan bank to bring the major part of its headquarters to a new campus site at Bournemouth. The port of Poole has greatly increased its trade and the completion of the second roll-on/roll-off ferry terminal should be a further boost to its growth. These are encouraging developments and show that the economy of the area has vitality. They are important for job creation, which I am sure my hon. Friends will agree is necessary——

The Question having been proposed at Ten o'clock and the debate having continued for half an hour, MR. SPEAKER *adjourned the House without Question put, pursuant to the Standing Order.*

Adjourned at half-past Ten o'clock.

House of Commons

Thursday 13 June 1985

The House met at half-past Two o'clock

Orders for Second Reading read.
To be read a Second time upon Thursday 20 June.

Oral Answers to Questions

NORTHERN IRELAND

Security

1. **Mr. Proctor** asked the Secretary of State for Northern Ireland if he will make a statement on the current security situation.

The Secretary of State for Northern Ireland (Mr. Douglas Hurd): Since I last answered questions in the House on 9 May, four police officers and two civilians have died in incidents arising from the security situation in the Province. The recent tragedy at the Killeen border crossing point, in which the four police officers died, underlines the grave risks which the security forces continue to face in carrying out their duties. I am sure that the House will join me in paying tribute to their outstanding courage and determination to defeat terrorism. Our sympathies go to the families of the bereaved.

Since the beginning of this year a total of 230 people have been charged with serious offences, including 20 with murder and 18 with attempted murder, and 103 weapons, 5,715 rounds of ammunition and 3,858 lb of explosives have been recovered.

Mr. Proctor: The House will be grateful to my right hon. Friend for that statement. Does he regret the reluctance of the Irish Police Commissioner, Mr. Wren, to meet and to co-operate with Sir John Hermon, the Chief Constable of the RUC, since such co-operation must be in the best interests of both police forces to ensure that terrorism is eliminated as speedily as possible?

Mr. Hurd: It is not for me to analyse the position of Commissioner Wren of the Garda. As my hon. Friend knows, in many ways there is strong and worthwhile co-operation between the RUC and the Garda, as a result of which many lives have been saved. However, that must be buttressed by regular meetings at a senior level between the two police forces, and I would hope that it could be regarded as a matter of course that the two chiefs of the police forces should also meet from time to time.

Mr. Maginnis: Is the Secretary of State aware that the Chief Constable of the RUC has consistently stated that he has no disagreement with Commissioner Wren? Has the commissioner or the Government of the Irish Republic identified to the British Government the substance of any disagreement on their part with the chief constable?

Mr. Hurd: No, Sir. As the hon. Gentleman said, Sir John Hermon has always been keen to improve co-operation, which in many respects is good, but which could be improved.

Rev. Ian Paisley: Will the Secretary of State comment on the remarks made at the annual meeting of the police representative body in Northern Ireland, when Mr. Alan Wright said that the financial cuts were hindering the RUC in their campaign against terrorism, and that the deplorable state of some border police stations was telling against the morale of the RUC?

Mr. Hurd: I have noted those remarks, and my hon. Friend the Parliamentary Under-Secretary of State was present at the dinner. There have been no financial cuts, in the sense that the RUC now disposes of greater financial resources than ever before. I understand what Mr. Wright said about the need for the renovation and replacement of buildings, and £20 million has been designated for that purpose for each of the next three years. That will match the needs created by the rapid expansion of the RUC in recent years.

Ms. Clare Short: Did the Secretary of State see the editorial in *The Economist* and think about its implications for security? It suggested that the Government were wrong to refuse to meet elected Sinn Fein representatives. Does he agree that it is a better democratic principle to meet the representatives of all elected parties than for the Government to pick and choose which representatives they find acceptable?

Mr. Hurd: I am a little puzzled about *The Economist*. In one article it advises us not to talk to Dublin any more, and in another, as the hon. Lady said, it advises us to talk to Sinn Fein. I am clear that there is no purpose in deceiving ourselves that any conversations with Sinn Fein representatives would turn members of the Provisional IRA into decent, law-abiding citizens. In my view, that is not a possibility. The policy which I pursue is clearly different from that practised by the hon. Lady, though not, as I understand it, by her Front Bench spokesmen, who took an aeroplane to London before the embarrassing meeting took place. The policy in which I believe is that we should use every means within the law to distinguish between those in Northern Ireland who believe in and practise constitutional means and those who connive at violence.

Mr. Moynihan: Is my right hon. Friend content with the present practice in relation to marches and parades in the Province?

Mr. Hurd: I have not lived through a marching and parading season yet, but I am uneasy about the present

position. The policing of marches and parades on the present scale places a heavy burden on the police and in some cases, not all, can provoke sectarian conflict. Those who wish to see the police concentrate on the basic security problems of saving lives and protecting the community should think rather more carefully about the way in which some, not all, of those parades are organised and the burden that they place upon the RUC.

Mr. Alton: Despite Sir John Hermon's repeated statements that he wants to see an improvement in relations between the RUC and the Garda, does the Secretary of State agree that such an improvement will not be helped by public recriminations and by the apportioning of blame by the RUC or by the Garda?

Mr. Hurd: Yes, Mr. Speaker. I agree with that. It is inevitable that occasionally feelings run high and that there are misunderstandings. Those produce statements and further misunderstandings. I do not believe that any of those principally involved believe that that is a sensible way to carry on.

Rev. William McCrea: Will the Secretary of State bear in mind the serious statement made by the Sinn Fein chairman of Omagh council, who claimed that if ordinary Northern Ireland council workmen don the Queen's uniform and are part-time members of the security forces and the IRA say that they are legitimate targets, he is happy to abide by that? What action will the Secretary of State and the Government take against Provo Kerr, and what protection will they give to my constituents who happen to be part-time members of the security forces and work for Omagh council? When shall we see an end to the mockery of Sinn Fein-IRA vampires in our councils in Northern Ireland?

Mr. Hurd: Anyone in Northern Ireland, whether a councillor or not, is under the law, and any remarks made or any membership of any illegal organisation—whether the person involved is a councillor or not—fall to be examined by the police and prosecuting authorities in the same way as with any other citizen. I hope that people who make the kind of highly objectionable and disgusting remarks to which the hon. Gentleman referred have that point well in mind.

Mr. McCusker: In view of the fact that the armed wing of Sinn Fein has murdered three councillors in County Armagh, an hon. Member and a Member of the Northern Ireland Assembly, what measures has the Secretary of State taken to protect other councillors, council officials and council workers in the Province?

Mr. Hurd: The level of personal protection accorded to personalities in the Province who may be under threat is plainly something that the RUC studies constantly, sometimes adding and sometimes subtracting protection as it assesses the threat. With his long experience, I hope that the hon. Gentleman will agree that that is the only sensible way to proceed.

Sir John Farr: While the House is pleased to hear my right hon. Friend's comment about cross-border co-operation, is it not a fact that the two chief officers of police have not met for more than two years, and that, however good that co-operation may be today, it would be much better if the two chief officers of police could be persuaded to get together more frequently?

Mr. Hurd: It is true that the co-operation that exists and is particularly strong in the border areas would be buttressed and re-inforced if there was more regular contact and co-operation at senior levels of the police forces. It should become a matter of course, without need for publicity or notice, that the commanders of the two police forces occasionally meet.

Mr. Archer: For the avoidance of doubt, will the Secretary of State accept that the return to London yesterday of my hon. Friend the Member for Middlesbrough (Mr. Bell) and me for an evening engagement was arranged before we knew the timetable of the working group and the order in which it was seeing delegations. However strongly the right hon. Gentleman may disagree, as we all do, with some of the views expressed by Sinn Fein, does he accept that the essence of democratic and constitutional politics, in which we all profess to believe, is listening to people with whom we disagree? In particular, can the right hon. Gentleman justify refusing to talk to elected councillors about health and safety matters? Does he agree that those whose reaction to every circumstance is to throw a tantrum and walk out can hardly complain if they are seen as being more interested in dramatic discord than genuine understanding?

Mr. Hurd: I am sorry to hear the right hon. and learned Gentleman's explanation, because it means that he associated himself with the Labour party delegation's decision that it was right to receive Sinn Fein. I simply repeat what I believe to be the right attitude for people in positions of responsibility, which is to distinguish to the maximum extent permitted by the law between those, whether we agree with them or not, who practise constitutional means of arguing their objectives and those who connive at violence.

Mr. Hume: Is the Secretary of State aware of the recent cross-border incursions by British soldiers into County Louth and the consequences of it? Is he further aware that there have been many such incursions, that they are always one way, and that the soldiers always give the same reason—a map-reading error? What conclusions does the Secretary of State draw from the fact that the only soldiers in Ireland who appear to be able to read maps are Irish soldiers?

Mr. Hurd: I am not so sure that there are many Irish soldiers in those areas. The hon. Gentleman is correct in drawing attention to an error that was made and has been acknowledged by the Army. He spoke of "consequences", and he may be talking about a certain tap and oil supply. I have no evidence to lead me to suppose that that incident had anything to do with the British Army.

Kilroot Power Station

2. **Mr. Chapman** asked the Secretary of State for Northern Ireland if he will make a further statement about the decision to convert the Kilroot power station to burning coal and lignite.

The Minister of State, Northern Ireland Office (Dr. Rhodes Boyson): The decision to convert the first phase of Kilroot power station to dual solid fuel—oil firing was announced by my right hon. Friend the Secretary of State in reply to my hon. Friend the Member for Hazel

Grove (Mr. Arnold) on 22 May 1985. It has been widely welcomed in Northern Ireland as a first step towards reducing the costly dependence on oil.

Mr. Chapman: I warmly welcome the decision to use lignite mined in Northern Ireland to fire a power station there. Does my right hon. Friend agree that that makes good sense economically, and that it will lead to a reduction of sulphur dioxide emissions from that power station compared with other conventional coal-fired power stations in the United Kingdom? If that is the case, is he aware that his Department is taking a welcome lead by setting an example to other Departments in playing a part in reducing what could be the severe effects of acid rain in the United Kingdom and acid rain exported to Scandinavia?

Dr. Boyson: I am delighted to be a crusader in the House for clean air by the conversion of Kilroot power station to coal. The sulphur content of heavy fuel oil is 3 per cent., of coal 1 per cent., and of lignite in Northern Ireland 0·2 per cent. Therefore, the conversion of Kilroot to coal will cut by one third the amount of sulphur pollution. If we can eventually move to lignite production in the Crumlin area, we shall cut the sulphur content again by about 40 per cent.

Mr. Wilson: As the Ayrshire coalfield had hoped to supply coal to Kilroot power station, will the Minister say what proportion of the solid fuel will be composed of lignite and what proportion will be occasioned by the burning of Ayrshire coal?

Dr. Boyson: I thank the hon. Gentleman for that supplementary question and I know that the NCB and the coal miners welcome the switch of Kilroot to coal. The intention of the switch at the outset is completely to coal. The transfer will cost £94 million and the saving will be between £25 million and £30 million a year. It will, therefore, pay for itself within three or four years—a relationship with capital expenditure currently almost without equal. If we decide eventually that lignite is right, and the test at the West Belfast station has not yet been completed, it will be used first not at Kilroot but near the mine. The intention for the foreseeable future, though not necessarily for the long-term future, is to use coal at Kilroot.

STC Monkstown

3. **Mr. Beggs** asked the Secretary of State for Northern Ireland if discussions have taken place between Government Ministers, the chairman and chief executive of STC and trade union officials regarding job losses at STC Monkstown, Northern Ireland; and if he will make a statement.

Dr. Boyson: In the course of the past few months I have had discussions with STC's chairman, the Monkstown factory work force representatives and the Northern Ireland committee of the Irish Congress of Trade Unions. I have also corresponded with STC's chairman. I have stressed my concern to secure the future of the factory and have promised that the Industrial Development Board of Northern Ireland will do all it can to help the company in its efforts to increase the factory's efficiency and to bring in new products.

Mr. Beggs: I thank the Minister for his efforts so far. Does he accept that the privatisaton of British Telecom and the policy of purchasing from foreign companies contributed to the loss of 345 jobs in 1984 and will contribute to further job losses totalling 550 this year? Will he undertake to press the board of STC further to encourage the company to allocate products for manufacture at the Monkstown plant in Northern Ireland? May we be assured that the centralisation of STC activities in London is not a precursor to its withdrawal from Northern Ireland?

Dr. Boyson: The answer to the first part of that supplementary question is that the Government are committed to a policy of free competition within the telecommunications sector. It is up to the manufacturing companies to exploit the opportunities available to them within that framework. The problem in relation to STC, as raised in the second part of the hon. Gentleman's supplementary question, is that we have products there which have been sold in the past and are selling now. We need new products which will sell in the future. The whole problem of the Northern Ireland economy, of which the IDB is aware, is the need to encourage the development, by STC and other companies, of products that will sell in Northern Ireland, in Great Britain and throughout the world in the coming 20 to 30 years.

Crumlin Road Court (Trial)

4. **Mr. Corbyn** asked the Secretary of State for Northern Ireland if he will make arrangements to pay an official visit to observe a trial involving evidence from a self-confessed terrorist at the Crumlin road court.

Mr. Hurd: No, Sir.

Mr. Corbyn: Is the Minister aware that many people regard the present system of juryless trials at the Crumlin road court as outrageous? It would be appropriate for him to pay a visit to see the way in which trials take place, with no jury, where the decision is made solely on the word of a supergrass witness who stands to benefit from giving evidence, and where only the judge makes the decision. How much money has been paid in the last four years to supergrass witnesses for their evidence in such circumstances?

Mr. Hurd: The figure for which the hon. Gentleman asks, £1·3 million in recent years, has previously been given in the House. The answer to the main point of his supplementary question is that the matter must be seen against the background of terrorism and the struggle to protect the citizens of Northern Ireland. Terrorism has in the past included the intimidation of jurors, and that is why the recent Baker report concluded that the Diplock courts should continue. The uncorroborated evidence of which the hon. Gentleman complains is admissible in England and Wales, under federal law in the United States and in many Western countries. It is for the court to decide how much weight should be placed on that evidence. It is much better that the court should decide than that politicians or others outside the court should decide.

Sir John Biggs-Davison: Is my right hon. Friend aware that those of us who believe that the Maguires and Bernard Conlans were erroneously convicted of terrorism by an English court with an English jury, also believe that they would probably have been acquitted if they had been tried in Northern Ireland by a Diplock court with a greater knowledge of explosive cases?

Mr. Hurd: My hon. Friend will not expect me to follow him too closely down the Maguire trail. However, it is true, and it is a notable figure, that of those in Northern Ireland who pleaded not guilty before the courts, 50 per cent. were acquitted by a jury, and a higher proportion, 53 per cent., were acquitted in Diplock courts.

Mr. Molyneaux: In view of the Government's rejection of the principle of joint sovereignty, will the Secretary of State also reject the Dublin proposals for the involvement of, and a role for, the Republic's judges in Northern Ireland?

Mr. Hurd: I have noticed a flurry of speculation in the press, including the lead story in *The Irish Times* today. It is difficult to comment in the House or in public on discussions between Governments that are going on all the time and are confidential, but the right hon. Gentleman is too shrewd a hand to allow himself to be carried away by such speculation.

Mr. Stanbrook: Does not recent experience, including the acquittal of several alleged terrorists at trials where accomplice evidence has been admitted, show that the judiciary of Northern Ireland is well aware of the dangers of convicting on uncorroborated evidence of accomplices, and that its quality is at least as high as that of the judiciary in the rest of the United Kingdom?

Mr. Hurd: I entirely agree with my hon. Friend and I am grateful for that comment.

Mr. Flannery: Is it not a violation of both natural and legal justice that some self-confessed murderers are literally being paid to give evidence that will save their skins, and are doing so in trials without juries? The right hon. Gentleman said that it is all right for that to happen in England and Wales, but he omitted the fact that there are juries in England and Wales but not in Northern Ireland. Is he going to do nothing to set right such a travesty of justice in Northern Ireland?

Mr. Hurd: I am looking, as the hon. Member knows, at the Baker report's proposals and I shall soon, I hope, be able to tell the House the way in which my mind is working. I am sure that it would be wrong, and a false service to the citizens of Northern Ireland, if we were either to abolish the Diplock courts and go back to the intimidation of jurors, or to pass extraordinary provision by which Parliament would rule out uncorroborated accomplice evidence, however much a court might later wish to assess its weight. That would be an extraordinary and untoward decision.

Rev. Ian Paisley: Will the right hon. Gentleman keep in mind that opposition to the supergrass system comes not only from Republicans, but, almost unanimously, from the Unionist side of the House? Does he not realise that the Unionist side would defend a proper legal system, which is one of the systems under which we have to work? By taking uncorroborated evidence, the system under which we want to live is seriously weakened.

Mr. Hurd: I agree that the sooner we can work toward the restoration of, or at least an increase in, jury trials, the more that everybody in the House and Northern Ireland will be pleased. The hon. Gentleman knows the proposals which the Baker report made in that direction, which I am weighing. I return to the basic point, which is that so long as intimidation of jurors is a problem in Northern Ireland we would be rash to suppose that we could reconcile justice with an untrammelled restoration of the jury system.

Mr. Hume: May I remind the Secretary of State that this question is about the use of supergrasses and that the vast majority of the citizens of Northern Ireland, to whom he referred, in both sections of the community, regard the supergrass system, according to recent opinion polls, as a very serious travesty of justice.

Mr. Hurd: Let us suppose that a terrorist had committed a terrorist crime and that the only evidence available to bring him to justice was the evidence of one of his accomplices. As the hon. Member for Antrim, North (Rev. Ian Paisley) said, it is not a matter of which community he belongs to. It would be very hard to say that that person could not be brought to justice even if the evidence of his accomplice would carry great weight in the court. Surely it must be right for the courts, whose independence has been rightly praised this afternoon, to make a decision in each case on the merits of that case.

Cross-border Co-operation

5. **Mr. Dubs** asked the Secretary of State for Northern Ireland when he next proposes to meet Ministers of the Government of the Republic of Ireland to discuss cross-border co-operation.

9. **Sir John Biggs-Davidson** asked the Secretary of State for Northern Ireland if he will make a statement about co-operation with the Irish Republic, making special reference to security.

Mr. Hurd: I met the Irish Minister for Foreign Affairs, Mr. Barry, on 30 May. No date for a future meeting with Irish Ministers has been set. I welcome close co-operation with Irish Ministers in areas where we can work together to our mutual benefit. It is essential that we co-operate closely in dealing with the common threat of terrorist violence. I welcome the co-operation that exists at present between the Royal Ulster Constabulary and the Garda and I hope that this can be developed further.

Mr. Dubs: Is the Secretary of State aware that many people regard talks between the British Government and the Dublin Government as crucial, not just in areas of security, but in areas covering the whole range of affairs in Northern Ireland? Is he further aware that, as all that we have to go on are pessimistic newspaper leaks that are causing a great deal of dismay, it would be better if the secret diplomacy came to an end and he were frank about what is going on? It would be better if the Secretary of State said this to us instead of always being scared about what the Unionists might say to him if he revealed something about these discussions.

Mr. Hurd: One or two contradictions are embedded in that question. We have frequent discussions with Irish Ministers within the framework of the Intergovernmental Council, and I agree with the hon. Gentleman's remarks about those discussions. We are holding serious and confidential discussions with the Irish Government to establish whether the relationship sketched in the Chequers communiqué last November could be made more substantial. It would not do much good to break off the negotiations at this stage and reveal their contents to the

public. It may be a little time yet before we know whether they will succeed in the form of an outcome that would have to be explained and defended in this House.

Sir John Biggs-Davison: Did not the Taoiseach describe the IRA as "our common enemy"? Despite the reported disagreements between the Garda Commissioner and the Chief Constable of the Royal Ulster Constabulary, has not the co-operation between those two admirable forces saved many lives on both sides of the border?

Mr. Hurd: That is true, and it is one reason why we should like the existing co-operation to be strengthened and improved.

Mr. Stephen Ross: Has the Secretary of State noticed the good news of the increased recruitment of Catholics — between 10 and 12 per cent. — into the RUC? *[Interruption.]* It is a good step upwards. Is there any possibility of the two police forces holding joint training exercises and getting together to try to reach an understanding of the problems?

Mr. Hurd: There has been an increase in the proportion of Catholics joining the RUC, which I welcome. However, the hon. Gentleman will accept that there is a long way to go before we can be satisfied about the position. A great deal depends upon what I hope will be a growing understanding between the leaders of the nationalist minority in the north and the police force. As for the hon. Gentleman's second question, I should like to move in that direction, but it has to be a step at a time.

Mr. Nicholson: In recent months, 14 members of the RUC have been brutally butchered in my constituency by the IRA. The Secretary of State's words ring hollow in the ears of my constituents. The co-operation to which he refers with the Irish Republic is a sham and non-existent. Does the Secretary of State not recognise that fact?

Mr. Hurd: It is certainly true that the hon. Member's constituency, above all other constituencies in the Province, has suffered grievously in the course of this year. The response of the great majority of his constituents in both communities has been very steady and praiseworthy. I think that the hon. Gentleman went a little too far in his remarks, because I could take him to a place on the border, not far from his constituency, where the local RUC superintendent, if asked about his personal co-operation with his Garda counterpart across the road or across the river, would say that it was good and useful.

Dr. Mawhinney: Bearing in mind the importance to cross-border security and co-operation between the two police forces of a Royal Ulster Constabulary with a considerable number of Catholics in it—and it needs to have more — and bearing in mind also the apparent ignorance of some Irish Ministers, particularly Mr. Barry, about the facts of the case, will my right hon. Friend take an early opportunity to reaffirm to the Irish Ministers that there is a 10 per cent. Catholic component in the RUC and a 12 per cent. recruitment rate, and that he and his fellow Ministers want to see both figures increased?

Mr. Hurd: The Irish know that. Mr. Barry and I regularly find opportunities to enlighten each other's ignorance.

Mr. Bell: Will the Secretary of State accept that the Opposition welcome the fact that the serious and confidential discussions with the Irish Government are continuing? He has not, however, denied the aura of pessimism in relation to the talks to which my hon. Friend the Member for Battersea (Mr. Dubs) referred. Can the Secretary of State confirm that Her Majesty's Government will, with the utmost vigour, press the talks to a successful conclusion?

Mr. Hurd: Sometimes in the past few months there has been too much optimism about the talks and sometimes there has been too much pessimism. What I see and experience is a steady negotiation, seriously conducted, on both sides, but I do not yet know and cannot yet tell the House whether it will succeed.

Mr. Eldon Griffiths: Having had the opportunity of discussing with members of the Garda on one side of the border and with members of the RUC on the other side their practical co-operation, may I ask my right hon. Friend whether he will accept that at the operational level there is good co-operation, intelligence and information-gathering between the two forces? Nevertheless, will he accept that the recent incident at Killeen has raised some real anxieties among operational members of the RUC, and that there may be a case for some independent investigation into exactly what happened, and whether the four dead officers were set up before they were killed?

Mr. Hurd: There is a police investigation proceeding into what happened and my hon. Friend, with his experience, will not expect me to elaborate on that. I think that the police are the right people to do the investigation and bring to justice, if they can, those responsible for a particularly atrocious crime.

Mr. A. Cecil Walker: May I ask the Secretary of State, when in discussions with Irish Ministers on cross-border co-operation, to demand that action be taken against those terrorists who are hiding in the South under a cloak of respectability? Will he take steps to demand that they be apprehended and returned to justice in Northern Ireland?

Mr. Hurd: Yes, indeed. When there is proof that we can adduce, or that can be adduced in a court of law in the North, we do not hesitate to ask for the return of those concerned. As the hon. Gentleman knows, often it is not necessarily a question of proof, which may already be available. It is a question of wanting information that could be useful operationally.

Anti-discrimination Safeguards

6. **Mr. Heathcoat-Amory** asked the Secretary of State for Northern Ireland if he has any plans to introduce additional safeguards against discrimination in Northern Ireland.

Mr. Hurd: A wide range of laws and powers to safeguard individuals against discrimination have been in place for over a decade. We keep a careful watch on the effectiveness of these measures. I have already welcomed the review to be undertaken by the Standing Advisory Commission on Human Rights. I am examining information about the relative social and economic positions of the major denominational groups in Northern Ireland. I shall shortly publish data about that and make a statement about the Government's proposals for further consideration of this matter.

Mr. Heathcoat-Amory: I thank my right hon. Friend for his very full reply. Does he agree that outside

interference in that area is not helpful? In particular, does he agree that the adoption by American companies of the so-called McBride principles would not be helpful for employment or equality of opportunity in Northern Ireland?

Mr. Hurd: My hon. Friend is quite right. I have been encouraged by the number of people in Northern Ireland and the United States, usually supporters of the nationalist community, who have seized that point and are explaining to Americans that the McBride campaign could damage the whole community in Northern Ireland.

Discrimination in employment in Northern Ireland is illegal. Therefore the best way to secure fresh jobs for the nationalist minority is to secure fresh jobs for Northern Ireland.

Improvement Grants

7. **Rev. Martin Smyth** asked the Secretary of State for Northern Ireland what period of time elapses between application for and authorisation of improvement grants; and if he is satisfied with the performance of the Northern Ireland Housing Executive in this respect.

The Parliamentary Under-Secretary of State for Northern Ireland (Mr. Chris Patten): This is a matter for the chairman of the Housing Executive, who has advised me that the average time taken is 15 months. However, progress has recently been made to cut the backlog and that should contribute to an improvement in the time taken to process new applications.

Rev. Martin Smyth: While welcoming the Minister's understanding that improvement will occur, may I ask whether he acknowledges that some people have been on the list for two years and that some of them have died before their applications have been approved? Indeed, the increase in costs has made it impossible for people to proceed.

Mr. Patten: I am aware of the problem. I am pleased that we have cut the backlog, which peaked about 15 months ago, by about two thirds. We are presently reviewing with the Housing Executive ways in which we can target grants more effectively, to take account of both personal and housing need.

Mr. John Mark Taylor: In the context of housing policy, will my hon. Friend say a word about his right-to-buy programme and whether home ownership is in fact conducive to greater stability in society, including greater stability in the Province?

Mr. Patten: I agree with my hon. Friend. We have managed to sell 26,000 Housing Executive homes in Northern Ireland to their tenants. There are 150 applications a week and 100 completions. I think that that should have some of the benefits to which my hon. Friend referred.

Elections (Identification Documents)

8. **Mr. J. Enoch Powell** asked the Secretary of State for Northern Ireland what use he intends to make of the power to extend by statutory instrument the prescribed identification documents in the Elections (Northern Ireland) Act 1985.

The Parliamentary Under-Secretary of State for Northern Ireland (Mr. Nicholas Scott): My right hon. Friend is currently reviewing the list of specified documents in the light of experience at the district council elections on 15 May. The Government will in due course consider bringing forward legislative proposals to apply the specified document requirement to other categories of elections held in Northern Ireland.

Mr. Powell: Making use of the blessed interval between elections to which we are now looking forward in Northern Ireland, will the Government be careful to consult all those with practical experience derived from the local government elections a month ago?

Mr. Scott: The Assembly has already had a debate on that subject, and we shall be studying that. We are ready to listen to representations from any quarter in Northern Ireland about the range of the documents electors might produce or, indeed, other aspects of the conduct of those elections.

Mr. Peter Bruinvels: Is my hon. Friend certain and satisfied that those wishing to take part in the recent elections in Northern Ireland were able to do so and were not denied the opportunity because they had the wrong documents available on the prescribed list?

Mr. Scott: We got the balance about right. The overriding fact is that, as the *Irish News* put it, personation was well and truly buried at this election as the result of our legislation. That was our aim, and we achieved it.

Mr. McCusker: Can the Minister assure us that the Central Services Agency is doing everything in its power to issue a post-1973 medical card to everyone in Northern Ireland?

Mr. Scott: In giving that assurance, I wish also to pay the warmest tribute to the staff of the Central Services Agency for their efforts in putting out more than 50,000 cards immediately before the election.

Rev. Ian Paisley: Will the Minister keep in mind the proposal put in this House—*[Interruption.]*—when the matter was debated by—*[Interruption.]*

Mr. Speaker: Order. We have not finished Questions yet.

Rev. Ian Paisley: Will the Minister keep in mind the proposal put to this House by the hon. Member for Foyle (Mr. Hume) that those who wished to have their names on the electoral list would have to sign the forms themselves and put their date of birth, which would be duplicated so that the presiding officer could properly check that all those voting were on the list?

Mr. Scott: As I said earlier, we shall want to review the experience of the district council elections and ensure that in future elections personation is as well and truly buried as it was in those elections.

Enterprise Ulster

10. **Mr. Randall** asked the Secretary of State for Northern Ireland what is the planned level of funding for Enterprise Ulster for the financial year 1985-86.

Dr. Boyson: A total of £7·1 million, Sir.

Mr. Randall: Is it not a fact that funding in real terms has increased, yet the minimum target for 1985-86 of 1,000 newly created jobs has remained the same?

Dr. Boyson: What the hon. Gentleman says is broadly true. The cost per individual of the Enterprise Ulster

scheme is much higher than the cost of, say, the ACE scheme. The net cost of the Enterprise Ulster scheme is £1,899 per head, compared with £345 per head for the ACE scheme. The planned level of funding for Enterprise Ulster was set to ascertain how many jobs could be done under that scheme compared with other schemes.

PRIME MINISTER

Engagements

Q1. **Mr. Hannam** asked the Prime Minister if she will list her official engagements for Thursday 13 June.

The Prime Minister (Mrs. Margaret Thatcher): This morning I presided at a meeting of the Cabinet and had meetings with ministerial colleagues and others. In addition to my duties in this House I shall be having further meetings later today. This evening I shall be attending a banquet given by President de la Madrid of Mexico.

Mr. Hannam: Will my right hon. Friend take time today to consider the growing menance of drug abuse, especially the threatened cocaine flood from the United States? In view of the vast profits that are made from these dealings, will she take the strongest possible steps to deal with drug pushers? When will my right hon. Friend introduce legislation to ensure that any profits or drugs that the pushers acquire can be confiscated?

The Prime Minister: We hope to introduce legislation on this matter during the next parliamentary Session. As my hon. Friend is already aware, we have added 160 new posts to Customs and Excise especially for tracking down drugs. Last Tuesday, it was announced that we would add a further 50 investigators to Customs and Excise to track down drugs. All police forces now have specialist drug units. The police are devoting more manpower to drug investigations. I hope, therefore, that we have equipped ourselves well should there be any diversion of cocaine from the other side of the Atlantic to this side.

Mr. Kinnock: Will the Prime Minister now tell us, honestly and plainly, whether there are figures for gainers and losers from her social security proposals—yes or no? Has the right hon. Lady or any of her Ministers seen such figures—yes or no?

The Prime Minister: As I made clear in my letter to the right hon. Gentleman, the purpose of issuing a Green Paper was to set out—[HON. MEMBERS: "Let us have the answer."] — the main themes and principles in proposing a new social security structure. The proper time to produce figures is when decisions have been taken on the structure. We shall provide a range of illustrative figures when the White Paper is published in the autumn. By that time we shall have taken decisions on the structure. Then we shall provide a range of illustrative figures for the right hon. Gentleman and other hon. Members.

Mr. Kinnock: The Prime Minister's refusal to give a straight answer to a straight question will be noted by the whole country. It is entirely consistent with the approaches that she has taken on the whole matter. If the right hon. Lady will not answer that question on gainers and losers. will she publish the report of the pensions review committee, which included Mr. Stewart Lyon, so that the whole country can make a judgment on the advice that was tendered to the Government?

The Prime Minister: Perhaps the right hon. Gentleman did not quite expect the answer that I gave. As to the latter part of his question, Mr. Lyon was an expert adviser, but the Government do not always have to take expert advice — *[Interruption.]* Indeed, we could be criticised if we did. I notice that it is reported that Mr. Lyon said:

"the final proposal to phase out Serps was ingenious".

Mr. Couchman: Will my right hon. Friend confirm that the Metropolitan police have had a 5 per cent. increase this year, that there is a need for an examination into manpower and overtime, and that the police, who have been so well treated by this Government, cannot expect to be exempt from examination of their expenditure?

The Prime Minister: I agree with my hon. Friend that the police have been extremely well treated by this Government. Expenditure on the police generally has increased from £1·1 billion in 1978-79 to £2·8 billion in 1985-86, and spending on the Metropolitan police has increased from £291 million in 1978-79 to £763 in 1985-86. Against that background, we are justifiably proud of our record in respect of the Metropolitan police and the police throughout the country as a whole.

Mr. James Callaghan: Is the Prime Minister aware that the word "ingenious" is always used of every successful burglar?

The Prime Minister: It is precisely because this Government do not wish to burgle future generations that we are looking at the present scheme to ensure that it is soundly financed by contributions from this generation, rather than staying with the old scheme which would put the burden on our children and grandchildren.

Mr. Maxwell-Hyslop: On a point of order, Mr. Speaker.

Mr. Speaker: I shall take it afterwards.

Mr. Maxwell-Hyslop: But it relates to this question.

Mr. Speaker: Order. I shall take it immediately after questions.

Mr. Maxwell-Hyslop *rose*——

Mr. Speaker: Order. There is no injury time during questions, and therefore I shall take the hon. Gentleman's point of order afterwards.

Sir William Clark: Does my right hon. Friend agree that at present contributions from 2·8 workers pay one pension, and that if SERPS is not altered 1·6 workers will in future pay one pension? That is surely an unsustainable charge on such workers.

The Prime Minister: I do not believe that the present SERPS system is deliverable. The burden on our children and grandchildren would be absolutely intolerable, and they would not be able to meet it. As my hon. Friend knows, the expert advice indicated that if SERPS were to be carried on the benefit would have to be substantially reduced, even though the contribution would have to remain the same.

Q2. **Mr. Ron Brown** asked the Prime Minister if she will list her official engagements for Thursday 13 June.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Brown: Is the Prime Minister aware that the "World in Action" programme the other evening said, in effect, that she was lying about the sinking of the General Belgrano——

Mr. Speaker: Order. The hon. Gentleman knows that "lying" is not a word that we use in the House, especially about one another.

Mr. Brown: Is the Prime Minister aware that "World in Action" said, in effect, that she was not telling the whole truth about the sinking of the General Belgrano? Is she aware that many people regard this as Britain's Watergate, as the Falklands war was used cynically to win a general election and many people on both sides lost their lives needlessly.

The Prime Minister: The whole matter of the Belgrano was thoroughly debated in the House when the Government motion that the sinking of the Belgrano was justified and that the first duty of the Government is to protect the lives of our people was passed without one dissenting vote from any part of the House.

Mr. Viggers: Has my right hon. Friend had the opportunity to note that *The Times* newspaper today carries so many job advertisements that a separate eight-page supplement has been printed to contain them, the *Daily Telegraph* carries 10 pages of job advertisements and even *The Guardian* has five? Does she agree that that is a sure sign of a buoyant and expanding economy and is bad news for the Labour party and those whose profession it is to talk this country down?

The Prime Minister: I believe that it is a sign that more jobs are being created. I hope that those who are without jobs will go anxiously after those vacancies and that many more will be employed as a result.

Dr. Owen: As larceny now seems to be the right description of the Government's proposals for the state earnings-related pensions scheme, will the Prime Minister admit that Mr. Stewart Lyon proposed that the scheme should be retained but modified and its ultimate cost reduced, but that that option was not discussed by the Secretary of State's advisory team? Does she agree that that option should now be put to the House with Government figures so that we can decide whether it is viable?

The Prime Minister: I thought from their early declarations on the reviews that members of the SDP were supporting abolition of SERPS very vigorously, but with the alliance one never quite knows. The Green Paper made it clear that one of the options considered by the Government was to restrict SERPS rather than to phase it out. The reasons why the Government concluded that that was not the right option are set out in detail in paragraph 7.9 on page 23 of the Green Paper.

Rev. Ian Paisley: Will the right hon. Lady take time today to discuss with her right hon. Friends the Secretary of State for Northern Ireland and the Minister of Agriculture, Fisheries and Food the plight of the small dairy farmers in Northern Ireland, who are the only dairy farmers in the whole of the United Kingdom with herds of 40 cows or fewer who will have to carry the cruel EC cross of the milk quota?

The Prime Minister: I am very much aware of the problem in Northern Ireland. I believe that too few people took up the outgoers offer. My right hon. Friend the Secretary of State for Northern Ireland is considering the matter now.

Q3. **Mr. Nellist** asked the Prime Minister if she will list her official engagements for Thursday 13 June.

The Prime Minister: I refer the hon. Gentleman to the reply that I gave some moments ago.

Mr. Nellist: Instead of attending yet another banquet this evening, will the Prime Minister take time to read the report in today's *Daily Mirror* about a woman who is to have an abortion after breathing in fumes from a weedkiller containing the chemical 2,4,5-T? Having cut the health and safety inspectorate by 20 per cent. in the past four years, will she now support the campaign by the Transport and General Workers Union and others for a ban on that chemical, which was used by the United States as a killer in the Vietnam war?

The Prime Minister: The matter is now under consideration by the Health and Safety Executive.

Q4. **Mr. Forth** asked the Prime Minister if she will list her official engagements for Thursday 13 June.

The Prime Minister: I refer my hon. Friend to the reply that I gave some moments ago.

Mr. Forth: Has my right hon. Friend had time to study the speech of our right hon. Friend the Chancellor of the Exchequer in the Maurice Macmillan memorial lecture on Tuesday evening, in which he described the emphasis that he puts on wider share ownership and wider property ownership as one of the bases of the Government's policies? Does my right hon. Friend remain committed to the principle that further share and home ownership are the bases for further responsibility in society and for further economic and social progress?

The Prime Minister: Yes. I saw that speech and, as my hon. Friend knows, owner-occupation is at an all-time record because of the Government's policies. Moreover, the number of individuals who own shares has risen rapidly. It fell during the lifetime of the Labour Government. It fell from 2·5 million in 1958 to 1·75 million in 1979. It is now rising substantially. The British Telecom share issue alone has 1·7 million shareholders —a figure equal to the total number of shareholders in 1979.

Mr. Speaker: I shall now take the point of order of the hon. Member for Tiverton (Mr. Maxwell-Hyslop).

Mr. Robin Maxwell-Hyslop: It is sometimes difficult in the Chair to hear what is being said in the House, but it is sometimes difficult to hear in the House what is being said in the House. It must have been obvious to everyone in the House that the Opposition deliberately drowned my right hon. Friend the Prime Minister's answer — *[Interruption.]*—just as they are trying to drown this point of order. They succeeded in drowning my right hon. Friend's reply to the somewhat mischievous question of an ex-Prime Minister. [HON. MEMBERS: "Mischievous?"] I raise this point of order—*[Interruption.]* I am happy to wait.

Mr. Speaker: Order. Perhaps the hon. Gentleman will put his point of order to me.

Mr. Maxwell-Hyslop: I shall put it when I can be sure that you can hear it, Mr. Speaker. [HON. MEMBERS:

"Oh."] I rose on a point of order earlier to ask you to enable the Prime Minister to repeat her answer so that the House and the right hon. Member for Cardiff, South and Penarth (Mr. Callaghan), who asked the question, could be allowed to hear her answer.

Mr. Speaker: The hon. Gentleman has raised an important point. Over the centuries our predecessors have fought for freedom of speech in this place and it is a very bad example to others if we fail to preserve that freedom. It is perfectly true that Prime Minister's questions have been very noisy, but I had detected a rather better tone of Prime Minister's questions in the past several weeks and I hope that that will continue.

Business of the House

3.35 pm

Mr. Neil Kinnock (Islwyn): May I, within your hearing, Mr. Speaker, ask the Leader of the House to state the business for next week?

The Lord Privy Seal and Leader of the House of Commons (Mr. John Biffen): Yes, Sir. The business of the House for next week will be as follows:

MONDAY 17 JUNE—A debate on a Government motion to approve the White Paper on Airports Policy, Cmnd. 9542.

TUESDAY 18 JUNE—A debate on a Government motion on the Green Paper on the Reform of Social Security, Cmnd. 9517-9.

WEDNESDAY 19 JUNE—Opposition Day (15th Allotted Day). There will be a debate on an Opposition Motion entitled "Government Imposed Price Increases".

Motion on European Community Document 9402/84 on quick frozen foodstuffs.

THURSDAY 20 JUNE—There will be a debate on a Government motion on the White Paper on Developments in the European Community July-December 1984, Cmnd. 9485, on the report of the Dooge Committee on Institutional Affairs, and on Community Documents 11911/1/81 (on a conciliation procedure between the European Assembly Council and the Commission), on 10350/82 (on stronger action in the cultural sector), and on 8667/82 and 4469/85 on controls and formalities at Community borders.

FRIDAY 21 JUNE—A debate on small firms which will arise on a motion for the Adjournment of the House.

MONDAY 24 JUNE—Opposition Day (16th Allotted Day)—subject to be announced.

[European Community Documents to be debated

Wednesday 19 June

(a) 9402/84 Quick frozen foodstuffs

Thursday 20 June

(b) Unnumbered Report of Dooge Committee on EC Institutional Affairs

(c) 11911/1/81 Conciliation procedure between Community Institutions

(d) 10350/82 Communication concerning stronger action in the cultural sector

(e) 8667/82 Frontier checks on Community citizens

(f) 4469/85 Frontier checks on Community citizens

Relevant Reports of European Legislation Committee

(a) HC 5–iv (1984-85), paragraph 4.

(b) HC 5–xxi (1984-85).

(c) HC 21–xix (1981-82)

(d) HC 34–xv (1982-83)

(e) HC 34–i (1982-83) and HC 78–xxviii (1983-84)

(f) HC 5–xvi (1984-85).]

Mr. Kinnock: I am grateful to the right hon. Gentleman. First, may I ask him to ensure that the statement on the social security benefits uprating is made next Monday so that in the debate on the Government's Green Paper on the reform of social security the House can have all the relevant information on the most recent uprating to hand?

Secondly, may I ask the right hon. Gentleman for a debate in Government time on the immigration rules, taking into account both the European court judgment and the new restriction on Tamils?

Thirdly, will the right hon. Gentleman arrange for a debate in Government time on the crisis facing the arts, caused by the unexpected shortfall of £30 million that has resulted from the Government's failure properly to estimate the effects of the abolition of the Greater London and metropolitan county councils? *[Interruption.]* While considering that matter, will the right hon. Gentleman disregard the philistines who heckle from Conservative Benches?

Finally, it is now 13 weeks since the violence at the Luton-Millwall match and the statement by the Parliamentary Under-Secretary of State for the Environment, who is responsible for sport, and two weeks since the horrific incidents at the Heysel stadium in Brussels and the Government's promise to take effective measures. As it is now only 10 weeks to the start of the new football season and five or six weeks until the summer recess, when will we have the necessary discussions about the Government's legislation and their other proposals for dealing with football hooliganism?

Does the right hon. Gentleman recognise that we in the Opposition want strong, urgent and effective action to be taken in that matter? Those objectives can be best achieved by joint effort and maximum agreement. In pursuit of that, will the right hon. Gentleman ensure that there is joint discussion, maximum information and, very important, adequate time for legislation?

Mr. Biffen: I recognise the importance of the uprating statement in the context of the debate on the social security proposals. Perhaps we can look at that matter through the usual channels.

On the second point, while no announcement has been made about a debate on immigration reflecting the problems of the Tamils and recent judgment of the European Court of Human Rights, I accept that the topic is important.

Thirdly, in the context of the arts, perhaps I will be allowed to say this—and I believe that this sentiment will be widely echoed throughout the House. I should like to express our great pleasure at the donation that has come today to the National Gallery through the Getty Foundation. I note what the right hon. Gentleman said about a debate concerning public sector provision for the arts. Again, perhaps we can look at that matter through the usual channels.

Finally, I am most anxious to join the right hon. Gentleman in underlining the importance of consultation and maximum agreement on legislation on alcohol in respect of football matches. I shall do what I can to move matters in the direction that he seeks.

Mr. Nigel Forman (Carshalton and Wallington): On next Tuesday's debate on the social security Green Paper, is my right hon. Friend aware that more than 129 right hon. and hon. Conservative Members have signed early-day motion 653, which urges the House to endorse the principle of an integregated tax-benefit system?

[That this House endorses the principle of an integrated tax-benefit system; and urges Her Majesty's Government to use the present review of social security and the forthcoming Green Paper on personal taxation as an opportunity to take the first steps towards that objective.]

Will he ensure that my right hon. Friend the Secretary of State for Social Services is made fully aware of that broad-ranging support?

Mr. Biffen: I shall be happy to concur with what my hon. Friend seeks.

Mr. A. J. Beith (Berwick-upon-Tweed): Surely the House will not be denied the opportunity to debate and have a separate vote on the humanitarian issue of the immigration rule changes that will effect the Tamil community. Does the Leader of the House, whose responses to the matter have been sympathetic, recognise that to embrace the matter within a wider debate would be to confuse that debate and to deny the House an opportunity that it should have?

Mr. Biffen: I am happy to repeat now the sympathy that I expressed last week.

Mr. Eldon Griffiths (Bury St. Edmunds): On next Monday's business, will my right hon. Friend make room for the debate to continue for about a further hour so that more hon. Members may be able to contribute and Mr. Speaker may be assisted in his selection of hon. Members who should speak?

Since the past year has seen unprecedented threats to public order and an unprecedented increase in violent crime, is it not time that we had a proper debate on the relationship between the resources available to the police and the demands placed upon them, which are, frankly, becoming too great?

Mr. Biffen: I acknowledge the authority with which my hon. Friend speaks about the police, but I hope that he will understand when I say that I cannot offer the immediate prospect of a debate in Government time on that topic. I shall, of course, keep the matter in mind.

As to my hon. Friend's request with regard to the airports debate, I am sure that we can consider through the usual channels the virtues of extending the debate, perhaps until midnight.

Mr. Nigel Spearing (Newham, South): Is the Leader of the House aware that the Scrutiny Committee will be glad that there is to be a debate next Thursday on the Dooge report, which leaves plenty of time before the Milan summit? Is he further aware that the Committee's 21st report, published today, includes a summary of its views on this matter? There have been press reports of additional proposals from the Foreign Secretary. Will they be available to hon. Members before next Thursday's debate?

Mr. Biffen: I appreciate the hon. Gentleman's kind remarks about the arrangements that have been made to debate the Dooge report before the European Council meeting. I shall look into his second point.

Mr. John Stokes (Halesowen and Stourbridge): Would my right hon. Friend be good enough to think again about the role, in its broadest aspects, of the European Court of Human Rights, which is so different from our system, which is thoroughly un-English and which may lead us into an awful mess?

Mr. Biffen: No time has been made available next week to enable the House to debate the shortcomings of the European Court of Human Rights, and I cannot offer any prospects of an early debate in Government time. It is a subject well suited to my hon. Friend's private enterprise.

Mr. George Foulkes (Carrick, Cumnock and Doon Valley): Will the Leader of the House arrange for the Foreign Secretary to make a statement as soon as possible disassociating the British Government from the decision of the United States Congress to give financial aid to the Contras? In view of the increasing possibility of American intervention in Nicaragua, and because of the extreme danger of such an event, will the right hon. Gentleman arrange an early debate on the matter?

Mr. Biffen: I would mislead the hon. Gentleman if I suggested that there were any prospects of an early debate in Government time, but I shall draw the attention of my right hon. and learned Friend the Foreign Secretary to the points that he has raised.

Mr. John Browne (Winchester): Does my right hon. Friend accept that, although many people would abhor a police state, they believe that the availability of identity cards could be a critical part of the fight against terrorism and crime in general? Does he further accept that many forms of security card already exist? Therefore, may we have a debate on this subject so that the Government might be encouraged to make available to the public on request a standard identity card, just as passports have been available for decades—

Hon. Members: No.

Mr. Biffen: The reception to my hon. Friend's suggestion shows that his first step should be to try his luck in an Adjournment debate and to see what reaction he gets there.

Mr. Tam Dalyell (Linlithgow): May I ask the Leader of the House a question of which I gave him notice? In the light of my Consolidated Fund debate on 19 December 1984, the two books by Graham Smith and Judith Cook and the astonishing articles in the *Daily Star* yesterday and today on the death of the rose grower Hilda Murrell and the possible involvement of British intelligence, does he think that the time has come for a statement on the subject by the Home Secretary?

Mr. Biffen: I am grateful to the hon. Gentleman for having given me notice that he would ask his question. It is not immediately clear that the articles in the *Daily Star* add anything to what has hitherto appeared in the press, but I shall refer the point that has been made to my right hon. and learned Friend the Home Secretary.

Mr. Roger Gale (Thanet, North): My right hon. Friend will be aware that, in the overwhelming majority of cases, the introduction of the National Health Service approved list has been not just acceptable but welcome. He will also be aware that in a tiny minority of cases genuine difficulties have been created. Will he seek from my right hon. Friend the Secretary of State for Social Services an early statement to the House not just on plans for an appeal procedure but for the resolution of those few genuine difficulties?

Mr. Biffen: I understand that my right hon. and learned Friend the Minister for Health wrote to the general medical services committee of the British Medical Association on 16 April setting out the Government's proposals for an

[Mr. Biffen]

appeal mechanism. I understand that the committee will be responding shortly. I hope that we can take it from there.

Mr. David Winnick (Walsall, North): Will the Leader of the House give further consideration to the point raised by my hon. Friend the Member for Carrick, Cumnock and Doon Valley (Mr. Foulkes) so that we may have an opportunity to discuss the deplorable resolution passed by the United States House of Representatives yesterday? Is he aware that the Opposition feel that the Government should make it clear that they do not believe that Washington should destabilise or try to overthrow any Government, as in Nicaragua, which they do not support or consider should exist?

Mr. Biffen: I do not think that I can helpfully add to the answer that I have already given. I shall, of course, make it my business to ensure that my right hon. and learned Friend is also informed of the hon. Gentleman's opinion.

Mr. Harry Greenway (Ealing, North): Did my right hon. Friend see the excellent letter in *The Times* yesterday from a former British and world boxing champion, Mr. Alan Minter, on values in sport and the need to improve crowd behaviour at sporting events? Does my right hon. Friend feel that the whole subject, linked with general social discipline, should be debated by the House in addition to discussions on the football measures to be introduced by the Government before the summer recess?

Mr. Biffen: The initial step must be to introduce the measures that the Government have in mind and to which the right hon. Gentleman the Leader of the Opposition referred. If we can get along with those, that will be the best contribution that the House can make.

Mr. D. N. Campbell-Savours (Workington): Does the Leader of the House recall that last week, when I asked for a statement on Lear Fan, he pointed to Question Time this week as being the time to raise that issue? Has he looked at the Order Paper today and noticed that there was no opportunity on it for any questions to be asked on Lear Fan? As £56 million of public money is involved, do we not deserve a statement at the Dispatch Box? Why do the Government persist in refusing to come to the Dispatch Box to answer about the Lear Fan loss of money?

Mr. Biffen: I am sorry that the hon. Gentleman has not had the opportunity that I thought, when we had the exchange last week, might be available to him. I shall refer his observations to my right hon. Friend the Secretary of State for Northern Ireland.

Mr. Richard Hickmet (Glanford and Scunthorpe): Is my right hon. Friend aware that in some quarters there is growing anxiety about the manner in which consultants within the NHS carry out private operations, about the waiting lists which are maintained, in some cases, it is felt, artificially long, and also about the remission of NHS fees from private patients? Will he arrange for a statement to be made on that matter by my right hon. and learned Friend the Minister for Health or for a debate on it?

Mr. Biffen: I shall refer that point to my right hon. Friend the Secretary of State for Social Services. In the meanwhile, my hon. Friend may like to take the opportunity, if it is possible, to ask about it at Question Time on Tuesday.

Mr. Peter Hardy (Wentworth): Does the Leader of the House accept that the House needs an early opportunity to consider the case for urgent improvements to regional policy and changes in the pace and scale of public expenditure to assist coalfield areas where unemployment is already dreadful and is now being so swollen as to present a genuine threat of corrosion and the crippling of our communities? Is he aware that that is making a mockery of any residual attachment of the Government to the concept of one nation?

Mr. Biffen: The hon. Gentleman raises an important aspect of economic policy that is contained within regional policies. There is no immediate opportunity for debating that in Government time, but he may wish to use the other opportunities that are available to him.

Mr. Tim Yeo (Suffolk, South): Is my right hon. Friend aware of the widespread disappointment at last week's decision to defer legislation to decontrol new private tenancies? In view of the fact that that will obstruct mobility of labour and, therefore, slow down the process of reducing unemployment, will it be possible to arrange a debate on the subject so that many Back-Bench Members who feel strongly about the matter may have a chance to express their views?

Mr. Biffen: I do not foresee an early likelihood of a debate in Government time, but my hon. Friend may wish to pursue the other opportunities available to him.

Mr. Charles Kennedy (Ross, Cromarty and Skye): Given that the Government have termed the social security reviews as the most fundamental since Beveridge, does the Leader of the House seriously consider that one day's debate is sufficient to discuss them? In view of the revelations in today's press that Ministers completely ignored the advice of Mr. Stewart Lyon, the independent adviser on pensions, does the right hon. Gentleman agree that the consultative exercise within Parliament is likely to be as flawed and fraudulent as the consultative exercise for the reviews clearly was?

Mr. Biffen: I do not accept much of that rhetoric as being appropriate to next week's business. The social security review is a big topic to be contained within one day, but, provided hon. Members argue succinctly, much good argument can be put forward and resolved.

Mr. Tony Marlow (Northampton, North): May I reinforce the point made both by my hon. Friend the Member for Halesowen and Stourbridge (Mr. Stokes) and in an excellent article by Ronald Butt in *The Times* today? Surely it is completely undemocratic for the laws of England to be made, not by the Commons of England, but by a bench of foreign judges, however distinguished they may be? We must have time for a proper debate to reassess our relationship with the European Court of Human Rights.

Mr. Biffen: There is no time made available specifically and explicitly by the Government next week. However, if my hon. Friend could not slip the matter into Thursday's agenda, I would feel that he was not living up to his reputation.—*[Interruption.]* I am aware of his reputation and I am trying to be complimentary to him. I

am trying to say, if I may use a somewhat overworked word, that my hon. Friend has the ingenuity, which is meant to be a complimentary term, to make his point even within that guise.

Mr. Brian Sedgemore (Hackney, South and Shoreditch): Will the Leader of the House arrange for an early debate on yesterday's unsuccessful attempt by Mr. Coleby, a senior member of the Bank of England, to falsify the record of his evidence to the Treasury and Civil Service Select Committee on 22 May——

Mr. Speaker: Order. I do not think that the Committee has reported to the House yet.

Mr. Sedgemore: Could the Leader of the House arrange for the Chancellor of the Exchequer to answer——

Mr. Speaker: Order. We cannot have a debate on the matter, because it has not yet been reported to the House.

Mr. Sedgemore: With respect, Mr. Speaker, I wonder whether I could finish my question. I am asking the Leader——

Mr. Speaker: Order. Perhaps I too could use an overworked word and ask the hon. Gentleman to be more ingenious.

Mr. Sedgemore: Disingenuously, Mr. Speaker, could the Chancellor of the Exchequer answer a debate on the ground that his denunciation of Mr. Coleby's evidence in the House on 23 May put pressure on Mr. Coleby to falsify the record of his evidence?

Mr. Biffen: So many hard things have been uttered on topics of which I am wholly unaware that I can best assume that the hon. Gentleman has been thinking aloud.

Mr. Nicholas Winterton (Macclesfield): Is my right hon. Friend aware that, in the name of the Government, hospitals for the mentally ill and disabled are being closed? Will he, therefore, take note of early-day motion 515, which has been tabled by me and signed by 118 right hon. and hon. Members?

[That this House, noting the widespread interest in the issue of care for the mentally ill and mentally handicapped in the community following the publication of the report of the Social Services Committee on this matter, calls for an early debate on the recommendations and implications of this report.]

It asks for an urgent debate on the subject before all the damage is done and facilities for the mentally disabled and mentally ill are closed without adequate facilities being provided in the community by way of accommodation and skilled personnel.

Mr. Biffen: I shall draw the attention of my right hon. Friend the Secretary of State for Social Services to that serious point.

Mr. Dave Nellist (Coventry, South-East): Will the Leader of the House arrange for the Secretary of State for the Environment to come to the Dispatch Box this evening to make a statement about the actions of district auditors in Lambeth and Liverpool, the results of which are due to take effect this week? Is he aware that Lambeth Labour councillors have had no alternative but to defend the services in the area against the swingeing cuts that have been made by the Government? Is he further aware that Liverpool has made great advances in jobs and housing in the last two years? Does he appreciate that in the view of many Labour Members, trade unionists and members of the public who depend on the services in Liverpool and Lambeth, the needs of the working class in those areas have a higher priority than Tory legality?

Mr. Biffen: I had hoped that the hon. Gentleman would join with me in welcoming the fact that one Labour council after another was now concluding a legal rate. I shall convey to my right hon. Friend his request that he come to the House this evening, but I cannot say that I travel that road hopefully.

Mr. Peter Bruinvels (Leicester, East): In view of recent abuses by certain diplomats, including a Syrian who claimed diplomatic immunity when, highly illegally, occupying someone's property, will my right hon. Friend provide time for the House to debate the question of privileges and immunities given to diplomats, particularly in view of the number of people now being given diplomatic status?

May I assure my right hon. Friend on behalf of many hon. Members that we were sorry not to hear him defending his stand on the business motion on the Unborn Children (Protection) Bill? Shall we have a further chance to hear his views on the subject, as the House would like an opportunity to debate the Bill again?

Mr. Biffen: On the latter point, I can only repeat what has been said many times—that the Government would not themselves be providing time for that legislation.

In the first part of his question my hon. Friend raised an extremely important point, especially for those living in central London. However, no time has been made available by the Government for a debate on the topic. My hon. Friend may like to take his chances with the Adjournment.

Mr. Robert Parry (Liverpool, Riverside): The Leader of the House will be aware of the appeal that has been made by Mr. Ted Croker, secretary of the FA, in respect of the worldwide ban against all English football teams. He will also be aware of early-day motion 765 tabled by me.

[That this House unequivocally condemning all forms of social violence, deplores the decision of FIFA in banning all English teams from playing friendly and competitive football worldwide, including games against teams from Scotland, Wales and Ireland; believes that this hasty move leaves England in total isolation from the rest of the football world; calls upon Her Majesty's Government to support the Football Association, Football League and the Sports Council in any appeal against this decision; and supports any measures which will help to end football violence.]

Will he ask the Minister responsible for sport to support this appeal against the total isolation of all English football teams from world soccer?

Mr. Biffen: I shall, of course, pass on that suggestion.

Sir Kenneth Lewis (Stamford and Spalding): Is my right hon. Friend aware that I have just received, as I think he and other right hon. Members have, a solicitous letter from the authorities of the House advising me that a nurse and doctor are available should I require their attention? Will he bear in mind, as we get into the hot summer, that we need an early recess, and will he advise us when the summer recess will start? The weather is so bad at present

[Sir Kenneth Lewis]

—we cannot blame the Government for that—that the sooner we start the recess, even if it means returning early in the autumn, the better.

Mr. Biffen: I find that a worrying intervention, because my hon. Friend refers to a letter about medical advice which I have not received. Somebody must, therefore, be making an act of extreme discrimination in judging those of us who will and those of us who will not get to the middle of August.

Mr. Dennis Skinner (Bolsover): Does the Leader of the House recall that, on the many occasions when I have referred to the Johnson Matthey collapse, representations have been made from other quarters, notably from the Conservative Benches, to the effect that there has not been sufficient cover by the Bank of England to oversee the credit worthiness of banks generally? Is the right hon. Gentleman aware that we should have a statement to clarify the position? It has been reported, for example, that only one Bank of England official oversees the credit worthiness of every bank in Britain. Is it any wonder that Johnson Matthey collapsed without anybody from the Bank of England having been made aware of what was happening? Does the right hon. Gentleman appreciate that that is in strong contrast to the way in which district auditors have an army of people crawling all over Lambeth and elsewhere trying to stop councils from carrying out the mandates on which their councillors were elected?

Mr. Biffen: I take at once the importance of the present investigations into Johnson Matthey and the items that are related to it. I shall look at the matter and see how soon a report can be made on it.

Mr. Max Madden (Bradford, West): Was the Leader of the House at the Cabinet meeting when the Secretary of State for Social Services presented a slide show on his proposals for the dismantling of the welfare state? As the Government are denying the House and the public any detailed information about those proposals, if the right hon. Gentleman thought that the slide show had any merit, will he arrange for hon. Members to see it before we debate the proposals?

Mr. Biffen: Unlike, as far as I can judge, every member of every Labour Cabinet, I never comment on what happens in this Cabinet.

Mr. Jeremy Corbyn (Islington, North): Is the Leader of the House aware that since visa restrictions were imposed on Tamil people trying to leave Sri Lanka to come to this country there have been serious problems for those going to the British high commission in Colombo to apply for a visa? Is he further aware that, at 3 o'clock in the morning on Tuesday, a young man who had attended the high commission to try to get a visa was pulled out of the queue by the police and beaten up at the local police station? Does the right hon. Gentleman accept that the decision by the home Secretary and the Foreign Secretary about Sri Lanka merits urgent and important debate in the House because of the implications for the future of refugee status for any asylum seekers from any part of the world?

Mr. Biffen: The hon. Gentleman will recollect that I have already told the Leader of the Opposition that there is in prospect a debate on immigration, which will cover many of the points that the hon. Gentleman has in mind. I cannot offer a debate in advance of that.

Mr. Ron Brown (Edinburgh, Leith): As there has already been a call for a debate on the condition of the police force, would it not be appropriate to have an urgent debate to consider the plight of victimised miners, especially as in Scotland the coal board has consistently refused to reappoint Jack Kane, a recognised conciliator? This is disgraceful and it should be the subject of a debate in the House.

Mr. Biffen: I recognise the hon. Gentleman's interest in this matter, but I can see no early prospect of the debate that he seeks being held in Government time.

Later——

Mr. Corbyn: On a point of order, Mr. Speaker. When the Leader of the House was trying to answer the question that I put to him, the hon. Member for Macclesfield (Mr. Winterton) interjected a remark to prevent me from hearing the answer.

Mr. Nicholas Winterton : No, I did not.

Mr. Corbyn: Is it in order for an hon. Member, who is about to go on a trip paid for by the puppet Government of South-West Africa, to try to prevent other hon. Members from hearing Ministers' answers?

Mr. Speaker: We have had enough about hearing answers in the House today. It is incumbent upon us to set a good example of free speech. We cannot possibly expect the rest of the country to respect this place if we do not set a good example.

Mr. Winnick: Further to that point of order, Mr. Speaker. What are your powers regarding entries in the Register of Members' Interests? Concern has been expressed outside, and should be expressed inside, the Chamber that free trips for hon. Members are not being entered in the register. I think that you should give a ruling, Mr. Speaker. If an hon. Member is going on a free trip, no doubt he will put in an entry to that effect. That is essential because otherwise, to a large extent, the register becomes meaningless. Will you give a firm ruling that if an hon. Member goes on a trip organised by a foreign Government he is under an obligation to ensure that an entry is put in the register?

Mr. Speaker: The rules governing the Register of Members' Interests are well known to the House. They have been laid down by the Select Committee and every hon. Member should declare his interest. As I understand it, all overseas visits are recorded.

Mr. Nicholas Winterton: Further to that point of order, Mr. Speaker. For the benefit of those rather unpleasant Members who are very happy to take free trips behind the iron curtain—I am making no individual accusation when I say that—I put it on record that on Saturday I am going to South-West Africa as a guest of the multi-party conference of the internal parties, black, white and brown, of that country, to attend the inauguration of the transitional internal Government, comprising the internal parties. I am happy to declare that and it will be registered, as I have always done in the past, in the Register of Members' Interests.

Several Hon. Members *rose*——

Mr. Speaker: Order. I think that we have had enough of this. I have a long list of right hon. and hon. Members wishing to take part in the defence debate, and we should really move on to the next statement.

Mr. Corbyn: Further to that point of order, Mr. Speaker.

Mr. Speaker: Order. I have already had one point of order from the hon. Gentleman.

Mr. Skinner: Further to that point of order, Mr. Speaker. This arises out of something that you said in answer to my hon. Friend the Member for Islington, North (Mr. Corbyn). May I have an assurance that, when you said that every trip should be registered, you were saying, from the authority of the Chair, that that is what you would expect in the next compilation of the register? It would be handy if that were the case.

Mr. Speaker: The hon. Gentleman is most helpful in drawing my attention to the rules of the House. He and the House know that it is not for me to interpret the rules on Members' interests made by the Select Committee on Procedure. They are laid down and known to very hon. Member. I hope that every hon. Member will obey them.

Mr. Andrew Faulds (Warley, East): Further to that point of order, Mr. Speaker. I wonder whether the party of the hon. Member for Macclesfield (Mr. Winterton) could prevail on him to make a permanent series of foreign visits.

Mr. Speaker: Order. Let us leave this matter of foreign visits. I hope that the House will agree that it is not wrong for hon. Members to make visits to overseas countries. They enhance our debates and hon. Members are able to come back and express to the House their observations and personal experiences. It would be detrimental to our proceedings if that did not happen.

Mr. Corbyn: Further to that point of order, Mr. Speaker. Will you accept that it is wrong for the hon. Member for Macclesfield to make incorrect innuendos concerning Labour Members about trips paid for by foreign Governments that they have not made?

Mr. Speaker: Order. I think that the hon. Member for Macclesfield (Mr. Winterton) was honourable in what he said. The hon. Member for Islington, North (Mr. Corbyn) made the accusation in the first place and the hon. Member for Macclesfield said that his visit would be recorded in the Register of Members' Interests.

Sri Lankan Refugees

4.2 pm

Mr. Dave Nellist (Coventry, South-East): On a point of order, Mr. Speaker. You will be aware, as the House and the Leader of the House are already aware, of the interest that my hon. Friend the Member for Islington, North (Mr. Corbyn) and I have taken in the plight of refugees from Sri Lanka, particularly those who are Tamils. May I ask you a question?

Mr. Speaker: The hon. Gentleman may ask me a question, but it must be related to my responsibilities. There have been exchanges about this matter with the Leader of the House.

Mr. Nellist: Can you explain how it is that the Government can introduce changes in—*[Interruption.]*

Mr. Speaker: Although I have many responsibilities, I am afraid that explaining Government statements and answering questions that hon. Gentlemen may seek to ask about them are not matters for me. I cannot possibly answer the hon. Gentleman.

Mr. Nellist: Further to that point of order, Mr. Speaker. As I understand it, during the recess, changes were made in the immigration rules. A negative prayer against those changes has been tabled by the Liberal party. Therefore, can you explain how the Government can act on those changes before they have been discussed and passed by the House?

Mr. Speaker: That is not a matter for me, and the hon. Gentleman well knows the rules about prayers.

Council of Agriculture Ministers

4.4 pm

The Minister of Agriculture, Fisheries and Food (Mr. Michael Jopling): I represented the United Kingdom, with my hon. Friend the Minister of State, at the meeting of the Council of Agriculture Ministers on 11-12 June in Luxembourg.

The Council resumed negotiations on prices for the 1985-86 season for cereals and rapeseed on the basis of a compromise which was before the Council on 13 to 16 May. The Commission submitted 10 draft regulations to give effect to the compromise, including the proposed reduction of 1·8 per cent. in common prices for these commodities. When the Presidency announced its intention to put these regulations to a vote, the German Minister said his Government were not prepared to accept the decrease in cereal prices. He formally invoked paragraph 2 of the Luxembourg compromise by saying that a very important national interest was involved for Germany and that negotiations must be continued until unanimous agreement was reached.

I said in the Council that I had noted that the German Government supported the United Kingdom Government's view that, where a member state declared a very important national interest, discussions in the Council should continue without a vote. Given the German Minister's statement, I said that, in accordance with our position on the Luxembourg compromise, I had to object to a vote being taken and that I was not prepared to vote or abstain. The Ministers from Denmark, France, Greece and Ireland made similar statements. None the less, the Presidency proceeded with a vote. These four member states, together with the United Kingdom, refused to record a vote. Germany also refused to participate in a vote. The regulations were therefore not adopted.

I regret the fact that the Council has thus failed to take decisions on sensible price arrangements for cereals and rapeseed for the next season. This represents a serious setback to the progress which has been made in putting the common agricultural policy on to a more realistic basis. Careful thought will need to be given by the Agriculture Council and the Commission to the situation that now confronts us.

The rapeseed and durum wheat marketing years begin on 1 July and the marketing year for other cereals on 1 August. In the absence of agreement in the Council, the Commission will need to take decisions on how the markets should be managed.

The Council failed to reach agreement on a draft directive covering intra-Community trade in heat-treated milk. Nor was it able to resolve long-standing differences among member states on the authorisation of hormone growth promoters. However, agreement was reached on the text of a directive on control procedures for hormones. Its adoption was delayed pending further consideration of the substances to be authorised.

Several other veterinary directives were adopted, including an important two-year extension of the special import arrangements which the United Kingdom, Denmark and Ireland are entitled to apply as a protection

Mr. Brynmor John (Pontypridd): First, may I ask the right hon. Gentleman to say a little more about the veterinary points, in particular the state of the discussions upon hormone growth promoters? There are few hon. Members, and certainly not me, who would quarrel with the right hon. Gentleman's constitutional point, that any country should have the right of veto on a matter of national interest. But there is nobody who will not marvel at the sheer obtuseness of the German Government in refusing to face the necessity of cuts in cereal prices, in view of the mounting surpluses and the escalating cost to all member states.

Does this not, however, bear out my warning when the right hon. Gentleman last made a statement: that by reaching agreement on all other commodity prices the Council had thrown away whatever leverage it had and that its tactics were the factor which enabled Germany to reduce the whole of this year's negotiations to a shambles? I hope that this year's lessons will be learned for the future.

Where does this leave the cause of reform of the common agricultural policy, and in particular the right hon. Gentleman's often repeated belief that surplus production can be eliminated by means of price reductions alone? If agreement cannot be reached on a paltry reduction of 1·8 per cent., what hope is there of the Council being resolute enough to impose real cuts? Will the right hon. Gentleman say whether this year's cereals price will be maintained next year, or has the Commission, as was suggested this morning by the *Financial Times*, the power to reduce prices in its capacity as manager of the fund? When will some of the agriculture Ministers realise that there is a national taxpayers' interest in all countries to reduce the subsidy, currently running at £1·3 billion, for unwanted cereals? There will soon be an outcry as subsidies and surpluses mount up. The Council of Ministers will be compelled to do in haste what they are obviously too spineless to do in an orderly way, namely, to cut agricultural production, and agriculture will be the loser.

Mr. Jopling: On the hon. Gentleman's veterinary point about hormones, the difficulty is that there is a difference of opinion between individual member states, some of whom believe that a ban should be imposed on the use of growth promoting hormones, even if there is scientific evidence showing that they are harmless. There are others, like the United Kingdom delegation, who say that we should rely upon the scientific evidence, that where there is clearance for certain substances they should be allowed to be used and that where we are awaiting a report on others we ought to wait for the scientists' report before reaching a decision.

I am glad that the hon. Gentleman has no quarrel about the way in which we responded to the German veto on cereals. I agree with him that that was the correct and proper constitutional procedure for us to follow. I share the hon. Gentleman's exasperation over the attitude of the German delegation, but that made the rest of us appear, to use his word, spineless in view of the way in which the German delegation was prepared to use its veto to block a sensible decision being reached. It would have been much better if we could have given a signal to grain farmers throughout the Community that there would be a proper reduction in prices this year.

The hon. Gentleman will remember, however, that last year there was a reduction of about 3 per cent. in cereal prices. I am still not without hope that we can continue to press for a 1·8 per cent. reduction which would amount to a reduction just short of 5 per cent. in two years. During this period production costs in very many countries have

increased by perhaps 10 per cent. There has, therefore, been a squeeze on cereal prices in the last two years, when surpluses have been mounting.

Mr. James Wallace (Orkney and Shetland): Were cereal quotas discussed during the negotiations? Can the right hon. Gentleman assure the House that they will not be sprung on the industry, as they were in the case of milk, which led to confusion and dislocation?

Mr. Jopling: Cereal quotas were not discussed during this Council meeting, but in the past I have brought the discussion around to this point. The majority of Ministers in the Council of Ministers are, I believe, very strongly opposed to cereal quotas. We have to try to get the Community to understand that the best way to control the growing surplus of grain is to cut cereal prices.

Sir Peter Mills (Torridge and Devon, West): Although I support the stand taken by my right hon. Friend the Minister in Brussels, particularly over ensuring that there is a cut in cereal prices, how, in view of this failure, can markets be managed in future? Cereal farmers must be given guidance about the future. What can be done to assist them between now and when a decision is made, bearing in mind that already there are huge surpluses and that there will soon be another grain crop?

Mr. Jopling: I think that the Commissioner understands the need to take urgent action to deal with these matters. In particular, he said yesterday that the Commission would shoulder the responsibility of ensuring that there is not undue speculation in grain because of the legal vacuum. I believe that the Commissioner is well aware of the problems to which my hon. Friend referred, and I hope that we shall be getting some announcements from the Commission very soon.

Mr. Neil Hamilton (Tatton): Will my right hon. Friend enlighten us as to why the sensible British proposals for the reform of the CAP are either voted down or vetoed by what we are pleased to call our Community partners? Does not the German veto exercised yesterday mean that any serious prospect of reform in the CAP may now be declared kaput, and that as the only real control on agricultural spending is the ceiling of resources available to the Community, the only way to get any reform whatever is not to propose or support any increase in the own resources of the Community?

Mr. Jopling: I can say only that if it had not been for the financial discipline that is now imposed upon the common agricultural policy my guess is that we should have been discussing, at this Council in Brussels, considerably more expensive policies than those that we are facing.

The financial disciplines are biting very hard on the common agricultural policy, and rightly so. The main reason why we were unable to get realistic decisions was the German attitude and the German Minister's statement that he was not prepared to accept anything that might depress farm incomes in Germany. I was able to tell him that if we put off taking tough decisions now the dangers were that there would be much bigger drops in farm income throughout the Community in a year or two.

Mr. Nigel Spearing (Newham, South): As Her Majesty's Government support the principle of a veto on matters regarded as being of outstanding national interest, will the Minister agree that, in view of the changing and varying social and agricultural conditions to be found in the now 12 EC countries, the moral of the event points to greater flexibility, and perhaps the permission to use national aids and national expenditure when a country wishes to have a supplement over and above common agricultural policy objectives?

Mr. Jopling: I hope that we shall not move towards a more national base under the common agricultural policy. I hope that very soon the member states of the Community will understand that, unless the common agricultural policy returns quickly to realism, we shall have to think fundamentally about the future of that policy.

Mr. Andy Stewart (Sherwood): In view of what my right hon. Friend said about oilseed rape, and the fact that the harvesting year starts on 1 July, what advice will he give to farmers who are waiting to market that valuable crop? Are they to wait until he makes a decision, or are they to wait upon the Commission telling us what price they are to receive?

Mr. Jopling: As I have said, the Commissioner told us yesterday that the Commission will shoulder its responsibilities in the legal vacuum which has so unfortunately arisen. I hope that very soon the Commission will give some proper guidance to farmers as to the way in which it intends to manage the market.

Mr. Robert Maclennan (Caithness and Sutherland): Why does the Minister so conspicuously avoid giving any advice to the Commission this afternoon on how it should apply the guaranteed threshold and how it should manage the market, which is now completely disrupted by his failure to reach agreement?

Mr. Jopling: That was a particularly silly remark, if I may say so. The Commissioner has been sitting in the Council day after day and night after night, listening particularly to me explaining to the Council of Ministers what I believe should happen and how we should return to realism, especially in terms of grain prices.

Mrs. Elaine Kellett-Bowman (Lancaster): Regrettable though it is that we have no price for cereals, will my right hon. Friend agree that it was infinitely more important to maintain the principle of veto, otherwise we shall not only lose control over agricultural prices but lose control completely over all Community expenditure?

Mr. Jopling: I am grateful to my hon. Friend. I am sure that we could have achieved a settlement if we had been able to move to the German position of insisting on a price reduction of no more than 0·9 per cent., but I was not prepared to do that; nor was my French colleague, and nor, thank goodness, was the Commission.

Mr. John Carlisle (Luton, North): Does my right hon. Friend accept that this is a very serious setback to the grain market and could cause great confusion? Did he point out to the Germans and the other members of the Community that the most serious threat to cereal prices at the moment is the United States' declared aim of offering about $2,000 billion worth of export credit guarantee to its own cereal growers? Do not the Americans realise that that in itself will undermine the market and push our prices down?

Mr. Jopling: Earlier this week several of us met the United States Secretary for Agriculture. We were able to discuss with him this extremely dangerous trend in world trade. The United States Government made an offer of

[Mr. Jopling]

about 1 million tonnes of wheat to Algeria, which immediately caused a very considerable drop in the price of grain on the Chicago exchange. That has not exactly endeared American farmers to the United States Government's policy. We tried to explain to the United States Government that, while we recognise that they have lost large parts of their food export market, that is largely due to the strength of the dollar rather than anything else.

Mr. Eric Deakins (Walthamstow): What will be the impact of the failure to agree cereal prices in the Community on 1985 budgeted expenditure in the EC? If the German veto—which I support, as the Minister does — means that there will have to be compensating savings elsewhere to ensure that total Community expenditure in 1985 comes somewhere near the financial guidelines, can the Minister assure us that the cuts will not occur in the non-agricultural part of the total Community budget?

Mr. Jopling: I am grateful for what the right hon. Gentleman said about the use of the veto and our response to it.

With regard to the future of grain prices, we must wait until the Commission reacts. Until we get to that point —I hope that it will be very soon—it is difficult to know what will be the impact on the market in the immediate future.

Rev. Ian Paisley (Antrim, North): Will the right hon. Gentleman take it from me that the farmers in Northern Ireland will wholeheartedly support him in supporting the veto? To forgo the veto would be a very serious matter and could in the future have very serious implications for agriculture in the whole of the United Kingdom.

Will the right hon. Gentleman keep in mind that the intensive sector of the farming industry in Northern Ireland has been devastated because of low grain prices? Will he do something to make intervention grain available in Northern Ireland?

Mr. Jopling: I will certainly look into that matter, but the hon. Gentleman will recall that I have consistently said that I believe that there is a serious imbalance between the grain and the livestock sectors, and I have been working hard to try to redress that balance.

Sir Hector Monro (Dumfries): Will my right hon. Friend accept that we all greatly appreciate his hard work on our behalf in Brussels?

Will he try to clarify for the British farmer where we now stand? Other than the decisions on rapeseed and grain, are all the other decisions this year to stand, such as those on the sheepmeat regime, the beef premium and the other livestock subsidy? We need to have an answer so that we may know where we stand in regard to that sector.

Mr. Jopling: My hon. Friend will recall that the last time I came to the House I announced the agreement on all the other parts of the package. Those stand, and we are just left now with the grain and the rapeseed parts of the package which are not agreed. Those are the parts that the Commission will have to manage between now and the time when the Council can again properly pick up its responsibilities.

Bearing in mind what the Commission has said and its attitude to a movement towards realism, I do not believe that it will take steps which amount to moving backwards from reality.

Several Hon. Members *rose*——

Mr. Speaker: Order. I will allow questions to continue for another six minutes, making a full half-hour. There is a very important debate to follow the statement, and I believe that some of the hon. Members who have been rising wish to take part in it. Will they please put their questions briefly?

Mr. Michael Latham (Rutland and Melton): During this highly unproductive and farcical meeting yesterday, did my right hon. Friend ask those countries which rightly voted to support the veto what they were doing three years ago when we had a price review stuffed down our throats against our veto?

Mr. Jopling: I did that. I expressed the hope that if, at some time in the future, we wished to use the veto, those countries would remember what they did.

Mr. Robin Maxwell-Hyslop (Tiverton): Does the Luxembourg veto apply to Spain and Portugal, which are still in transition? Spain can flood our markets with cars, yet charge exorbitant duties on British cars going into Spain. Why did we agree to the entry of Spain and Portugal before we adopted quotas on wine and olive oil—which could utterly ruin the EC agricultural budget if quotas are not agreed in advance?

Mr. Jopling: These matters were not discussed in the Council of Ministers yesterday. Of course, Spain and Portugal will not have the right to use the veto until they become full members.

The negotiations on all agricultural matters were hard fought until the very last minute. I believe that I am right in saying that the last issue settled was the milk quota for Spain.

Mr. Robert Hicks (Cornwall, South-East): Is my right hon. Friend aware that this inability to find agreement on sensible but modest reductions in grain prices will ensure a continuation of the imbalance between the livestock and cereal sectors? It is damaging economically as well as politically for the milk producer, who last year was obliged to accept milk quotas, yet will have to bear the cost of high grain prices.

Mr. Jopling: My hon. Friend should recall that the settlement we reached two or three weeks ago meant milk prices rising by 2·5 per cent., a freeze on beef prices and a freeze this year on lamb prices, whereas we had been talking about how much we should reduce the grain price. That does bear out the decision to which the Council has been moving, which shifts the balance away from grain and in favour of livestock.

Mr. Hugh Dykes (Harrow, East): Surely my right hon. Friend would prefer today to condemn the Germans wholeheartedly for an utterly selfish action — the imposition of a veto on a subject that did not really warrant the use of such a grave national reservation. Does that not show, not only for agriculture but generally, that we need to get away from the atmosphere of support of the veto? The more that we get away from that and use the veto as a rare instrument for real national protection, a truly

solemn and profound issue, the more we shall achieve sensible agreement on all things including CAP price reductions.

Mr. Jopling: I plead with my hon. Friend to remember that it is getting into very dangerous country when we start picking and choosing between the use of the veto by various countries. That was the difficulty in which we found ourselves in 1982, into which I hope we shall not get again, because other nations were picking and choosing over our decisions to use the veto. It was right to say that where an important national interest, as defined by a particular Government, is at stake, discussions should be continued without a vote.

Mr. David Harris (St. Ives): Will my right hon. Friend consider whether it is really credible to continue to rely on the hope that the problem of cereals will be cured through price cuts, given the disastrous decisions taken during the last day or two in Brussels? Are we not being driven, almost against our will, to a position of quotas? Should we not be preparing for that so that we can avoid a sudden introduction of quotas overnight, as happened with motor car accessories?

Mr. Jopling: We must do everything that we can to avoid cereal quotas. I believe that they are almost unmanageable and almost impossible to control, especially in some other countries in the Community, and almost certainly in this country.

I share my hon. Friend's pessimism as a result of the decision, but one optimistic note is that the German delegation made it clear that it wanted a transitional year of having no reduction in cereal prices. I just hope that that means one transitional year and that, before long, we can return to a position where the Community can move towards a more realistic policy and avoid the build up of huge, unsaleable, uneatable surpluses.

Mr. Nicholas Budgen (Wolverhampton, South-West): Is it not clear that, once again, the budget of the EC will be seriously overspent? If my right hon. Friend is not prepared to use the mechanism of refusing to increase own resources, will he please tell the House what mechanism he will use to force reform of the CAP?

Mr. Jopling: I think that perhaps I should have mentioned overspending when it was referred to earlier. I have been alone in asking the Commissioner, at almost every point of the negotiations, whether he remains satisfied that the cost of the package is within the financial discipline that has been agreed for the agricultural budget. He has assured me at every stage that he was satisfied. I have no reason to believe that that is not correct.

As I said in the early part of my statement, I believe that the financial discipline is already actually very effectively constraining extravagances of the CAP.

Mr. Eric Forth (Mid-Worcestershire): Is my right hon. Friend prepared to recommend to my right hon. Friend the Prime Minister that if there is no indication of a realistic restriction on agricultural expenditure as this year goes on she should not come to this House and ask for any increase in the Community's resources until a real restriction in agricultural expenditure is achieved?

Mr. Jopling: With respect, that is already being achieved by the way in which the Commission has refused to go as far as some member states have been pressing it to go because there is not the money under the financial discipline to pay for some of those policies.

Mr. Tony Marlow (Northampton, North): It is all very well my right hon. Friend talking about financial discipline, but is not the fact of the matter that the Community will spend a damned sight more on agricultural policy this year than last and the only way of stopping that from happening is for the House to say loud and clear that there should be no more own resources until we have sorted out this rake's progress on agricultural policy?

Mr. Jopling: No doubt there will come a moment when my hon. Friend will be able to make that speech in this House at considerable length. All that I can say is that the policy that has been pursued, where spending on the CAP budget must rise at a slower rate than the growth in overall spending, is one to which we should stick, and which the Commission is also in the business of sticking to.

Mr. John Home Robertson (East Lothian): Is my right hon. Friend aware that in just two months' time farmers will be sowing next year's winter crops, and it is likely that they will have to remain in store in 1987, and perhaps beyond with the way that things are going? The Minister must recognise that that position is unsustainable and absurd. What advice is he giving to the industry for which he is supposed to be responsible about the future? How can the Commission manage the market for unlimited quantities of unmarketable grain within its existing budget?

Mr. Jopling: The Commission has moved in before in the event of a legal vacuum to manage the market, so it is not a new position.

The advice that I shall give to farmers is that the Commission has taken sensible approaches to these matters in the past. Clearly, it must have a short time in which to take up its responsibilities to manage the market. I hope that then the proper guidance can be given.

NCB Workshops (Closures)

4.39 pm

Mr. Allen McKay (Barnsley, West and Penistone): I beg to ask leave to move the Adjournment of the House, under Standing Order No. 10, for the purpose of discussing a specific and important matter that should have urgent consideration, namely,

"the proposed closure of the National Coal Board workshops at Birdwell and the partial closure of the National Coal Board workshops at Elescar."

Both workshops are in my constituency. They are in the Barnsley and south Yorkshire areas of the NCB.

I picked up this point last night on reading the newspapers, after the House had finished. I should like the NCB to return to the idea of informing Members of Parliament of matters that are of great concern to their constituencies. The closure of the Birdwell workshops will mean the loss of 204 jobs and the partial closure of the Elescar workshops will mean the loss of 211 jobs—415 jobs in total. This is in addition to the loss of jobs recently announced—3,000 jobs in the Barnsley area and 7,000 in the Yorkshire area.

What will be the effect of the closures, not only on hundreds of families, but on the area? The area is seething with discontent and reeling at this savage attack on the coal mining industry, its work force and their families. The Coalfields Community's campaign document and Barnsley district council's appraisal of the effects of coal mining closures on the local authority area clearly show that, for every job lost in the mining industry, another is lost outside the industry.

In the Barnsley area 15,140 people are unemployed, there are 1,011 school leavers and the male unemployment rate is 20 per cent. There are only 217 unfilled vacancies. To the 3,000-plus jobs which have recently been lost we must add the numbers of jobs that will be lost through the workshop closures and through their knock-on effects.

By and large, the NCB workshops are manned by a skilled work force that is second to none—men who have served their apprenticeships in the time-honoured way by learning the skills of the trade. They include mechanical and electrical engineers, fabrication engineers, turners, platers and welders. Many have been retrained in the workshops' rationalisation schemes. There is a young work force providing services to the mining industry from places of excellence. Shops have been modified and re-equipped to carry out that service.

Mr. Speaker: Order. The hon. Member must not go into detail. He should make a case showing that this matter is urgent, specific and important.

Mr. McKay: I shall develop the reason why this matter is important. I shall not take long. The services provided by the workshops are well recognised.

Fifteen years ago, a decision was made to close the Birdwell workshops. After instructions from the area director, I had the honour to make sure that the workshops were kept open. As I understand it, the Birdwell workshops are the only workshops within the whole of the area covered by the NCB which have workers with fabrication engineering skills. That is why this matter is specific and important. Where will the work go if those workshops are closed? Is this the beginning of privatisation in the NCB? Those questions must be asked and debated.

Why close the Elescar workshops, which provide hydraulic expertise to the area and which rejuvenate roof supports? Where will that work go? Where will the men go? Closures have occurred on such a large scale within Yorkshire that there is nowhere for the men to go. If the men have to go to other workshops, they will face transportation difficulties. The MacGregor blight is moving across the whole of the Yorkshire coalfield as this butcher carries out the Government's policies.

What about the replacement of the jobs and the £10 million for the NCB enterprise scheme? I should like the House to debate—if you are so kind as to allow me this debate, Mr. Speaker — a paper from the Coalfields Community campaign. This paper shows that, to breathe some semblance of life into the coalfields, the industry needs not £10 million but £2 billion. That is why this matter is specific and important and should be debated.

Mr. Speaker: The hon. Member for Barnsley, West and Penistone (Mr. McKay) asks leave to move the Adjournment of the House for the purpose of discussing a specific and important matter that he thinks should have urgent consideration, namely,

"the proposed closures of the National Coal Board workshops at Birdwell and the partial closure of the National Coal Board workshops at Elescar."

I have listened carefully to the hon. Member's speech. He knows that the decision which I have to take is whether to give this matter precedence over the orders set down for today and for Monday. I regret to say that I do not consider that the matter he has raised is appropriate for discussion under Standing Order No. 10. I cannot, therefore, submit his application to the House. No doubt he will find other ways of raising the matter.

BALLOT FOR NOTICES OF MOTION FOR MONDAY 1 JULY

Members successful in the ballot were:

Mr. David Winnick.
Mr. Barry Henderson.
Mr. Norman Atkinson.

SCOTTISH ESTIMATES

Ordered,

That the Estimates set out hereunder be referred to the Scottish Grand Committee:—

Class XV, Vote 3, Regional and general industrial support, Scotland.
Class XV, Vote 4, Manpower Services Commission, Scotland.
Class XV, Vote 5, Regional assistance, Scotland.
Class XV, Vote 8, Housing, Scotland.
Class XV, Vote 9, New Towns, Scotland.
Class XV, Vote 11, Administration of justice, Scotland.
Class XV, Vote 12, Police grant, legal aid and criminal inquiries compensation, Scotland.
Class XV, Vote 13, Legal Proceedings, Scotland.
Class XV, Vote 15, Education, arts, libraries and social work, Scotland.
Class XV, Vote 16, Student awards, Scotland.—*[Mr. Archie Hamilton.]*

Orders of the Day

Defence Estimates 1985

[SECOND DAY'S DEBATE]

Order read for resuming adjourned debate on amendment to Question [12 June]:

That this House approves the Statement on the Defence Estimates 1985, contained in Cmnd. 9430.—*[Mr. Heseltine.]*

Which amendment was to leave out from "House" to the end of the Question and to add instead thereof:

"believes that the plans outlined in the Statement on the Defence Estimates 1985, Cmnd. 9430, in particular the Government's policies of buying, at an ever-increasing cost, the Trident nuclear system, will inevitably lead to further damaging cuts in Britain's real defence and in our conventional contribution to the North Atlantic Treaty Organisation; believes also, that in view of the North Atlantic Treaty Organisation's present strategy of "first use" of nuclear weapons, a reduced conventional contribution will increase the risk of a nuclear war in Europe; calls upon the Government to cancel Trident, to remove all nuclear bases from the United Kingdom and work within the North Atlantic Treaty Organisation for a substantial reduction in, and eventually the elimination of, battlefield nuclear weapons; notes with alarm the decline of the Merchant Navy; and urges the Government to take positive and immediate steps to arrest and reverse that decline" —*[Mr. Denzil Davies.]*

Question again proposed, That the amendment be made.

Mr. Speaker: No fewer than 32 hon. and right hon. Members have intimated their wish to participate in this important debate. I propose to impose the 10-minute limit on speeches between 6 pm and 8 pm. I appreciate that this may mean that some Privy Councillors will speak during the period when the 10-minute limit is imposed. I hope that they and the whole House will feel that that is fair in the circumstances.

4.47 pm

The Minister of State for Defence Procurement (Mr. Adam Butler): I shall reflect only briefly on yesterday's debate before discussing my main theme. I was struck by the contrast between the two sides of the House — between the confidence and clarity on the Government side, and the confusion on the Opposition side. Most of the confusion came from the Opposition Front Bench, although one has some sympathy for the right hon. Member for Llanelli (Mr. Davies) in having to play the almost impossible role of Labour's defence spokesman. The right hon. Gentleman must try next time to find a better argument to justify his apparent support for the use of tactical nuclear weapons at sea, against submarines, and total opposition to them on land.

There was also considerable confusion between the two partners of the SDP-Liberal alliance, especially in the mind of the right hon. Member for Plymouth, Devonport (Dr. Owen), who seemed at one stage to believe that deterrence could be maintained with an obsolescent system, but later in the debate, if he was not arguing for the continuing deployment of Polaris, appeared to prefer the sea-launched cruise to Trident, which would combine higher cost with lower effectiveness.

I shall be more charitable about the report of the Select Committee on Defence, whose message was expounded in a constructive speech by my right hon. Friend the Member for Spelthorne (Sir H. Atkins). The report presents a very definite challenge to the Government, but—and I seek for the politest of words—the Committee's interpretation of the facts is at variance wth mine. What the report does is to draw attention to the potential for savings throughout the defence budget, and it warmly commends my right hon. Friend the Secretary of State for his great energy in that regard. It makes special reference to the economies which can be, and are being, achieved through effective procurement. This, of course, is a prominent feature in the Statement on the Defence Estimates, and it is on this vital aspect of our defence strategy that I want to concentrate my remarks this afternoon. We can fulfil our defence commitments only if we have an efficient and effective procurement policy.

As the Statement on the Defence Estimates shows, and as my right hon. Friend reiterated yesterday, since this Government came into office in 1979 there has been a substantial real increase in the defence budget as a whole. Perhaps most significantly, the proportion of that budget spent on equipment has risen from 40 per cent. in 1978-79 to 46 per cent. in 1985-86. That is an increase of 40 per cent. or, if expressed in current money terms, of nearly £2·5 billion. Those facts provide the Government with the answer to most of their critics.

With this dramatic increase in the equipment budget the Government have gone a long way to meet the almost insatiable requirements of the armed services and to strengthen still further our contribution to NATO. However, as the sophistication of modern weaponry and systems increases, so does the cost—*[Interruption.]* I am sorry that the right hon. Member for Llanelli has only just joined us. I was not offensive towards him, and I would have preferred him to hear the remarks that I made about him. Nevertheless, we are delighted to see him.

Sophistication adds to cost, and while the accent in the last six years has been on making more resources available, our task now is to concentrate on maximising the return from those resources. Our procurement policy is dedicated to that end. We seek the maximum benefit for our armed services, the greatest satisfaction for the taxpayer, and the healthiest state of our defence industry.

Success should be measured not primarily by the expenditure committeed but by the output—by what is achieved for the money spent. To attain that target of best value for money we must operate our procurement policy in as commercial a manner as possible. With certain obvious exceptions, defence procurement is a commercial activity. The procurement executive within the Ministry of Defence must see itself essentially as a commercial organisation in its structures, practices and attitudes, and particularly, of course, in its relations with its suppliers.

The most obvious and important manifestation of this new commercialism is the exercise of competition. Properly used, competition will ensure the most efficient and effective use of our industrial resources. It embraces so much more than just getting the best price for any particular equipment, however important that is. Competition will stimulate innovation and the advancement of technology. It will improve quality and service. While better meeting the needs of the MOD as customer, it will strengthen the efficiency and competitiveness of British industry. Within some of the wider considerations of our procurement policy, our maxim now is, "Competition, unless . . . ".

[Mr. Adam Butler]

Competition is, of course, not new to the MOD, but over the last two years there has been rather more than just a shift in emphasis in ministerial policy. There has been a change of gear, and increasing momentum. The results of this can be seen in the response of industry as it discovers that the MOD has become an increasingly demanding customer. The results can be seen in the way that our contracts are placed—and in the prices that we pay.

Over the past 18 months Ministers have carefully monitored the nature of contracts. The latest results show that the proportion by value of new contracts placed as a result of competition, or otherwise by reference to market forces, is running at more than 60 per cent., while the proportion of those placed on a cost-plus basis is only 7 per cent. of the total. Overall, the total value of work placed last year as a result of competition rose by four to five percentage points.

As for individual prices, the Select Committee chided us for including only one specific example of savings—that of the RAF trainer — in the Statement on the Defence Estimates. I shall now give some more examples of the success of competition policy, but I first enter one caveat. As it is rarely possible to know what we would have paid in the absence of competition, it is difficult, if not impossible, to quantify precisely what savings result from competition or, indeed, to forecast total future savings with accuracy. Nevertheless, we can produce some illustrative and guiding figures.

In many cases details of past savings are regarded as commercially confidential, but, as the Select Committee knows, I have made available to it classified information about a number of contracts where major savings have resulted from competition.

The case of the RAF trainer has been well and publicly aired. There can be no question but that we had a very keenly fought competition, and the estimated cost saving of about 35 per cent. was striking by any standards. That competition produced benefits for the Department other than just the price tag. The contract is on a firm price basis, fixed in cash terms, and with no risk to the MOD from cost escalation or foreign exchange rates. The right hon. Member for Llanelli may also wish to know that competitive pressures on the contenders produced more jobs for British industry, because the companies strove to maximise the United Kingdom content of their bids, while the final stages of the competition produced more offset work against the Garrett engine. We can expect that what happened in that case will happen in other competitions.

Indeed, the basic trainer competition was exceptional only in the interest that it generated, not in its principles. Competition is being applied with equal vigour in other areas—for example, in naval shipbuilding. The recent competition for two mine countermeasure vessels which was won by Vosper Thornycroft resulted in prices that were some 12 per cent., or nearly £10 million, below those included in our costing.

Although the first of class of the new type 2400 diesel-powered submarine — HMS Upholder — was ordered from Vickers, competitive tenders have already been invited for the next three submarines from Yarrows, Vickers, Scott Lithgow and Cammell Laird.

Let me clarify the position of the type 23 frigates. The first type 23 was ordered from Yarrows last year. My right hon. Friend announced on 28 January that Swan Hunter would be invited to tender for the second. Tenders for the third and fourth will be invited at the same time late this summer on a competitive basis from the frigate shipbuilding yards.

Mr. Churchill (Davyhulme): Is my hon. Friend not concerned that, even though the type 23 is cheaper and simpler than the type 22, it is none the less three and a half times more expensive in real terms than the Leander frigate? Does that not hold great implications for containing defence expenditure within a zero growth limit?

Mr. Butler: I am well aware of the interest that my hon. Friend takes in these matters, and he is well aware of what we have said about the targets for the numbers of frigates and destroyers. It was because of the escalation of the cost of frigates and destroyers that we had to see whether it was possible to produce a vessel with an adequate capability at a significantly lower cost. Much will depend on the competition. The likely price of the type 23 will be 75 per cent.—perhaps less—of the type 22 which it will replace.

Sir Patrick Wall (Beverley): Will my hon. Friend make quite certain that in future when there is a competition all sides know the rules? He will know that in respect of the competition for the RAF trainer there was a strong feeling that the rules were not known.

Mr. Butler: That competition was carried out totally fairly, but in reviewing the circumstances of it we may well find that procedures will be improved in one or two respects. It is essential to ensure not only that even-handedness is done, but, as so often in such cases, that it is seen to be done.

Mr. John Wilkinson (Ruislip-Northwood): Would not the most publicly reassuring thing that the MOD could do be to publish the price tags of the final bids?

Mr. Butler: There are arguments for that, and I have raised the matter with individual industrialists. There are some obvious disadvantages, but also some advantages, and I gather that it is practised in some regards in America. We certainly need to consider it.

My hon. Friend the Member for Aberdeen, South (Mr. Malone) raised the subject of the OPV 3 in yesterday's debate. When firms were invited to submit their ideas for an enhanced OPV-type vessel within a cost bracket of £25 million to £35 million, it was made clear that this was without any commitment by the Ministry of Defence to proceed. We have looked at the proposals put forward, and those by two firms — Hall Russell and Vosper Thornycroft — are judged to have the potential for providing a vessel of the type specified which would offer good value for money. We think it right to tell the firms the results of the evaluation, and this is now being done. It remains the case, however, that the OPV 3 has not secured a place in the forward defence programme when set against competing priorities for the Royal Navy and for the other services.

My hon. Friend the Parliamentary Under-Secretary of State for Defence Procurement, who wound up yesterday's debate, has asked me to point out that with regard to the amphibious vessels as possible replacements for Fearless and Intrepid he inadvertently said that Ministers expected

to make a decision "this year", when he should have said "next year". We need to be sure that these matters are properly understood.

Mr. Michael Marshall (Arundel): As a member of the Select Committee, I appreciate the examples given by my right hon. Friend the Minister about the value of competition, but will he take this opportunity to reiterate the importance of buying British and maintaining a British industrial base in these matters? Will he comment on the overall figures, and also say something about procurement for space matters in relation to Skynet and for a future share in the NATO satellite?

Mr. Butler: I was concerned that my speech was getting too long, but I shall be coming to the proportion of our buy which is British. It is very high and I hope that it will remain so.

With regard to land systems, my right hon. Friend the Secretary of State referred yesterday to a saving of some £100 million from the competition for the MCV80. That is a healthy 12 per cent. or so, and in cash terms, which seems to be the standard most used in this debate, it is equivalent to one type 23 frigate.

I wish now to tell the House of another successful cost-cutting competition and to make an announcement. We intend to place a contract with Vickers Defence Systems for the development and initial production of a new armoured repair and recovery vehicle for Challenger tanks. The ARRV is an important force-multiplier and the new vehicle will have a vital role in keeping our tanks in the front line, where they should be. This contract has been won by Vickers after a competition which has resulted in a saving on the initial budgetary estimate for the project of almost 20 per cent. This contract will include production of the first batch of some 30 vehicles. Once development is complete, I intend to meet the bulk of the Army's requirements for ARRV by a further competition. I am sure that the Select Committee and the House will welcome these concrete examples of the success of our policy.

Mr. Kevin McNamara (Kingston upon Hull, North): Can the right hon. Gentleman give the cash equivalent for that saving?

Mr. Butler: I cannot give that figure at the moment, but I hope that the hon. Gentleman will welcome a saving of some 20 per cent. as a considerable achievement, thus making resources available for other purposes. If the hon. Gentleman does not wish to do so now, he will have the opportunity to lavish praise on the procurement executive and Ministers at the MOD when he makes his own speech.

The defence research establishments have carried out some fine work over the years, but development generally, and especially short-term development, will come to fruition more quickly and at lower cost if it is commercially driven. One of the Government's aims, therefore, is to make the best use of industry's capacity for innovation, limiting what is done in-house to essential activities of which only the research establishments are capable and to longer-term research.

Viscount Cranborne (Dorset, South): My right hon. Friend has been very generous in giving way. There is an important Admiralty research establishment at Portland in my constituency. My right hon. Friend will be aware of the worldwide reputation of that establishment in anti-submarine warfare, but is he aware of the effects of the low salaries paid to the teams working there? The Government depend upon the highly qualified staff there to assess the work of industry. Is my right hon. Friend aware that the loss of highly-qualified staff from that establishment to outside industry affects the MOD's ability to make the right assessments for outside contracts?

Mr. Butler: The Government are always worried about the loss of highly qualified staff. The position of ARE, Portland has not been drawn to my attention before, but I know of one or two other areas where a potentially serious situation is developing. I assure my hon. Friend that I will examine the situation at Portland to see whether there is anything that we should or can do about it, and I am grateful to him for drawing it to my attention.

I want to refer to the use of cardinal point specifications in relation to research establishments. Those who follow these matters will be aware of these, but I shall give a brief explanation of them now. Cardinal point specifications are given to industry for a proposed project and contain a brief statement of the essential features of performance and support necessary to meet the services' needs. This means that industry is free to innovate and to propose solutions which meet those needs, but which also best suit their own capabilities and may have better export potential.

This approach is being applied for the first time to a major ship and its weapons systems—the new "one-stop" support ship for the Royal Fleet Auxiliary, the auxiliary oiler replenishment. Industry has been asked to take part in a design-and-build competition to find a prime contractor for the first two vessels. We are looking to the prime contractor to take on total responsibility for the design, building and fitting out of the ship. Another example of this was Phoenix.

I have stressed the benefits of competition, and they are clear in many cases, but it is not a policy which is applied blindly, and it is not a short-term policy. We have to look to our longer-term interests, and particularly to security of supply.

I shall now deal with one of the points raised by my hon. Friend the Member for Arundel (Mr. Marshall). Our record of placing business with British industry is one of which we can be proud. Allowing for necessary adjustments associated with collaborative projects, nearly 95 per cent. of our orders go to British companies. Nevertheless, we do not owe them a living. The best guarantee that those companies have of obtaining MOD business is to demonstrate that they can best meet our needs.

In a number of cases, of course, competition will not be practicable for prime contracts, and it is in such cases that we have a major problem to ensure best value for money. One answer lies in requiring the maximum possible level of competitive subcontracting. In the code of practice which we are currently discussing with industry it will be made clear that the proportion of competitive subcontracting in a bid will be a highly relevant factor. I do not doubt that in some cases production in-house may give, or appear to give, the prime contractor the most efficient option. I must, however, issue a warning. Any practice which frustrates competition and prejudices the development of small business will be judged critically by my Department.

[Mr. Butler]

I said at the beginning of my speech that there was a need for commercialism in the MOD. The operation of competition policy throughout our procurement demands a high level of commercial expertise among MOD staff. We are taking steps to ensure that this is so. That is why we appointed Mr. Peter Levene as chief of defence procurement. That decision is already showing that it was throughly justified. We are making arrangements to draw further upon the experience available in industry by the secondment of staff from the private sector, and relevant training is being provided.

I do not believe that achieving lower prices as a result of competition means that industry's profits were necessarily excessive before or that they will be inadequate in the future. That is not the argument. The pressures of competition ensure that industry becomes more efficient, offering a better service to the Ministry of Defence as a customer, and that it is capable of winning more business in a wider field, thereby providing more employment.

Mr. Eric S. Heffer (Liverpool, Walton): That is not true.

Mr. Butler: I am sorry that the hon. Gentleman will not have another opportunity to speak. What he said yesterday was interesting, but I hope that he will not continue to make a speech from a sedentary position.

Mr. Heffer: For many years I worked in the shipbuilding and shiprepair industries when there was competition. The industry declined until the only way to save it was to take it into public ownership. The fact that it continued to decline is not the fault of the industry. The Government did not give it the assistance which they ought to have provided.

Mr. Butler: Nobody can claim that the nationalised shipbuilding industry has been competitive. It was heavily overmanned because it depended largely on a sole customer. Essential as competition is, it cannot by itself be a sufficient basis for achieving the better value for money that we are seeking.

My second major theme is collaboration. I shall deal with the not entirely unfounded criticisms of the Secretary-General of NATO, Lord Carrington. In applying competition policy, we are taking into account our longer-term interests. As members of NATO, it is not in our long-term interests for each member state to develop and produce its own competing equipment. It makes no sense from an operational point of view for the various armed forces to have different equipment, and it makes no sense from an economic point of view for several nations to invest in developing and producing different and expensive equipment to meet a common threat. Resources are wasted through duplication of research and development, and higher unit costs resulting from small production runs make the equipment too expensive for our forces to buy in sufficient quantities, and too expensive for our industries to sell overseas.

NATO members have long recognised the potential military, economic and political advantages of collaboration. Indeed, we have some 20 years' experience of successful collaboration, as the White Paper makes clear. The Tornado is perhaps the best current example of the extent to which we can succeed in a major collaborative programme at the forefront of technology, but to obtain the maximum benefit from collaboration we must progress from an ad hoc and patchy pattern of working together to a more systematic process for securing wider — and more permanent—collaboration.

We must ensure that Europe builds up a competitive and dynamic defence technology and industrial base capable of making its full contribution to the overall Alliance effort. Europe must become more self-sufficient in defence equipment and take a larger share of world trade. Collaboration is the key to that.

While pursuing ways of improving collaboration, we must ensure that competition procurement is also maintained. We must keep in mind our aim — a technically better, but lower-cost product for the Ministry of Defence and a more competitive one for our industries to sell in export markets. That is not an easy task. It would be naive to believe that the needs of different nations can readily be harmonised, that the chauvinism to which Lord Carrington referred will be overcome, or that the interests of national industries will be reconciled, but there should, from now on, be an assumption that some collaboration is called for in all major projects.

Some hon. Members may not be convinced that collaboration can really work, but it must if the Government are to continue to equip our own forces adequately. It must work if Europe is to stand any chance of redressing the imbalance with America, in cost and in technology. Some collaboration is already taking place, but a system of collaboration must be developed.

The European fighter aircraft is in the forefront of our minds, but I can add little to what my right hon. Friend the Secretary of State and my right hon. Friend the Parliamentary Under-Secretary of State said yesterday. It has come a long way. Many sceptics doubted whether the air forces of five countries could agree on a staff target, but they did. We are determined to bring about this major European venture, if we can. However, we shall not do so to the detriment of British industry. Rather, we would expect the greater export potential of the aeroplane to bring greater opportunities to our aerospace industry.

Mr. Robert Atkins (South Ribble): Is my right hon. Friend aware that we have been saying this sort of thing for year after year, and that it is about time a decision was made?

Mr. Butler: I am sure that my hon. Friend, who must have discovered as much about the project as I have, will appreciate the progress that was made at Rome about the airframe and the engine. However, there is some way to go. If progress is not made, we must consider other alternatives.

A third vital area gives us scope for improving value for money for the Ministry of Defence. I refer to defence sales, which can assist in many ways. The longer production runs which result from sales can give cheaper unit costs for British forces. They assist in maintaining the United Kingdom's capacity in important areas where our forces' requirements are not sufficient to do so. Defence sales therefore make industry less dependent upon the Ministry of Defence and better able to stand on its own. Our success is increasing. One target is to reduce still further the imbalance in our trade with America, which must be one of our most demanding markets. The imbalance in trade between the rest of Europe and America

is as bad as 1:6, but in our case it is 1:2. That is still not good enough and, with further work that is in hand, we shall improve it.

Mr. James Couchman (Gillingham): Is my right hon. Friend aware of the superb efforts of our diplomatic staff and Army personnel in Washington, who are trying to sell the Americans the mobile subscriber equipment in conjunction with International Telephone and Telegraph Company Ltd., Plessey and Rockwell, which my right hon. Friend the Secretary of State mentioned yesterday?

Mr. Butler: I am aware that they are doing an excellent job. It is a multi-billion dollar project. I know that my hon. Friend the Member for Gillingham (Mr. Couchman) made his contribution during a recent visit to America. We must all pull together on that matter.

Central to the Government's defence strategy and the debate is our policy of independent nuclear deterrence. I do not need to rehearse all of the arguments and shall therefore concentrate on those which impinge on defence procurement. One of the grounds on which the decision to proceed with Trident is criticised is that we cannot afford it. We cannot afford not to have Trident.

Mr. Andrew F. Bennett (Denton and Reddish): As the Minister is referring to Trident and its cost, will he answer the question that I posed yesterday to the Secretary of State and the Parliamentary Under-Secretary of State for Defence Procurement? How will we keep control over Trident when it is in the ocean? Will not the control system be extremely expensive? Is not the control system excluded from the White Paper? If we continue to use the Polaris communication system, what is the point of having a newer system?

Mr. Butler: I should be very happy to write to the hon. Gentleman about that. The present communication system used in Polaris will be used in Trident, but we are working on a new system—the extremely low frequency system—which is very much at the development stage. It is not designed specifically for use with the nuclear deterrent, but it will be applied to the submarines, for which it is most suitable. We are at an early stage, but there is no problem with regard to the communication system, which will be transferred from the Polaris system. I think that the hon. Gentleman is chasing a hare which will not run.

Mr. Martin J. O'Neill (Clackmannan): Will the right hon. Gentleman tell us whether the ELF development project has been costed, and whether it is within any of the budgets that have so far been presented for Trident?

Mr. Butler: My understanding is that the project is still very much at the research stage and that the first step will be a technology demonstrator programme. At this stage it is impossible to give the cost, and it is not our habit to give costs in regard to programmes of that sort.

I think that it would be better if I did not give way any more, because if I were to do so I would unduly try the patience of my hon. Friends even further than I have already.

We cannot afford not to buy Trident. It is the most cost-effective deterrent that we can buy, and it is perfectly manageable within our planned overall defence expenditure. The cost of buying the equivalent level of deterrence through conventional armaments would be astronomical. Indeed, conventional strength alone, at whatever level, can never be relied upon to deter an enemy who is armed with nuclear weapons.

We have handled programmes of Trident's magnitude before. I do not remember an outcry against Tornado, which was seen as an essential update of the RAF's capability. That programme has taken a higher proportion of available resources than Trident will, and a greater proportion of the equipment spend, both on average and at peak. Those facts are there for Opposition spokesmen or for any other hon. Member to see.

The plain fact is that, thanks to the Government's policy, expenditure on equipment has increased by about £2·5 billion since 1979. As my right hon. Friend the Secretary of State said yesterday, defence expenditure as a whole has increased by about £3 billion in the same period in real terms. Given a level spend, on which the Select Committee's case is postulated, the cost of Trident on today's estimates can be seen to be about one fifth of the additional sums that will be made available over the procurement period.

The expenditure on Trident is large, and we have sought to contain it by commonality with the Americans in hardware and shared servicing facilities, but the critics destroy their case by over-exaggeration. They also point to other likely pressures on equipment spend, and nobody is denying that those pressures exist. While the critics are ringing their alarm bells, Defence Ministers are demonstrating how they will cope with the sorts of problems envisaged.

Procurement is not the only area in which savings can be made, but it is in procurement that the biggest scope lies. As I have shown, through the exercise of competition we are now consistently scoring savings on individual projects of 10 per cent., 20 per cent. or more. It would be unrealistic to suggest that we can achieve this across the board, but on a spend of some £8,000 million on equipment each percentage point saved represents a major piece of equipment or provides a healthy contingency against unplanned demand.

Thanks to the priority which the Government have given to defence expenditure and to our approach to spending, I have no doubt that our forces will be armed with the right balance between nuclear and conventional weapons, sufficient to make their proper contribution to NATO and to maintaining peace.

5.24 pm

Mr. Kevin McNamara (Kingston upon Hull, North): That was a somewhat disappointing speech by the Minister of State after what we had been led to expect yesterday. Before I refer to what he said, I wonder whether, in his reply, the Minister of State for the Armed Forces will elaborate on one major statement by the Secretary of State yesterday which was not pursued to any great extent. It was about the out-of-area exercise that is likely to take place to test our capability. Apart from matters on which we might disagree, such as whether we should have such a force, the House is entitled to know where the exercise will take place, how much it will cost and which host nations will be involved. Today's issue of *The Guardian* suggested that it would in the middle east, that 10,000 men were likely to be involved and that it would be rather expensive. I suggest that the likely location would be Oman. If that is so, the House is entitled to know about the matter, particularly the cost.

[Mr. Kevin McNamara]

Secondly, I should like to refer to the Secretary of State's rather strange tantrum yesterday over the amphibious capability of the Navy. He said:

"I must say a little more about the amphibious capability replacement, about which I have told the House the precise story."

Here is the tantrum:

"If the idea should once get about in the Ministry of Defence that that part of each individual armed service was likely to get preferment over all the rest of the priorities by leaking its concern either to the press or to hon. Members in order to embarrass Ministers in the Ministry of Defence, it would bring our legitimate planning process to a grinding halt. That is precisely what has happened in this case. I am not prepared to be sucked into that process."—[*Official Report*, 12 June 1985; Vol. 80, c. 914.]

The Secretary of State was not prepared to be sucked in, yet there has been a correction of yesterday's statement, and we have been told that we might have a statement in a year's time on the future of those vessels and their replacement.

However, the important thing is that that problem arose directly from the Secretary of State's own proposals for reform within the Ministry of Defence. When he took away service chiefs' control over those matters, the forces and services felt that they were likely to be overlooked, and that their case was not properly being heard. Thus they were likely to react in precisely that way. Last Wednesday's *Daily Telegraph* said of the matter:

"Underlying the basic concern that the Chiefs of Staff have lost the right to influence important decisions on new equipment —and thus the responsibility to fulfil their responsibility for combat efficiency—is the belief that it is not right that a central staff general should have the power to direct the choice of a new ship, or that an air marshal should have the last word on the army's next battle tank."

That is what the problem is all about. The article also states:

"Mrs. Thatcher will find that the division between authority and responsibility could lead to a situation in which she might be advised on a task force's fitness for war by a central staff committee free of responsibility for its performance in action."

There was a more threatening, and, knowing the Government's attitude, more sinister paragraph that said:

"There is concern in the Services about the method of selecting and promoting officers for senior appointments in the all-powerful central staff. It is feared that future promotion could be based as much on an officer's ability to work agreeably with government staff as on his military prowess."

We have already seen that in operation in the Civil Service. If somebody is appointed to the general staff on the basis of his agreement with policy, rather than on his ability as a military and serving officer, it would be to the detriment of the services. Under this system that is likely to happen.

Mr. Nicholas Baker (Dorset, North): The hon. Gentleman should not believe everything that he reads in the papers.

Mr. McNamara: The hon. Gentleman should not say things like that, especially of the Department. The newspapers were correct and the Secretary of State has been in the courts about the matter. He should be careful with such statements. I am surprised he says that about the "Torygraph", which is the bible of the Tory party.

The debate yesterday was on the decisions of the Secretary of State on procurement now that we are nearing the end of the period of expansion—the 3 per cent. development—and are in a zero growth position. The general feeling of the Select Committee faced with this problem was that, after questioning the Minister and Ministry officials, it could not come to any concrete conclusions about whether with the funds available we could meet our commitments, either in terms of deployment, or in acquiring new weapon systems. The report states:

"We had hoped that the Ministry of Defence would be able to demonstrate to us that the scale and phasing of major projects into the 1990s could be made consistent with the likely demands on the defence budget for pay, fuel, stocks and other items . . . We wanted to examine in-service dates, operational life, scale and phasing of expenditure. Our purpose was frustrated by vague and evasive answers and elegant but unhelpful hypotheses."

It gave a list of examples, but it missed a little gem in answer to the hon. Member for Hampshire, East (Mr. Mates). The question was:

"Given that *(a)* I think Mr. Gainsborough was very frank when he said five and no more at the moment"

—the regiments of tanks—

"and *(b)* you are going to be able, because of the cost penalty of running on Chieftain well into the next century, even to do that on the budget you have at the moment, I want some idea of what the penalty is in taking the decision that you cannot afford the capital cost to equip the rest of the British Army with Challenger?"

The question was perfectly clear, but it is only as clear as the answer. Major General New replied:

"When that moment comes, and it is not yet, and when the studies have been completed, and they have not been completed yet, and when the international work, which I am quite willing to describe because I am deep in it up to my neck, but not in this open session, has come to its next decision point, then is the moment we decide to go one way or the other. We have the capability of going one way or the other. To what extent we do not know yet, because we have not reached that point."

That precisely sums up the attitude of the Secretary of State yesterday. He adopted the same policy, and said:

"I cannot say precisely how the defence budget will develop in volume terms in the next few years. This depends on a range of factors, some positive, some negative. I cannot engage in a detailed line-by-line, figure-by-figure analysis of the gloomy picture painted by the Defence Committee. . . There is, then, no hidden motive behind my reluctance to disclose all the assumptions being made in 1985 about the programme stretching 10 years ahead and beyond."—[*Official Report*, 12 June 1985; Vol. 80, c. 913-14.]

But there is a reluctance. There is something hidden which the Secretary of State either does not know or does not want to tell the House, the Committee or the country. He does not want to tell us, because he wishes to leave those problems to be solved by his successor or, if he hangs on until the general election, by the Labour Government. Even Conservative Members recognise that that is the Secretary of State's position.

I thought that the Chairman of the Select Committee, the right hon. Member for Spelthorne, did a marvellous job yesterday. I have also been a chairman of a Select Committee, when the Labour Government were in power, which produced a report which the Government did not like. I said in the House how marvellous the Government were, and then tore to pieces their policies and strategies. That was done so beautifully yesterday by the right hon. Member for Spelthorne that I am sorry that he is not here today to hear me pay him the compliment. He did it delightfully, and in the best traditional way — by attacking the Opposition furiously, and then carving up the Government. The right hon. Gentleman understood the points being made and the effects of the policies. The fear is that we shall reach a position, by the postponement of

orders, the arrangement of studies and the postponement of decisions, which will lead to the structural disarmament of our forces.

The right hon. Member for Spelthorne pointed out carefully something which the Under-Secretary of State for Defence Procurement did not pick up yesterday evening—the importance of exchange rates in working out our budgets. He asked when will the frigates come, and when shall we fulfil our duties in the north-east Atlantic? Shall we have the number of frigates that the Committee and the Ministry say are needed by 1991? If they are going out to tender, when will the keels be laid? Those are the key questions, and we have received no answers to them.

The hon. Member for Beverley (Sir P. Wall) mentioned Intrepid and Fearless. If an early decision is not made about them, we shall lose our ability to supply directly our entire northern flank and Norway. We have already heard from the right hon. Member for Taunton (Sir E. du Cann), my right hon. Friend the Member for Lewisham, Deptford (Mr. Silkin) and from the chairman of the 1922 Committee, the hon. Member for Woking (Mr. Onslow), about the enormous problems caused by the rundown in our merchant fleet. That rundown is as much about structural disarmament as anything else. It is no good saying that, on paper, we can meet our present commitment. We wish to know whether the Government are continuing and developing the exercise started by my hon. Friend the Member for Sheffield, Attercliffe (Mr. Duffy), when he was the Minister responsible for such matters, of going out occasionally to discover where the ships are, to whom they are chartered, whether they still exist, who owns them, and under which flags they fly. That must be a horrendous task due to the decline in our merchant fleet.

Mr. Michael Colvin (Romsey and Waterside): The hon. Gentleman raises an important matter. If the Government argue that there are sufficient ships on the register, that others are flagged out, which can be requisitioned in time of hostilities, and that the laws are adequate for that purpose, the argument can be made the other way round. Plenty of the ships which fly the "red duster" and which are registered in Britain belong to other members of NATO. Will those countries use their laws to requisition ships that are at present flying the "red duster", and will that not deplete further the fleet that we believe, on paper, will be available to our forces in time of war?

Mr. McNamara: I am grateful to the hon. Gentleman, whose intervention cuts out another two paragraphs of my speech. He makes exactly the point that I was about to make. It is important to know how the register works and to which countries those ships are committed. The Opposition and the National Union of Seamen believe that those problems are not being faced.

Exactly the same position applies to the European fighter aircraft and our need to replace our old Phantoms and Jaguars. We could all echo the point made by the hon. Member for South Ribble (Mr. Atkins) and some of his colleagues about the need to make that decision. Other matters, apart from the defence commitment, are at stake as a result of decisions on merchant shipping, weapons procurement and aircraft build-jobs, and the sustaining of design teams and our capability. The longer such decisions are pushed aside, the more at risk such people become. There has already been a call at Warton for 500 voluntary redundancies. The trade unions there feel that that is just the tip of the iceberg. There has been a slowing down of the Tornado project and a failure to decide on the EFA. If we do not have a European agreement but want collaboration, what will the Government do? Will they go for the national option? Some of us would regard that with grave suspicion and would not wish to see it happen.

I echo the words of the hon. Member for Woking. We want an aircraft which meets the RAF specification for defending our skies and not one which depends upon the French.

Yesterday many hon. Members accepted what the Select Committee said. The Government's replies have been evasive. They have not accepted the arguments or faced up to the problems that will result from a zero-growth policy.

Without the full disclosure that exists in the United States, the Government can pull the wool over the eyes of the Committee, the House and the country. Debate in a democratic society must be informed debate. People must be able to make a judgment with knowledge of the resources available and the schemes being implemented. It is not a matter of wanting to know the new secret technology or to tell the Russians about it. That does not happen in the United States, unless someone is a seaman by the name of Walker.

We need to know whether the commitments and decisions being made are equal to or surpass the funds that will be available. That is important. That is why the Secretary of State let down the Committee and the House yesterday when he said:

> "I cannot engage in a detailed line-by-line figure-by-figure analysis of the gloomy picture painted by the Defence Committee."—[*Official Report*, 12 June 1985; Vol. 80, c. 913.]

It is the Secretary of State's duty to tell the House and the Committee what is going on.

The Government are trying to find an excuse to bamboozle the House on the effectiveness of their policy on competition. I welcome anything that saves money or obtains value for money in the defence budget. However, I draw the attention of the House to an important statement by the hon. Member for Dumfries (Sir H. Monro):

> "We have made one decision and must make another, and both are crucially important. The first decision related to training aircraft. I hope that the Ministry of Defence will never again embark on a cheapest tender policy. It may have reduced the eventual price well below what was anticipated, but the Ministry's attitude must be to go for the best buy. It is necessary to take into account the quality, specification, performance and handling of an aircraft and balance that against costs. To go for the cheapest aircraft, even if its performance is acceptable, is not to buy the best aircraft for the Royal Air Force."—[*Official Report*, 12 June 1985; Vol. 80, c. 966.]

The principle should apply to all contracts entered into by the Ministry of Defence. It is not sufficient merely to go for what appears to be the cheapest.

Now that a decision on the Tucano has been reached, will the Minister tell us whether any of it will be manufactured in west Belfast? Will he also tell us about the battle that is going on with British Aerospace about the debriefing, because as I understand it, while the Ministry would like to regard the subject of the procedures which were followed as closed, the company is still not satisfied about it or about the naming of one of its employees as being the person to whom the information was given. He steadfastly denies that he was given any information about

[Mr. McNamara]

the final date. The procedures should be tidied up. We do not want one of our major companies to feel not that it had been outbid but that it had been cheated by the Ministry. That is not good for the Government's relations with industry. We do not want to see matters continue in that way.

Mr. Adam Butler: I do not believe that the term "cheated" is one that the company would use. It is not one that the hon. Gentleman should use. He asked whether the company considered the matter closed, and it has assured us to that effect.

Mr. McNamara: On what date did the company say that? Did it not ask the Minister further questions after the question had been tabled in the House and the reply given? Is not the company still in correspondence with the Minister?

Mr. Butler: I made the categoric statement that the company has assured us that it considers the matter closed.

Mr. McNamara: The Minister has not answered the questions that I asked, because he cannot. He knows that that is not the case.

We obviously all welcome savings wherever they occur. We welcome them in the new Vickers order. However, we do not know the criteria used and how much money is involved. If the Government are not prepared to tell us that, we must look at the matter suspiciously. Even the savings that have been announced do not reach the overspends on some of the contracts. For example, there was a £600 million overspend on Nimrod. That project has advanced no further and all the problems remain. There have been overspends on the torpedoes, but the problems remain. No savings are likely to be achieved on that project. Will the Minister tell us when he replies whether Mr. Levene's target of 10 per cent. savings across the board on contracts will be achieved?

Employment in the United Kingdom is of interest to us. The Minister claims that he has increased employment by some of his policies, but we have lost nearly 100,000 jobs in the defence manufacturing industries since the Secretary of State has been in office. Those are serious job losses. They are in no way compensated for by Trident, as the hon. Member for Tayside, North (Mr. Walker) tried to suggest yesterday. The cost of the jobs created by some of these major equipment contracts is horrific. In Scotland, the cost per job on Trident is £309,000, and on Tornado is £271,000. If one argues for such projects on a job-creating basis, even some Conservative Members would argue that more jobs could be created more cheaply than by pursuing the Trident project.

I should like to consider the subject of Trident in a way different from that mentioned by the Under-Secretary of State for Defence Procurement, who made a strange statement yesterday. He said:

"Let me say in the clearest possible terms that there has been no real increase in the estimate for Trident D5 since it was first announced—no real increase at all. The difference between the current and original estimates is due entirely to inflation and exchange rate movements."—[*Official Report*, 12 June 1985; Vol. 80, c. 988.]

Judging from that, the hon. Gentleman should be in the Treasury with the Chancellor of the Exchequer. It would be marvellous if we could all run our budgets in that way. As the right hon. Member for Spelthorne pointed out, the mere change from $1·38 to $1·26 in the exchange rate was £180 million. If one has a fixed number of pounds which, because of exchange rates, buy fewer dollars and one is buying goods in dollars, there is a real increase in cost. I do not know who wrote the hon. Gentleman's speech, but I would make him pay for that. I am told that the hon. Gentleman is a chartered accountant. I can understand why he came into the House—this Government have always operated a system of creative accounting.

An important question relating to Trident is the Government's attitude to arms control. They believe that we need not bother about our Trident, that Britain need not play an important part in arms control and that we can leave the matter to the Americans and Russians because they have more bombs, warheads and missiles. The problem with that is that the Russians take our attitude and missiles into account. In their negotiations they take into account the commitment from France and the United Kingdom. If there were an argument for proliferation and for other countries to have their own atomic and nuclear weapons, it is contained in that callous disregard and in the attitude that we need only worry about the big fellows having them.

Paragraph 14 of the defence Estimates states:

"the vast majority of the world's nuclear weapons are in the hands of the Superpowers: clearly, therefore, these arsenals must be the first priority for reductions."

It is not our arsenals, but those of the superpowers that must be reduced. If one is not prepared to include those arsenals in negotiations, it is an open invitation to other countries to create their own atomic arsenals. That is a major reason why we are against this country owning any form of nuclear bases and weaponry. If we do, we cannot prevent other countries from forming arsenals or speak to them about it. It is an inducement for the proliferation of nuclear weapons.

Mr. Churchill: It ill becomes the hon. Gentleman to make himself the advocate of the Soviet view in this case. Since he is well aware that today we have the capacity of guaranteeing on station one single ballistic missile submarine, and that that will remain the case even when we have Trident, what does he suggest for a country committed to a nuclear deterrent, as we are? Does he suggest that we should have half a submarine?

Mr. McNamara: The Conservative party may be committed to a nuclear deterrent, but we are not, and we will not have a nuclear deterrent.

Mr. Roland Boyes (Houghton and Washington): I am pleased to hear my hon. Friend wholly renouncing nuclear weapons. Will he make it absolutely clear that we renounce nuclear depth charges? Will he educate Conservative Members about what the use of nuclear depth charges might mean for our own ships and submarines?

Mr. McNamara: We do not intend to maintain any nuclear capability, whether it is Polaris, nuclear depth charges, bombs or Tornado. The Labour party policy is not to have any of them, and that is made clear in our amendment.

Mr. Derek Conway (Shrewsbury and Atcham) *rose*——

Mr. McNamara: Will the hon. Gentleman sit down? He will get his chance in a minute.

A major reason why we will not have nuclear depth charges is that they are no good as weapons. An American admiral said:

"the most concrete objection is that any initiative use of nuclear weapons at sea would be very much to the disadvantage of the Allies, because we are the outfit with the big ships and we are the outfit largely dependent on service ships to keep the seas open. The differential advantage we might get from going after a submarine with a nuclear depth bomb is just not worth it. In addition it has the interesting characteristic that if you blow one beneath the surface of the sea, you will ring the ocean acoustically for several hours and lose the capability to track anybody. As a tactic that is soft-headed, deeply obnoxious—and militarily futile."

Moreover, if Boris comes along in the first of a group of submarines and is blown to pieces, behind him will come Igor, Ivan and the rest of them in their submarines, and pass through the disturbed acoustic and sonar screen to reach their objective. Nuclear depth charges are self-defeating. I would not expect the hon. Member for Ashford (Mr. Speed) to accept this because it was the reason why he resigned from the Government, but the defence Estimates of 1981 at figure 8 on anti-submarine warfare show that there is no need for nuclear depth charges. It shows the submarines being attacked by hunter-killer submarines, of which we shall have fewer because we are to have Trident—that is a further reason for not having Trident. Those estimates show nuclear depth charges being used by destroyers and helicopters, and how effective our anti-submarine warfare capability is.

There is an interesting question on anti-submarine warfare, from which the House has shied away for some time. The Minister should tell us how damaging the unearthing of the Walker spy ring in the United States has been to Britain's naval defence. Much of what comes from the United States seems to indicate the undercutting of our whole basic defences and the control of the Iceland-Greenland-England area, which was popularly known as the Denmark strait. The role of the hunter-killer submarine and the weapons that we already have make the idea of nuclear depth charges obnoxious and foolish in military terms. Our view about whether we should have them is clear in our amendment.

Mr. Conway: Regarding the Labour party's amendment, the Labour party pay lip service to our conventional forces, but if it were successful in removing any form of nuclear deterrent, what precise protection could be afforded to British troops in the event of chemical or biological warfare? We would have no deterrent.

Mr. McNamara: First, if the hon. Gentleman listened to what his right hon. Friend said about the capability and effectiveness of our chemical defences, he would see that that matter does not arise in the Mickey Mouse suits that the troops have. Secondly, it is not the Government's policy to introduce chemical warfare, and we support them in that. The hon. Gentleman also raised the general question whether new technological and other devices can be as effective to the defence of our troops as risking the possibility of a nuclear war. We are not prepared to risk that.

The military concept of star wars is extremely dangerous. More importantly, people have not yet taken on board the genuine and considerable threat that it poses to British industry, British research capability and our ability to sustain modern technological advance. Originally President Reagan suggested that there should be a grand partnership, and that we might even share our knowledge with the Russians to show our bona fides. That statement has long since gone out of the window.

American action in relation to industry has been in direct contradiction to the fine words of the President because industrial developments have taken a different tack. In recent years in COCOM America has urged that the lists of goods and products which may not be exported to the Eastern bloc should be considerably expanded. Indeed, the Americans have even suggested that there should be a body of military advisers in Paris deciding, or at any rate recommending, what should be done.

The United States Government claim direct control over re-exports in the form of re-export licences, with direct sanctions against foreign offenders. Hon. Members will recall the row that broke out over that, in particular with the pipeline system. We also had enormous problems over the NATO frigate because of the views of the United States. Instead of limiting lists in this connection, the American Government are seeking to expand them, not only in terms of weapons and weapon technology but about everything that might have a dual use, be it new materials, robotics, biotechnology, aviation or space travel. All such matters are coming under United States restrictions.

The same can be said of the way in which the Americans treat the free flow of information in the academic sphere. There is now increasing evidence that the United States is screening participants going to American symposia. The United States armed forces are beginning to limit the amount of public tendering for some of their contracts.

The same can be said of classified material. Perhaps the trend of which I have spoken applied to the Trident contract in the United Kingdom; mainly an American subsidiary got the bulk of the small amount of work on the project that came to this country. The Americans are using those methods to prevent a transfer of technology, and they are using their Federal Acquisition Regulations to that end.

President Reagan has signed a Distribution Licence Order which limits what can be done. Clauses in American university research contracts limit the amount of information that can be passed on. This increasing militarisation of science and research means that if we were to flirt with the Americans and enter the star wars business, we should find our basic research encompassed by American contracts, directions and regulations in such a way that any possible spin-off that might be of benefit in the development of the weapons—that is, if we were to join them in that, and I am not in favour of doing that—would be tied up.

The history of this issue shows that while the two-way street of exchange may be improving in some ways—for example, in relation to purchases of weapons—the transfer of technologicial information from the United States to the United Kingdom is very limited indeed.

When President Reagan said that he wanted to get rid of mutually assured destruction and wanted a policy based on mutual security and understanding, everybody applauded him. Monsignor Bruce Kent and E. P. Thompson did not lead any demonstrations down the streets of Whitehall against that suggestion. Unfortunately, as we look at the development of that concept in the last two years, we see how right people were to be suspicious about what the President said.

[Mr. McNamara]

It is clear that the US President is doing a number of things. First, unilaterally he is upsetting the stability of the Western Alliance as it now exists. Secondly, he is disturbing the whole nuclear basis of the defence of Western Europe in terms of the graduated response. Thirdly, he is putting at risk the ABM treaty. Fourthly, he is bringing into focus the fact that if we were to become associated with his latest ideas, we should be seen to be endorsing the creation of instability and insecurity in the world. Those are some of the problems with which hon. Members must wrestle in debating these issues.

Mr. Wilkinson: Does the hon. Gentleman have no sense of balance? Is it somehow all right for the Soviet Union to build up a massive arsenal of offensive nuclear systems, of both strategic and intermediate range, but it is not all right for the President of the US to launch a technical research initiative to see if it is feasible to construct a space base for ballistic missile defence? How is that in any way destabilising? Surely it is offensive systems which destabilise.

Mr. McNamara: I have not gone into the argument in great detail because many other hon. Members wish to take part in the debate. Since the decision was first made, the US Administration have said that there will be not the abandonment of ABMs but an integration of the star wars concept with existing missile systems. They are saying, therefore, "We shall knock out the Russian ABMs but maintain our own," and that creates instability as well as an arms race, and it is bound to increase if the Americans go ahead with their plans.

I appreciate, I assure the hon. Member for Ruislip-Northwood (Mr. Wilkinson), that the Russians are involved in these things. The Americans are involved, as I have explained, and even we have technology which could be adapted to those concepts. Nevertheless, specifically and directly to take up the major defence resources of the West by adopting the American type of scheme would create a more horrendous arms race than we have had up till now.

Indeed, the Secretary of State agrees with that to a degree because he said in evidence to the Select Committee:

> "I think that the arms race has a momentum, and I think that the development into space is a logical step of the evolution of the technologies of war. I do not think there is a new issue which has been raised, other than the scale and resources which would be involved."

We passionately disagree with the right hon. Gentleman about that. In our view, a great qualitative jump in the arms race would take place. It is a frightening prospect for mankind and we should not go ahead with it.

For those reasons, we are not prepared to support the Government Estimates. In our view, they are bad for the defence of the country, will increase instability in the world, will ruin British industry and will prevent the nation establishing a proper, sensible, cohesive and coherent role within the NATO Alliance.

Several Hon. Members *rose*——

Mr. Deputy Speaker (Mr. Ernest Armstrong): Order. I remind the House that the ten minutes rule is now in operation.

6.8 pm

Sir Frederic Bennett (Torbay): Irrespective of the ten minutes rule, it is up to hon. Members to be brief, so enabling others to speak, some of whom will have been precluded from speaking by the great length of the speech of the hon. Member for Kingston upon Hull, North (Mr. McNamara), who did not observe any restraint. Accordingly, I shall limit my remarks, as I say, irrespective of the rule that now applies.

In the first part of his speech the hon. Member for Kingston upon Hull, North spoke almost entirely of forecasting. He spoke in a gloomy way of the problems that would face a future Conservative Government in the 1990s. Part way through he showed a little of his old spark by admitting that his previous remarks had been largely wasted because, in his view, there would not be another Conservative Government, anyway, so that whether sufficient funds existed in the 1990s would not be a matter to worry either us or him.

I was glad to hear the hon. Gentleman mention two issues later in his speech and, because of the time factor, I shall limit my remarks to those. Although the anti-Trident campaign continues, I hope that it will not be repeated year after year in the way that it has gone on in the past. A few years ago it was recommended by a Select Committee that, if we were to have a sovereign nuclear deterrent, we should adopt Trident.

Mr. Dick Douglas (Dunfermline, West): When was that agreed?

Sir Frederic Bennett: Perhaps the hon. Gentleman was not here at the time. I assure him that that course was adopted, and that policy has been implemented ever since. With a weapon such as Trident, it is not possible to adopt an on-off policy. The Trident issue has been decided and, so long as the Conservatives are in office it will be maintained. That being so, let us not, year after year, battle about whether we should have gone for a different concept. I was a member of the Select Committee which thought that, of all the options before us, Trident was undoubtedly the best.

Some defence strategists genuinely believe that there is either a less expensive way to maintain our sovereign nuclear deterrent or that we can leave the interests of our country to be protected by the United States nuclear umbrella and spend more on our conventional forces. I regard that as an outdated argument which would not get general support in the House.

I understand that the Labour party will fight the next general election campaign on a policy of no nuclear sovereign deterrent and, as I understand it—I stand to be corrected—getting rid of all American nuclear bases and facilities. If that is the Labour party's policy, is it sure that it knows what the impact will be on the coherence of NATO? Other free democratic countries — Italy, Germany, Belgium and France—have decided that they will maintain their own, or support American nuclear deterrents on their soil. Are we to be the only significant NATO power that does not do so?

Is the hon. Member for Kingston upon Hull, North prepared to make a specific pledge that if the Labour party cancels Trident it will devote all the money that it saves to other military purposes? Is he prepared to say what he hinted at in the earlier part of his speech, that the money would be used to increase the scope of conventional

forces? The hon. Gentleman knows that he could not give such a pledge. We all know that the Labour party will fight the next general election campaign not just on nuclear abandonment, but on transferring resources from armaments to other sectors. Let us be in no doubt that the Labour party is being both hypothetical and hypocritical when it suggests that it is interested in saving money for conventional defence by giving up Trident. It may have other reasons for doing so, but that is not one of them, because every penny that it would save would go on other sectors, and other manifesto promises.

I have not yet heard a declaration from the hon. Member for Kingston upon Hull, North as to whether the Labour party supports the next stage in the CND's programme, which many Labour Members support. The CND has gone on record as saying that giving up our nuclear weapons and reliance on American nuclear weapons leads logically to giving up our membership of NATO. It says also that in the meanwhile, to set an example, we should not try to persuade the Russians unilaterally, or even reciprocally, to give up any of their nuclear arms. We should know whether the Labour party supports that proposal as well.

I plead with my right hon. Friend the Secretary of State for Defence and the Leader of the House for a full day's debate on SDI. The other place has had two such debates, and in the Western European Assembly, to which I belong, we have had at least two and will have some more in the autumn. There are constant debates in the United States, and the House should be given the opportunity for the true picture to be properly painted. This cannot be done properly by a Minister in a few minutes or even half an hour.

The hon. Member for Kingston upon Hull, North gave a false impression of what SDI is about. Any citizen would be delighted with a Government who said that instead of a continued arms race they would provide a system which ensured that those now living under the threat of nuclear war would, for the foreseeable future, have that threat removed once and for all. Any Minister who put forward such a programme and was believed would get support across the board, because that is what we have all been looking for.

The argument that negotiations are the only way to achieve peace and that SDI stands in the way of such negotiations is wrong. On the contrary, it has already been shown that it is the only bargaining factor that interests the Russians. I have too much respect for the hon. Member for Kingston upon Hull, North to believe that he really thinks that half—or even a whole—British submarine will affect the outcome of the negotiations. The Russians want to get the Americans to give up research into the system which they have already put into effect around Moscow, and which they are intending to put into effect elsewhere.

Nowhere in history has there been any case of a country voluntarily giving up a weapon as a result of round-the-table negotiations. Weapons have been given up over the centuries when they have become obsolescent. Bows and arrows were given up because of suits of armour, not because of field of the cloth of gold negotiations. Rifles and machine guns were made obsolescent by the invention of the tank. Capital ships became obsolescent and disappeared from the seas because of the creation of aircraft, not because of talks around any negotiating table. We should learn that lesson, and we should be immensely grateful for the fact that the Americans have concentrated on a genuine system of protective defence and have not yielded to the temptation of engaging in yet a further bout of what has rightly been called MAD—mutually assured destruction. That should commend itself to all of us, even the egregious Mr. Kent.

6.16 pm

Mr. Tam Dalyell (Linlithgow): One of the many strange and incomprehensible features of this White Paper is that it fails to address the key questions of communications, operational control, political control and intelligence. In short, it ignores the whole question of military and political crisis management.

Last Monday night, a well-researched "World in Action" programme raised vital questions, not only about these issues, but about the behaviour and actions of political and military leaders under pressure. One of the reasons for nagging on about the Falklands war is to get at the truth. Another reason is to ensure that, given the truth, we can learn from errors the problems and flaws inherent in our systems of political and military control.

If the information provided by "World in Action" is correct, and Sir Sandy Woodward, through Northwood, actually did issue the initial order to sink the Argentine cruiser, without political authority, this is tantamount to the military initiating a fighting war, without political assent. If "World in Action" is incorrect, and Admiral Woodward never issued such an initial order, and Admiral Herbert never countermanded it, then the House should be told.

It is not sufficient to say that these are past minutiae. Important questions about control must be answered. Could such a situation conceivably recur? What steps have been taken to prevent such a recurrence? The 10 million "World in Action" viewers must also have an interest in knowing whether "World in Action" was correct, and, if not, in what specific ways the programme was misleading or incorrect. It appeared to me that Mr. Stuart Prebble and his colleagues had produced a remarkably well-informed programme.

Argument about the alleged leak to the "World in Action" of the draft reports of the Select Committee on Foreign Affairs must not be allowed to overshadow what purports to be a startling disclosure. It appears that the crucial joint chiefs of staff meeting on 2 May was not even informed that the Belgrano had been under observation for at least 15 hours by the Conqueror, having been picked up on passive sonar before 1600 hours on Friday 30 April.

The explanation is simple. The 44-year-old cruiser was not considered enough of a threat to be worth worrying about. I must tell my parliamentary colleagues that I have learnt that there was strong opposition not only from the right hon. Member for Cambridgeshire, South-East (Mr. Pym) but from senior naval staff at Northwood over a period of days to attacking either the carrier or the Belgrano. This was for an understandable reason. They knew that the most dangerous retaliation would come, not from the 6 in guns, range 13 miles, of the old USS Phoenix, or even from carrier-based aircraft, but from land-based aircraft.

A judicial inquiry ought also to set out all the known facts about the supposedly missing log books of the Conqueror. I do not believe that any log books went missing. It is inconceivable that when HMS Conqueror arrived at Faslane someone, or members of the crew, just

[Mr. Tam Dalyell]

filched a log book as a memento for his sideboard. It is an insult to the Royal Navy to suppose that it operates like that. I veer to the opinion that the missing log book was a cock-and-bull story devised by Ministers or their aides as a smokescreen for the morning that the Secretary of State for Defence was to give evidence to the Select Committee.

Mr. Wilkinson: On a point of order, Mr. Deputy Speaker. The purpose of this debate is to discuss the motion, that the "Statement on the Defence Estimates 1985" be approved. The defence Estimates contain references to future provision for the defence of the Falkland Islands but no reference to the 1982 operation that the hon. Member for Linlithgow (Mr. Dalyell) is describing.

Mr. Deputy Speaker: We are discussing the motion and the amendment. As the hon. Member for Ruislip-Northwood (Mr. Wilkinson) knows, defence debates range very wide. All defence matters are related.

Mr. Dalyell: A judicial inquiry ought also to ascertain what unofficial as well as official messages had been received from Lima and Washington about the Peruvian peace plan. I remind the House of the following exchange on 28 March 1985. The Prime Minister's reply was:

"The authoritative report was the telegram from Her Majesty's ambassador in Lima."—[*Official Report*, 28 March 1985; Vol. 76, c. *293*.]

What unofficial contacts took place? A judicial inquiry should consider whether Chequers received all the intercepted Argentine signals, particularly those of major significance, and, if not, why not? Was Chequers supplied with all decoded signals? These are questions concerning crisis management. We had better learn. I quote the following passage from the "World in Action" programme:

"Four hours later another Argentine signal was sent. This time, it was unmistakable. It confirmed the previous order to the attack groups to return to home waters. If this signal was intercepted, Britain could scarcely justify sinking Argentine ships as self-defence . . . There have been many unofficial reports from GCHQ that the second recall signal was decoded and passed on. As yet, no proof has been produced that it was."

But of course this signal, sent at 1.19 am, was, like all other signals, decoded and passed on, as *The Observer* of 6 January 1985 put it, unchallenged:

"The intercepted Argentine signals were decoded and telexed at the time directly to GCHQ at Northwood and to Mrs. Thatcher's office."

A report by Sir Brian Tovey admits that the cryptanalysts at GCHQ did, indeed, decipher this vital message. Neither their skill nor their computers failed them. In effect, the Tovey report states that there was complete evidence available to the Government, before the order to sink, that the Belgrano and the rest of the fleet were safely on a course for home. Tovey's statement went to Sir Robert Armstrong. I am not even sure that the Secretary of State for Defence has seen it. Ponting certainly has not, and since he compiled the "crown jewels", how can the Secretary of State for Defence be certain, to use his own words, unflattering to his Prime Minister, that there was no "Watergate round here"?

Ministers might care to study Mr. Duncan Campbell's significant article in the *New Statesman* of 3 May 1985. I do not know his sources, but I suspect that they are different from mine.

We now need a clear account from the Prime Minister of how the signal at 1.19 am was handled, who had it, who decrypted it and to whom it was sent.

I believe that knowledge of what happened to this particular signal may well have been suppressed from the present Secretary of State. Maybe it was considered better that he should not know. During the time that the Tovey report was being compiled, was I under surveillance? I am just curious.

Last Sunday the Prime Minister responded to Mr. Frost. She said:

"There were no particular peace proposals. It is alleged that there were some from Peru at that time. There were not. They had not reached us."

This is at variance with the statement of the right hon. Member for Hertsmere (Mr. Parkinson) and the right hon. Member for Cambridgeshire, South-East on the subject.

Why was the decision to sink the Belgrano taken not by the War Cabinet but by an impromptu group of persons called together by the Prime Minister without any minutes being taken? That is a matter for control. The 44-year-old cruiser posed no kind of immediate threat at the time. What a way to run a war.

How is it that a Prime Minister can authorise a shooting war, according to Lord Lewin, without apparently being given, or asking for, an assessment of the potential retribution? The implications for the control of nuclear weapons are spine chilling. This is the Prime Minister who claims to have a veto on cruise missiles. How, if the admirals do not tell the Prime Minister what is going on, can she claim to have "full political control"? One cannot allow admirals to give orders in an undeclared war, before a British life has been lost in action, to start shooting, without the politicians knowing.

The Prime Minister claims that the Belgrano was a threat, but the Conqueror had orders to sink it when it approached the exclusion zone. Why were these orders changed to sink it when it was heading away?

Last Sunday the Prime Minister said:

"You run a war through your admirals . . . Do you really think they say to a Prime Minister, do you really think that in the middle of a war they come up and say: 'That ship has changed direction'?"

Incidentally, it was an undeclared war. This is the Prime Minister with her finger on the nuclear button. Does she know nothing of NATO's strategy of flexible nuclear response, a strategy based upon political leaders being fully and frequently informed on the progress of a conflict? Or will the Prime Minister leave it all to the admirals? On the one hand, is she prepared to run a war though the admirals, while on the other she claims to have full political control? It is like trying to be an Iron Chancellor and an Iron Lady committed to £18·9 billion of defence Estimates at the same time.

Finally, there is one other matter that the House, for all our traditional cosiness, ought to face up to. On our television screens last Sunday morning we saw the British Prime Minister saying to Mr. David Frost:

"If you think I know in detail the passage of every blessed ship, you cannot think what you think the Prime Minister's job is . . . in charge of a war again, I would take the same decision again."

If I were David Frost, I should have said: "But Prime Minister, this was not every blessed ship. This was one ship—the ship, and a thousand men or more—that you had ordered destroyed, a very special ship. Is it bonkers to ask if you made no attempt to find a rational cause to reverse your orders? Is it bonkers to be amazed that you

did not instruct your military to keep you fully and frequently advised? Is it stark staring bonkers to wonder whether, for humanitarian reasons, you hoped that it might go away and give you the opportunity not to start the killing?"

I make no apology for saying that the whole question of the political control of a war is a matter of overriding importance.

6.26 pm

Miss Janet Fookes (Plymouth, Drake): I shall make only one comment about the speech of the hon. Member for Linlithgow (Mr. Dalyell). I am sick to death of his obsession with the Belgrano. I am more concerned about the British lives that were lost in the Falklands. The Belgrano was a risk and we were justified in sinking it. That is the end of it. The points that I wish to raise in this debate are more relevant to the discussion than the speech of the hon. Member for Linlithgow.

The Statement on the Defence Estimates deals, under the heading "Rationalisation of support", with an issue that is very close to home: the future organisation of the royal dockyards. Paragraph 518 says:

"We have been considering the arrangements under which the Royal Dockyards at Devonport and Rosyth should be managed in the future to enable them to meet the Royal Navy's needs in the most cost-effective manner. No decisions involving major change will be taken until a period of consultation has been completed."

It is on that point that I would take issue with my hon. Friends.

I do not believe that the consultation period is sufficiently long to be really meaningful. The Government are asking for the results of consultations to be in by July, a very short time. It has been argued that, owing to the leak of a report by Mr. Levene, people have had longer to consider the issues, but I consider that this is a specious argument. It is not one that I accept. The consultation period should start when the Government place the proposals before the public. I shall accept nothing less. I beg my right hon. Friend the Secretary of State for Defence and his colleagues to allow a further period to elapse during which proper consultations can take place. The issues are very important. We cannot afford to make mistakes about the future organisation of the dockyards. Therefore, it is very important that full consultation should take place.

The city council has set up a steering group, as a result of which a report has been commissioned from Peat Marwick and Mitchell. An interim report was produced which has been sent to me in the last few days. While that report appears to accept much of the analysis of the Government in their open document, it queries whether an agency agreement is the right solution. By that, of course, it means the bringing in of a private firm to manage the dockyard for a period of years. Clearly, if it were to be for a period of only five, six or seven years, and another firm were then to be brought in, that would be unacceptably destabilising. May I have confirmation from the Minister of what I believe the Government intend—that the firm, if satisfactory, could expect to continue for a considerable number of years, and that the period of five or six years would simply be a let-out clause if the particular firm proved, unfortunately, not to live up to the expectations of it?

I feel that we should get rid of the dead hand of the Civil Service in running what is essentially an industrial organisation, although I remain open as to what other form it might take at present. We shall never get away from all the rules and regulations unless we detach ourselves from the Civil Service set. Therefore, I hope that the Government will look very seriously at that point.

I am, of course, concerned about the issue of redundancies in the meantime, prior to reorganisation, since there will be about 2,000 job losses at Devonport, and no local Member of Parliament can view that with equanimity, bearing in mind the level of unemployment. The trouble is that nobody knows for certain whether his or indeed her job is going, and that makes for a loss of morale and real anxiety. If only my hon. Friends could be persuaded to say that there would be no compulsory redundancies, that would take much of the sting out of the matter, and I ask that that be considered. I know that the majority of the redundancies will come through voluntary means, early retirement and the like, but no individual in the dockyard knows how it will affect him or her. It would be a valuable contribution to increasing morale in the dockyards if my hon. Friends could make the commitment for which I have asked.

We are concerned about alternative job opportunities, and I am glad that there has been set up a development agency for Devonport, located in the civic centre. It would be interesting to have some idea of how that agency is working. If my hon. Friends are not able to reply to me tonight, perhaps they will do so in the near future.

It is also important to spell out what possibilities there are for non-naval work in any new set-up. It has always been a minus factor for those working in the dockyards that the work provided by the Navy inevitably goes up and down, and that when there is less work there are redundancies. Good non-naval work which could keep them going in the leaner times would do a great deal to assist, and would make the life of a dockyard city much more acceptable than it is now.

I make a particular plea on behalf of those men who moved with their families from Chatham when that dockyard was closed—in itself a traumatic experience for them—and who now face further difficulties and uncertainties about their future. They have a particular claim on our sympathy and our understanding, and I hope that the Ministers will bear that in mind.

I have a further concern, and that relates to the training of apprentices in the dockyard. It was mentioned in the open document, but there was no full explanation of what was to happen there. It is my understanding from some of the instructors at the apprentice training centre in Devonport that they are still totally unclear about what their future may be. That is not good enough. Apprentice training is in any case vital if the dockyard is to be run efficiently in the future. Those who instruct at the centre need to know what their opportunities are to be in the future. Some information about that would be very helpful.

All in all, I have severe reservations about the way things are going, although I accept the need for change. I hope that every opportunity will be taken to ensure that the dockyard remains as a more efficient, viable unit, and one which plays a very important part in the economy of the city of Plymouth and will, I hope, do so for many years.

I do not wish to conclude my speech without a reference to the Royal Marines. No doubt Ministers will heave a sigh if once again I refer to the issue of the amphibious

[Miss Janet Fookes]

capability of the Royal Navy, but I do so because I was not at all happy about the words used in my hon. Friend's speech in opening the debate today—not this year; next year. I was reminded of the game children play with plum stones and other stones—"This year, next year, some time, never". We want to be absolutely certain that the role of the Royal Marines is backed up by such an amphibious capability. It is a jargon phrase. What it means, in effect, is that, where there is not a proper port for ordinary landing, there is the means of landing the Royal Marines through the amphibious ships. Without that capacity, much of their role and future is thrown into jeopardy. That is how important it is. Certainly it is extremely important for the role in Norway.

6.36 pm

Mr. Russell Johnston (Inverness, Nairn and Lochaber): I apologise to you, Mr. Deputy Speaker, and to the House for the fact that, for domestic reasons, I was unable to be present yesterday, but I have read the report of the debate and hope that hon. Members will allow me to make my contribution on that basis.

The rules say that I have 10 minutes. I do not like the rules. Frankly, I resent them, as I speak for the Liberal party and the Labour spokesman took 41 minutes. But I must abide by them. Against all my inclinations, therefore, I shall not give way, and I shall also gallop.

My right hon. Friend the Member for Plymouth, Devonport (Dr. Owen) dealt yesterday with the Select Committee report, which he rightly described as "a devastating criticism" of Government policy. I shall repeat only one thing that he said, because it must, from the alliance position, be underlined repeatedly. He said:

> "This is the last year in which we can make a decision not to go ahead with Trident without effectively pouring money down the drain. The Government must reassess the Trident decision." —[*Official Report*, 12 June 1985; Vol. 80, c. 933.]

The justification for Britain retaining an independent deterrent, if it is a fully integrated member of NATO, with all the logic that that has, has always escaped me. Given the Western Alliance, given our interdependence, in what circumstances is it envisaged that an independent deterrent would be required? Why do we need it rather than West Germany or Italy? Surely we have outlived those mirages of greatness that we long pursued during the twilight of empire. I fear that both the Prime Minister and the Secretary of State for Defence are susceptible to such mirages and do not count their cost.

The defence debate is now very much overshadowed by the discussion of the strategic defence initiative. That is also true of the Geneva talks. The Secretary of State for Defence was cautious yesterday in his references to SDI, and his caution was reinforced by his welcome references to EUREKA, concerning which the Secretary of State for Foreign and Commonwealth Affairs had made an earlier statement. I attended the Assembly of Western European Union last month, when Baroness Young was questioned on EUREKA and found herself unable to say anything, yet in another part of Paris the Foreign Secretary was giving the go-ahead to it. It says little for the seriousness with which the Government treat that Assembly if, in the context of the so-called reactivation of WEU, it cannot be told things before the New York *Herald Tribune*.

I do not think that the Secretary of State for Defence should be cautious about star wars. He should be saying loudly and clearly that we do not want any further escalation. If the proposition is seen in the context of saying to the Soviet Union that that is what will happen if there is no agreement in Geneva, that is a different matter. But to pretend that this is some great step towards eternally safeguarded peace is yet another mirage.

President Reagan has said that when it is completed it will be deployed only after negotiation with the USSR. I doubt whether that gives Mr. Gorbachev nights filled with Elysian dreams of waving fields of corn in collective farms. I spoke the other day to an American defence expert who said, "I am not married yet, but this will not really be ready until my sons are at college". If we reach that stage, the United States of America can attack the USSR without fear of retaliation. That may sound absurd, but that is what they will say. Mr. Gorbachev will have his own programme and more millions will be poured into systems to defeat undefeatable systems. Man — and, indeed, woman—is endlessly ingenious.

I do not see where that leads us, other than to yet more escalation. The concentration must now surely be on Geneva, which, in a parched, underprivileged and population-burgeoning world, must surely be the last hope for some kind of sane deal between the two systems that now dominate the world. I say "now", because last week I had the opportunity of talking to the Foreign Minister of the People's Republic of China, who asked me about SDI. China has a nuclear capacity; it has an enormous and diligent population; it feeds its people. It has shown a wise, long view and restraint over Hong Kong. If we in the West cannot sort things out, we will end up being told what to do.

In our country — flawed democracy as it is — we should be able to reach some sort of sensible consensus about our views on how our society should be best defended against any threats. But we are becoming more and more cleaved, and for that I believe the Government have great responsibility. I am not a unilateralist—far from it—but I do not treat those in my party who are unilateralists with contempt or simplistically label them as fellow travellers. Under a Communist system, most of them would be in the labour camps. They are concerned, worried and frightened people watching impotently as their rulers not just fail to find accords, which would give them and all of us security, but are very much seen as not making the necessary efforts to do so.

One may say that the Greenham Common women are nuts, and go down in a flak-jacket and laugh at them. I do not agree with them and I have found it difficult to have any dialogue with them. But they represent a powerful plea for real action on disarmament. I understand and agree with the argument about one-sided defence often put forward by Conservative Members, but I also recognise the view that if the rockets go up there can be no one-sided survival.

No Liberal can defend a Communist system. No Liberal can be other than appalled at the treatment of the Sakharovs and the Shcharanskys and numberless, nameless others. But no Liberal who has made the effort, as I and my right hon. Friend the leader of the Liberal party have, to talk regularly to the Soviets and to visit the Soviet Union can take the facile "Empire-of-evil" view, nor accept that managed agreement is impossible and that all that is left to us is to build the munitions dumps higher and higher.

I have little time left, and I wish to put on the record the amendment tabled by the alliance which was not selected:

"Line 1, leave out from 'House' to end and add 'fully supports the United Kingdom's continued membership of the North Atlantic Treaty Organisation; regrets the forthcoming reduction in Britain's conventional defence which will lower the nuclear threshold and create an unacceptable reliance on "first use" of nuclear weapons; calls for the cancellation of Trident in order to avoid a new and provocative proliferation of the arms race and to release resources needed to strengthen Britain's conventional defence; considers that the high level of Soviet and United States nuclear arsenals threatens world peace and could be reduced without jeopardising mutual deterrence; regrets the preoccupation with the Strategic Defence Initiative which is technically questionable and obstructs progress towards peace and disarmament; and urges the Government to use all its influence, in conjunction with our European partners, to persuade the United States to take a constructive position in the Geneva discussions with the Soviet Union in which British nuclear forces could be included.'."

I believe that that makes a good case. We argue that it is possible to find the will effectively both to defend our country as necessary and the will to find a managed solution to the endless escalation of arms development and expenditure in the West and the East.

6.45 pm

Mr. Julian Amery (Brighton, Pavilion): I wish to congratulate my right hon. Friend the Secretary of State on his White Paper—both its style and its content. I also congratulate my hon. Friend the Minister of State on his opening speech — a mastery of constructive ambiguity that would have gladdened his father's heart.

The right hon. Member for Llanelli (Mr. Davies) and the hon. Member for Kingston upon Hull, North (Mr. McNamara), who opened for the Opposition today, repudiated the general strategic concept of the White Paper. I find that a tragedy. I have been in the House for some years. When I first came here Mr. Attlee had just launched the British independent deterrent. Then Hugh Gaitskell was going to fight again and again to prevent unilateralism. Nye Bevan was not going to be a streaker in the conference room. Harold Wilson was persuaded by the right hon. Member for Leeds, East (Mr. Healey) to keep Polaris, in spite of his election pledge the other way; and the right hon. Member for Cardiff, South and Penarth (Mr. Callaghan), the Father of the House, adopted the Chevaline improvement in Polaris. Now, suddenly, we are faced with the official Opposition departing from the basis of a bipartisan Alliance policy. I find that a tragedy.

I find it difficult to explain, especially as anti-Americanism has grown among Opposition Members. After all, the further we are from the Americans the more important it is that we should have the means of defending ourselves. To abandon all nuclear weapons—our own and those in the United States—and suggest that we should confront a nuclear superpower with only conventional forces is to return to a position where we would be dervishes with bows and arrows fighting against machine guns.

The escapism of the Opposition was well illustrated in two interesting speeches — one by the right hon. Member for Lewisham, Deptford (Mr. Silkin) and the other by the hon. Member for Liverpool, Walton (Mr. Heffer). The right hon. Member for Deptford suggested that peace should be kept by United Nations blue helmet troops. The hon. Member for Walton said that we must make a gesture; we must begin to disarm nuclear weapons unilaterally. That is the sort of speech that would be all right in a university union debate. It might just wash in a maiden speech. But both the right hon. Gentleman and the hon. Gentleman lost their political virginity a long time ago. Listening to them reminded me of two old madames preaching the virtues of no sex before marriage.

The right hon. Member for Plymouth, Devonport (Dr. Owen) said that he was in favour of a British nuclear deterrent but against the Trident. Political reasons might incline him to be so. He said that there must be alternatives. He knows perfectly well that the most parsimonious Government that Britain has ever had is this Government. They would have taken any alternative if it had been worth taking. The Government analysed the figures and knew that there was no alternative. What would be a criminial waste of money would be to invest in a second-rate deterrent that did not have the credibility to deter.

I have reservations, too, about the right hon. Member's idea of withdrawing battlefield weapons 150 miles. If one looks at a map of Germany, one finds that withdrawing 150 miles would place the weapons along the Rhine. If I were a German I would not feel sympathetic towards that manoeuvre.

The critics of my right hon. Friend the Secretary of State have agreed on one point. The Select Committee on Defence and the right hon. Members for Llanelli and for Devonport have said that they do not believe that my right hon. Friend's defence programme can be financed within the existing Estimates. They may be right; I do not know. However, I have confidence in my right hon. Friend. He will do his best, and his best can be pretty good. In any case, he should not have any sleepless nights about it.

The Estimates for the Home Department are decided in Cabinet. That is not the case with the defence Estimates. They are decided in Moscow and, to a lesser extent, in Washington. It is the threat that determines the programme, and the threat is growing. Let us have no illusions about that.

No doubt, the stately minuet at Geneva over arms control is continuing with due dignity, but the issue will be decided on the periphery.

The arms race has run for a long time. The issue will be settled in Afghanistan, Angola, the Horn of Africa, Cambodia and Central America. For a long time, the Soviets have openly declared their support for what they call "freedom fighters" and have supported them by proxy. At long last, the United States has decided to fight back. The United States could no longer look the other way. When the United States Congress votes publicly to support resistance in Afghanistan and Nicaragua, something is happening. The omens are clear. I hope that we will support the United States because we know more about this type of warfare than almost any other country. We must draw this conclusion: if the Estimates to which we are working are not sufficient, they will have to be stretched and the necessary financial resources will have to be found.

6.52 pm

Mr. Dick Douglas (Dunfermline, West): I do not propose to follow the remarks of the right hon. Member for Brighton, Pavilion (Mr. Amery), but I may refer to some of his points tangentially.

I congratulate the hon. Member for Plymouth, Drake (Miss Fookes) on her speech on the dockyards. I shall not

[Mr. Dick Douglas]

say much about the dockyard at Rosyth, which affects my constituency, because the Select Committee on Defence will consider the Government's proposals and take a considerable amount of evidence. I would not want to prejudge its report. I shall adopt the same view that the Government seem to adopt—all the options are open. The Government's preferred option still needs critical examination.

Referring to putting the contracts to refit the Otter and Euryalus to tender, paragraph 511 of the statement says that the comparison

"will enable us to compare the performance of commercial yards on this type of work"

with that of the dockyards. I hope that the Government will give a detailed assessment of the comparisons. I echo the words of the hon. Member for Drake: the period of consultation has been too short. Unless the Government can produce before 5 July the necessary figures for the Select Committee clearly showing the basis of comparison, their case will be in considerable doubt. We are entitled to a detailed consideration of cost.

I share the concern of the House at the demise of the Merchant Navy and urge all hon. Members not to be complacent about its numbers. They are "unduly" inflated because of North sea activity. I hope that that activity will continue for a considerable period, but it might not. I believe that the type of vessels that now operate will not necessarily fit our future defence requirements. I shall say nothing about Trident because the Select Committee will report on that aspect.

The right hon. Member for Pavilion referred to the threat that we face. This aspect is given considerable emphasis in annex A of the statement. It is, however, a guarded analysis. I part company with the right hon. Gentleman in certain respects. The statement gives us the impression that the Warsaw pact is monolithic. It is not. One cannot have a situation in which Poland or Rumania does not want to renew the agreement for five years or one in which Albania wishes to withdraw from the pact and still argue that the pact is monolithic.

Recently David Holloway said:

"The non-Soviet members nominally contribute 55 divisions to the Pact's order of battle, compared with the 31 Soviet divisions in Eastern Europe."

How much do the non-Soviet forces really add to Soviet military power? Would the Poles fight? They are the best-armed and the best-equipped members of the pact. How would the East Germans or Rumanians perform? I am not complacent about this matter. I have paid many visits to the area with other Select Committee members. I am not a defence expert and I do not have a military background. I make no apologies for my Merchant Navy background. I thought, because of my background, that it would be useful to become a member of the Select Committee to analyse the difficulties and complexities of this subject. It is difficult to become an expert on it. I feel for Ministers who must make the decisions. I have tried in all humility to gain some knowledge of this subject. The Soviet Union has not been looking since 1917 for buffer states to defend themselves. This has been happening for about 250 years.

I turn to the strategic defence initiative. We have heard a great deal about President Reagan's speech in March 1983 but little about the sums involved. This is part of the dilemma. As I understand it, we are talking of sums not far short of $30 billion to be spent before 1989. That is more than twice Britain's total annual defence expenditure. We must recognise the pull that that expenditure will exert in the military industrial context. The Nitze criteria—that we will not embark upon this programme unless it is "reliable, survivable and cost effective"—are impossible to fulfil.

We have had a meeting with Dr. Keyworth, the President's scientific adviser. According to the United States Information Service, he said:

"I'll reiterate a prediction. Before the president leaves office, we're going to be able to demonstrate technology that convinces the Soviets that we can—if we choose—develop a weapon to shoot down their entire ICBM fleet as it tries to enter space."

I understand that the President has about another three years in office. Therefore, if we are to accept Keyworth's view, such a prospect is not as distant as we might imagine. Keyworth is highly intelligent and is nobody's fool, but he frightens me to death. That is the view which we must answer in the context of our research and development prospects.

Yesterday I crossed swords with the right hon. Member for Plymouth, Devonport (Dr. Owen). Today I warn the House that we must be extremely careful about nomenclature. What the Americans mean by research and development may not be what we mean. In any case, the 1972 ABM treaty clearly circumscribes development. Article V of that treaty states:

"Each Party undertakes not to develop, test, or deploy ABM systems or components which are sea-based, air-based, space-based, or mobile land-based."

Therefore, research can be carried out only if the systems are fixed, and that places severe constraints on them.

That is not the type of system which Dr. Keyworth seems to describe. He is describing systems that can take out Soviet ICBMs at the boost stage. These are extremely dangerous and difficult developments, and it would be wrong of us—I support the suggestion of a full-scale debate on this issue — to stand back and say, "Everything is fine. All we will do is participate in research." I again stress that what we mean by research and development may not be what the United States means. In any case, I doubt whether we shall frighten the Russians to death on the basis of carrying out research.

I am concerned not so much about the cheapness of the nuclear deterrent as about the cheapness of chemical warfare. The West is ill-prepared to counteract what the Soviets or the United States are doing. If we are to do anything through the United Nations or the world community, we must reinvigorate national opinion on chemical warfare, because if our only answer to chemical warfare is the nuclear deterrent we are in severe trouble.

Labour members of the Select Committee, with other hon. Members, spent a lot of time preparing this report. I hope and trust that that report and the Government's White Paper will be widely discussed in the nation. In particular, I hope that the Select Committee's report will be read by all my constituents.

Royal Assent

Mr. Deputy Speaker (Mr. Ernest Armstrong): I have to notify the House, in accordance with the Royal Assent Act 1967, that the Queen has signified Her Royal Assent to the following Acts:

1. Industrial Development Act 1985
2. Intoxicating Substances (Supply) Act 1985
3. Coal Industry Act 1985
4. Motor-Cycle Crash Helmets (Restriction of Liability) Act 1985
5. Luton Borough Council Act 1985
6. Greater Manchester Act 1985
7. Royal Bank of Scotland Act 1985
8. Bath City Council Act 1985

Defence Estimates 1985

Question again proposed, That the amendment be made.

7.4 pm

Mr. Keith Speed (Ashford): I hope that the hon. Member for Dunfermline, West (Mr. Douglas) will forgive me if I do not comment on his interesting speech.

The debate has been characterised by a total muddle and incoherence by the Labour Front Bench on nuclear policy. It is clear that, in spite of the protestations of Labour Members about this White Paper, they would spend not a penny more—indeed, very much less—on defence. To put it mildly, there was also a difference of opinion between the Liberal and Social Democratic parties.

The debate has been characterised by an optimism on the part of my right hon. Friend the Secretary of State that increased competition plus the speculative nature of the forward programme will in some way ensure that it will be all right on the night. I do not entirely share his optimism. However optimistic or pessimistic the view of my right hon. Friend or the Select Committee about the amount of money that will be available for the equipment programme, no one has argued that in real terms there will be an increase over the next few years. Indeed, we have heard to the contrary, and all we have discussed so far is by how much it will decrease.

Yesterday, as reported in column 913 of the *Official Report,* my right hon. Friend said that over a 10-year period costings become increasingly speculative. That is undoubtedly true in respect of some projects and some items of equipment and stores. But the House will be aware that a new frigate, submarine, aircraft or armoured fighting vehicle takes about nine to 10 years from the design stage to the in-service stage. Therefore, many hon. Members — both those who served on the Select Committee and those in the House—fear that equipment that will be needed to replace outdated weapons and capabilities by a specific time will not be available because of financial pressures.

The cat was let out of the bag in one of the Select Committee's evidence-taking sessions. In paragraph 675 on page 129 of the report, I asked the Assistant Under-Secretary (Systems), Mr. Reeves:

> "If you pluck a year out of the air—1990—and take the three programmes the Type 23, the EH101 and Trident . . . those three programmes would represent a major part of the Royal Navy's equipment programme".

Mr. Reeves replied:

> "I think you have interesting and contrasting building blocks here. Trident has a certain political commitment; the EH101 has a certain international commitment; the Type 23 and its expenditure pattern has an element of discretion attached to it. Those three instances could be multiplied several times and you would find these building blocks with different degrees of solidity."

I then said:

> "Because of the Italians and the total commitment to Trident, the Type 23 programme looks as if it will go pretty far right."

Mr. Reeves replied:

> "I did not say that."

I then said:

> "No, but we can draw our own conclusions",

as indeed we can. That is what worries the Committee and many hon. Members.

When we talk of flexibility, we talk not about cuts but about pushing items of equipment further right. In a nutshell—and my right hon. Friends know it—the fact

[Mr. Keith Speed]

is that in the next 10 years a great deal of new conventional equipment will be required by all three armed services to keep our forces up to date and able to meet the threat that faces us. In addition, there is to be massive expenditure on Trident. There will also be an equipment budget which will be declining in real terms from an admittedly high plateau. Within the next few years there will be substantial problems for the MOD. I would describe it as a defence review in a stealth configuration. I hope I am wrong, but I believe that I am right.

A number of hon. Members have referred to amphibious warfare. I regret the remarks made by the Secretary of State yesterday about lobbies from the Royal Marines, Royal Navy or wherever trying to embarrass Ministers. On reflection, I think that my right hon. Friend will wish that he had not made that remark. It does him no credit and was totally out of character.

Paragraph 428 of last year's Defence White Paper stated:

"We are currently examining the provision of future amphibious capability once the existing specialised ships come to the end of their lives in the 1990s".

Paragraph 430 of this year's White Paper states:

"We are considering a range of options for providing a future amphibious capability once the existing specialised ships come to the end of their planned life".

We have heard that the same decision has been taken for next year, so presumably the type can stay in place for next year's White Paper. That is not good enough.

The French have a similar capability with their Orage and Ouragan ships, which are the same age as Fearless and Intrepid, but are replacing those ships with the new TCD 90 class and ordering not one or two but three for delivery by 1993. The Royal Marines have a right to be fearful about this. Only three or four years ago their whole existence was in jeopardy. Fearless and Intrepid were to be disposed of prematurely and only the Falklands war and certain other matters prevented that.

The Select Committee stated clearly and unequivocally in paragraphs 25 to 27 that there is an urgent need for an early decision to replace those aging vessels. Those of us who went last week with the Select Committee to NATO's northern flank in Norway had discussions with NATO commanders and Norwegian forces and generals as well as with Norwegian politicians. We were left in no doubt about the overwhelming political and military importance of our amphibious capability. If Ministers are thinking of replacing that capability by airlifts, I must tell them that they are wrong. The importance of amphibious capability lies in its flexibility. Having seen the thousands of islands around 68° and 69° north, we realise that that flexibility is vital. Equally, if Ministers think that they can get by using merchant ships, I remind them that, in view of the lack of damage control in such vessels, even a minor accident can quickly put them out of action, as shown by the accident off the coast of Holland a few days ago. I am arguing not for a one-by-one replacement of Intrepid or Fearless but for urgent and positive decisions, perhaps with a small number of less expensive ships. That decision is needed quickly by the Royal Marines and our northern flank partners and not least by the Dutch with whom we work.

The contribution of the Merchant Navy is vital and the Select Committee has now produced a report on this. Some argue that it will be a short war next time so it does not really matter, but in my view that is nonsense. In a report to Congress a year or so ago Mr. Weinberger warned of the fallacy of assuming a short conventional war and spoke of

"enhancing the readiness, mobility and sustainability of our forces".

Part of that sustainability is the need for 600 merchant ships in the first month of any crisis or conflict to steam across the north Atlantic to these islands and to continental Europe with men, reinforcements and supplies. The harsh fact is that not just this country but other NATO countries are allowing the merchant fleet to run down to a dangerous extent. I remind the House once again of what was said by the man who in the autumn will become the new Chief of Defence Staff. After the Falklands crisis, Admiral Sir John Fieldhouse said:

"I cannot say too often or too clearly how important has been the Merchant Navy's contribution to our efforts. Without the ships taken up from trade the operation could not have been undertaken and I hope this message is clearly understood by the British nation."

Admiral Fieldhouse understands that very well; but do Parliament, the Government and the country understand it?

7.13 pm

Mr. Willie W. Hamilton (Fife, Central): The hon. Member for Ashford (Mr. Speed) is remembered for having resigned from the Government over indefensible defence cuts, and we admire him for that.

I wish to comment briefly on the theme that has run through all ministerial speeches in this two-day debate. Ministers have all been at great pains to persuade us that we are getting value for all the taxpayers' money spent on defence, but I believe that the opposite is true. I cite just one example. The Select Committee report gives the amount to be spent on the Falkland Islands from 1984 to 1994 as £3,220 million, which is money down the drain. Every other party in the House is committed to getting rid of that burden from around the taxpayer's neck. The taxpayers and the British public are being massively conned by some of the suavist and smoothest con men in the business, both within and outside the House. I believe that there is waste on a monumental scale in the most profligate Government Department in Whitehall.

I will cite just a few examples. On 8 April, *The Observer* ran an article referring to a series of articles published in November 1983. In 1983 it wrote of

"institutionalised inefficiency and waste on a large-scale"

and

"lack of accountability within the Ministry of Defence".

It points out that Ministery officials have devised a number of ways of answering questions and ensuring that auditors, the guardians of the public purse, do not see potentially embarrasing documents. Moreover, parliamentary attempts to penetrate the system are easily thwarted. The example was given of a three-inch file of British companies making Exocet missile parts, but as such documents do not officially exist no one in the House can see them and even the Comptroller and Auditor General cannot see them.

On torpedoes, *The Observer* stated in its article of 13 November 1983:

"The Navy's latest torpedo, the Tigerfish, is considered so unreliable that submarine crews are reluctant to fire it. There are grounds for believing that its successor, Spearfish, recently ordered by the Ministry of Defence at a cost of £950 million, will be equally disastrous."

Tigerfish apparently proved its unreliability in the Falklands war. According to *The Observer*, 70 were fired at a cost of £50,000 each but

"The commander of the submarine which sank the Belgrano chose to fire Second World War generation torpedoes in preference to the Tigerfish he carried."

I was a member of the Select Committee on Public Accounts when we called into question the value of another torpedo, the Sting Ray, the only torpedo mentioned in the White Paper and costing about £700 million at constant 1984 prices. In March, the report by the Comptroller and Auditor General on the torpedo programme estimated the cost of the three torpedoes at £5,000 million up to the mid-1990s, but no other navy within or outside NATO seemed remotely interested in them. The Comptroller and Auditor General summed up as follows:

"Successive torpedo projects have suffered delays and cost increases and optimum weapon effectiveness has not been achieved. This suggested to me that the taxpayer in the past may not have received good value for the considerable sums spent."

That is a typicl understatement of the case from the cautious Comptroller and Auditor General. It is a polite way of saying that the poor British taxpayer has been ripped off by Marconi and others in the defence business. At paragraph 19, the Comptroller and Auditor General says:

"A major difficulty is the lack of competition in the United Kingdom for the prime contractor role."

Marconi, now Marconi Underwater Systems Ltd., has a monopoly in torpedo development and production in the United Kingdom and is sitting very pretty. I remember two years ago, when Sir Frank Cooper, then the permanent secretary at the Ministry, was asked how many defence contractors had gone out of business in the great recession that we had suffered from in the previous few years, he smiled and said, "I cannot think of one."

A later report from the Comptroller and Auditor General on design and procurement of warships, which was published about a week ago, exposes similar problems and abuses. Paragraph 11 of the report says that the five main warship yards have made £185 million profit on the building of warships since 1980-81, as against losses of £525 million on other work in the same period. Paragraph 12 says:

"in terms of the prices paid for warships . . . and the profits made by the warshipbuilders in the past suggest that the MOD have not always received good value for money".

Again, we have the polite, moderate and cautious words of the Comptroller and Auditor General which show, once again, that taxpayers are being robbed of vast amounts of money by the armaments industry.

Vickers Shipbuilding Engineering Ltd. is the monopoly supplier of nuclear submarines to the Royal Navy and depends entirely on Ministry of Defence orders. It is one of the seven British Shipbuilders yards which are to be handed over to private owners. The Comptroller and Auditor General's report says that such companies have consistently overestimated the number of man hours necessary to complete contracts. The overestimates averaged 21 per cent., the worst example being 43 per cent. Non-competitive contracts for nuclear submarines are expected to be worth more than £2 billion up to 1990. Hundreds of millions of pounds of British taxpayers' money is being swallowed up every year by defence contractors whose accounts are never properly checked in Whitehall or elsewhere.

We are now embarking on the Trident programme. I shall say nothing about its morality, but the only people who are laughing are the companies in the United States and Britain which will build the components. My God, the figures are worth quoting. *The Sunday Times* of a few weeks ago described the enormous duplicity, immorality, dishonesty and fraud which is being perpetrated in the United States and which is now being perpetrated in Britain. That article mentioned $748 being asked for a pair of air force pliers, $436 being asked for a navy hammer and $7,600 being asked for an air force coffee pot——

Mr. Deputy Speaker: Order. The hon. Gentleman must conclude his speech—he has had his 10 minutes.

Mr. Hamilton: We do not believe a word that Ministers say when they say that they have defence expenditure under control. On the contrary, they are willing partners in a massive fraud being perpetrated on British taxpayers.

7.24 pm

Mr. Neil Thorne (Ilford, South): I listened with interest to the hon. Member for Fife, Central (Mr. Hamilton), and I am sure that my right hon. Friend the Secretary of State will be delighted to have such a close ally in the appointment of Mr. Levene, whose job it is to ensure that good value for money is obtained.

Mr. Willie W. Hamilton: He is one of them.

Mr. Thorne: If the figures which the hon. Gentleman quoted are anywhere near accurate, they show that there is much work for Mr. Levene to do.

I attended the Select Committee's interview of Mr. Levene earlier this week. What he said shows that he will direct his attention towards that problem and try to ensure that as few as possible cost-plus contracts are entered into, but that there will be many more fixed-price contracts. I welcome that step, as the world is highly competitive and we are in direct competition with other European countries, America and, perhaps in future, Japan.

Further economies could be achieved in the fisheries protection service. I understand that no fewer than 16 vessels provide the service, but that only four of them are required. In 1981 there were proposals to transfer the service to the Merchant Navy, where considerable economies could be achieved. I understand that as recently as last January the Inspector of Fisheries looked into the matter and that four excellent companies are able and willing to provide the service. They are P and O Fleet Mastercare, Townsend Thoresen, Sea Containers and F. T. Everard. I hope that the Ministry and, if necessary, the Cabinet will examine the cost comparisons closely to ensure that there is no waste so that resources can then be moved to other parts of the defence budget.

The two-way street is important. Matters have improved considerably recently. There was once a highway to Britain from America and a narrow country lane from Britain to the United States. The imbalance has been partially rectified, and trade is now merely 2:1 in their favour. There is still some way to go, however, and I hope that the lessons of Trident, which I fully support, have been learnt and that, in future, any such massive programme will be backed up with a direct offset arrangement.

The United States needs our moral support for the continuation of the nuclear umbrella, quite apart from a

[Mr. Thorne]

financial contribution towards the cost. We did not use our negotiating opportunities to the best advantage. Had we obtained offsetting arrangements, we should not have to work so hard to sell Plessey's excellent mobile subscriber equipment system, which my hon. Friend the Member for Gillingham (Mr. Couchman) mentioned earlier. There is no comparison between that system and the RITA system, which the French Thompson organisation is selling hard. I know that my right hon. Friend the Minister of State for the Armed Forces has lent his weight to the Plessey project, because I remember seeing him in Washington when the Defence Select Committee was there earlier this year. I understand that one of the main reasons for his visit was to draw attention to the advantages of the system. The French are devoting their energy to selling a system which is not in the same class as Plessey's tried and tested equipment, being part of the incredible Ptarmigan system.

While so much is being spent on defence, I ask my right hon. and hon. Friends also to consider service families. In the past we have been able to rely very much on the nuclear umbrella. For the past 40 years it has served us extremely well. However, we are now moving into a new era in which several much smaller powers can acquire the knowledge that is necessary for nuclear weapons. Arms have been supplied by some powers to terrorist organisations, and that nuclear knowledge may be used for terrorist purposes in future. Coupled with that fact, if we have the strategic defence initiative, it could lead to 95 per cent. of the nuclear weapons in the world being rendered obsolete, which could mean a new situation for the nuclear umbrella.

If we are asking service personnel to go off and fight for their country, we have an obligation under the defence budget to consider what happens to their families. Therefore, I urge my right hon. Friend the Secretary of State and his Ministers to work closely with the Home Office in considering what should be done in civil defence. In other countries, as much as 3 per cent. of the total defence budget is allocated to civil defence measures, but in this country we spend less than half of 1 per cent. on that. There is a great difference. If we are to work towards the type of result that the strategic defence initiative may produce, we must be ready for what might happen at the end of the day. It would be a costly exercise to try to make the necessary arrangements in a hurry, whereas if it were done over a period of 10 or more years there could be a series of phased developments, particularly in the sphere of shelters. Therefore, the Ministry of Defence has an interest in the matter. I have already mentioned this matter to the Secretary of State and I hope that it will be taken up and looked at carefully.

There is just one other matter that I should like to mention in the short time available. It seems entirely wrong that so many countries are sheltering under the defence provided by relatively few. I am thinking particularly of the Secretary of State's remarks the other day on the poor contribution by one of our NATO allies, Denmark. Other countries, particularly Japan, were limited back in 1945 by the United States to total defence expenditure not exceeding 1 per cent. of their gross national product. That has given Japan and other countries an enormous advantage, in that they have not been burdened by the heavy defence expenditure that we have had to undertake over the years. They have the advantage of relying upon us to keep the air and sea lanes open for the benefit of their trade, both in supplying their goods round the world and receiving the oil which they desperately require to keep their industry going. That is entirely wrong. I understand why the United States did that in 1945, but we have had plenty of time to put the matter right. Whether that is done directly or indirectly is a matter for discussion among Governments, but undoubtedly a better solution must be sought and a more satisfactory answer obtained.

7.34 pm

Mr. Bruce George (Walsall, South): I preface my remarks by expressing my gratitude to those who, in their wisdom, limited speeches to 10 minutes. If that had not been done, non-Privy Councillors would not have had a look in, in such a debate.

Secondly, I should like to comment on the procedural impediments in the House to a proper debate on defence. We are one of the few legislatures that does not consider the Estimates seriously, rarely voting on them and not proceeding line by line. Although many kind things have been said about the Select Committee on Defence, which is under the able chairmanship of the right hon. Member for Spelthorne (Sir H. Atkins), and of which I am a member, we have no real input into the Estimates process, unlike most other legislatures. We probably have the weakest Committee system, certainly the weakest Defence Committee system in the whole of the Alliance with the exception of Iceland, which, as it has no defence, finds having a defence committee surplus to its requirements. Despite our lack of power, we managed to inspire the Secretary of State to a fine series of rhetorical flourishes yesterday, with our reports on merchant shipping and defence commitment and resources.

The Secretary of State lashed out at everyone. Last week it was the Danes. This week it was our Select Committee on Defence for some of the things that we dared to say. That Committee is under no obligation to produce reports that make the Ministry of Defence happy. That is the responsibility of the Ministry's public relations experts and Tory Central Office. It is not our task. We analysed carefully and produced what I believe is a competent piece of research, which will be read diligently in the Ministry of Defence, if that has not already been done.

The Secretary of State struck out at his own Department, defence contractors, the military and the Labour party—indeed, everyone except himself and the Treasury. I am afraid that the Secretary of State is angry because our Committee has finally rumbled him and pointed out that the emperor has far fewer clothes than he has hitherto presented to the world. In his speech yesterday, in criticising the Select Committee on Defence, the right hon. Gentleman looked at our worst case analysis and his best case analysis, and tried to point out the difference between what we say is available for defence and what he says is available. Perhaps our figures were too generous to the right hon. Gentleman's Department. We did not take into account the large pay increase that was given to the services recently. During his interview with us earlier in the week, Mr. Levene talked of a 10 per cent. efficiency saving in defence procurement, which was different from our calculations. Our figures, with which the Secretary of State disagrees, go wider than he is prepared to admit. The simple fact, which anyone can see,

is that there is a considerable discrepancy between the Government's aspirations and what is available for defence. It is what some people would call a funding gap. No amount of massaging of the figures, or use of mirrors or conjuring tricks will eliminate that fact. The Government will simply not have the money available to do what they wish.

The Secretary of State proudly told us what his Department had done in the past five or six years, but one must tell him honestly that, with the exception of a few years, his Government have not met the 3 per cent. real increase target to which the previous Government agreed. His Government are now abandoning it. Therefore, they are in considerable difficulties. I would accept a non-nuclear defence policy — not because I have moral objections to nuclear weapons. I find all nuclear and chemical weapons objectionable. I believe that if there is going to be a funding gap, the only function that can be withdrawn, albeit reluctantly, is the nuclear function, as long as the resources committed to conventional defence will compensate.

That can be strongly justified to NATO. The Government, in committing themselves to NATO and to a significant out-of-area capability—the Falklands and so on—will simply have to have a defence review, and abandon a function, or half a function. It must be unpalatable for Conservatives to admit that fact, but I suggest that in addition to reading the White Paper they look carefully at the report of the Select Committee on Defence.

The Select Committee investigated many problem areas, including the flying white elephant Nimrod and the gross inadequacy of our air defence. The Conservative party criticised Labour's record in air defence, yet a Conservative Minister slaughtered our air defence 30 years ago. The idea of bringing out the museum Lightnings has been laughed off as the Army's equivalent of digging up General Custer. What we need, but will be unable to afford under the Government, are far more Tornados for air defence. The arming of Hawks is not remotely adequate, because they have no radar. They will need Phantom jets to take them out and point them in the direction of an adversary, which will no doubt release its load many miles away. We shall be sending out gallant men unprepared.

The Government are struggling in every way possible to bridge the gap that they know exists between what they want to spend and what they can spend. One example that has come to light is our third aircraft carrier, the Ark Royal. It is lunatic planning to decide to have three aircraft carriers but not to have the men, aeroplanes and helicopters to put on those carriers. Shuffling two crews among three carriers is the height of folly in peacetime, and would be suicidal in time of war.

My hon. Friend the Member for Kingston upon Hull, North (Mr. McNamara) criticised COCOM. I sympathise with some of his economic arguments. It is the height of lunacy to export or give away equipment of a non-military character to the Soviet Union that can easily be used for military purposes. Research has shown how costly it is to compensate the West in military terms for the quantum leap forward that the Soviet Union has been able to make in many technologies, based not only on intelligence and spying, but on the legal, and sometimes illicit, exports of what might appear to be non-military equipment.

During the next three years, the Labour party will have the difficult task of convincing the public that its alternative defence policy will provide adequate security for Britain. The policy that we presented at the previous general election did not work, and contributed heavily to our defeat. Unless we are careful, we might do the same in 1986 or 1987.

During visits of the Select Committee to other countries, I have met many Democratic Socialists. To most of them, defence is vital. Only in Britain and a few other countries are democratic Socialists considered as being endorsers of pacificism or semi-neutralism. Last week, we were in Sweden. Being a Democratic Socialist in Sweden and believing in defence is an expensive business. It has 350 fighters—almost as many as we have—and an enormous commitment to civil defence. Almost everyone between the ages of 17 and 47 is committed to participating in the defence of Sweden. In France, Socialism does not mean pacifism. The Socialist-led coalition in Italy is investing heavily in defence. Socialists in Spain and Portugal would not deny their citizens adequate defence. The last thing that one could call Chinese Socialists is pacifist or neutralist or people who are naive about the Soviet Union.

We can convince the public only if we convince ourselves first. Any party whose defence programme includes policies that the public perceive as inadequate will deservedly be rejected by the electorate. I am not sure that we are up to it, but the Labour party's task is to provide a proper alternative defence policy that is not a carping membership of NATO, like the Greek variety, but is a genuine commitment to NATO.

7.44 pm

Mr. James Couchman (Gillingham): Yesterday, my right hon. Friend the Secretary of State stressed the vital importance of our membership of NATO. He was right to do so, for it is impossible to exaggerate how important it is to NATO to have Britain as a member, and how important it is for us to be a member of NATO. I shall concentrate my remarks on some of the strains that confront the Alliance.

My first concern arises from the decision to proceed with research on the strategic defence initiative. I approve of the decision, and I wish our American allies every success. However, a basic misunderstanding of SDI seems likely to fuel uneasiness about American intentions in researching those sophisticated systems.

Last week, with other right hon. and hon. Members, I was privileged to be briefed on SDI at the Pentagon by the programme's director, General Abrahamson. That briefing set SDI in context as the series of research programmes that it is. The programme is wholly compatible with the anti-ballistic missile treaty, and is comparable to the research permitted under that treaty, which the Soviets have been carrying out for many years. Only the Soviets have deployed an ABM system to protect Moscow.

As my right hon. Friend the Member for Torbay (Sir F. Bennett) said, for 20 years, NATO has relied on the principle of mutually assured destruction. We have relied on a nuclear retaliation capability large enough to counter any potential aggressor. For many years, it has been assumed that neither NATO nor the Warsaw Pact possessed the technology to construct a comprehensive and effective defence against nuclear offensive systems. That assumption must now be set aside. Scientific and technological advances suggest that we must now consider

[Mr. James Couchman]

seriously a defence option, especially a non-nuclear option, which might allow us to move to a much more secure and stable basis for deterrence.

Apart from technical feasibility, the other parameter that has changed has been the scale of Soviet offensive and defensive growth since the SALT process began, in addition to which there has been growing non-compliance and deception by the Soviets that threatens the entire military balance. Not only does the Soviet Union possess the only ABM system; it possesses the world's only deployed anti-satellite capability. The Soviet Union clearly believes in both offensive and defensive deterrence.

In view of the massive build-up of Soviet forces, offensive and defensive, nuclear and non-nuclear, it is clear that NATO must respond by modernising its retaliatory capacity and updating its strategic and longer-range intermediate nuclear forces. Hence the deployment of MX missiles and the development of Midgetman, the deployment of cruise and Pershing missiles and, for Britain, the ordering of Trident. In addition, NATO must explore new deterrent options. Hence the desirability of SDI, for it is directly aimed at negating the destabilising effect of Soviet growth in offence and defence. If it concentrates Soviet minds on defence, it will have a highly beneficial stabilising effect.

It is unfortunate that those who scoff at NATO and at our defence should have tagged SDI with the perjorative epiphet of star wars. SDI is a research programme with several different elements, which is carried out at several different locations. I should stress that it is a research programme. Although research will cost about $26 billion during the next few years, deployment of such a system if the research is successful would cost anything between $500 billion and $1,000 billion. The jump between research and deployment is a quantum leap. Research is permissible under the ABM treaty; deployment would require negotiation. But we should be deluding ourselves if we thought that the United States would give the Soviets a simple veto on deployment.

We should encourage our American allies to carry out the research, in the hope that they will achieve the concept of a multi-layered defence system. We should share in that research and, if it is successful, we should share in the decision as to whether SDI should be deployed.

My second anxiety relates to the current American attitude to the ABM treaty and the unratified SALT II treaty. In the case of the ABM treaty, the Americans have every good reason for cynicism. It is clear that the Soviet construction of a huge new phased-array radar near Krasnoyarsk is an ominous departure from and breach of the ABM treaty. That installation will increase the Soviet Union's capability to deploy a territorial ballistic missile defence system. Claims that it is a part of a space tracking station are demonstrably a cynical untruth.

The SALT II treaty, although unratified, has generally been adhered to by the USA for six years. This week, President Reagan has committed himself, on the advice of Secretary of State Shultz, to broad observance of SALT II whilst reserving the right to counter Soviet breaches such as the construction of the SS-X-25 missile.

The announcement that the United States would take out of service a Poseidon submarine later this year when the new Trident submarine goes to sea is to be welcomed. It is in sharp contrast to Soviet activity. Nevertheless, the tensions and strains in connection with SALT II and the ABM treaty have contributed to our uneasiness.

My last worry about the NATO Alliance relates to the south-east flank. I have recently been to Bulgaria with a number of other hon. Members. There we were told by senior members of the Government that Bulgaria is keen to promote a Balkan nuclear-free zone. There is little doubt that the initiative for that came from Moscow, to which Bulgaria offers close support. It is an idea which is easily accepted by Yugoslavia, Rumania, Bulgaria and even Albania, to whom no one would be silly enough to offer nuclear arms. It is an idea that is seductive to Greece, ruled as it is by the unpredictable Mr. Papandreou. In his bid for re-election, Mr. Papandreou offered as an election bid the expulsion of American bases in 1988—shades there perhaps of another Socialist party aspiring to government.

Only Turkey with its vital strategic position is not attracted by a nuclear-free zone, but who can tell what the effects of the current resurgence of Moslem fundamentalism will be on Turkey and its present western-inclined Government?

I am worried about the stability of the south-east flanks. I floated that anxiety in Washington last week and received a glib assurance from a staff man at the Pentagon that the Alliance is in fine shape. I remain to be convinced, because I believe that there are strains and tensions in the Alliance which run deeper than mere "domestic tiffs".

It behoves us all to work hard to conserve and foster the vitality and strength of NATO, our most important partnership. Opposition Members should drop their malicious and divisive proposals to throw out American bases or even some classes of American weapons. It is the height of hypocrisy to suggest that we should deny bases to American nuclear weapons whilst hoping that America will continue to offer us protection under its nuclear unbrella.

The threat posed to the Alliance by the erratic Mr. Papandreou is nothing when compared with the threat posed by those who would expel the Americans and their weapons from Britain. Such a catastrophe would surely spell an end to the Western Alliance.

7.52 pm

Mr. John Cartwright (Woolwich): Like the hon. Member for Gillingham (Mr. Couchman), I have been subject in Washington to briefings on SDI. It must be a growth industry at present in Washington. I reached conclusions slightly different from those of the hon. Gentleman. The doubts and reservations about SDI that transcend the political spectrum in Europe are well founded. It is difficult, for example, for those of us who have been brought up to believe that the deterrent has maintained peace throughout the post-war years suddenly to be told by the American Administraton that the whole idea of deterrence is immoral and will not last.

The critics of SDI are correct to suggest that it involves the risk that a potential aggressor will increase his offensive capability to swamp the defensive system. The critics are also right to suggest that, while the SDI approach has an impact on arms control, it may well lead to the unravelling of the ABM treaty, and cuts that we want to see in the INF and the START will be much more difficult in view of the American priority on the SDI.

If the SDI approach were to be effected it could well result in the decoupling of Western Europe from the United States, because the development of an SDI approach on both sides would undermine the effect of the United States nuclear guarantee to Western Europe.

Finally, there is the opportunity cost of the SDI operation. The sums of money involved, as we are aware, are gigantic. One cannot help feeling that they might be directed better to other parts of the defence budget.

It is not just money. I had the opportunity about a month ago to be in the national laboratory at Los Alamos in New Mexico looking at some of the techniques and technology involved in the SDI operation. The scientists there are in no doubt that SDI will attract the best and brightest brains in American physics. With the current state of the world, I cannot help thinking that their expertise and abilities might be better directed to other projects.

The American belief that it is possible to accommodate the improvements in conventional defence that are necessary, the modernisation of the nuclear deterrence and SDI during a period of pressure on defence budgets mirrors the belief of this Government that it is possible to have Trident and all the other improvements in defensive capability that we want.

I am glad to see that the Select Committee on Defence is examining the impact of Trident on the defence budget. I look forward with great interest to see what conclusions it reaches. I hope that it is rather more successful in getting clear answers from the Ministry of Defence than it has been in the past. I hope, for example, that the Committee does not find itself, as it was on this occasion, frustrated by vague and evasive answers, and elegant but unhelpful hypotheses.

It is perhaps worth recalling that the Select Committee on Defence studied the issue in 1981. It produced a detailed report after more than a year's investigation of the future of the strategic deterrent in this country. Even then the Select Committee on Defence had problems in obtaining clear information, because the report's first conclusion states:

"It is a matter of regret to us that we have found the Ministry unwilling to discuss in any detail the opportunity costs of purchasing the Trident system".

In recommendation 14, the Committee, in a sense, trailered the type of problem that we are discussing tonight. It said:

"Against the background of current reviews of defence, commitments and expenditure, it is very difficult to see how it will be possible to give top priority to the Trident programme throughout the decade without displacing or squeezing out some other equipment programmes."

That is part of the case against the Trident that has been deployed during the debate.

Conservative Members said yesterday, and they have said it again today, that there is no alternative to Trident. That ignores a good deal of the academic work done by Professor Freedman, Dr. David Greenwood and others which suggests that there are alternatives. The most likely alternative is a cruise system. The Minister of State merely dismissed the cruise alternative as being less effective and more costly. I am not aware of any recent work which the Government have produced which would show that cruise is more costly than Trident. There is a good deal of independent evidence to the contrary.

When it comes to effectiveness, no one would dispute that any form of cruise deterrent system would not be as effective and sophisticated as Trident. We must then face the question of what type of deterrent we need in this country. I argue that we need only the minimum deterrent. The right hon. Member for Brighton, Pavilion (Mr. Amery) correctly said that it would be a foolish waste of resources to purchase a deterrent which was not effective, but I would argue the reverse. It is equally foolish to waste resources on a deterrent which is far more sophisticated and accurate and which has a longer range than we need in this country. When we have a deterrent system whose warhead potential is 14 times the potential of Polaris, it is certainly too sophisticated for us. We should also bear in mind the impact of that on arms control negotiations.

I am surprised that hon. Members have attempted to devalue cruise. It is worth reminding ourselves that the United States is involved in massive investment in cruise. The United States' current programmes, for example, involve more than 5,000 air-launched cruise missiles, of which 1,000 are already deployed, and almost 2,000 sea-launched cruise missiles. The Department of Defence describes the Tomahawk cruise missile as

"a highly capable and versatile weapon system that can be launched from a variety of surface ships, submarines and aircraft."

I do not argue that the Tomahawk is a perfect replacement for Trident, but the way in which it has been dismissed in the debate runs contrary to the evidence before us.

Finally, I wish to comment on the issue of manpower in the armed forces. That is not mentioned in the White Paper. I notice that the Select Committee report states that the White Paper

"contains surprisingly little about recruiting, retention, pay and allowances, maintaining skills, morale and career prospects at a time when these issues are causing concern to service men and their families. More space should have been given to these aspects."

Yesterday the Secretary of State fairly referred to the problems of increased outflow from the armed forces as a result of pressure from industry. He referred to fierce competition from the private sector regarding technical posts. The picture that he presented was that that sort of competition from the private sector would become stronger as the economy improved and, presumably, unemployment became less of an automatic recruiting sergeant for the armed forces.

We must bear in mind that population changes make it difficult for us to get the manpower that we need in the armed forces. The reduction in the numbers of 16 to 19-year-olds in our population, for example, will continue throughout the 1980s and 1990s. Although the problem was referred to in the 1981 White Paper, it has not been referred to since. That problem will continue even beyond 1991. In 1983, for example, we had 1·929 million men in the 16 to 19 age range, but by 1995 that figure will have dropped to 1·39 million. I know that that is a general problem in Europe, but the Government must devote much more attention to it.

We can improve our reserve capability, but that will not solve all the problems. We can use modern technology to replace men, but that will not solve all the problems. We can pursue the strategy, which the Secretary of State set out yesterday, of trying to ensure that the armed forces keep pace with pay and conditions outside. That is right, but it will not solve all the problems. That is yet another area where the pressures of trying to make good deficiencies in manpower will add to the pressures on the defence budget. That brings us back once again to the impact of Trident.

[Mr. John Cartwright]

Because we do not believe that the Government are taking sufficiently seriously the impact of those budgetary problems on our defences, we shall not support them tonight. Equally, we shall not support the Labour amendment, because the commitment to remove all nuclear weapons from the United Kingdom is wholly irresponsible.

8.3 pm

Sir Paul Bryan (Boothferry): I declare my interest as a director of a shipping company, but also as one of a growing number of right hon. and hon. Members who have become concerned about the decline of our merchant fleet and, in particular, its ability to carry out its role in time of war. That growing anxiety has been reflected in the significant number of times to which the subject has been referred in the debate.

The lack of any evident will on the part of the Government to face that problem has been especially worrying. However, I feel rather more at ease this year about that than in last years debate, not because the decline has halted—far from it—but because I see signs that we are all at least beginning to face the issue. Last year the Government were still resting on their Falklands laurels. No criticism came from the public. After all, the Merchant Navy had more than proved itself in the campaign, when there were more merchant ships taking part than those of the Royal Navy. No mention of the Merchant Navy appeared in the Statement on the Defence Estimates, an extraordinary omission.

At that time the then president of the General Council of British Shipping and a few worried members of the shipping industry and of this House seemed to be the only warning voices to be heard. It was then that the Defence Select Committee played precisely the role that Select Committees should play. In its report last year, the dangers were for the first time exposed and an answer was demanded. That was backed up by two powerful speeches — one by the Chairman of the Defence Select Committee, my right hon. Friend the Member for Spelthorne (Sir H. Atkins), and the other by my hon. Friend the Member for Ashford (Mr. Speed), who as we heard again today is extremely knowledgeable about anything to do with the sea. Subsequently, my right hon. Friend the Member for Taunton (Sir E. du Cann) set up the all-party maritime group, supported by some of the most influential Members of the House. Finally, we have had the first report from the Defence Select Committee on the use of maritime shipping for defence purposes, which was published only this week. During the past year the pressure on the Government has really built up.

In this year's Statement on the Defence Estimates we have the interim reaction to that pressure. We are promised a major study by consultants into the future trend of availability of those parts of the merchant fleet for which there is a defence need. The results are due to be available by the middle of the year—in other words, very soon. That is a welcome sign that the Government appear to be waking up to the defence consequences of the decline in the British merchant fleet. The consultants' studies will surely secure a basis of facts, on which the continuing debate can be based, although the Defence Select Committee's report makes one wonder how far Ministers had taken the issues on board when they embarked on this course. Indeed paragraphs 25 and 31 of the report are pretty damning.

The first report published this week shows the Select Committee system working at its best. The Members have got their teeth into the subject, and will not let it go. While recognising the need for confidentiality, the consultants' report will clearly form the basis for discussions in the coming months. As much of it as possible should be published, and the Select Committee should be given full access to it.

Paragraph 9 of the report gives a clue to the reasons for apparent past ministerial disinterest. Few problems were likely to arise in the days when the merchant fleet was much larger than it is now, both in total and in respect of each of the ship types. When there was such a large pool of ships to draw on, one could afford errors in estimating the future size of the fleet. As the report says:

"fluctuations in the availability of ships for any reason would be covered by the excess of vessels in the Merchant Fleet over those required for defence purposes."

Meanwhile, before the report of the consultants, one of the most intractable problems has been brought to light by the Defence Select Committee report and by several hon. Members during this debate, and has been underlined in the presidential address of the new president of the GCBS, Mr. Brian Shaw. He said:

"another striking feature of British Shipping is how increasingly international it has become. Companies not only operate as partners in international consortia; they are sometimes multi-national companies in their own right. Moreover foreign ship owners no longer begin at Calais. Something like a quarter of British owned shipping is now registered outside the U.K. and the proportion is now rising."

He goes on:

"There is a growing fleet of British-owned ships sailing under a variety of non-United Kingdom flags. We have experienced the development of consortia, joint ventures, interlocking share-holdings across international boundaries and we have seen the management in operation of ships increasingly as an activity carried on quite separately from ship-owning."

Thus, the ease and speed with which the Government were able to commandeer the pick of the merchant fleet for the Falklands campaign was misleading. The time has come to establish what ships will be legally and practically available to the Navy in a longer term war.

Another feature of the shipping industry—common, I suppose, to most industries today — is the speed of change. It is not only the numbers and ownership of ships which are changing, but the types. Within a few years, the size of tankers doubled. The same is now happening with container ships, which are thus much more vulnerable in war.

The summary of the British merchant fleet, which I understand is now to appear yearly in the statement, assumes a new importance and should be in more detail to reflect the increasing specialisation which is the order of the day. For that reason, I commend paragraph 45 of the Select Committee's report. It is probably the most important recommendation in the document, for it says:

"We believe that in future Defence White Papers, the Merchant Navy should be treated formally as a defence resource. From now on, there should be statistical information on the availability of merchant shipping by category, including only those vessels susceptible to requisition."

It goes on to say that the manpower figures should also be given.

I hope that the consultants' report will go beyond the role of the Merchant Navy in its direct support duty to the

Royal Navy and will deal with the problem of keeping the country supplied in wartime, which was a large part of its duty in the last war. For example, the position of our ports in time of war needs consideration, as an increasing proportion of our supplies now arrive in container ships. Container terminals, which are dependent on a few huge cranes, must be more vulnerable than a conventional port. We were told in the Felixstowe debate that there was an excess of container terminal capacity in Britain. That may be inconvenient now, but it could be a great boon in time of war.

The report points out the extent to which responsibility for providing an adequate merchant fleet in wartime is divided between a number of Departments and, therefore, tends not to be the prime responsibility of any one Department. For instance, I do not suppose that the Merchant Navy's role in war was uppermost in the Chancellor's mind when he dealt the shipping industry such a blow in his 1984 Budget.

To meet the dilemma, my right hon. Friend the Member for Taunton has advocated a Minister for Shipping. I doubt whether such a Minister would be senior enough to be effective. Nevertheless, we must find a method by which responsibility for the policy of shipping and the monitoring of its achievement is carried out at the highest level of Government.

8.14 pm

Mrs. Ann Clwyd (Cynon Valley): Despite the cosy and comforting tone of the White Paper, there are a number of disturbing areas which it does not address, one of which is secrecy. Another is the extent to which the United Kingdom has mortgaged its future, not only to the nuclear arms race but specifically to United States nuclear arms policy.

The White Paper has done nothing to lift the obsessive secrecy which pervades any important discussion about defence. As the Select Committee reports in paragraph 36:

"We wanted to examine in-service dates, operational life, scale and the phasing of expenditure. Our purpose was frustrated by vague and evasive answers and elegant but unhelpful hypotheses."

Many of my hon. Friends have had similar experiences with Ministers in recent months. For example, written answers were given to me on 29 October of last year on the question of FOFA, the follow-on force attack concept. I asked the Secretary of State what view of the FOFA concept had been taken by the NATO military committee, and was told that that committee's business was, by its nature, confidential. I then asked whether the FOFA concept would be on the agenda of the December meeting of NATO defence ministers, and I received the reply that the business of the ministerial committee was confidential —[HON. MEMBERS: "Hear, hear."]—"Hear, hear" say Conservative Members. They do not feel the same in America, because three days earlier General Rogers held a briefing for journalists and the details of that press conference were reported fully in the *International Herald Tribune* on 26 October. That clearly showed that he gave clear answers to the questions that I had asked our Minister.

The White Paper, in justifying the increase in the number of warheads of the Trident D5 purchase, says:

"The United Kingdom's deterrent force, when equipped with Trident, will remain the minimum size compatible with cost-effectiveness and credibility."

As the Government have not yet released details of the number of warheads that will be produced for the Trident system, how can the House judge either contention?

Ministers have repeatedly denied that "Air-Land Battle" has been used on NATO exercises. Yet Casper Weinberger told Congress that it was used on NATO's Reforger 82 exercise. He also made it clear that the declared intention of the United States Defence Department was to bring about European acceptance of the "Air-Land Battle" doctrine, involving the offensive use of chemical and nuclear weapons in deep attacks. Who is telling the truth, our politicians or American politicians?

I know who I prefer to believe. *[Interruption.]* I do not believe our politicians, and that is clear to all on the Opposition Benches. If we do not receive answers from Ministers, I cannot believe what they do not say— *[Interruption.]*—because they do not say it. They hide behind the tag of "confidential." In the United States, on the other hand, Congress is open on these issues and at press briefings full answers are given to questions that we in this House are denied.

Last week a group of Members of Parliament went on a visit to SHAPE and NATO for round-table discussions chaired by top military personnel, including Chief of Staff General James E. Dalton, General Bernard Rogers' chief of staff. When asked for information concerning battlefield nuclear weapons and about exactly what General Rogers had sought at the nuclear planning group at Montebello in 1983, he replied:

"The British Government has been told."

Pressed about the modernisation of the weapons, he said:

"It is up to your Government to tell you, not me."

Asked to what the allies were likely to agree, he said:

"Ask your own national Government."

That is precisely the problem. We ask hundreds of questions but find ourselves, like the Select Committee, frustrated by vague and evasive answers.

My hon. Friend the Member for Sunderland, North (Mr. Clay) yesterday illustrated the point when he attempted to get answers to questions about American nuclear-tipped artillery shells and their deployment. How much longer in a so-called democratic society must we rely on the American press and Congress to give us the answers that our politicians should be giving us?

The White Paper says:

"We welcome this debate for it is vital in a democratic society that people should clearly understand the issues involved in maintaining defences sufficient to deter aggression. We believe it is appropriate, this year to address these questions in detail."

However, in effect, there is no debate. Nuclear weapons, our defence policy and the secrecy surrounding them are negating the very values in our society on which we so often pride ourselves.

What is even more sinister is that, while the Labour party intends to see that the defence of the United Kingdom is put on a rational and stable footing—if Conservative Members waited until the end of my sentence they would not laugh quite so hard—one of our major allies, the United States, is apparently prepared to frustrate the policy of a democratically-elected Government. When asked what the American reaction would be to a British Labour Government abandoning nuclear weapons for Britain, General Dalton replied that the United Kingdom has "a key geographical position". When asked what kind of pressure might be put on a future Labour Government and whether the pressure might

[Mrs. Ann Clwyd]

include economic sanctions, General Dalton replied, "It might be."—*[Interruption.]* Obviously Tory Members do not believe in democratically-elected Government.

When a democratically-elected Government was overthrown in Chile in 1979——

Mr. Boyes: Did not General Dalton also say that the American Government were pressurising the Government of Canada because they were not happy with their performance and that they were also dissatisfied with the 1 per cent. spending on defence in Japan and were going to put pressure on that Government as well? Does this not show the lengths to which the American Government will go to get their own way?

Mrs. Clwyd: I thank my hon. Friend for making that point. He also heard General Dalton say what I am telling Conservative Members, although they obviously do not want to listen.

Henry Kissinger said about Chile in 1979 that the revolution was in the best interests of the Chilean people. We have seen what the Americans are doing to a democratically elected Government in Nicaragua. We have seen their reaction to New Zealand, when that Government refused to toe the line.

Yesterday, the Secretary of State for Defence told us that each of us is a sovereign nation. That suggests that we have our destiny in our own hands. Can we believe that when we see how more powerful countries, and even multinational companies, can destroy the economy of a country by their actions?

Mr. Brian Sedgemore (Hackney, South and Shoreditch): Can my hon. Friend elaborate that point? She appears to be announcing an important new papal doctrine from the lips of General Dalton. If the United States is prepared to inflict economic sanctions on Britain, they should remember that economic sanctions have political consequences. Interfering in the affairs of a democratic state amounts to a denial of the democratic system. Were there any witnesses to this statement? Can my hon. Friend give us the names of those present so that we can find out whether they can verify what she is saying? Obviously, NATO will have to respond to what my hon. Friend is saying.

Mrs. Clwyd: I thank my hon. Friend for making that important point. Nine Members of Parliament were present at this meeting, and during the round table discussions chaired by General Dalton there were also present Minister-Counselor Grey, from the United States, Rear Admiral John Rodocanachi from Canada, who is assistant chief of staff in the inteiligence division, a German general, Major General Jurgen Schluter, deputy assistant chief of staff, policy division, Rear Admiral Kenneth A. Snow, deputy assistant chief of staff, operations division and Air Commodore Pilkington.

The people at NATO were so concerned by what General Dalton had said that public relations men followed us about for the whole of the rest of the next day, apologising for the way in which General Dalton had responded to our inquiries. They said that he had been so frank because he was letting his hair down because he was retiring in July. We are extremely glad that General Dalton was prepared to let down his hair and be so frank about the intentions of the United States military if a future Labour Government were to implement their non-nuclear policy.

The Defence White Paper is a bland and complacent document. It completely ignores four things. The first is the growing absurdity of the so-called flexible response. The second is the extent to which the Government are prepared to mortgage our future to United States nuclear weapons policy. The third is the serious financial implications for our conventional forces if Trident is allowed to be constructed. The fourth is the need for clear and detailed information, not least on financial matters, if we are to have democratic debate in anything other than name. In short, the White Paper is much prose to little effect. It is thousands of words that do nothing to paper over the many cracks in Britain's defence posture, which the Government have brought about by muddled thinking and downright evasiveness.

8.26 pm

Mr. Cyril D. Townsend (Bexleyheath): I am prepared to admire the hon. Member for Cynon Valley (Mrs. Clwyd) for the way in which she has persevered with the issues that she has raised. However, I listened closely to her speech, but I could not agree with a word that she uttered from start to finish. There were two basic errors.

First, we would all be interested to learn the state of the art of communicating with our nuclear submarines. I would be fascinated — but so would people in the Kremlin. There must be rules and regulations about what is brought into the public domain. Secondly, it is incredibly naive to think that if there were an invasion of West Germany it would not be part of NATO's plan to attack forces piling up in East Germany. That has been part of NATO's defence strategy for many a year, and I hope it will continue to be so.

In many ways, the debate has an air of unreality. I cannot remember the golden years—they have certainly not been around for the past 20 years — when our defence budget was not under pressure. I remember only too clearly sitting on the Opposition Benches and watching with horror as Labour Ministers slashed the defence budget by about five or six times. If anybody thinks that a Labour party returned to government—I do not think that it will be — would increase spending on conventional weapons, he is living in a fool's paradise.

I am a 100 per cent. supporter of the Trident decision. I cannot think of a better weapons system to act as a deterrent. I find absurd two arguments in particular of those trotted out against it. The first is that it is too sophisticated. The Trident system is due to last until I reach the age of 82, when I hope to be coming up to being one of the older and perhaps more senior Members of the House. The thought of our not going for the latest and best technology when we have such a period of time ahead of us is absurd. Secondly, the concept that the present Polaris submarines should be allowed to continue beyond their natural lifetime is highly irresponsible. What about the poor crews who have to go to sea in them?

A vexed issue is the huge and increasing stocks of chemical weapons in the hands of the Soviet Union. Rather chillingly, the White Paper talks about 300,000 tonnes of nerve agencies. How should the West respond to that sort of threat? We might respond in three ways. First, we can look the other way and pretend that we do not know anything about it. I would not back any Government that

adopted that point of view. Secondly, we could develop our own offensive chemical weapons capability, a capability that we rightly gave up after the war. If one thinks through the implications both at home and abroad, it is not a course that I would recommend to my Front Bench. There is too much evidence that other countries follow one's bad examples, not necessarily one's good examples. The unilateral disarmers might remember that point.

There is a third response, which I call the Admiral Sir James Eberle solution, which is fairly brutal: that we should make it perfectly clear that we are not going to develop an offensive chemical weapons capability. I do not think that Congress will allow the United States to develop its stocks. We should also make it perfectly clear that if, in the event of hostilities, there were to be a major use of chemical weapons by the other side, we should feel free to give serious consideration to using tactical nuclear weapons in reply. That may fill many hon. Members with shock and horror, but it is facing reality.

I have always been in two minds about the Mount Pleasant airfield in the south Atlantic. Of course it was expensive and of course it would change the environment of the islanders, but the case for building it was probably overwhelming. I do not see how our garrison could be scaled down without it. The runway at Stanley will soon need to be repaired, anyway.

It is very important that our defence policy for the rest of this century should not be distorted by the Falklands campaign. That would be most foolish. Our defence posture in the Falklands is a burden on the defence budget. Admiral Stavely has referred to the shortage of ships in the north Atlantic. He claims that the fleet is at about half strength. It is a big naval commitment. For most of my political life Britain has been withdrawing its forces from the far-flung corners of the empire back to northern Europe and the north Atlantic. I do not see how we will have the ability in future to send another task force 8,000 miles down the Atlantic sea lanes. Should we have the merchant ships if a similar operation had to be carried out in a year's time, let alone in 10 years' time? I hope that the Ministry of Defence is feeding to the Foreign Office some of the long term implications of our strategy in that part of the world.

Finally, I wish to refer to a subject that is given a special little essay of its own in the White Paper, the British training teams abroad. They do a remarkable job. It is a rare privilege for a country to be invited to send training personnel to build up from scratch, or to rebuild the defence forces of a country. We have tremendous expertise. Some of our best soldiers, sailors and airmen are involved in these programmes. In real terms, however, we have cut back upon the expenditure on those programmes. I ascertained that fact from the Library this afternoon. I know that more people are serving abroad—in about 30 countries, I believe—but it is shortsighted to cut back on the amount of money that is put into that effort.

Our defence policy is very much on the right course. It backs up our foreign policy. Lord Home of the Hirsel used to refer to dealing in conciliation from a basis of strength. Our Foreign Secretary is, I understand, to be the first British Foreign Secretary to visit each eastern European capital. That policy is reinforced by the fact that in the last Parliament we spent so much time upon strengthening our defence capability. We are taken seriously. Lord Mountbatten made a famous speech in May 1979. It is much used by the Campaign for Nuclear Disarmament. I see that on the CND bumf they write on top "The speech we overlooked." I did not overlook that speech. Lord Mountbatten said:

> "To begin with we are most likely to preserve the peace if there is a military balance of strength between East and West. The real need is for both sides to replace the attempts to maintain a balance through ever-increasing and even more costly nuclear armaments by a balance based on mutual restraint. Better still, by reduction of nuclear armaments I believe it should be possible to achieve greater security at a lower level of military confrontation."

That is very much where I stand. Anybody who read the major speech made by the Prime Minister in Hungary recently knows that is very much where my right hon. Friend stands. It is a thoroughly sound and sensible approach for this Government to adopt.

Ministers in the Ministry of Defence may feel that the campaign against CND has gone well, that our defence posture is sound and that to some extent, therefore, we can rest on our laurels. That is a fundamentally false assumption. A great deal of evangelical work lies ahead of us in two areas. First, the very success of NATO means that it is not understood by a growing number of people in our constituencies. Secondly, the need for NATO to have a back-up of nuclear weapons is not understood in the schools and universities of this country. There is a tremendous amount of work to be done there.

It used to be said of the Stonewall Jackson brigade in the American civil war that it started at dawn—except when it started the night before. I commend that sort of spirit to my right hon. Friend the Minister of State for Defence Procurement. God forbid that he should have too many late nights, but let him and his colleagues get up early. They have a fundamental job to do of great importance to the safety of this country. They have to explain what our defence policy is all about. In return, my right hon. Friend has the privilege of responsibility for the finest, fittest, most skilled and most courageous service men in the world.

8.36 pm

Mr. Roland Boyes (Houghton and Washington): I regret that I have to say to the hon. Member for Bexleyheath (Mr. Townsend) that I agree with very little of his speech. However, he referred to his abhorrence of chemical weapons. I should like to say a few words about chemical weapons and their possible use in war. Paragraph 18 of Annexe A of the "Statement of the Defence Estimates" is headed "Chemical Weapons". This paragraph of 15 lines contains a vitally important sentence:

> "Among NATO members, only the United States has chemical weapons; but she has produced none since 1969 and has only a limited and ageing retaliatory capability, which is not declared to NATO."

That sentence raises a number of questions: what are these weapons? Where are they located? What does "not declared to NATO" really mean? One could even ask questions about their control.

Chemical and biological weapons are the subject of the Geneva protocol of 1925 which outlaws the use of these weapons. While nations agree to a no-first-use policy, it did not stop the signatories, including the United States, the Soviet Union and the United Kingdom from using them in retaliatory circumstances, nor did the protocol stop production and stockpiling. Chemical weapons are barbaric, destabilising and socially abhorrent, yet on a

[Mr. Roland Boyes]

recent visit to SHAPE and NATO the message to the parliamentary group was quite clear. In view of the Soviet Union's superiority in chemical stocks, it is necessary further to develop this type of weapon so that NATO military commanders have it at their disposal in a battle situation.

In a world where some countries have the capacity to use nuclear weapons not only to destroy the territory of an aggressor but to destroy all living matter on earth, to develop and deploy new chemical weapons is the height of criminal insanity. As a consequence, disarmament talks would become even more difficult as a new arms race began. It would undoubtedly lead to a proliferation of committees and increased tension and suspicion.

The Government's view on chemical weapons was put during a debate in another place. Lord Trefgarne echoed the Prime Minister when he said in the House of Lords on 23 April that Britain had abandoned its chemical warfare capability in the 1950s and that that policy had not changed, nor was any change proposed. So far so good. However, I shall now return to the questions that I proposed a few moments ago, and examine together Lord Trefgarne's statement and the text that I quoted from the White Paper. I shall demonstrate clearly that the Government are more closely linked to chemical weapons than they want the public to know.

For a start, the paragraph in the White Paper is misleading, because it does not let an uninformed reader know that the USA has chemical weapon stocks in the Federal Republic of Germany. It does not tell the reader what kind of weapons are stored there, and it misleads by suggesting that they are not part of NATO's armoury.

In the debate in another place to which I referred previously, Lord Trefgarne acknowledged the existence of the US chemical weapon stocks in the Federal Republic of Germany but dismissed the information given to him by Lord Mayhew when he said:

"I do not think he will be surprised when I tell him that it is not really a matter for me."

I am surprised that a Minister can utter those words when the United Kingdom is a member of NATO and US forces —except for a few on specialist duties—are committed to NATO and armed with chemical weapons.

Lord Trefgarne also emphasised, in replying to a point raised by Lord Kennet, the need to uphold NATO's deterrent strategy of flexible response. In reply to another of Lord Kennet's points about chemical weapon release procedures, he said:

"Political control of the limited US stocks is therefore naturally a matter for them."

I shall return to the question of political control procedures, but, as the writers say, the plot is beginning to thicken.

Further evidence to substantiate the link is provided by David Summerhayes, disarmament adviser to the Foreign and Commonwealth Office — at the time of writing, anyway—and former head of the British delegation to the Committee on Disarmament. His article, entitled, "Chemical Weapons: Postures, plans and prospects for control", was printed in the November/December 1983 edition of "Review", which is published by the armament and disarmament information unit at Sussex university. He wrote:

"The US is the principal stockholder of chemical weapons for the NATO alliance, with the bulk of these stocks held as filled munitions or in storage tanks in the Continental US."

But he also said that

"NATO has only a small stock of US-provided chemical weapons in West Germany . . . while the remainder would have to be transported across the Atlantic if an attack were ever launched against NATO".

That is quite explicit. It is NATO that has the chemical weapon stock, and the United Kingdom is a member of NATO.

Mr. Conway: Will the hon. Gentleman give way?

Mr. Boyes: No, I am trying to finish my speech.

Another piece of evidence demonstrating that this country is closer to chemical weapons than many understand is Casper Weinberger's report to Congress in 1982 that the United States' doctrine of airland battle had been used during the NATO exercise code named Reforger. Airland battle is described in the "US Army Field Manual 100-5" as follows:

"By exending the battlefield and integrating conventional, nuclear, chemical and electronic means, forces can exploit enemy vulnerabilities anywhere."

The Secretary of State emphasised yesterday the United Kingdom's commitment to the doctrine of flexible response, and this allows a wide range of weapons to be used in the face of an attack by an aggressor. Further, General Rogers has asked for the production by the West of the new binary chemical weapons, and for them to be stored in Europe.

The several pieces of evidence that I have cited demonstrate clearly that, despite the Government's posturing against chemical weapons, they are double-dealing with the public because they have committed British troops to a military alliance that has chemical weapons in its armoury. Furthermore, one of the countries, the USA, is developing new, more powerful and more deadly chemical weapons. We are in danger of entering a period that could lead to a disaster of catastrophic proportions. Will the Minister comment on the anticipated role of British troops if General Rogers decides to deploy chemical weapons?

Another aspect of the policy raises important questions. In reply to a parliamentary written question from my hon. Friend the Member for Dagenham (Mr. Gould), asking for a statement on the work of the Chemical Defence Establishment at Porton Down, the Minister replied that the primary role of the CDE is to carry out research and development in order to improve our defences against attack by chemical weapons. That answer hides the vast amount of research carried out for the Ministry of Defence and the CDE at Porton Down by universities and other institutions.

Earlier this year, representatives of the group of scientists working party on chemical and biological weapons met Members of Parliament in the House of Commons and stressed the concern about the growth of funding by the MOD in universities. In fact, they said that the level is so high that it threatens the whole direction of higher education. The working party also stressed that some of the research was related to chemical and biological weapons.

A further example of university involvement is contained in an advertisement in the 16 May issue of the *New Scientist*. Applications were invited for research studentships at the university of Southampton, and one of them was for research on

"novel synthetic approaches to some of the toxins and related alkaloids."

It was in the name of Dr. P. J. Parsons and CDE Porton.

What research is being carried out in our universities on chemical weapons, and how much are the Government hiding by placing the research with outside bodies? Those are very serious questions that need to be answered.

Much pressure is being exercised in the United States by the President and the military for the development and deployment of new chemical weapons, particularly the big eye bomb and the 155 mm shell. Although the binary chemical weapon, the big eye bomb, is flawed, pressure is mounting for its deployment.

According to the *Washington Post* of 31 May this year, Deputy Assistant Defence Secretary, Thomas J. Welch, said, in an interview, that

"Big eye is lethal enough to kill enemy troops. It is a bonus and we are not going to give it away because the chemical isn't pure."

Such is the haste of the Administration in the United States to get the bomb on to the soil of Europe. Those weapons are intended for Europe, and in particular for areas such as mine, in the north-east of England. Primary targets will be airfields, docks and shipyards, because the use of those weapons will be to slow down supply lines. The military would not be particularly interested in using them in battle situations because it would slow down its own troops, with the enormous amount of protective clothing needed—and, of course, the gas would spread uncontrollably.

Civilians are not to be equipped against the danger with the necessary specialist equipment. None of the research that I know of at Porton Down—and I have visited the establishment — is aimed at providing people in the docks and civilians on airfields with the necessary clothing. The people I represent would like to know, as a matter of urgency, the Government's real position, and it would help if the Government would give detailed answers to the following questions. What did the British Government actually say to President Reagan's review commission on chemical warfare when it visited Britain in March this year? What are the exact terms of and our obligations to the quadrupartite agreement on chemical weapons? How would the Government respond if big eye were deployed in Europe? Finally, what research on chemical weapons is being carried out in British universities and similar institutions?

The whole of human life on earth is already in great danger of total annihilation. A decision to manufacture and deploy chemical weapons might be the one that pushes us over the ever-looming abyss. All of us in this House have a duty to our families and to the people we represent to prevent the seemingly inevitable from happening. Only by destroying, not adding to, existing weapon stocks can we build the peace that we all desire.

The Secretary of State said that nuclear weapons had kept the peace for 40 years. I think that my right hon. Friend the Member for Lewisham, Deptford (Mr. Silkin) destroyed that argument yesterday. However, the Secretary of State is not talking of peace; he is talking about the absence of war. I and my colleagues want to live in a world of mutual understanding between nations and real peace.

8.50 pm

Mr. Churchill (Davyhulme): I marvel that the hon. Member for Houghton and Washington (Mr. Boyes) could speak for 14 minutes on chemical weapons without making any reference to the 300,000 tonnes of modern binary weapons held by the Soviet Union. But, of course, we well know the standpoint of the hon. Gentleman and many of his hon. Friends. They are concerned to draw attention to outdated 20-year-old residual American offensive capability.

I congratulate my right hon. Friend the Secretary of State on the clarity of his White Paper and the wide range of information that it contained. I noted his criticism of the Defence Committee's report on the defence commitment and resources in his robust opening speech. What he is achieving through competition and increased efficiency is of very great importance. I certainly welcome what he is doing. I wish that I could share his belief that the savings will be on a scale great enough to bridge the resources gap that appears to be looming.

From next year, not only are we to abandon the 3 per cent. commitment, but in each of the two following years there will be a net reduction in real terms in defence expenditure, albeit very small. But, as the Chief of Defence Staff pointed out to the Defence Committee, the real danger is that zero growth could end up as negative growth with a shortfall of up to 7 per cent.

The position inevitably will be aggravated by the fact that forces' pay is running ahead of the normal retail price index. Technological information in modern military equipment is running ahead by a factor of two or three of that index, and there are the exchange rate effects on the Trident purchase. All those are to be found at the expense of something else in the defence budget. If my right hon. Friend's optimism does not prove well founded—and I hope that it will be—cuts in manpower, capability and commitments are inevitable.

It is tragic that the Labour party that has for so long played such an honourable part in the defence of this country should have abandoned the bipartisan policy that has guaranteed our country's peace for 40 years. The Labour party of today would make itself the Trojan horse for the fulfilment of the key Soviet strategic and foreign policy objective of the unilateral nuclear disarmament of the United Kingdom, the removal of American bases from this country and the consequent break-up of NATO as an effective deterrent to war and to Soviet expansionism in Europe.

Other speakers have referred to the report on the use of merchant shipping for defence purposes. I merely make the point that, for the first time, we as a nation do not have sufficient merchant vessels in each category to meet our war requirements. The British merchant fleet has dropped from 1,600 in 1975 to a mere 700 eight years later. It is continuing to decline at the rate of about 100 per annum. How much longer are we to tolerate the unfair competition from the Soviet Union, both in cruise ships and in freight? How much longer are we to use British taxpayers' money to give our Soviet bloc competitors an advantage? I have in mind that magnificent deal whereby we build ships for the Polish merchant fleet to put British seamen and British shipping lines out of work. Surely that should be urgently reconsidered by my right hon. Friend in consultation with his colleagues.

I come now to the strategic arms race, to SDI and to the whole question of arms control. We have reached a critical point in the strategic arms race and the prospects for arms control. President Reagan has declared that the United States will continue to observe the SALT II

[Mr. Churchill]

limitations, which will involve the decommissioning of a United States Poseidon submarine, in spite of what the United States believes to be a clear violation of the existing arms control agreement.

I welcome the President's decision, for without it the prospects of achieving in Geneva meaningful progress in arms limitation talks would have been slim indeed. However, as we are currently faced with negotiating with a new and more vigorous Soviet leadership, and as we stand on the threshold of dramatic developments in military technology, it is important to take stock of the position today.

Since the signing of the ABM treaty in 1972, the strategic balance between the superpowers has undergone a major transformation. Those fundamental changes are today placing extreme pressures on existing arms control treaties.

Since 1972, the Soviets have been working all out to acquire a first strike capability—something that they are close to achieving. Since that date, they have deployed more than 650 SS18S and SS19 missiles with a total between them of more than 5,000 independently targetable nuclear warheads, which combine the accuracy of 250 yards with a destructive power of half a megaton, which gives both of those categories of missiles a silo-busting capability. On the other hand, the Americans have no more than 900 comparable warheads, namely, the Minuteman 3, with the mark 12A warheads.

The chairman of the United States Joint Chiefs of Staff, General John Vessey, has testified that already 70 to 75 per cent. of the United States Minuteman force could be destroyed in a pre-emptive strike. That figure is expected to rise to as high as 90 or 95 per cent. within the next few years with the deployment of the fifth generation Soviet ICBMs. That degree of imbalance between the superpowers in first strike capability not only might incline the Soviet leadership towards a dangerous gamble — although that has not been inherent in its nature thus far — but more realistically makes likely a position in which the United States might feel constrained to launch on warning. Such a position is profoundly unsatisfactory, destabilising and dangerous because there would be less than 30 minutes in which to assess the threat and take decisive action. This enormously increases the possibility of mistakes.

The Soviet Union is not only far ahead of the United States in first-strike capability but has the only operational anti-ballistic missile system in the world and has demonstrated an anti-satellite capability, achieving success in four of its last five tests. In defiance of the ABM treaty, the Soviet Union has established a large phased-array radar at Kransnoyarsk in central Soviet Union and has tested its SA5 and SA12 surface-to-air missiles in an ABM mode close to 100,000 ft, far higher than any aircraft can fly.

This combination of factors has provided the urgency behind the President's decision to forge ahead with SDI, which holds profound implications for our national interests for arms control. It is not up to us whether this technology goes ahead. It is not even up to the United States. The Soviets are forging ahead. For a decade already they have been spending as much on defence as offence.

It is vital that the United Kingdom should form its view and exercise its powers of influence over our great ally to ensure that the right decisions are taken at this critical time. I trust that my right hon. Friend the Secretary of State will move quickly to identify those areas of research that will have application to British defence interests. It is obvious that, if we are to be participants in research, our influence will be far greater than that of a bystander. We must be involved. We must make sure that Britain's voice is heard.

9 pm

Mr. Michael Mates (Hampshire, East): My right hon. Friend the Secretary of State was rather peeved at some of the points made by the Select Committee on Defence. His colleagues on the Front Bench received it with a certain stoicism which, I suppose, we can respect. If they are not pleased at the quality of our report and do not believe that we have got it right, to a large extent that is their fault. Yesterday, my right hon. Friend the Secretary of State made much of the fact that the ability to cope with defence commitments on the present admittedly high plateau without increases had a thoroughly sound defence basis. It was militarily sound; it was acceptable; and they could cope. That may be the case today — although the Committee had its doubts—but it certainly was not the case when the decision was made two years ago. At that stage, neither my right hon. Friend nor his team had looked at the problem. It was a political decision. Therefore, it was totally reasonable for the Select Committee to look at what might be a perfectly correct and sound political decision to ascertain the defence and military fall-out from that decision.

If we got it wrong — my right hon. Friend the Minister of State said that he would have come up with a different answer — I say, "Give us further and better particulars" because we want to arrive at a sensible solution and to form an informed judgment for the House and the country. I speak only for myself, but I suspect that I would carry my Select Committee colleagues with me. If we have not got it right, it is because of the decision taken at the highest level by my right hon. Friend the Secretary of State and his team that there are certain aspects of future defence policy that they are not prepared to share with the Defence Committee. That saddens me. Perhaps they do not trust us. I have had the privilege of being on that Select Committee for six years. Not one secret or confidence has leaked out. Whatever the Government have told us — they have given us some extremely sensitive information—it has remained within the four walls of the Committee Room. We have never let anything get out, so the Government should trust us.

If the Government believe that they must be diverse in their options during the next four or five years, that is something that, again, the Committee would understand. The Committee believes that there is a serious problem ahead. We have tried to report on it. If we have not got it right, it is largely the fault of Ministers and officials in the Ministry of Defence who have not shared the problems with us as we hoped.

My next point concerns Trident and the nuclear deterrent. I shall skate over the argument quickly. The leader of the SDP made an uncharacteristically bad speech yesterday. I say "uncharacteristically" because normally he is pretty sound on defence. Yesterday, he was in tremendous difficulty because he had the CND wing of the

alliance sitting behind him and many young Liberals sitting outside waiting to jump on any sensible defence remarks that he made to show that the Liberal wing of the alliance speaks for a very different voice from that of the right hon. Gentleman.

The right hon. Member for Plymouth, Devonport (Dr. Owen) remarked on the horror that would be felt in the United States. He said that last week he had been in the Congress when the Americans realised the consequences of our decision not to increase the defence budget from 1986. We went there just before Easter and spoke to the Senate armed services committee—Senator Nunn, who in the past has been critical of our European defence efforts, was there—and to the House armed services committee. They were well aware of the difficulties that we would face because they were facing up to them. They were looking at the consequences of what would happen.

I am sure the House will agree that, were the Americans or the Alliance to be alarmed because we were unable to devote more financial resources to our defence budget over the next few years, that would be nothing to the alarm and instability within the Alliance that would follow a unilaterial decision by the United Kingdom to opt out of the nuclear business.

I shall not go into the military arguments, but I hope that the Minister will say something about the political arguments. They are much too neglected, and many people outside this House do not understand them. We must consider the effect among the people of the United States if it was felt that we were opting out of a responsibility that we have carried for the last 30 years —*[Interruption.]* The right hon. Member for Llanelli (Mr. Davies) may laugh, but there is a streak of isolationism in the United States, as anyone who has spent some time there will realise. It is under the surface. So long as America feels that Europe is making a sufficient effort in the defence of the West things will be fine, but if it believes that we shall merely load more responsibilities on to the United States and live under their defence umbrella that will have a destabilising effect.

The consequences within the European part of the NATO Alliance will also be extremely grave. We occupy a very special position among the European partners of NATO, and we can look with pride on what we have done. However, if we declined to contribute our nuclear deterrent to NATO, we would fundamentally change the relationships and responsibilities within that Alliance. That would change the whole perspective of the Alliance, vis-a-vis West Germany, which provides more conventional forces and assets in the European theatre than we are able to do. This would unbalance the way in which the Alliance is structured and the way in which we play such a leading part, both politically and militarily.

We may talk about the military balance between conventional and nuclear forces and the desirability of a deterrent which, while cheaper, would be less effective——

Mr. Speaker *rose*——

Mr. Mates: I notice that you are about to bring my remarks to an end, Mr. Speaker, but I was told that I could speak until 9.10 pm.

Political destabilisation would in the long term be far more serious for the Alliance, because we might be able to overcome any military destabilisation with American assistance.

9.7 pm

Mr. Derek Conway (Shrewsbury and Atcham): As a non-member of the Select Committee on Defence, it is nice to have an opportunity to contribute to the debate. I must declare an interest, because I still serve with the Territorial Army in the light infantry battalion, and that will add a certain bias to my few remarks.

Paragraph 418 of the statement, which relates to the British Army of the Rhine, says that 55,000 troops are based in BAOR, with a further 100,000 reinforcements, but many hon. Members may not appreciate that 50 per cent. of infantry reinforcements are formed in the Territorial Army.

Paragraph 420 explains that 1(BR) Corps faces a substantial tank threat. In that regard, I was delighted to hear the Secretary of State announce yesterday that a sixth regiment is to get Challenger main battle tanks. I hold a biased view on this matter, because the engines are manufactured in my constituency. That was an extremely welcome announcement, as was the announcement that we are to get more MCV80s, the armoured fighting vehicle, and Saxon, the armoured personnel carrier. They are manufactured in Shropshire, in the constituency of my hon. Friend the Member for The Wrekin (Mr. Hawksley), and fortunately many of my constituents are employed there.

The statement goes on to mention the role of the Milan anti-tank guided weapon system and anti-tank weaponry. I hope that while we all call for more expenditure on conventional defence we shall envisage a greater establishment of that anti-tank guided weapons system for the Territorial Army element—15 and 49 brigades—which forms part of the reinforcements for 1(BR) Corps.

Only a few weeks ago the Commander of the United Kingdom Field Army and Inspector General of the Territorial Army spoke in the media of the balance between the Territorial Army and the Regular Army which provides the main core of instructors for the Territorial Army. He rightly reminded politicians that, although he welcomed the expansion of the Territorial Army, as I hope we all welcome it, we must bear in mind the demands that it places on the Regular Army and the instructors that it is required to provide for the 73,000-strong Territorial Army.

My right hon. Friend the Secretary of State referred to that welcome expansion. The increase in equipment is also welcome, but we must also keep a sharp eye on morale in the Territorial Army. I hope that my right hon. Friend the Minister of State will be able to give some encouragement today to those members of the Territorial Army who are unemployed. The issue has been raised many times since I came to the House and Ministers from both the MOD and the DHSS have promised that it will be investigated. Those who are honest enough to declare that they receive pay from the Territorial Army have their benefit stopped immediately by the DHSS, although there may be a delay of six weeks and often much longer before they receive their Territorial Army pay. That causes great hardship to those who give their time and declare their earnings legitimately, as so many in the black market do not. I hope that the Government will take this on board as a matter of continuing concern to Members in all parts of the House who support the Territorial Army.

Finally, I should place on record a special word of thanks to the employers who support the Territorial Army.

[Mr. Derek Conway]

Their business is clearly affected, as they lose staff for at least 14 days training per year. Fortunately, however, employers in this country are prepared to do that and to encourage the Territorial Army in that way. I am sure that that support is greatly welcomed by Members in all parts of the House.

9.12 pm

Mr. Martin J. O'Neill (Clackmannan): In this lengthy two-day debate many hon. Members have participated. The debate has perhaps lacked cut and thrust because with the 10-minute rule people are naturally reluctant to give way unduly. I do not wish to break any conventions in that respect but if the opportunity arises we shall have to see what happens.

The debate was preceded by a variety of leaks and considerable speculation, much of which seems to have been distressingly accurate in respect of the Secretary of State. Virtually everyone who spoke referred to the report produced by the Select Committee on Defence and to the evidence that that Committee considered. Members in all parts of the House agree that the spending spree is over or at least is coming to an end. The right hon. Member for Brighton, Pavilion (Mr. Amery) said that more money would have to be found even from this most parsimonious of Governments, but I do not think that any extra money will be forthcoming so the anxieties expressed by Members in all parts of the House about their pet projects are doubtless well founded. Certainly, I do not think that there is much likelihood of adopting the policy suggested by the SDP—that everything would be all right if we would only employ sea-launched cruise missiles, which that part of the alliance at any rate seems to regard as the acceptable face of nuclear war.

Our amendment makes it clear that we want no part of Trident and that a Labour Government would cancel it forthwith. We have heard many speeches for and against Trident, including some rather reluctant support from Conservative Members, but the Government seem determined to proceed with the project regardless of the cost. There is now time for an assessment of the cost. We have had the debate about rising and falling exchange rates, but it is important that there be some detailed examination of costs. The Select Committee would appear to be the most appropriate vehicle for such an examination.

In 1982, missiles would have accounted for 17 per cent. of the cost, or £1,278 million. That cost appears to have dropped to 14 per cent. in 1985. If those figures are correct, they can have been caused by one of three reasons. First, missiles cost 30 per cent. less in dollars than they did in 1982. Secondly, the reduction might be accounted for by a drop in production costs in dollars, although that is unlikely. Thirdly, some of the missile costs might have been switched elsewhere. Spending less on missiles would be consistent with having only three Trident submarines. That option has not been discussed today, but it must be exercising the Government. It is possible to have three submarines — one in refit, one in base and one operational. That would be the last face-saving gesture if the Government wished to retain the independent nuclear deterrent.

My hon. Friend the Member for Denton and Reddish (Mr. Bennett) considered communication and control facilities, and my hon. Friend the Member for Linlithgow (Mr. Dalyell) referred to the problems of communication and control in the south Atlantic. If we could not get that right—nobody denies the difficulties—the facilities that we operate for Polaris must be upgraded. We do not want Trident but were we to have it and to have a system of communication and control——

Mr. Adam Butler: This seems to be an obsession of the Labour party today.

Mr. O'Neill: The Minister says that this is an obsession. It is an illustration of a cost which the Government have never stated. The Secretary of State slid over it yesterday and the Minister of State refused to answer questions about it today. Nevertheless, it could cost upwards of £600 million. It has never been made clear to the House whether that cost has been included in the budget or whether it will have to come along later. In the light of experience of the increasing cost of such projects, it is only reasonable to raise the matter now. We want to know whether £600 million is an accurate figure for a command and control system, whether it has been included in the budget and, if it has not, where the money will come from.

We are extremely worried about other aspects of the procurement side of Trident. The claims about the amount of work which would go to British companies have not been met. If the costings done on an exchange rate of $1·78 to the pound are to be taken account of now, when the exchange rate is about $1·25 to the pound——

Sir Humphrey Atkins (Spelthorne): $1·28.

Mr. O'Neill: $1·28 today, $1·26 yesterday and $1·24 the day before. Unlike the right hon. Member for Spelthorne (Sir H. Atkins), I have not had the luxury of an opportunity to look at the tapes this evening. Instead of quibbling about figures such as that, the Defence Select Committee, of which the right hon. Gentleman is Chairman, should examine this major item of expenditure again and seek clear information about these matters, not least the British share of contracts for the project, which seem at the moment to be at a depressingly low level.

Dr. Keith Hampson (Leeds, North-West): How does the hon. Gentleman answer the question that the costs of the Tornado programme were half as much again as Trident on a much smaller budget? Therefore, is not all this spurious? Is not the Labour party just against Trident, with no intention of moving the £500 million a year that would be saved into any conventional area?

Mr. O'Neill: I am glad that the hon. Gentleman has raised that point. It is about time that we pinned this one to the wall. Frankly, they are not valid comparisons—the two budgets are extremely different. When Tornado was being funded, it was on the basis of a rising budget. We have been told that at best there will be level funding for the next four years. Therefore, there is no comparison on that basis.

The impact on our conventional defence—our "real defence", as our amendment says — is all too clear. Virtually every speech made by hon. Members on both sides of the House has returned to the theme that we do not have enough money, and certainly the biggest single element in the budget will be Trident expenditure.

More than anything else, reference has been made to the provision of type 23 frigates. We welcome the

announcement; we are happy about it. However, we want to know from the Minister when the hulls will be laid, and whether the target of providing us with a fleet of 50 ships will be met by the end of the decade. The Minister of State for Defence Procurement did not make that clear. He did not tell us what would be happening beyond next year. The year after that there will be a Labour Government, and a different set of priorities. However, the Government of the day owe it to the Navy and the country to explain what will happen in the ordering of type 23s.

Many ships will be up to 25 years old within a couple of years, and they will have to be replaced. Of the 12 frigates and destroyers that are at present on order, three were ordered under the Labour Government. There will be increasing problems with aging craft in a short time. If the Government want to secure a fleet of 50 ships which, by and large, is agreed as being desirable on both sides of the House, they will have to set in train a more positive plan of ordering than the present plan, given that it will take between five and six years from the date of ordering to completion.

The Minister did not intervene yesterday when the right hon. Member for Spelthorne, the Chairman of the Select Committee, attacked my right hon. Friend the Member for Llanelli (Mr. Davies) about the costing for those frigates. The figure of £110 million has been quoted. A figure of £150 million was quoted in yesterday's edition of *The Times*. Perhaps the Minister will let the House know which of those figures is correct.

Sir Humphrey Atkins: It is in the Estimates.

Mr. O'Neill: It is there, but it has been in there before, and it has changed. The most up-to-date costings suggest that it is more than that. Perhaps the Minister will give a revised figure.

If we cannot get such information, we want to know when the hulls will be laid. Many hon. Members were concerned about the Secretary of State's response to the other ships that were being requested—the amphibious class. Many people took offence at the Secretary of State's carping criticism of officials, the people whom he was seeking to blame for the leaks and the campaign for replacements for Hermes and Invincible. Apparently, people leaking under a Labour Government are acceptable and should be cheered along, but people who do so under a Conservative Government are to be condemned.

We realise that not for those individuals will be the fate that was provided for Sarah Tisdall, because they are too influential. What they are saying has too much support on Conservative Benches. At the end of the day, the Government will have to provide the backing for amphibious craft that the country wants. The Government will take on junior clerks and clerical officers, but they will not take on the brass hats—they will simply try to insult them from the Dispatch Box.

Hon. Members on both sides of the House have expressed anxiety about the merchant marine. We are grateful to the Select Committee for its report, and I understand why, at this stage, the Minister is reluctant to debate it. However, I cannot stress strongly enough the purposes of the Merchant Navy, which include the transatlantic reinforcement of Europe, the reinforcement of Europe from the United Kingdom, transferring British and American equipment to Europe and direct support for the Royal Navy. The gross registered tonnage of the fleet has declined by about 59 per cent.—from 50 million tonnes in 1975 to 18·642 million tonnes last year—and the number of ships has declined from more than 1,600 to just over 700. Those figures are extremely worrying, because we know the role that the merchant marine played in the south Atlantic and that it would have to play in any conventional war.

We know from the Select Committee report that the Government are confused. Paragraph 13 states:

"The use of statistics on several different bases does not . . . affect the actual availability of hulls needed for defence purposes. Nevertheless, it is essential to assess defence needs as a proportion of the total fleet; and the use, even by the Government, of different statistics for the latter has confused debate and has made the Government's response less convincing."

Mr. Colvin: Will the hon. Gentleman pay tribute to what my hon. Friend the Parliamentary Under-Secretary of State for Transport, whose presence on the Front Bench this evening is appropriate, said about the Merchant Navy? Is not the Minister who should be here the Chancellor of the Exchequer, since it is fiscal policy that is at fault? It is one reason why there is so much flagging out and why, because of unfair competition from overseas countries that subsidise their fleets and practise protectionism, the merchant fleet is declining at such a rate. Should not the Chancellor be here?

Mr. O'Neill: The hon. Gentleman has made his point, despite being denied the opportunity to make a speech. The Opposition believe that the Chancellor should be blamed for almost everything. However, I am grateful that the Under-Secretary of State for Transport is here this evening.

The Select Committee report is littered with examples of confused thinking from the Government. There is confusion about the availability of ships for requisition and about the state of ships that have been flagged out. We await the report of the shipping economics advisory group. It will probably take both Departments about two months to come to a conclusion. When they reach a conclusion, I hope that it will be the subject of a debate in Government time. I hope that, as a result of the Select Committee report, we shall have a clear definition of the collection of data, the instructions or advice that the consultants were given. So far, there has been a clear lack of preparation and foresight by both Departments in giving any instructions to the consultants. That is not in keeping with the Prime Minister's statement that the Merchant Navy should be regarded as the fourth part of our defences.

Ships' crews are another difficulty. Not only do we need ships, but we need men to serve on them. There has been a steady outflow of men from the Merchant Navy and, as my hon. Friend the Member for Dunfermline, West (Mr. Douglas) said, the Government take into account men on oil-related work in the North sea, which might not be the most appropriate training for the work that would be undertaken during a war. If that requires Government money, as has been said, we may be able to use the Department of Transport, because if the Ministry of Defence does not have the money perhaps the Department of Transport can be touched for some of the resources required.

Other points have been mentioned. The royal dockyards and SDI were referred to by my hon. Friend the Member for Dunfermline, West and the hon. Member for Plymouth, Drake (Miss Fookes). Unfortunately, the hon.

[Mr. O'Neill]

Lady is not here. Her request for an extension of the consultative period on the royal dockyards was a perfect example of the ingenuity of a Back Bencher who does not want to appear too disloyal to her Government.

There is no way that there will be a change in the timetable for consultations, as far as I can see. If there is a change in that consultative process the legislative programme for them will be scuppered. The Government would not then be able to rush through the Bill next year and, as they hope, have it passed before a general election.

In the long term, of course, there is the issue of star wars. It will not go away. The current special diplomatic initiative of the Reagan Administration will be with us for some time. I am confident that Conservative Back Benchers are somewhat out of step with the Foreign Secretary who seems to be a good deal more sceptical about the value of SDI than most of the people who have slavishly followed the propaganda that the American Administration have been pouring out.

Any suggestion that we shall see a practical demonstration of SDI within three years is wishful thinking. It will be impossible. I hope that it will not happen because it will be at the expense of the ABM treaty. I am relieved to know that we cannot be involved in the project because we cannot afford it. Thoughts of our hi-tech industries becoming involved in it are unrealistic. Given the budget about which we are talking today, no amount of competitive tendering, fixed-price contracts or shaving of expenditure will enable us to indulge officially in the star wars fantasies.

The Labour party's responsibility towards defence is to ensure that the country plays its role in NATO and to ensure that a Britain free of nuclear bases can assist in restoring stability to Europe and, I hope, to the rest of the world by committing the resources necessary to prove to the Americans, our other Alliance partners and the Soviet Union that we are interested in peace and disarmament but that we are prepared to defend Britain in a way that is consistent with our resources and our standing in the world. The White Paper does not do that, and, therefore, I ask my right hon. and hon. Friends to join me in opposing the motion.

9.33 pm

The Minister of State for the Armed Forces (Mr. John Stanley): If the hon. Member for Clackmannan (Mr. O'Neill) wants his party to play its role in NATO, it should take some account of what NATO thinks of the Labour party's current policies which it regards as detrimental to NATO's interests.

We have had an interesting debate. I am sorry that some of my hon. Friends who have waited patiently through one day, and possibly two, have been unable to contribute.

The hon. Member for Kingston upon Hull, North (Mr. McNamara) made a far-reaching statement on nuclear weapons policy on behalf of the official Opposition. I listened carefully. He said that his party's policy was to get rid of all nuclear weapons in this country. I should be grateful if he would clarify—I shall of course give way to him—whether it is the Labour party's policy to get rid of British nuclear weapons as well as American nuclear weapons.

Mr. McNamara: Yes, Sir.

Mr. Stanley: I am grateful to the hon. Gentleman for confirming that. I hope that he and the rest of his party are giving considerable thought to the extraordinarily anomalous and ridiculous position of depriving British Armed Forces of nuclear weapons in this country and having nuclear weapons still at their disposal elsewhere. That is a ludicrously inconsistent policy, and he should recognise it.

Much the most telling speech from Opposition Members came from the hon. Member for Walsall, South (Mr. George), who told his colleagues that being a Socialist does not mean denying the citizenry adequate defence. He stressed the difficulty that the Labour party would face in convincing British citizens at the general election that they would be adequately defended by Labour policies. He was absolutely right.

My hon. Friend the Member for Plymouth, Drake (Miss Fookes) referred to our policy on dockyards. She asked whether a contractor would be able to manage for more than five or six years. We have said that at the end of the initial contract the management of the dockyards will be thrown open to fresh tenders. Clearly, that is the best way of ensuring adequate competition, and keen prices and performance. However, there is no reason why a contractor whose performance has been good should not win a renewal of his contract.

My hon. Friend also asked about compulsory redundancies. To make the necessary improvements in the dockyards we need to begin efficiency measures now before the introduction of contractor management. We believe from our experience that the bulk of any jobs reductions can be achieved by natural wastage, early retirement and voluntary redundancy. While compulsory redundancies cannot be ruled out, we expect them to be largely avoided.

The hon. Member for Dunfermline, West (Mr. Douglas) asked about comparisons between refitting Euryalus and Otter in the private sector and the cost of work done in the royal dockyards. A direct comparison with a Leander frigate and a submarine being refitted at Devonport will be made, and the Ministry is establishing a special exercise to ensure that as detailed and accurate a comparison as possible is made.

Mr. Douglas: The Minister's earlier remarks do not sound as if the Government are open minded about the three options. He has given a far indication that the Government's preferred option is the only option and, therefore, that the consultation period is a farce.

Mr. Stanley: The hon. Gentleman would not be right in coming to that conclusion. We have made it clear that our mind is open and that we are conducting consultations.

A great deal of the debate has inevitably been taken up with weapon systems and the question of the defence budgets, to which I shall return. As hon. Members pointed out, the men and women of the armed services are every bit as important. Those who keep aircraft serviceable around the clock in the freezing Falklands weather, those who live and work cheek by jowl for months on end in submarines, and those daily at risk of bomb or bullet in Northern Ireland are just a few of those in our Armed Forces of whom our country and those of all political complexions are justly proud.

The Government are aware of their responsibility to give those men and women a fair and proper reward for

their skills and for the demanding and sometimes dangerous circumstances in which they serve. I can fairly say that the Government's record on looking after the Armed Forces pay and conditions is thoroughly creditable and, certainly, a significant improvement on that of our predecessors.

When we came to office in May 1979 the annual rate for premature voluntary retirement exits of men across the three services had risen to 4·4 per cent., which is the highest level recorded during the past 10 years. In addition, the Labour Government had allowed service pay to fall significantly behind the rate recommended by the Armed Forces Pay Review Body. In contrast, I am glad to say that in 1984-85 the rate of premature voluntary retirement exits was down to barely more than half what it was when we came to office.

In addition, as a result of the full and non-phased implementation of the AFPRB's 1985 pay recommendation announced by my right hon. Friend the Prime Minister last week, service pay is currently right up to the recommended AFPRB rate. Indeed, apart from a seven-month period last year, that has been the case throughout the entire six years we have been in office.

Sir Paul Hawkins (Norfolk, South-West): I entirely agree with what my right hon. Friend has been saying. However, will he look into the question of amenities at some stations, particularly RAF stations, where the facilities for service men, their wives and families have fallen considerably? In my constituency, at RAF Marham, the swimming pool and theatre have been closed for two or three years.

Mr. Stanley: My hon. Friend has ingeniously introduced a constituency point which he has already raised with me. We shall look into the matter. It does not offset the basic point that I made, namely, that on service pay and conditions generally we have done creditably since 1979.

A number of hon. Members referred to the strategic defence initiative. I do not disagree with those who see the SDI as of potentially profound significance for stability. b. . disagree with those who see it as an initiative of the United States alone. As my hon. Friend the Member for Gillingham (Mr. Couchman) pointed out, the Soviet Union was first in the field with an SDI research programme, which dates back to the 1960s and which has included extensive research into technologies directly relevant to ballistic missile defence including high-energy lasers, particle beams and heavy lift capability.

Moreover, the Soviet Union has already gone far further down the track of ballistic missile defence than has the United States in terms of actual deployment. The Soviet Union has the only deployed ABM missile field — that around Moscow — to which it is, of course, entitled under the ABM treaty. The Soviet Union has the only deployed operational anti-satellite system.

The Soviet SDI programme, about which we have heard little or nothing in the speeches of Labour Members, is well described in the latest edition of "Soviet Military Power," a copy of which is in the Library and the assessment in which, in this area, we broadly agree.

In view of the high dependence of the entire nuclear deterrence posture of the West on ballistic missile systems, both land and sea-launched, it would be risky in the extreme to turn a blind eye to the extensive ballistic missile defence research programme being undertaken in the Soviet Union and not to develop an equivalent research programme in the West.

I am glad to note that the Select Committee takes the same view. I also endorse what my hon. Friend the Member for Torbay (Sir F. Bennett) said about the contribution that the American SDI research decision has made to getting comprehensive arms control negotiations at Geneva under way.

I come to the question of the adequacy of the public expenditure provision for defence in the years ahead, a subject which many hon. Members have raised. My right hon. Friend dealt with this yesterday. While I do not want to duplicate what he said, I wish to make three specific points.

First, we are, happily, not starting from the baseline of defence expenditure that the Labour party promised to introduce at the last election, a baseline of cutting the United Kingdom's defence expenditure to the same proportion of resources as the other major European countries.

If that policy were followed today, it would mean that Britain's defence budget this year would not be £18 billion but £12 billion, a cut of £6 billion, which would be achievable only by the total decimation of our conventional equipment programme. Happily, thanks to this Government's policies, we look ahead with defence expenditure lifted on to a vastly higher plateau than it was in 1979.

Some will say, "Yes, that's all very well, but you now have Trident which we didn't have in 1979." To them, I would reply that they should compare the average annual expenditure on Trident during its procurement period which on present figures can be put at some £500 million a year, with the real increase in the size of the defence budget this year compared to 1978-79, which is some £3,000 million—some six times greater than the average annual cost of Trident. I can only say that if Labour Members want to claim that the provision for defence expenditure today is out of line with our defence commitments, then they had better acknowledge it must have been monumentally out of line in 1979.

My second point is that the level of expenditure on our conventional forces is of a quite different order of magnitude today compared to what it was six years ago. I have just said that defence spending this year will be some £3,000 million higher in real terms than when we came into office. The House may be interested to know that it breaks down into approximately £600 million more for the Army, £1,100 million for the Navy, and £1,300 million for the RAF. Most of those sums represent increased expenditure on our conventional forces, and they are very big annual figures indeed.

My last point on defence expenditure is that it must be stressed that we are one nation in a 16 nation alliance—an alliance in which the burden of defence is shared by all and in which all are expected to pull their weight.

There is no doubt about Britain pulling her weight. Of the major European members of NATO, we have the highest proportion of our GDP going to defence. We have the highest defence expenditure per head, despite being well down the European league table of GDP per head. Other NATO members undoubtedly could do more, but on the figures that I have given there are no reasonable grounds at all for saying that Britain is not taking a full and fair share of Alliance defence expenditure.

[Mr. Stanley]

The single most important decision in Britain's defence policy is whether we should continue to have our own independent nuclear deterrent. Yesterday, the right hon. Member for Plymouth, Devonport (Dr. Owen) said that he hoped that we would not be left with the alternatives of having Trident or no deterrent at all. The hon. Member for Woolwich (Mr. Cartwright) echoed that point today. I am sorry to disappoint them, but those are indeed the only sensible alternatives—Trident or no deterrent.

The other choices that the right hon. Member for Devonport tossed around yesterday make neither military nor financial sense to Britain. The right hon. Gentleman suggested replacing Polaris with another version of Polaris. That would be nonsense. The Polaris production line has been shut for over 15 years. It would cost a fortune to recreate it, and as the 1980 Open Government Document said in dismissing this option in paragraph 47:

"Missile system costs could well be twice those of Trident, for a smaller and less assured capability".

The right hon. Member for Devonport then suggested going into partnership with the French on their M5 missile. I can only say that there are no grounds for thinking that such a partnership would produce a cheaper deterrent for Britain, or one as effective as Trident.

The right hon. Gentleman then returned to his old hobby-horse of a sea-launched cruise missile deterrent. His argument that we should choose this option for our deterrent because the Americans are deploying sea-launched cruise missiles ignores the fundamental point that the Americans can afford both a primary ballistic and a secondary cruise deterrent at sea. We cannot. We have only one option.

We have to choose the most cost-effective system and for the reasons that I spelt out in detail in the Navy debate on 29 November, the most cost-effective option is unquestionably a submarine-launched ballistic missile. As my right hon. Friend the Member for Brighton, Pavilion (Mr. Amery) rightly said today, "It would be a criminal waste of money if we were to invest in a second rate deterrent that would not deter."

For Britain to base her strategic deterrent on cruise missiles would mean both a more expensive deterrent and a less certain one. It would require many more missiles, and submarines, and it would be more vulnerable. *The Sunday Times*, in much the most detailed and dispassionate analysis of the deterrent options carried out by any newspaper in this Parliament, came to this conclusion:

"Britain's deterrent needs to be credible in the Kremlin's eyes and that means it must be invulnerable. Cruise carries too many risks to be certain of deterring the Soviet Union in a crisis. We conclude that Britain made the right choice in opting for Trident and that we can afford it".

The right hon. Member for Devonport has a fairly awkward choice to make about where he stands on the future of Britain's deterrent. Either he can continue to be nearly a lone voice advocating a non-credible deterrent that clearly is a bad buy, or he can join the Liberal one-sided disarmers on the Benches behind him. Or perhaps he will do the sensible thing and agree with the Conservative party that Trident is the only answer if we are to have a nuclear deterrent.

As for the cost of Trident, there are those who have expressed the view that we cannot afford it, but our view most certainly is that we can afford it. By way of perspective, it is worth pointing out that the average amount per year that we shall be spending on buying Trident is no more than the amount that we spend each year upon research and development just for military aircraft, it is only half as much as we spend each year on training, it is only a third as much as we spend each year on the British Army of the Rhine and it is only one sixth as much as we spend each year on service pay and allowances. We believe that Trident is affordable and that it makes good sense for this country to have it.

The essence of the defence case for Britain maintaining her deterrent is the same today when it is rejected by the Opposition parties as it was in the 1960s and 1970s when they accepted it. Trident adds significantly to deterrence overall by resting NATO's deterrence on more than a single national source. For that reason, NATO supports us in maintaining the credibility of our strategic nuclear deterrent. Trident will give an increase in deterrence vastly greater than can be obtained by any other method of spending the same sum on conventional weapons, and Trident represents an ultimate insurance for Britain against nuclear blackmail.

In election after election the British people have consistently shown that they favour the maintenance of Britain's nuclear deterrent, and we are in no doubt that their judgment is right.

I now want to turn to another extremely important subject that has been raised on a number of occasions during the debate, namely, the future of American nuclear bases in Britain. The Leader of the Opposition in a recent television interview reportedly said that under a Labour Government the removal of American nuclear bases from Britain would take place.

"Within a year, and certainly not much longer."

The avowed intention of the Labour party, repeated by the right hon. Member for Llanelli (Mr. Davies) again yesterday, to boot the Americans out of their nuclear bases in this country is profoundly short-sighted and, if carried out, would be profoundly damaging. Militarily it makes no sense at all. When my hon. Friend the Member for Ashford (Mr. Speed), in an acute intervention yesterday, asked the right hon. Member for Llanelli whether he accepted the need against Soviet submarines for the nuclear depth charges provided by the Americans and operated from this country, the right hon. Gentleman had no answer whatsoever to offer.—*[Interruption.]* The hon. Member for Kingston upon Hull, North, I agree, thought up an answer overnight. He came to the conclusion that American nuclear depth charges are militarily useless. I can only say to him that the entire Labour Government, from 1974 to 1979, took a totally different view.

I hope that the Labour party is not under the illusion that the repercussions of telling the Americans to go home would be limited just to Britain. They would not be. The repercussions would be felt across the European NATO countries, they would be felt across the Atlantic, and they would be felt not least on Capitol Hill. In Europe, if a British Government sent the Americans packing certain other Governments in NATO countries would undoubtedly come under pressure to follow suit.

Across the Atlantic, the reaction in Congress to American eviction from Britain is not difficult to predict. It would be to say, "Well, if you don't want us in Europe, you needn't have us, and we will start thinning out our European conventional forces as well as the nuclear ones

that you don't want, and save our valuable foreign exchange". It is certain that that would be the reaction. Therefore, this particular Labour policy could well result in setting in motion a chain of events leading to a substantial reduction of the American presence in Europe —a presence which has been a key element in the successful maintenance of deterrence in the post-war period. That is why that piece of Labour party policy is profoundly irresponsible. But it is not only profoundly irresponsible; it is also glaringly inconsistent.

The Labour party professes itself to be committed to NATO, and the Opposition spokesman repeated that commitment at the end of his speech. As a member of NATO our own country, like every other NATO country, automatically enjoys and willingly accepts the protection of the American nuclear umbrella that is provided by American nuclear weapons based outside Europe and within Europe. For that reason, every British Government, since 1948, including every post-war Labour Government, have willingly accepted the basing of American nuclear-capable aircraft in Britain. They have also, since 1960, willingly accepted the basing of American nuclear missile-firing submarines in British waters.

If we accept the benefits of NATO, including American nuclear protection, it is weak, faint-hearted and morally indefensible to say that we want the protection of American nuclear weapons provided that they are based in somebody else's country. The policy of serving notice to quit on the American nuclear bases in Britain is a policy without either defence responsibility or moral justification.

The Government have carried through a major improvement in defence over the past six years. While most other expenditure programmes have nad to be reduced, expenditure on defence has been increased by approximately one fifth in real terms—a very substantial uplift. I am sure that no other Government, of whatever political complexion, would have given such a degree of priority to defence expenditure over the past six years as this one. That priority is very necessary against the rate of improvement in Warsaw pact capabilities, which shows no sign whatever of slowing down.

Our uplift in defence expenditure has enabled us to restore pay comparability for the Armed Forces and to halve the record rate of premature voluntary exits that we found on coming into office. It is enabling us to carry through a massive and comprehensive re-equipment and modernisation programme of our conventional forces in all three services. It is enabling us to bring about a much needed expansion of our reserves and territorials. It is enabling us to build up war stocks and to make improvements in sustainability, to which the Warsaw pact has been devoting huge resources in recent years.

We have not just been in the business of spending more money. We are equally in the business of getting better value for money and greater efficiency wherever we can. My right hon. Friend's radical reorganisation of the Department is without question a major improvement and a major success. The drive for still more efficent use of service manpower is being carried through in all three services, and with the striking result already achieved by the Army. The drive for more competition is already showing some significant cost savings, and more savings will undoubtedly follow.

The Government have properly discharged their fundamental responsibility to maintain the peace with freedom that we have enjoyed in Europe these past 40 years, and we shall continue to discharge that responsibility.

Question put, That the amendment be made:—

The House divided: Ayes 157, Noes 367.

Question accordingly negatived.

Main Question put:—

The House proceeded to a Division—

Sir Kenneth Lewis (Stamford and Spalding) *(seated and covered):* On a point of order, Mr. Speaker. I must ask for your clarification in case there has been a mistake I find it quite extraordinary that the Opposition should vote against the Defence Estimates—they do not usually do so—because it means that they are voting against the defence of the realm. If they won, we should have no money to pay the Army, the Navy or the Air Force and——

Mr. Speaker: Order. I think that that is a speech that the hon. Gentleman might have made if he had been called. How people vote in this place is not a matter for me.

The House having divided: Ayes 353, Noes 168.

Question accordingly agreed to.

Resolved,

That this House approves the Statement on the Defence Estimates 1985, contained in Cmnd. 9430.

CHILD ABDUCTION AND CUSTODY BILL *[LORDS]*

Order for Second Reading read.

Motion made, and Question put forthwith, pursuant to Standing Order No. 69 (Second Reading Committees), That the Bill be now read a Second time.

Question agreed to.

Bill accordingly read a Second time, and committed to a Standing Committee pursuant to Standing Order No. 42 (Committal of Bills).

CHILD ABDUCTION AND CUSTODY BILL *[LORDS]* [MONEY]

Queen's Recommendation having been signified—

Resolved,

That for the purposes of any Act resulting from the Child Abduction and Custody Bill, *[Lords]*, it is expedient to authorise the payment out of money provided by Parliament of—

(a) any expenses incurred by the Lord Chancellor or the Secretary of State by virtue of the said Act; and

(b) any increase attributable to the said Act in the sums so payable under any other Act.—*[Mr. Peter Lloyd.]*

STATUTORY INSTRUMENTS, &c

Motion made, and Question put forthwith pursuant to Standing Order No. 79(5) (Standing Committees on Statutory Instruments, &c.)

Betting, Gaming and Lotteries

That the draft Pool Competitions Act 1971 (Continuance) Order 1985, which was laid before this House on 20th May, be approved.—*[Mr. Peter Lloyd.]*

Question agreed to.

ENERGY

Ordered,

That Mr. Robert Hayward be discharged from the Energy Committee and Mr. Michael Portillo be added.—*[Mr. Marcus Fox, on behalf of the Committee of Selection.]*

SCOTTISH GRAND COMMITTEE

Ordered,

That, in the course of its consideration of Scottish Estimates, the Scottish Grand Committee may meet in Edinburgh on Monday 8th July at half-past Ten o'clock. — *[Mr. Peter Lloyd.]*

War Pensioners

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Peter Lloyd.]*

10.28 pm

Mr. Teddy Taylor (Southend, East): I am grateful for the opportunity to raise the subject of the problems facing war pensioners. I am particularly grateful to my hon. Friend the Parliamentary Under-Secretary of State for being here to answer the debate after what I know has been a demanding week for him. I took up some of his time this afternoon when he saw a deputation from Southend.

One thing on which we are all united is the sentiment that we owe a huge debt to the millions of Britons and members of the Commonwealth forces who fought for the preservation of our freedom. We owe a particular debt to those who were injured in the conflict, and to the widows and families of those who lost their lives. In times of peace, we have a special obligation to those who sustain injury or illness in the continuing battle to preserve the peace through service in the armed forces. Although I appreciate that Governments of both parties have consistently claimed to give a high priority to this basic duty and obligation, I believe that the time has come for a comprehensive review of our procedures and policies, and tonight I shall make several suggestions which I hope will be considered by the Minister as a matter of urgency.

The first proposal is that much more must be done to inform ex-service men of their entitlement to pensions and to give them advice on how claims can be submitted and considered. Many ex-service men have developed illnesses and disabilities stemming from their war service many years ago, but they are unaware that they have the right to apply, even after the lapse of time involved. This may appear to be an unusual proposition, but I know of several cases in my constituency where ex-service men were prompted to apply, and obtained the pensions to which they were entitled, simply because individuals with specialist knowledge went out of their way to give advice.

In that connection, the Minister will be aware of the outstanding campaigning and sheer hard work carried out by many interested people throughout the country, and of the endeavours in the Southend area of Mr. Holtham of the Far East Prisoners of War Association, and Mr. Micky Strauss, who, as a disabled ex-service man, has devoted much of his life to his former comrades-in-arms.

My argument is that this is not an area that we should leave to the dedicated work of individuals, because, inevitably, some will slip through the voluntary net. There is an urgent need for the Department to initiate a publicity campaign to advise ex-service men of their rights and to provide convenient and suitably qualified facilities to give advice on the claims mechanism. The least that I would ask is that pamphlets be displayed in post offices and in other public offices, and that some newspaper advertisements be submitted for publication in the national press.

My second proposal is that there is an urgent need for steps to be taken to speed the processes of dealing with claims. Many of the claimants are aged 70 years or more, and it seems outrageous that months pass before decisions are made. There are also long delays in the appeals procedure. I appreciate that medical issues cannot be decided within 24 hours, but I hope that the Minister will

[Mr. Teddy Taylor]

be aware of the resentment that exists over the long delays — especially in the assessment of claims relating to tropical diseases.

The third issue on which I would appreciate advice is the onus of proof. Of course, it is no easy task to make a decision on the relevance of disabilities and illnesses stemming from military service years ago, and to isolate that factor, but when we consider the contribution that has been made by ex-service men, there is a need for more flexibility and humanity to be shown.

My fourth suggestion relates to what I consider to be an unjust anomaly for those whose pension entitlement stems from service before and after 1973. My understanding is that a private soldier who left the services with a 100 per cent. war disablement before 1973 receives £58·40 a week, which seems extremely low. However, I understand that those who left the forces with 100 per cent. disablement after 1973 receive £86·60 a week. Likewise, pre-1973 war widows receive £46·55 a week, while those whose husbands were killed after 1973 receive £95·43 a week. There should be no differentiation between ex-service people who suffer from the same disability, or widows who have lost their husbands serving their country, because of the time of disablement or death. Surely one man's arm or leg is as valuable as another's, and one widow's husband was as dear as the next's. Is there any prospect of removing what seems to be an absurd anomaly?

Another strange anomaly relates to the distinction made between payments to war widows of officers and those of other ranks on remarriage or on the death of the second husband. Perhaps the Minister would also comment on that.

My final point relates to the size and scale of service pensions. Of course, I am aware of the enormous problems facing all Governments in the area of public spending, but there can be no greater priority than the care and welfare of those who abandoned their homes and loved ones to secure the preservation of our freedom and way of life. The information that I have shows that Britain does not excel in the league table of pension provision for ex-service men among the nations of the free world. Does my hon. Friend agree with that on the basis of the information available to him?

May we have my hon. Friend's firm pledge that he will fight to ensure that the highest possible priority is given to our war pensioners and war widows, to whom we owe the kind of debt which cannot be quantified in cash? That debt demands the provision of substantial and continuing resources to deal with their problems.

I am grateful for having had the opportunity to put my points, and I thank my hon. Friend for the attention that he has paid to what I have said.

10.34 pm

The Parliamentary Under-Secretary of State for Health and Social Security (Mr. Ray Whitney): I am greatful to my hon. Friend the Member for Southend, East (Mr. Taylor) for initiating this debate about war pensioners. He was kind enough to give me a detailed idea of the points he intended to raise and that will enable me to give him a detailed reply.

My hon. Friend the Member for Littleborough and Saddleworth (Mr. Dickens) recently initiated a similar debate about war widows, and in this year, which marks the 40th anniversary of the ending of the second world war, it is appropriate that we should remind ourselves of the debt that we owe to those who were disabled or bereaved in the service of this country. We all understand that nothing can fully compensate those who have been seriously disabled as a result of service in the armed forces, but the special circumstances of their disablement are recognised in the preferential provisions made for them under the war pensions scheme administered by my Department. There are still about 225,000 war disabled pensioners. I should like to give the House some details of the benefits that those pensioners receive under the war pensions scheme.

The rate of war disablement pension depends on the degree of disablement. A pensioner whose disablement is assessed at 100 per cent. receives a basic pension of £58·40 a week. There are proportionately lower rates for lower degrees of disablement, down to £11·68 a week for a pensioner whose disablement is assessed at 20 per cent. Awards for disablement of less than 20 per cent. take the form of a lump sum gratuity. In addition to the basic war disablement pension, there is a range of additional, supplementary allowances which are paid as part of the weekly pension. They are, in the main, designed to provide extra help for the more seriously disabled. My hon. Friend will be aware of some of the details of those special allowances.

A severely disabled war pensioner with maximum allowances can receive a total pension in the region of £200 a week and, moreover, that sum will be entirely free of income tax. I am quoting these figures not in any boastful way, because, as I have said, no amount of money can compensate someone for such grievous disablement, but to show hon. Members that the war pensions scheme seeks to ensure, as far as it can, that financial worries of war pensioners are reduced to the minimum.

It is important to make it clear that the proposals for the reform of social security in the Green Paper recently published by my right hon. Friend the Secretary of State do not relate to war pensions and allowances. The war pensions scheme was specifically excluded from the scope of the social security review. In consultation with the ex-service organisations, we shall be looking separately at any implications that the proposed changes may have for war pensioners and war widows.

It has long been the policy of Governments of all complexions that war pensioners should be accorded preferential treatment. Indeed, that preference has been progressively extended over the years as additional pensions have been introduced into the war pensions scheme. As recently as 1983, we introduced the new war pensioners mobility supplement for pensioners with serious walking difficulties occasioned by their war disablement. The supplement is paid at a preferentially higher rate than the national insurance mobility allowance and, unlike mobility allowance, has no age restriction. Nearly 11,000 pensioners have benefited so far from the new supplement.

Adequate financial provision for the war disabled is most important, but the Government's responsibility does not end there. Any war pensioner who needs treatment for his war disablement is given priority treatment within the National Health Service, subject only to emergency and other very urgent cases. If the necessary treatment is not available under the NHS, the DHSS can approve and pay

for private treatment. Treatment may also be arranged in hospitals with special facilities for war pensioners and, in some circumstances, in service hospitals. All medicines prescribed under the NHS for a pensioner's war disablement are free of charge, and any aid or appliance is also provided free of charge.

The DHSS also runs a special war pensioners' welfare service which provides help and advice for war pensioners on any problems which they may have. Through a nationwide network of specially trained welfare officers, help is given with pensions, allowances and more personal matters, such as work and housing. The service is available on call from pensioners, and it also takes the initiative in visiting the more severely disabled war pensioners, for whom regular personal visits can be arranged either from welfare officers or voluntary visitors. The welfare service also runs a national homecrafts scheme, through which the Department's handicraft instructors can assist pensioners to take up a wide range of crafts.

Sir Antony Buck (Colchester, North): We are grateful to my hon. Friend the Member for Southend, East (Mr. Taylor) for raising this difficult issue. Will my hon. Friend the Minister consider getting his Department to publish a small work outlining what he is saying now? It is vastly complicated, and many of us would like something like a child's guide which draws together all the strands, including war pensioners from the Falkland Islands.

Mr. Whitney: I entirely accept my hon. and learned Friend's point, and in response to our hon. Friend I shall shortly deal with publicity.

At this stage, I should like to pay a warm tribute to the enormous contribution made by the voluntary sector in safeguarding the interests and well-being of war pensioners. My hon. Friend has already mentioned the work of the Far Eastern Prisoners of War Association in his constituency. It is not possible to praise too highly the valuable part played by this and many other organisations. I speak as someone who has for many years been a proud member of the Royal British Legion. We all know of the contributions that it makes. The success of a partnership between the public and private sectors with common aims and interests is surely seen to no better effect than in the area of war pensions and war pensioners.

Both my hon. Friend and my hon. and learned Friend raised the question of publicity. My hon. Friend pointed to the possibility that there may be former members of the armed forces who do not begin to suffer from the effects of injuries or diseases arising from their service until many years later and may not then realise that they can still claim a pension. We recognise the need for publicity. Information about war pensions is already included in literature issued to all service personnel on discharge. It explains to them about the availability of pensions, and how to make a claim if, either then or at any future date, they suffer from a disability caused or made worse by their service. Leaflets about war pensions are also available at DHSS offices and from ex-service and other voluntary organisations.

While I take my hon. Friend's point, there is already a considerable level of awareness of the war pensions scheme among service and ex-service personnel. In 1984, for example, we received significantly more than 4,000 new claims in respect of service after 2 September 1939, and 38 claims from ex-service men from the great war.

Nevertheless, I accept that we could do even more—as my right hon. and hon. Friends have pressed me to do—to publicise the availability of war pensions. The House will be glad to know that we are preparing a new leaflet aimed specifically at ex-service personnel. It will outline the allowances available under the war pensions scheme, explain who may be eligible and make it clear that "war pensions" are not necessarily restricted to people who served in war time but can be paid in respect of any disablement due to service after 2 September 1939. The distribution arrangements for the new leaflet have still to be finalised, but we shall take into account the points made by my hon. Friends about the need for improved publicity.

Mr. Teddy Taylor: That is splendid news and I am delighted with what the Minister has said. Will he, in the review, consider the possibility of the pamphlets being made available in post offices?

Mr. Whitney: I shall give careful consideration to that point.

My hon. Friend the Member for Southend, East referred to the problem of deciding claims for war pensions. As he will appreciate, this can be a complicated business, particularly when it may be necessary to look back over a period of 40 years or more. Like my hon. Friend, I know well from experience in my constituency what problems can arise in individual cases.

It is true that recently the time taken to decide war pensions claims has been even longer than usual due to staffing difficulties in the medical sections of the Department. I am pleased to say, however, that there has been an improvement in recent months. The number of claims awaiting medical decision is less than half what it was six months ago and there are now no delays in priority cases, claims from ex-far eastern prisoners of war and claims for supplementary allowances.

My hon. Friend raised the question of the onus of proof in deciding claims for war pension, a subject which is put to us from time to time. If pension is claimed within seven years of the man leaving the Services, his claim automatically succeeds, unless the Department can show that the disablement for which he is claiming is not due to service. The onus of proof in these cases is placed squarely on the Department. Where a claim is made more than seven years after the end of service, the onus shifts to the claimant. But the law requires that the claimant shall be given the benefit of any reasonable doubt.

If the claimant is dissatisfied with the Department's decision, he usually has a right of appeal to the independent pensions appeal tribunal. Hon. Members will agree that the terms under which claims are decided are very favourable, particularly when it is recalled that there is effectively no time limit on claiming a war pension.

I recognise the force of what my hon. Friend said about the pensions payable to war pensioners and war widows from before 1973. I should stress that the pensions payable under the war pensions scheme administered by my Department are made on the same basis, irrespective of the date of service. The disparity to which my hon. Friend refers arises from the improved pensions payable since 1973 under the occupational pension scheme for the armed forces administered by the Ministry of Defence in its capacity as the service man's employer.

The cost alone of making restrospective the 1973 improvements in that scheme is prohibitive—about £600

[Mr. Whitney]

million a year in current terms. I am sure that hon. Members will agree that to have failed to make those improvements because they could not be made restrospective would not have been in the best interests of current and future service men and their families.

My hon. Friend mentioned an anomaly in the rules governing the payment of war widow's pension to widows who remarry and then are widowed a second time. The widow of an officer does not receive a gratuity on her remarriage, but if her second husband dies and she can show that she is in financial need her war widow's pension can be reinstated. These provisions date back more than 60 years and the reasons behind them are largely historical. I have previously debated this subject with my hon. Friend the Member for Littleborough and Saddleworth, and I take note of my hon. Friend's comments on the issue.

Finally, my hon. Friend the Member for Southend, East raised the question of how we treat our war pensioners compared with other countries. First, let me say that comparisons between one country's provisions and another's are not easy to make. I am sure that my hon. Friend recognises that. Regard would need to be had not only to the rates of pensions and allowances themselves and the cost of living in those countries but to such things as the conditions for entitlement under respective schemes and whether pensions were taxable or means-tested in any way. One needs to have regard also to the non-cash provision, such as priority treatment and the war pensioners' welfare service, which I have mentioned, and to other, more general provisions, like arrangements in the National Health Service and social services.

All in all, I think that our provisions for war pensioners generally compare favourably with those of other countries. What matters, surely, is not what other countries do for their war pensioners but what this country does for its war disabled; and on that our record is good.

I am grateful to my hon. Friend for having raised this matter, and I am glad of this opportunity to assure him and other hon. Members of the Government's continuing commitment to the cause of war pensioners and war widows.

Question put and agreed to.

Adjourned accordingly at ten minutes to Eleven o'clock.

House of Commons

Friday 14 June 1985

The House met at half-past Nine o'clock

PRAYERS

[MR. SPEAKER *in the Chair*]

PETITION

Wakefield Prison

9.34 am

Mr. Austin Mitchell (Great Grimsby): I beg to ask leave to present a petition sent by Mr. Steven Alfred Wilkins, a former constituent of mine, at present in prison in Wakefield prison. It begins:

To the Honourable the Commons of the United Kingdom of Great Britain and Northern Ireland in Parliament assembled. The humble petition of Steven Alfred Wilkins sheweth——

and I should like to read extracts from this long petition. Mr. Wilkins is serving a life sentence. He has spent four years at Parkhurst prison and was then transferred to Wakefield prison. He finds the regime at Wakefield prison unacceptable. He says:

I find Wakefield prison as oppressive and provocative.

I feel I am no longer treated as a person but as a prisoner and the quality of life here is such that any unlawful disturbance is welcome in order to break the monotony and create excitement which is suppressed by the strict system here . . .

The two opposing systems of Parkhurst and Wakefield achieve different results and create opposite attitudes . . . For example in Parkhurst category 'A' prisoners move to various activities and functions within the prison along with the non-category 'A' prisoners and are allowed the same freedom of movement within the security of the prison as the other inmates.

In Wakefield, category 'A' prisoners are escorted as a separate group to all activities such as exercise, workshops, canteen, medicine hatch and other functions. This may sound justifiable from a security standpoint but the effects of this constant supervision are adverse.

Parkhurst and other long term prisons have shown that such strict supervision is not necessary to maintain security and like other inmates I myself recognise such and it is resented and contributed to a derisory attitude.

He says that recreation at Wakefield is extremely limited because the governor refuses to leave cell doors open throughout the recreation period which consists of only TV, snooker or board games . . .

The mental and sociological consequences of this restriction are these; prisoners in such a false and unnatural environment need to maintain during years in prison as near as possible a sense of normalcy in order to stave off institutionalisation and a degenerating of social skills and accepted social standards.

The restricting of social interaction to TV, snooker and board games is not conducive to the mental and social well being of inmates.

Not only do inmates need a period of solace away from the ever present observation of staff in order to socialise together in a relaxed manner but need also to maintain their identity.

There exists here in Wakefield as in other long term prisons a large compound containing a football pitch, volley ball court and ample room for jogging or just walking, but yet again unlike other long term prisons exercise during the weekdays here at Wakefield is restricted to a small yard measuring 83 paces——

Mr. Speaker: Order. The hon. Gentleman is giving us a great deal of detail, but this is a petition, not a speech.

Mr. Mitchell: It is a rather long petition, Mr. Speaker. I wish to conclude the extract and present the petition. I am reading only extracts.

Mr. Speaker: Order. That is not the procedure for petitions. It sounds as if the hon. Gentleman is making an Adjournment debate speech.

Mr. Mitchell: I should like to conclude the extract. He says:

we see it as unnecessary oppression because we know it does not happen in other long term prisons.

All this is seen as insecurity on the part of the authority.

He talks of Wakefield being aggravating, provocative, apathetic and aggressive. It produces people who become resentful, rebellious, disrespectful and everything a convict is supposed to be. He finishes:

your petitioner, as in duty bound, will ever pray, that the adverse aspects of the system here at Wakefield prison will be rectified in the interests of law and order for the benefit of both, offenders and society.

To lie upon the Table.

BILL PRESENTED

EUROPEAN COMMUNITIES (FINANCE)

Mr. Chancellor of the Exchequer, supported by Sir Geoffrey Howe, Mr. Michael Jopling, Mr. Peter Rees, Mr. Malcolm Rifkind, Mr. John Moore, Mr. Barney Hayhoe and Mr. Ian Stewart, presented (under Standing Order No. 111 (Procedure upon Bills whose main object is to create a charge upon the public revenue)) a Bill to amend the definition of 'the Treaties' and 'the Community Treaties' in section 1(2) of the European Communities Act 1972 so as to include the decision, of 7 May 1985, of the Council of the Communities on the Communities' system of own resources and the undertaking made by the Representatives of the Governments of the member States, meeting within the Council of 23 and 24 April 1985 in Brussels, to make payments to finance the Communities' general budget for the financial year 1985: And the same was read the First time; and ordered to be read a Second time upon Monday 17 June and to be printed. [Bill 158.]

9.40 am

Mr. Nigel Spearing (Newham, South): On a point of order, Mr. Speaker. You may recall that during the autumn there was a case in the High Court and an appeal—I refer to the case of Smedley *v.* the Crown—which had an impact on the procedures and powers of the House. This Bill seeks to define retrospectively two agreements made on 7 May, and on 23 and 24 April. I give you notice, Mr. Speaker, that I may wish to raise the question of the Bill's influence and effect on last autumn's proceedings.

Mr. Speaker: I thank the hon. Gentleman for giving me notice, but the presentation of a Bill is a formal procedure, giving authority for the Bill to be printed. Doubtless we shall all know what it contains once it has been printed.

Government's Policy for Science

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Boscawen.]*

9.41 am

The Secretary of State for Education and Science (Sir Keith Joseph): Today I shall concentrate on the utilitarian aspects of civil science. However, I first recognise and pay tribute to the noble function of scientific research in expanding our understanding of the world in which we live and, indeed, our understanding of the universe. I also realise the excitement, slog, frustration and satisfaction that those who devote their lives to scientific research face.

The Government spend about £2 billion a year on civil scientific research and development, ranging from pure or fundamental science at one end of the spectrum to the most applied work—for example, product development—at the other. I am responsible for about half of that expenditure — rather more than £1 billion — which supports research and the related training of highly qualified manpower in the universities, the polytechnics, in other institutions of higher education and in and through the five research councils.

This system is known as the nation's science base: it provides our national research capability and trains the highly qualified manpower essential for our increasingly science-based society.

In parallel with that, and interacting with the science base, the Government spend as much again—about £1 billion—on applied civil research, as set out in table 2.1 of the annual review of Government-funded research and development for 1984, which is directed to solving specific practical problems or to supporting the development of specific policies. About one tenth of this research is contracted out to research council establishments, and additionally some is commissioned direct from universities and polytechnics. In addition to all that taxpayers' money for civil research, huge sums are devoted by business to civil research, and there are significant additional resources which are given by charities, most of which are medicine-oriented.

In 1971 Lord Rothschild drew a distinction between applied research for which, by definition in his analysis, there had to be a non-scientist customer, and basic research where he acknowledged the choice of lines of research had to be left to scientists. Lord Rothschild's review led of course to the transfer of control for some applied work—and the money that went with it—from the research councils to Government Departments which stand as customers or proxy customers for this work under the post-Rothschild arrangements.

Lord Rothschild recognised, however, that there was a grey area between basic and applied work, which he called "general" research: this is research with clear potentioal for wide-ranging applications in industry, medicine, and so on, but where it is too early in the development of the work for specific applications and products to have been clearly specified. Lord Rothschild left responsibility for this kind of research to the research councils. These days it is usually called "strategic" research. Some 40 per cent. of the research supported by the research councils is strategic research; a further 20 per cent. is applied; the remaining 40 per cent. is basic pure research as conventionally understood.

I mentioned those statistics to counter the impression which seems to have gained ground in some quarters since Lord Rothschild's report that civil science in the universities and the research councils, because it is largely not applied research or development, is somehow irrelevant to and remote from the practical world. No one reading the latest advice to me from the Advisory Board for the Research Councils entitled "Science and Public Expenditure" published yesterday could labour under that impression for long. In its advice the board points to many examples of strategic work being undertaken by the research councils, in many cases in collaboration with industry, which is clearly of the greatest potential importance for the British economy.

I shall pick out a few examples: the work of the Science and Engineering Research Council on chemical sensors, the development of which could revolutionise the monitoring and controlling of industrial processes; and on low-dimensional structures, precisely tailored materials with novel properties and with a wide range of potential industrial applications; the Natural Environment Research Council's deep geology programme, relevant to the location and extraction of the United Kingdom's natural resources; the Medical Research Council's pioneering work in clinical molecular biology which could revolutionise medical practice; and the Agricultural and Food Research Council's expanding food research programe which is exploiting advances in molecular biology, biochemistry and biophysics to improve our understanding and control of micro-organisms.

Mr. Tam Dalyell (Linlithgow): Will the Secretary of State undertake to look at the proposed dispersal of the national yeast culture collection? I do not expect an answer from him in the middle of his speech, but, as it is a serious matter, will he consider it?

Sir Keith Joseph: I shall certainly inform myself, and write to the hon. Gentleman. However, the research councils are treated as autonomous bodies that make their own decisions as to how to spend the taxpayers' money which I, under advice, distribute to them. Subject to that, I shall look into the matter and write to the hon. Gentleman.

One of the themes which the Advisory Board for the Research Councils develops in its recent advice to me is the close interdependence of strategic and applied research; and of basic and strategic research. Although it is convenient for some purposes to define research using these terms, we must not forget that the different kinds of research feed off each other; that progress in applied and strategic research depends on advances in fundamental understanding in the related basic sciences. The advisory board advises caution in the use of the strategic and basic labels because it suggests erroneously that

> "a clear boundary can be drawn between relevant and curiosity-orientated research."

But, as the board goes on to say in its report:

> "Most branches of physics and chemistry are of strategic importance in relation to the engineering and chemical industries; and almost all fields of biology from molecular genetics to mathematical ecology are potential contributors to medicine, agriculture, food processing and environmental management. Science is now so pervasive and the application so widespread that most basic science is relevant to the practical needs of society."

More than ever in the past, scientific research is now the essential basis for industrial innovation. As the

advisory board argues cogently in its report, technological innovation in our traditional industries and the development of new high technology industries is essential if we are to maintain and, moreover, improve our prosperity. It might be argued — and I believe some people have argued—that the urgent priority for national energies and expenditure is industrial innovation and that scientific research should in the meantime take a back seat. But industrial innovation without an underpinning research capability is not a realistic option. As the advisory board says in its report, the pace and sophistication of scientific and technological advance is now such that to introduce the technology, one needs trained people, including active researchers in the corresponding basic science. Additionally, it may in future become more difficult to borrow technology developed overseas, because the increasing awareness of scientists and industry the world over of the commercial potential of research seems likely to inhibit the free circulation, to which we have become used, of the results of scientific endeavour.

Therefore, I view with some concern reports that increasing numbers of our brightest scientists are leaving this country, perhaps for good, to take up research appointments overseas. I stress that the healthy interchange of scientific skills across the world is entirely to be desired. What is not so healthy is if it tends to be a one-way traffic. The impression is that the loss of our brightest scientists is not being balanced either by the return of British scientists or by immigration into Britain of overseas scientists. In other words, there is a net brain drain.

That opinion has not been reached on firm evidence. The advisory board is conducting a quick survey of university research groups to collect hard information about the net brain drain, and it hopes to give me its results at the end of August.

It is not sufficient for the Government to invest money in civil science——

Mr. Patrick Thompson (Norwich, North): Bearing in mind his remarks, does my right hon. Friend agree that it would be in order and a good idea for the Government to consider encouraging repatriation of British scientists to this country?

Sir Keith Joseph: I well remember that in the 1950s we asked a civil servant—I cannot remember his name; I think it was C. P. Snow, was it not?

Dame Judith Hart (Clydesdale): It was C. P. Snow and Mr. Harry Hoff.

Sir Keith Joseph: Indeed it was. We asked them to try to persuade British scientists to return, and that had some success. I do not know whether the current position demands similar action or how effective it would be. However, I note my hon. Friend's comments.

It is well known that this country's track record in exploiting the commercial potential of our scientists' inventions has been poor. A number of factors are essential for successful exploitation. First, there must be a climate —almost a culture—within our society that encourages enterprise. There must be a receptive attitude by industry, embodying enterprise; there must be availability of risk capital; there must be links between academic researchers and industry; and there must be awareness by academic researchers of the commercial potential of their work.

Great strides have been made in recent years in building bridges between academic research and business. A considerable amount of the credit here must go to the research councils which have developed collaborative programmes of research with industry, commerce and business.

For example, since 1977, the Science and Engineering Research Council has established special programmes with industry in areas of technology such as polymer engineering, biotechnology and the application of computers to manufacturing engineering. Its teaching company scheme, supported jointly with the Department of Trade and Industry, has been notably successful in helping to develop active partnerships between higher education institutions and manufacturing companies and encouraging able graduates to train for careers in manufacturing.

The Science and Engineering Research Council's co-operative awards in science and engineering scheme— CASE—offers a type of research studentship where an industrial organisation joins with the university in defining a project and supervising student's progress.

The Medical Research Council currently has some 100 inventions licensed or under exploitation by the British Technology Group and some 50 exploitation agreements made directly with commercial organisations. It is planning to set up a new collaborative centre for research that will offer a consultancy and advisory service for industry.

The Natural Environment Research Council works closely with British industry to secure overseas contracts, especially in the environmental consultancy and resource survey areas.

The Natural Environment Research Council's institute of oceanographic sciences has developed a device — GLORIA—which allows researchers for the first time to survey the ocean floor—vital for the siting of offshore structures and the laying of submarine cables and pipelines. Shortly before Christmas, the council signed a £12 million agreement with the United States geological survey to use the device to survey the entire US coastal waters.

Dr. M. S. Miller (East Kilbride): The right hon. Gentleman is outlining a survey that is of very great interest. There is an emphasis on the industrial aspect— the application of science. Will he consider where that must originate? Surely it must come from our universities. Yet there is a tremendous problem in our universities because our young scientists find it difficult to obtain established posts. That is a relatively new position; it did not occur a few years ago. I am talking from personal experience because my son is a scientist. I can assure the right hon. Gentleman that, if he does not obtain a post of that description in this country within the next year or so, he will go abroad.

Sir Keith Joseph: I certainly acknowledge the problem, but to some extent it has been mitigated by the Government's new blood scheme, which has been welcomed by the universities. I note that the number of appointments that they would like to make significantly, though not dramatically, exceeds the number of vacancies that they expect during the equivalent time. I acknowledge the hon. Gentleman's valid point.

I was giving some examples of the research councils' work. The Agricultural and Food Research Council has

[Sir Keith Joseph]

recently developed a sophisticated new technique for chilling meat carcases which will save the country £12 million a year in energy costs, and a new technique for controlling the amount of nitrogen fertiliser used by farmers which will save British horticulture £7 million per annum and reduce environmental pollution from excess use of nitrogen fertiliser.

Progress is also being made in increasing the links between researchers in the universities and industry, though here there is further to go. The Government, for their part, have confirmed that universities' earnings from collaboration with industry will not be penalised in the determination of allocation of University Grants Committee block grant. We have ended the British Technology Group's monopoly of first refusal on research council-funded inventions and endorsed the proposed transfer of responsibility for promoting commercial exploitation from the research councils to universities, with delegation of responsibility wherever possible to the individual researcher. We are also working with the university directors of industrial liaison and others to develop a national database of academic expertise and facilities in universities and polytechnics for use by industry.

As for industry, the Government's recent Green Paper "Development of Higher Education into the 1990s" emphasised that business should take advantage, in its own interest, of what higher education has to offer through research, technology transfer, business start-up facilities and consultancy. Firms in the United Kingdom need to be as aware—I emphasise, in their own interests—as many of their foreign competitors of the potential of our higher education institutions, particularly as vital partners in product innovation. In its recent advice to me, the Advisory Board for the Research Councils—and it is encouraging—says that it

"now see a clear trend in which more science-based industry is being promoted actively in this country. It is becoming a significant industrial sector in its own right and is also assisting in the modernisation of more traditional industries".

But there is still a considerable way to go.

I wish to acknowledge the very large research spending and excellent work of some of our big chemical, oil, pharmaceutical, aerospace, communications, electrical and electronic companies. Their contribution to our national capability is very significant. Nevertheless, British industry as a whole still seems less interested in research than industry in other countries.

One sign of changing attitudes in industry may be that the status of our engineers and scientists within industry is improving and more young people with qualifications at first degree level in engineering and science are now entering industry. Many of our largest and most successful enterprises accord high status and provide good salaries to their top engineers and scientists. However, there is still a significant number of other British companies where engineers and scientists have a lowly position compared with their counterparts in countries that are our main industrial competitors. To succeed in an international technological environment, it is important that our best engineers and scientists receive adequate rewards and incentives not only in financial terms but in terms of their involvement in shaping the strategy of their enterprise in a highly competitive world.

The potential and excitement of science are such that demands for resources for science will always outstrip what can be afforded. That is true even in the wealthiest of countries and particularly so in the United Kingdom because of our relatively poor economic performance in recent decades. None the less, the Government have given science some priority in public spending decisions. Measured against average inflation, the science vote has grown by 8 per cent. since 1979-80—hardly negligible. At a considerable cost, I found an additional £55 million for science in the research councils and universities from the last public expenditure settlement—20 per cent. less than I had originally hoped for, but still a valuable reinforcement to the science base. The extra money is being used, highly selectively, to buy new equipment in universities for some of our best research groups, to fund more top quality research projects in the research councils and to assist the Agricultural and Food Research Council and the Natural Environment Research Council in restructuring their programmes better to reflect current priorities.

Dr. John Marek (Wrexham): I should like to believe what the Secretary of State is saying, but how can he square it with a note in one of the reference sheets from the Library, which quotes *Nature* of 26 July 1984, which states:

"By parsimony, indolence and indifference, the British Government is killing off imaginative research."?

I should like to believe what the right hon. Gentleman is saying, but it is difficult.

Sir Keith Joseph: I can best answer the hon. Gentleman by referring to the leading article in *Nature* of 13 June, in which a more balanced picture is given. It gives credit to the Government for what they have done and makes relatively constructive suggestions about what the Government should do. Therefore, I refer the hon. Gentleman to the current *Nature* leader.

Despite that recent financial reinforcement, the Advisory Board for the Research Councils is still able to make a powerful case for more money. It wants an additional £85 million for the research councils over the next three years. It accepts that the Government have honoured their pledge to protect the science budget in gross terms, but it emphasises that a small but significant fraction of public money within the science budget is not available for science because of increasing expenditure on overheads such as international subscriptions in sterling terms, the cost of redeployment and the cost of superannuation.

Two main arguments underlie the board's bid. First, the costs of undertaking science and of certain overheads, to which I have just referred, have increased faster than general inflation. Secondly, the rapid development of science and technology is opening up new research opportunities, which the research councils have difficulty responding to quickly enough within, at best, level and, in some cases, contracting budgets. The case that the advisory board makes is powerful, and I shall be considering it further with my colleagues during this year's public expenditure survey. Of course, at this stage, I cannot even guess what the outcome of those deliberations might be.

What I can do now is pay warm tribute to the way in which the research councils are responding to the challenge of reviewing and adjusting the balance of their

programmes to reflect the latest priorities. Of course I recognise the difficulties involved in making choices, in deciding to reduce support for one area in order to build up another that merits higher priority; the pain in closing down establishments and cutting jobs. But that process is necessary to secure the most effective use of resources available, by running down work that is less promising in favour of more promising work. The current redeployment in the research councils is also necessary to increase their flexibility—to reduce the proportion of their resources tied up in long-term commitments so that in future they can respond more rapidly and effectively as scientific priorities change.

The advisory board argues in its report that research in the universities, funded through the University Grants Committee, has come under pressure because of the 8 per cent. overall reduction in Government funds for universities since 1981-82, and that in consequence the well-found laboratory no longer exists. That is the board's judgment. It was because of my concern about that that I redeployed additional money—£18 million over the next three years out of the extra £55 million at the end of last year, for university equipment. In the Green Paper on higher education, I said that the Government intended that the contribution of the higher education system to the nation's research capability should continue on the present scale, but there was also a need for closer and better work with industry and commerce and the public services, more funding from private sources and better management, yielding greater value for money.

The University Grants Committee's plan to introduce new selective planning and allocation arrangements for its resources for research should lead to better value for money in due course. In the meantime, the picture from the universities is not all bare. On certain indicators, notably income from research contracts, the scale of research activity in the universities appears to be growing. The Government hope that the UGC's new selective arrangements for allocating resources for research can be formulated and begin to operate by the academic year 1986-87.

I have to acknowledge that it can be no simple matter to pick out areas of research on which resources should be concentrated — and by implication other areas from which resources should be withdrawn or reduced. It is a truism that some of the main breakthroughs of science have been made in areas which, up to that point, had not seemed particularly promising, and by individuals the significance of whose work had not been fully understood.

It is therefore necessary for us to ensure that resources are available to support the work of really brilliant individuals in whatever areas, and to enable the United Kingdom to maintain at least the nucleus of a research capacity across a range of areas of research. But that is not inconsistent with some concentration on centres of excellence. Nor does it mean that the United Kingdom should seek to lead the rest of the world in all areas of research. That would be totally impracticable. As the Advisory Board for the Research Councils advised me last December:

"it is unrealistic . . .to expect the UK to keep in the forefront of all fields of scientific research".

We must remember that the United Kingdom's share of world research activity accounts for only about 5 per cent. of the total, and that proportion is unlikely to be significantly affected by even the largest imaginable increase in our domestic expenditure. Rather, the way forward must be to scrutinise carefully the priorities implicit in the present balance of funding between subject areas and to consider whether some adjustments may be needed better to serve the national interest.

As part of the process of scrutinising priorities, the Advisory Board for the Research Councils jointly with the Science and Engineering Research Council last year established an independent review of United Kingdom involvement in high energy particle physics. Total annual expenditure on high energy particle physics is some £55 million or 10 per cent. of the research councils' total expenditure. Two thirds of that expenditure goes on Britain's subscription to the European Organisation for Nuclear Research—CERN. The review group, which is chaired by Sir John Kendrew, in addition to reviewing United Kingdom participation in high energy particle physics, has considered the implications for other areas of British science and for international scientific co-operation of the reallocation of resources from high energy particle physics in whole or in part to other areas of science.

I understand that the Kendrew group's report is to be published next Tuesday. Copies will be placed in the Library. I cannot anticipate what the report will say. The report is addressed not to me or to the Government but to the chairmen of the Advisory Board for the Research Councils and the Science and Engineering Research Council. I look forward to receiving their advice on Sir John Kendrew's recommendations later in the year.

Mr. Robert Jackson (Wantage): My right hon. Friend rightly says that he cannot anticipate the Kendrew report, but when he considers that report will he bear in mind the comment of one of our greatest scientists, Lord Rutherford, that physics is the only science and all the rest mere stamp collecting?

Sir Keith Joseph: I have no doubt that that and other points of view will emerge clearly, whatever is in the report.

Science and scientists make an essential contribution to society — to its material prosperity, its comforts and convenience, and to the general well-being and health of the community. Their work can and does have far-reaching consequences for society. Scientific and technological advance is probably the most potent force for change that there is. Sometimes the public will be rightly concerned about the social or ethical implications of a particular line of research, but I believe that on the whole the scientific community is aware of the moral implications of its work and has a good track record of self-regulation in this respect. From time to time, however, there will be a difference of views within the population as to where a particular line should be drawn and here, as elsewhere, it is essential to balance the moral and ethical arguments against the utilitarian ones. I am not sure that the scientific community has always been very good or very successful at presenting its side of the case in this kind of debate, perhaps because its members are scientists and not theologians or philosophers. However, I think that they may be improving in this respect and I urge them to give even more attention not just to taking the moral dimension into account but to being seen to do so.

I am grateful for the patience of the House and I should like to take this opportunity to remind hon. Members that an exhibition of the work of the Science and Engineering

[Sir Keith Joseph]

Research Council is to be held from 17 to 21 June in the Upper Waiting Hall of this House. I hope that right hon. and hon. Members will make a little time available to visit the exhibition, which promises to be full of interest.

10.12 am

Dr. Jeremy Bray (Motherwell, South): The parlous state of science in Britain means that it is high time that we debated science policy. The Government have tucked this debate away to a Friday when many Members on both sides are fulfilling constituency engagements postponed from last Friday when they felt obliged to be present for the Bill relating to experiments on embryos, which was of major interest to scientists, Members of Parliament and constituents. Attendance in the Chamber today, however, shows that *Nature* was wrong in its comment this week that science has lost its political friends. Many of my hon. Friends wish to speak on this vital area of policy and I hope that they will be able to do so. I draw attention especially to the interest of my right hon. Friend the Member for Clydesdale (Dame J. Hart) and my hon. Friend the Member for Linlithgow (Mr. Dalyell), whose interest in science policy has been continuous since the early 1960s, long before most of the people now leading the scientific establishment had engaged in debates on science policy at all.

To assist the House, I asked the Secretary of State to publish the advice that he received from the Advisory Board for the Research Councils on next year's science budget, and I am grateful to him for having done so. I hope that he will also publish the further studies promised by September, which will be a very helpful addition to the board's findings so far.

I am sorry that we do not have the Kendrew report on nuclear physics, to be published next Tuesday, as that is a vital part of the picture. I hope that the House will find time to discuss that report specifically before the summer recess, so that it can be taken into account in the coming public expenditure round.

We listened carefully to the Secretary of State for any inkling of developments in science policy to remedy the present situation, but the advisory board is clearly fully justified in complaining that the Government, Parliament and the country as a whole are complacent about the current financial straits of science. We shall seek to dispel that complacency. The advisory board points out that the Government have planned a 10 per cent. reduction in the volume of research activity in the 1980s, contrary to the trend in other countries, and warns the Government that the economic and industrial effects on the United Kingdom are likely to be grave and effectively irreversible. The least that the Government can do is to grant in the next three years the recommended £15 million, £30 million and £40 million increases above the levels planned for a zero-growth science budget, which now stands at about £600 million. That should be matched by agreeing the bid for £45 million over the next three years put to the Secretary of State by the University Grants Committee to strengthen the science base in the universities.

The Secretary of State explained the problems, spelt out some of the arguments and gave a selective account of the record, but he offered no policy and no promise to fight on the beaches—not even a sprat to catch the headlines. It will be no excuse for the right hon. Gentleman to wring his hands and say that of course he agrees, but there is no money. An increase in the science budget paid for out of a general increase in taxation would make everyone better off in both macroeconomic and microeconomic terms. The only loss would be a political loss for the Secretary of State, the Chancellor of the Exchequer and the Prime Minister, because it would be a further dent in the eccentric fiscal calculus with which they have hijacked the Tory party. The Secretary of State is putting his own personal convenience above the interests of science, the country and even the Tory party.

With science and technology now an all-pervasive influence in society, the Government are cutting the total number of qualified scientists and engineers whom they employ on research and development by 10 per cent. in the five years to 1986. They are mutilating the Natural Environment Research Council and the Agricultural and Food Research Council and they are destroying the prospect of a reasonable career structure for research scientists and technicians. Manufacturing industry, too, has cut research and development. Meanwhile, all our major industrial competitors are increasing their efforts.

I assume that the Secretary of State has sought this debate because, after the fiasco over his attempt to supplement science by cuts in student grants, he wants to build up support on the Conservative Benches for the battle that he will be waging with his Cabinet colleagues in the coming public expenditure round for a much-needed increase in the science budget.

Sir Keith Joseph: I do not think that the hon. Gentleman can justify the word "fiasco". It may have been a very unpleasant experience for me, but it resulted in the transfer of £55 million to basic science.

Dr. Bray: As the right hon. Gentleman says, it was not a great tribute to his judgment, but the result was to make it clear to scientists that the Tory party was more concerned about well-heeled constituents than about safeguarding the scientific future of this country.

Sir Keith Joseph: I accept that what I originally asked for and had to reduce by 20 per cent. was probably too rapid and abrupt a change, but the people to whom the hon. Gentleman refers accepted a £55 million switch from their resources to basic science.

Dr. Bray: That is a story to which we shall return many times in the future, especially when we see what further steps the Government will take in this public expenditure round.

Mr. David Crouch (Canterbury): Will the hon. Gentleman give way?

Dr. Bray: I have given way many times. I hope that the hon. Gentleman will be called.

To win the further battles more convincingly, the Secretary of State must have a reply to his colleagues, especially to the Chancellor of the Exchequer and the Prime Minister, when they say, "You led us into this deflationary hole. You had overall responsibility for policy and research at the start. How will you get us out?" It is from within science that the right hon. Gentleman can find an answer to that argument. Whether he has the insight and the courage to use it, we shall see. If his record of Damascene conversions is anything to go by, anything is possible.

Restoring science to a state in which it can play its necessary role in modern society will probably need a new Government, less dogmatic in their philosophy, and so less hostile to the whole spirit of science. There must be change. It takes a century—in Britain it has taken two or three centuries—to build up a scientific tradition such as we have enjoyed in the past. With modern science, however, such a tradition can be destroyed in a decade of parsimony if the essential links are broken between teacher and student in their seminal years, between ideas and their testing on expensive modern apparatus accessible only abroad, and between basic research and its application in the entrancing synergy of intellect truly linked with social concern.

Let us make no mistake where Britain's scientific strength has come from—a tradition of free inquiry, following where the arguments have led. In Germany the primacy of research is unquestioned, with no mere Government prepared to deny the scientists the resources which they say are needed to pursue their research. But the authoritarian stuctures of German institutions, with the student unable to escape from the control of Herr Professor Doktor until his thirties, are inimical to originality, though strong on exploitation within fields once established.

In France, by contrast, science is part of central Government, caught up in the aspirations and so also in the chauvinism of the moment, able quickly to take new initiatives, but not always able to deliver according to a political timetable, or to take wing on a new idea that does not come from the Government.

In Britain, our tradition of free inquiry, debate, peer group judgment, and ultimate respect for democratic demands and decision have given us world-class universities and a fine scientific tradition at an absurdly cheap price, yet the Government are destroying that by parsimony, misunderstanding, abuse, and hostility. Just when the Robbins wave of expansion should be leading on to access to that tradition by far more working-class children, as was traced so carefully by Professor Halsey, the Government are cutting back on student numbers and on the overall funding of science through the dual support system.

The Secretary of State is also confused about the links between teaching and research. The academic who publishes a paper on queueing theory, the polytechnic lecturer who sends his students out to record the timing of buses, the research student who helps commission the computer programme which transfers work between machine tools in a flexible manufacturing system, and the economist who consults for American banks on the financial futures market, are all doing essentially the same thing. They are all building the bridges between similar pieces of mathematics in the lecture room and the outside world, carrying from one to the other the experience and material which helps keep each alive.

So we have the Secretary of State questioning whether all institutions and departments have to do research, yet urging all to undertake consultancy and industry support. He is cutting off one hand because he wants to make the other hand work better. He takes no account of how he has reduced the flexibility and efficiency of higher education and research, by starving them of resources. It is now far more difficult for the fertile researcher to have his teaching load eased, for the good facilitator who is content to leave research to others to take on the heavier administrative tasks, and for the good communicator to concentrate on passing on the lessons he has learned by teaching the next generation. Because there is not the movement, the informal efficiency of the whole suffers. It cannot be replaced by formal edicts and demarcations, least of all from Whitehall.

The Secretary of State must understand and insist on keeping alive and healthy the traditions and institutions of a free society, and the scientific discourse which has been one of its finest products. Today, that science is all-pervasive, and as relevant to the management of the economy and the funding of resources for education and science as it is to the working of the Secretary of State's brain, and the Secretary of State is crucifying it.

Pick up *Nature* any week. Last weekend's copy had on the cover the best electron microscope pictures yet of the structure of acetylcholine receptors in synapses—the mechanism which makes nerve cells fire. The Secretary of State can relax. It is not from his brain. It is from the electric organ of the electric ray torpedo marmorata, by which it knocks out its victims with a 500 volt punch by firing all its nerve cells at once. Come to think of it, perhaps the Secretary of State's brain might be organised on a similar principle.

The resolution at different depths is excellent, enabling researchers to match the size of the receptor to the messenger protein molecules that bind to them and trigger the firing of the cell. The electron microscope is an essential tool in this and a wide range of other research, covering biology, metallurgy, material science, solid state physics, microelectronics and other sciences. In 1948 the best electron microscope in the world could be bought for about £3,000—the price of a Rolls-Royce car. Twenty years later the best cost £12,000—the price of two Rolls-Royces. Today, the best costs between £250,000 and £1·5 millon depending on the type—the cost of about 10 Rolls-Royce cars.

Mrs. Edwina Currie (Derbyshire, South): It depends on the Rolls-Royce.

Dr. Bray: Rolls-Royces do just the same job today and are based on very much the same engineering principles as in 1948. The difference lies in the power, sophistication and cost of the electron microscope.

There is a sophistication factor. To look at individual molecules, a magnification of 1 million or more is needed. High voltages are required to look deep into specimens, and chemical analyses of the elements present in the object can be presented. These are the necessary tools of modern research. Without them it is not possible to work at the frontiers of science.

The work is not of purely scientific interest. Dr. Leslie Iversen, the former head of the MRC Neurochemical Pharmacology unit at Cambridge, has had set up for him by the American pharmaceutical company Merck, Sharp and Dohme a new £25 million laboratory at Harlow to design drugs based on a knowledge of neuro-receptor sites of the kind illustrated in the *Nature* article. The immediate target is senile dementia, or Alzheimer's disease, which causes great distress and affects some 20 per cent of the rapidly growing number of 80-year-olds and above.

It is a huge world market. Many scientists feel that the results of Dr. Iversen's work should be available to science generally and for exploitation by British pharmaceutical companies, instead of having been pre-empted by an American company. It is better that the work should be

[Dr. Bray]

done, and be done in Britain but, in the present climate, it has taken the Medical Research Council three years to decide whether, among many competing claims, Dr. Iversen's unit can be replaced in this most promising area of clinical research.

Dr. Iversen is among the more fortunate. The authors of the article, Brisson and Unwin, are at Grenoble and Stanford. Dr. Nigel Unwin was in the Cambridge MRC labs before he was enticed to Stanford. The equipment that he used was supplied by Dr. Peter Gatan, who was professor of metallurgy at Imperial College before he went to America, because in Britain there was not the market or finance to set up his company for making equipment for use with electronic microscopes.

In British research laboratories there are six high-voltage electron microscopes, purchased in 1971. The recent UGC money for equipment will bring us nowhere near the 40 high-voltage electron microscopes of more recent vintage used in Japan.

Material science is a heavy user of electron microscopes. In the US, the National Critical Materials Act 1984 set up a council within the executive office of the President to co-ordinate Government policies and oversee the $1 billion per annum Government funding of research in materials. In the United Kingdom, the SERC budget for materials research is £4 million per annum. When the Collyear report recommended a serious material science programme in the United Kingdom, the Minister for Information Technology, the hon. Member for Chertsey and Walton (Mr. Pattie), said that industry would have to fund it. It is pathetic.

When Dr. Colin Humphreys of Oxford, the newly appointed professor of metallurgy at Liverpool, sought Department of Trade and Industry support for a new materials centre at Liverpool, the Minister of State turned him down flat earlier this month. It would be difficult to think of any development at the price likely to contribute more to the redevelopment of Merseyside and the industrial future of Britain.

The Government must fund science. As I said in the House on 15 May when we were debating industry and new technology, there is no inherent competitive incentive in a market economy for private or public commercial organisations to undertake pre-competitive research. Basic science and pre-competitive applied research, including research into enabling technologies, and in public concerns such as health, safety and the environment, will not be done unless they are done by the Government. Charity, whether from individuals or industry, plays a useful part in the more popular bits of medical research but elsewhere their contribution is marginal, and will remain so, however much industrialists are lectured by the Prime Minister. Sometimes even pre-competitive research, which is essential to the survival of an industry, is not undertaken by firms on their own because the benefits of the research cannot be used to strengthen one firm against its competitors.

When we debated new technology policy on 15 May, there was a deplorable response from the Secretary of State and the Minister of State, Department of Trade and Industry. I am sure the right hon. Gentleman knows that most of the support for innovation schemes that he began to build up when he was Secretary of State for Trade and Industry have now been dismantled, because, despite the overall increase of Government support for industrial research and development, there was no increase in overall research and development in manufacturing industry, and most of the money was just going into research-intensive firms which were already doing well out of Government defence research and development contracts. The Secretary of State did not adopt policies which would ensure additionality.

Today we are concerned with science, basic science and mainly pre-competitive research. Just as with technology, the needs and opportunities vary so much, and the position is moving so fast, that international comparisons at a particular time are no longer an appropriate guide.

Let us consider the international comparisons. The Reagan Administration cut development programmes on the new energy technologies left over from the Carter Administration which had been initiated before the oil glut. But President Reagan has increased, and is still increasing, federal funding for basic science. Federal funding for basic research in physical and life sciences and engineering in universities and colleges has been increased by 30 per cent. in real terms from 1981 to 1985. As the office of science and technology policy in the executive office of the President explains:

"Government has a responsibility to help our colleges and universities create an environment for attracting and retaining faculty of the highest quality. That means improving the climate for research on campus so that ambitious scientists and engineers won't feel compelled to take jobs in industry if they want to be competitive in research."

This is the American President's office talking. It goes on:

"In the long run an academic brain drain is devastating for universities and industry alike, because universities simply won't have enough faculty to teach students, particularly in the fastest moving areas of science and engineering. And without newly trained talent, industrial technology will surely dry up."

With these priorities, Reagan's America is a million miles away from Thatcher's Britain.

France is planning to increase civil research and development expenditure by 4 per cent. per annum in real terms for the next three years, making it a 40 per cent. increase in eight years, bringing research and development expenditure to 2·6 per cent. of the GDP. Government-funded civil research and development in 1981, according to OECD figures quoted in the Government's latest review, was 0·81 per cent. of the GDP in France, 1·05 per cent. in Germany and 0·64 per cent in the United Kingdom. In absolute terms, their civil research and development expenditure is higher still, and increasing, while Britain's remains frozen.

What should we spend, and why? Research and development does not, by itself, secure economic growth. On the supply side, there need also to be comprehensive and related programmes for investment and training in an overall policy of support for innovation, which is a necessary element in overall competitiveness. On the demand side, the economy must be so managed that there is an adequate level of effective demand at home and abroad, with a monetary policy aimed at securing a stable level of price competitiveness.

If the Secretary of State wants to know how that can be managed better than it is being managed at present, I invite him to come to the international conference of the Society of Economic Dynamics and Control at Imperial college later this month, where he will see, among many interesting papers, United Kingdom Treasury officials

demonstrating methods that were developed with Social Science Research Council support before the barbarous attack that the Secretary of State made on that institution.

It is an interesting and potentially important cross-fertilisation between economics and engineering. I do not see how the Secretary of State can crib at that. He will argue that the market will produce the investment and a greater element of applied research, development and training than I believe it is likely to do in Britain. It is not simply that the Secretary of State is asking for too much too quickly from a weakened industry. The problem is inherent in the role of research and development in competitive markets.

The problem — as taught not in Leftish British economic departments but in solid Ivy League economics departments and capitalist business schools in the States, even in those monetarist holy of holies, the economics department at Chicago and the Hoover institute at Stanford — is not that the invisible hand is like the emperor's new clothes — simply not there — but, as Professor Joe Stiglitz of Princeton and All Souls, who pioneered so much of this work, puts it — that the invisible hand is slightly palsied.

If we write down what people will buy and sell with the information available to them, we will find that, to work a market, information costs money, as any other production cost costs money. Wherever there are information problems, there are Government interventions which can make everyone better off. Either information is not generated because it is too costly or it cannot be witheld from competitors, or if it is generated it is better for the economy if it is shared. The arguments are rigorous — so rigorous that I doubt whether the Secretary of State could follow them in full because they are rather mathematical — but the Secretary of State and his right hon. Friends are giving a spectacular and appalling demonstration of what ignoring those arguments means in practice. It means the dereliction of a modern industrial economy.

I should like to see a doubling of research and development in manufacturing over three or four years, which is possible and which is needed to secure the technological competitiveness for the re-industrialisation of Britain.

The Secretary of State believes that the market will determine the research and development needed in industry, but he would surely agree that the basic science must be there to support it. Why, even Korea and Taiwan have this year decided to establish research programmes and institutes in materials science and microelectronics because they see that branch factories such as they now have — and such as we have in Silicon glen in Scotland — offer no secure future. Alvey is not enough. Korea and Taiwan will match that.

The economic argument for basic science is that if we do not practise it we will not be able to understand, still less apply, the new technology that it generates. A scientist who gives up working and reading at the frontiers of a rapidly moving subject will find that within a year he can no longer understand his former colleagues.

Much of science at its most applied and applicable is now moving with unprecedented speed — molecular biology, genetics, material science, electronics, system theory — I hesitate to mention more in case some scientists feel that I have deliberately left their subject out of a comprehensive list.

When there is such a rapid and such a comprehensive dependence of new technology on basic science, any medium-sized industrial country has an interest in fostering its basic science, to understand what is going on, to have the facility to apply it as applications appear possible, and to train the applied scientists and technologists on the science that they will be applying.

It is true that earlier in this century scientific discoveries often preceded by 20 or 30 years the new technology products and processes that they made possible. That lag is now falling. In areas such as molecular biology and microelectronics it is under 10 years. So in Britain, where we have had a fine tradition of basic science, it is only common sense to keep it alive and healthy. Yet it is declining, whether measured by citations in papers and patents, in patent registration, in papers produced, or in Nobel prizes. The Secretary of State does not need to wait for the evidence. It is there. The causes of decline have been greatly increased since the squeeze on the universities in 1980-81 tightened the pressures on science.

It is not a motivation for science that the Opposition would favour, but I have difficulty in understanding why the right hon. Gentleman and his friends do not accord to science the same priority as they accord to defence, law and order, national prestige and social privilege. Scientists are no angels, and there are plenty who would respond to a chauvinistic lead from the Government, such as President Reagan gave in the United States. A boost for science even now would be a cheap and effective way of boosting the kind of Britain which the Prime Minister seeks. If it will help the Secretary of State with his colleagues, I am even prepared to say that it would be embarrassing to the Opposition.

However, I suspect that the Government are incapable of making a move because they are so hag-ridden by the anti-science brew served up by the combination of that weird trio, the right hon. Gentleman, the Prime Minister, and the Chancellor of the Exchequer. If ever there were an argument for the cultural contribution needed from science, it is embodied in the background of those three: the aging gru, believing that whatever he cannot think out for himself is not knowledge, yet incapable of reading the language of science; the financial journalist, product of Oxford PPE — philosophy, politics and economics — from its slickest, most superficial and arrogant period, when its detachment from modern economics was yet to become a public scandal; and the second-class chemist, for whom her science was merely a channel through which she could pass to the indulgence of her political obsessions.

The openness of mind, the readiness to listen, the concern with objective reality, the acceptance of democratic and hence peer group review, which are fostered by science are not the prerogatives of science, but they are essential in any Government who are going successfully to foster science and win for the country the fruits that it can offer. Because those qualities are absent from the inner councils of this Government, the right hon. Gentleman will not, I believe, win for science the increased resources which he knows are needed.

Mr. Crouch *rose*——

Dr. Bray: I shall not give way. I have already spoken for too long. The hon. Gentleman will be able to make his speech.

I find useful the distinction within basic science between pure research and strategic research, introduced

[Dr. Bray]

by Irvine and Martin into the OECD Frascati definitions of research and development. Indeed, their study "Foresight in Science for the Government's Advisory Council on Applied Research and Development" is a valuable contribution to science policy. I hope that the Secretary of State has read it.

I do not like the term curiosity-oriented research because it attributes a motivation to the researchers far short of the great aspirations that often drive their pursuit of knowledge. The economic and social benefits from it may not be formulated or agreed, and their cultural dimension may not be emphasised, because the actual content of the questions asked in their research marks it out as of significance for mankind, for those who have eyes to see, but the nature of the scientific venture is such that it is often only the researcher himself or the little village of researchers in the peer group who at that stage have the eyes to see. I shall come to the subject of the criteria by which research resources should be allocated for this kind of work.

There is a clear area of strategic research carried out with the expectation that it will form the background to the solution of recognised practical problems, as the Secretary of State said. While large science-based companies may devote 5 to 10 per cent. of their research and development to such strategic research to be able to follow it, the bulk of it is publicly financed in this and other countries in universities and laboratories.

Here, decisions on the allocation of resources have to be made. Irvine and Martin make out a persuasive case, based on the experience of the United States, Germany, France and Japan as well as Britain, for a systematic effort to identify promising areas of basic science, given the increasing speed and pervasiveness of its effects on technology. The experience should be organised by the Government, but it should involve the whole scientific community and lead to the broad allocation of resources.

Not only must the research councils and the Advisory Board for the Research Councils be involved, as they are already, but also the universities, the University Grants Committee, the National Advisory Body for Public Sector Higher Education, the Departments of Education and Science, Trade and Industry, and Defence, and industry and the unions.

This is a task for the machinery of government for science which my right hon. Friend the Leader of the Opposition outlined in the current issue of *Link-Up*. A Cabinet Minister designated to speak for science, a chief scientific adviser with a proper staff, and a council on science and technology, are needed. The management of science budgets should remain with Departments acting within a comprehensive strategy. Democratic planning of the economy generally, with its wider spread of responsibility for decision-making, requires a modern information system, widely accessible in government and out. It is an area of information technology totally neglected by this Government, who are not even conducting a survey of annual research and development within industry.

A Cabinet Minister, says my right hon. Friend, with a brief to create the information system needed for democratic planning, not as an overlord but as a co-ordinator working closely with colleagues, could be the driving force needed for science and technology also. Within such an arrangement, science and technology could play their full part both as resources and as claims in the management of the economy.

The three claims — support for research and development in industry, support for strategic research, and support for pure research — should be settled by different but overlapping considerations. Support for research and development in industry, with the emphasis on fairly short-term development for the re-industrialisation of Britain, should be pitched at the level needed to lead and to match progress towards that objective. Support for strategic research would depend on the number and scope of strategic areas chosen, and support for pure research would be set to encompass those opportunities for support of excellence in basic science that were not encompassed by the strategic programmes. Both skilled manpower supply and expenditure would of course, be constraints, but not within pre-set target ceilings and cash limits set irrespective of effectiveness and cost.

The absence of such machinery has allowed uncoordinated and short-term considerations to mutilate the Agricultural and Food Research Council and the Natural Environment Research Council. It has led to cuts in the support for innovation schemes expanded by the Secretary of State. It has left nuclear physics to be reviewed on its own by the Kendrew committee, whose report we have yet to see. It has sold out on medical research opportunities. It has left engineers as uncertain of their role as ever. It has left defence research as remote as ever from civil applications. It has positively invited our best scientists to leave the country, and the country's service, and has bogged down those who remain in increased effort to get their share of diminishing real resources in the dual support system.

As the leading article in *Nature* said yesterday—in a part which the Secretary of State did not quote — the erosion of morale is too rapid to wait until the next election, for there may be little left by then. The least that the Government can do is to grant in full the ABRC and UGC bids to strengthen science, and set up sensible machinery of government for science and technology to secure the technological foundations of recovery.

We call upon the Government to nurture the science and technology on which the future of this country depends, instead of so wantonly destroying it.

Several Hon. Members *rose*——

Mr. Deputy Speaker (Sir Paul Dean): Before I call the next hon. Member to speak, the House will wish to know that no fewer than 20 right hon. and hon. Members hope to contribute to the debate. Therefore, I appeal for short speeches.

10.53 am

Mr. Kenneth Warren (Hastings and Rye): At the beginning of this year my right hon. Friend the Secretary of State and I had the privilege of being entertained—I believe that it was entertaining—by Lord Flowers and others at Imperial college. He brought together several of his friends, including Sir David Phillips, Sir Ronald Mason, John Ashworth and Sir John Kingman, to review the problems of science in Britain. My right hon. Friend will not be surprised if I say that, having launched a

personal study during the succeeding months into the well-being of science, I shall have a small contest with him today, which I hope that he will accept from a previous and loyal Parliamentary Private Secretary.

I believe that the Government should move resources towards science rather than look for ways of economising on its expenditure. My right hon. Friend will know that no one believes more strongly than me in trying to reduce the burdens on taxpayers. I do not advance a move towards higher taxation. However, the time has come when we can no longer take the risks that we are running in the well-being of the country for which we are responsible.

The first of my findings is slightly audacious, but I hope that it will be acceptable to my right hon. Friend. I believe that science should be driven by market demand, and that the demand-pull of markets should reach backwards towards the science-push of which we are conscious and which is being funded. That means that we must define objectives. Governments do not usually like defining objectives, even if Oppositions do. The market-pull is to meet competition on an increasing scale from many major industrial countries and we cannot ignore that. We must examine the means available to forecast how we should move forward in science. That will require a gathering of knowledge, ideas and information from our competitors to try to determine what will be the products of the future, and then to back-track those to the strands of science that we now have. That is not a mathematical or philosophical difficulty particularly for politicians, who have the benefit of hindsight at their instant command.

There is no doubt that the present position, with each Department of State setting its objectives in the light of its priorities and programmes, is not the sort of objective that should result in statements such as the one from the science board of the Science and Engineering Research Council, responding to the requirements of four sciences — physics, chemistry, biology and mathematics. The board reported that those sciences could not find the money to finance about one third of their alpha-rated projects — those of the highest merit that should be funded at all costs.

My right hon. Friend will recall that, at the conference at Imperial college, Sir John Kingman said that only 74 per cent. of his alpha projects could be funded, and that the figure could drop to 60 per cent. Sir James Gowans, secretary of the Medical Research Council, has said that, whereas in 1982-83 85 per cent. of his projects were funded, in 1983-84 the figure had dropped to 53 per cent. Sir David Phillips, the Oxford biophysicist, has said that the volume of science will be about 25 per cent. less in 10 years' time than it is now. He was sounding a warning bell, as a fellow of the Royal Society and a biophysicist of world renown, that we cannot ignore.

What will be the result of all this? If one examines the document "Charter for Jobs" published by that strange organisation which came above ground last month but which seems to have disappeared, one finds information that looks into the past specifying how growth rates of real national product per worker hour and real national product over five-year moving averages have all declined. But the arguments deployed by such organisations do not contain real solutions, other than the Government spending more money. If one considers matters to which that organisation drew no deductive attention in its document, one sees that the key factor, which illustrates the way in which our scientific ability is declining and will continue to decline is that, during the past 20 years, the percentage of manufacturing firms working at capacity has decreased from about half to about 30 per cent. That has nothing to do with the oil crisis or the world recession during the past decade. The fact is that Britain has declined in competitiveness at an unacceptable rate that must not be tolerated.

The science policy research unit at Sussex university — a university of whose court I am delighted to be a member — has considered how competitiveness will move forward in the 1980s and 1990s. It has done some startling work, to which the hon. Member for Motherwell, South (Dr. Bray) referred, relating to Britain's share of scientific publications worldwide, our share of citations worldwide and the number of foreign patents taken out in the United States. In all those areas, Britain's share has declined unacceptably. The share of the United States, the Soviet Union and France has also declined, to the benefit of West Germany, which has had a small increase, and Japan, which has had a startling 30 per cent. increase during the past decade. As for citations, the Japanese have taken over the reference base on which so many scientists rely for their publications. They now refer to Japanese publications 50 per cent. more than they did 10 years ago. The Japanese have now soaked up from the West all the science it has and are moving forward into an era of innovation which is well funded and devoted to strategic tasks which have been identified.

In considering the ways in which various countries determine how to use their scientific resources, there is no better example than that which the Japanese provide in the deployment of their science and technology agency. The agency has been functioning since 1956. In the past 15 years it has brought together in five-year programmes the opinions of those in industry, the universities and Government. About 4,000 to 5,000 people at a time have been invited to distil their opinions on where the country should be going with its science, technology and industry. This analysis, which results in consensus, is something which we should be able to achieve.

Success does not lie merely in the amount of money which is spent. The United States spends more than Japan on higher education — $8 billion a year compared with $5 billion. We spend about one fifth of that which Japans expends. The number of researchers, scientists and engineers in higher education is not the sole crieterion. The United States and Japan have about the same number. The clue lies in the research and development which is carried on in higher education as a percentage of all national research and development.

It is true that in Japan 75 per cent. of all research is funded by industry. However, the key figure is the number of people working in higher education as a percentage of all national research and development. There lies a clue to the success of the Japanese and the danger for us in future. We employ about 11 per cent. of our researchers, scientists and engineers in higher education. The United States, West Germany and France employ about 15 per cent. but the Japanese are employing 28 per cent. They are putting their best men at the sharp end. The rapid advances that they are making are such that it will not be a matter merely of trying to erect trade barriers against their products as a solution. We must not fail to understand that it is in investing in the brightest people that we can compete. The only way in which we can compete with Japan and other far eastern countries is by moving up the scale of industrial competitiveness.

[Mr. Kenneth Warren]

A third factor in an area in which Government policy should be developed is the co-ordination of information. There seems to be no way at present in which we can bring together knowledge of what is happening in universities, research councils, industry, Government and research establishments. There are organisations which meet in an ad hoc fashion but that are not akin to the scale of co-ordination that we must achieve.

We must come to some conclusions about our economic and social needs. We must examine all the areas of sciencee and technology which have the potential to meet those needs. We must establish priorities and certainly we must establish forecasts. At present, our objectives are not clear to our scientists. Too many industrialists are not aware of what the scientists are doing. We can achieve a great deal by setting objectives, giving leadership and co-ordinating the knowledge that is available. The Government are the only agency available to carry out that co-ordination.

We have a broad and deep basis of good science in the United Kingdom but its real value has yet to be recognised and used. Our task and our duty must be to mobilise these human resources to improve the well-being of our people.

11.4 am

Mr. J. Enoch Powell (South Down): It is not my intention to add to the Government's embarrassments by joining in the general demand for a more or less massive increase in expenditure. I want instead to warn the Government of an imminent embarrassment towards which they are drifting in an area related to the topic before the House and to indicate to them the way in which they could avoid it.

The key document in this matter is a letter which was issued from the office of the Leader of the House to the many members of the public who had written to him with the plea that the Government should find time for the completion of a Bill in the present Session on the subject on which the Warnock committee reported, namely the creation and use of human embryos for scientific experiment.

In the course of his letter to the Leader of the House wrote:

"the Government has not thought it appropriate to form a collective view on the merits of this legislation, believing that it raises issues best left to the individual consciences of Members of Parliament."

That is an important declaration of Government intention. The issues which such legislation raises are those which are inseparable from the conclusions put forward by the Warnock committee. The Government have therefore committed themselves to ensuring that when in due course they come forward, as they must, with legislation, that part at any rate of the legislation will be "left to the individual consciences of Members of Parliament" and no collective view of the Government will be formed upon it.

The Government have said frequently in debates upon this subject that they are neutral. It is not possible to be neutral as between what was proposed in that legislation and the proposals of the Warnock committee. But two things have happened in these past months which are relevant to the Government's considerations. First, they have learnt upon what lines the House will support legislation if the issue is "left to the individual consciences of Members". Secondly, the recommendations of the Warnock committee have begun to come to pieces in the course of debate and of the examination to which they have been subjected, so that they can form no longer a satisfactory base on which any Government can frame legislation.

Mr. Dalyell *rose*——

Mr. Powell: No, I shall not give way. I hope that the hon. Gentleman will not mind if I continue. It is part of my habit to give way to the hon. Gentleman, but I have, in a debate in which a number of hon. Members wish to speak, a substantial speech to make and I hope that he will allow me to pursue it.

Several times already in the course of the debate, quotations have been offered from *Nature*. It was on 7 March that *Nature* published a leading article of which, so far as I know, there has not subsequently been any rebuttal, nor has there been an arrangement made for an apologetic leading article to follow it in a later issue. In the course of a leading article on the subject of the proposed legislation, the editor of *Nature* wrote:

"The missing ingredient in the debate"—

that was the debate of 15 February—

"was the clear statement of what exactly are the benefits of investigations with human embryos."

He continued with this staggering sentence:

"That is not surprising, for as yet there have been no such investigations."

I saw no reports of angry crowds gathering outside the office of *Nature* demanding that the editor withdraw a statement which put a foot straight through the allegations and recommendations of the Warnock report. On the contrary, so convinced was he of the correctness of what he was saying that he went to the length of offering a prize for those who could suggest what investigations there might in future be within this area.

Being naturally inquisitive, I corresponded with the editor of *Nature* in due course to inquire how he was getting on. I did not receive an answer from him until 8 May because in the meantime he had been away at the Hanover fair. He replied:

"The position is that we have had about a dozen proposals, some detailed, some vague. I hope that we shall have opinions on these in a month or so. I have not yet decided how we shall publish them, but I shall make sure that you have a sight of what we plan to publish before it actually appears."

I am much obliged to the editor of *Nature* for his candour in reporting upon the response to his desperate plea to those concerned: "While no investigations are in progress at the moment, kindly let me know what investigations might be put forward to make up something of a case."

However, I did not think that it was good enough to go on waiting to hear from the editor of *Nature*. I said to myself, "This is too important to be left to correspondence with a periodical, however distinguished. I will go to the fountainhead. I will go to the Minister for Health because he is personally—not as Minister in his official capacity—opposed to the contents of the legislation. He must have thought deeply upon the subject. Moreover, his Department has been concerned in studying the legislation in great detail and advising upon the consequences if it were to be passed. So I cannot do better than to address myself to the Minister himself." Therefore, I asked the Minister, in a written question,

"if he will list the establishments in which he is aware of human embryos being currently possessed for purposes which would be outside the terms of the authority defined in the Unborn Children (Protection) Bill".

The reply which I received will be instantly recognisable by all students of that handbook of politics known as "Yes Minister". Mr. Hacker's—I am sorry, the right hon. and learned Gentleman's—written answer was:

"We do not have sufficient detailed information to enable us to speculate on the effects of the Bill as precisely as the question asks."—[*Official Report*, 17 April 1985; Vol. 77, c. 410-11.]

Mr. Frank Dobson (Holborn and St. Pancras): A good answer.

Mr. Powell: It was a very good answer. He said he did not know. He said that his Department did not know. So here all this agitation was going on, and yet the Minister was quite unable to draw attention to any establishment in which anything happening was incompatible with terms of the legislation to which he was personally opposed.

Therefore, I was not altogether surprised when, in the couple of articles, which many hon. Members will have read, in the *Sunday Telegraph* on 19 and 26 May 1985, Mr. Graham Turner, the author, said of one of the persons whom he had interviewed:

"So far, he hadn't done the sort of work on human embryos which the Powell Bill would have banned, but very much wanted to."

Nor was I surprised by the general conclusion at which Mr. Turner arrived, from the people he had interviewed in the course of his investigations:

"Too many have become scientist-politicians concerned with putting up a good public relations case for embryo experiments, but a few are genuinely concerned with truth, even to the extent of admitting that their own case is not watertight."

Since it has been alleged that I take no interest in the relevant establishments, I should add that I was careful to inquire of Professor Craft at the Cromwell hospital and of Messrs Steptoe and Edwards at Bourn Hall, to whom I express at once my gratitude to them for the great courtesy and hospitality they showed me. I asked them point blank, "Are you conducting any experiments which are incompatible with the terms of this legislation?" In each case the answer was no—a negative which has been confirmed publicly by both in the course of television interviews.

So here is a pretty pickle. We have Baroness Warnock in an article in *The Times*—opinions may differ as to the good taste or otherwise of the illustration—asserting:

"without continued research in vitro fertilization would come to an end",

yet in the very establishments where vast sums of money are being paid for the continuance of this process, we find that such research was not taking place and is not taking place—nor anywhere else, apparently. There is also the greatest difficulty in envisaging what it might be or, to quote the editor of *Nature* again, "what exactly are the benefits" it might produce.

I felt, however, that it was my duty to do what the Warnock committee had not done in its shoddy investigations, and to ask some pertinent questions, questions as to what were the purposes and the benefits for which it was indispensable for the experiments to be conducted on human embryos. I am much obliged to Dr. Lieberman of the regional IVF unit in Manchester for his correspondence with me and for his assistance to me in this respect. I am not certain that at all stages in the correspondence Dr. Lieberman knew exactly what had hit him; but, at any rate it has been an enjoyable correspondence on both sides.

When I asked Dr. Lieberman what were the purposes for which it was indispensable to conduct experiments incompatible with the terms of the legislation, he kindly referred me to an article by Dr. Anne McLaren published in the *British Journal of Obstetrics and Gynaecology* in April of this year. Naturally, I examined it with great interest and eagerness. I found that it contained four separate suggestions. Two of them I set on one side at once as they were compatible with the terms of the Bill, being concerned not with embryos but with gametes. That left two propositions. The first was that such experiments were necessary for testing male fertility. I quite understand that it was probably not possible for the Minister for Health to be present at this debate; but he will have been advised by his Department—as I was advised by his Department in writing—that there are other methods of producing that result which do not involve those experiments. So that leaves us with the residual fourth proposition Dr. McLaren put forward. I hope that I may spend a few more moments upon that, because it is of great importance, for it has been the cause of great misunderstanding, and of great avoidable distress occasioned to large numbers of people in the course of the debates which have taken place in preceding months. I refer to the elimination of embryos containing genetic defects.

I will spend a moment or two on the theory which underlies the proposition. It is that if parents known to be liable to transmit a genetic disease will have their children by in vitro fertilisation, and if, before insertion, the embryos can be tested to be cleared or otherwise of those diseases, it should be possible to ensure that those parents do not have children who will carry forward those diseases. That is the underlying theory of the whole proposition. It was contended by Dr. McLaren that for that purpose, "because of species differences" between human beings and the objects of the previous trials which had pointed to the conclusion that the remainder of an embryo of which one or two cells had been biopsied in order to test for genetic disease was viable if inserted—or, as the terminology goes, was totipotential—

"the last step can never be omitted if a procedure is to be used in clinical practice"—

in other words, that it was necessary to experiment upon human embryos in order to clear the totipotentiality of byopsied embryos for insertion. That is a very logical proposition if it is correct; but I am advised that there are strong grounds for taking it to be incorrect.

I was advised on the matter by Dr. McLean of the department of anatomy of the university of Manchester, who assured me that

"the only way in which"

the viability of the embryo from which the biopsy is taken can be assessed

"is by insertion, with subsequent monitoring of the pregnancy".

He assumes that that was what must be meant by "the last step" referred to in Dr. McLaren's paper to which I was referred by Dr. Lieberman.

So we arrive at a second conclusion. Not only has the current practice of these experiments not been demonstrated, though their continuance is supposed to be vital to the continuance of the fertility procedures; but it is extremely difficult and controversial to identify the benefits which it is alleged they might produce—a

[Mr. Powell]

whole field of inquiry into which there is no evidence that the Warnock committee entered in the course of arriving at its foregone conclusion that it was necessary to make provision by legislation for such experiments to be made.

Right hon. and hon. Members may feel that up to this point I have only discharged part of the task on which I set out. They would be entitled to say, "If anything, you have proved too much. You have shown evidence that experiments incompatible with the legislation are not in progress. You have argued that such experiments are necessary. How, then, comes it that pressure is so strong for such experiments to be authorised? How is it that there is such violent, though concentrated and orchestrated, opposition to legislation which would be incompatible with them?"

It is necessary to answer that question, and again I am indebted to Dr. McLaren for supplying the answer. Among the objects which she mentioned, there was a fifth which I now bring to the attention to the House. She wrote:

"Research on new methods of contraception also requires the use of IVF test systems."

I believe that there she laid her finger upon part, though only part, of the answer to the legitimate question of the House: why is it that such pressures have been exerted in order to secure legalisation permitting the use of the human embryo as an object of scientific experiment?

I do not know whether hon. Members have studied at all carefully the terms of reference of the so-called voluntary authority which has been set up between the Medical Research Council and the Royal College of Obstetricians and Gynaecologists to exercise those functions of control which the Warnock committee suggested should be vested in a quango. But even in setting out at this stage the objects, they said:

"The aim of any research must be clearly defined and relevant to clinical problems such as the diagnosis and treatment of infertility or of genetic disorders"—

and note—

"or for the development of safe and more effective contraceptive measures."

This bears out what Sir John Dewhurst said in a letter of great importance which was published in the *Daily Telegraph* on 6 June—a letter signed by some of the most eminent obstetricians and gynaecologists in the country:

"we must uderstand that enthusiasm for IVF is now only incidentally concerned with relief of infertility."

Dr. M. S. Miller: Will the right hon. Gentleman go a bit further with the voluntary code between the Medical Research Council——

Mr. Powell: Yes. I will go further. I am in the middle of it.

Dr. Miller: Will the right hon. Gentleman tell the House that this body which has suggested the voluntary code now has a more scientific attitude, I think, to determining the pre-embryo stage in order to differentiate between that stage and the embryo after 14 days? Will he go further and say that it depends on the development of the primitive streak? The Medical Research Council and the Royal College are very much in favour of experimentation so long as it does not occur after the primitive streak has appeared.

Mr. Powell: I am obliged to the hon. Gentleman. I was aware of the views officially put forward on behalf of the Royal College of Obstetricians and Gynaecologists, although they are not shared by many of the most distinguished members of that college or by many distinguished members of the medical profession.

I was drawing the attention of the House to what Sir John Dewhurst wrote, namely:

"What is more important (to some) is that there should be a plentiful supply of disposable human embryos in the laboratories for testing drugs (and especially in developing abortifacients)."

Some of us who have been interested in this matter for a series of months have been struck by the nature of the pressures which lay behind the opposition to legislation. The presence of commercial motivation, the existence of large potential profits in the background, was unmistakable. Here lies one of the central points. By research upon human embryos, the means——

Mr. Peter Thurnham (Bolton, North-East): Will the right hon. Gentleman give way?

Mr. Powell: No. I am finishing my speech. If the hon. Member is called, he can make his comments then.

The motivation behind much of the demand to have embryos available for experiment is a commercial motivation based upon the possibility and prospect of developing highly saleable and profitable contraceptives and other drugs.

Mrs. Renée Short (Wolverhampton, North-East): Is that not better than abortion?

Mr. Powell: Sir John Dewhurst continues:

"This is not scare-mongering. This is what the pro-IVF lobby itself tells us; and we may suspect that much more is already happening inside some laboratories than we are told."

This then is the answer to the legitimate question: Why is it that, in the absence of current experiments relevant to IVF, and in the absence of logical and rational justification of the need for human embryos for some future experiments, we have not had disclosed the real, effective ground and the real purposes for which that use was to be indispensable?

It is a curious reflection that some of the most incorruptible Members of the House, such as the hon. Member for Fife, Central (Mr. Hamilton), have found themselves ingenuously accepting, no doubt largely as a result of the careless and inadequate work done by the Warnock committee, the case put forward by those who wish to make major profits out of the exploitation of experiment upon the human embryo.

I am glad to see the hon. Member for Holborn and St. Pancras (Mr. Dobson) on the Opposition Front Bench, because I have noted with satisfaction and sympathy his growing interest in the exploitation of medicine by capitalist investment, especially from the United States. He will share with me a sense of the sardonic irony that hon. Members whom no one would suspect of any underhand motives should have been enlisted innocently in the service of the interests I have described.

So I have this last advice for the Government. It is that the background to legislation on this subject is changing with astonishing rapidity. It is not only that the work of the Warnock committee is being unpicked and shown to be the shoddy stuff it always was. It is that opinions in the profession are changing in a direction which should facilitate legislation that will be acceptable to the House.

At the end of last month I received a letter from Dr. Edwards of Bourn Hall, and again I express my gratitude

to him for the patience with which he has sustained a correspondence with me on the subject. His letter contains a most important and considered statement by a person who perhaps more than anyone else is famous and eminent in this branch of medicine. He wrote:

"I would stress that we do not wish to create 'research embryos', but to use those which are known to be genetically or otherwise abnormal and those embryos which are considered unfit for replacement or frozen storage."

That declaration by one of the leading figures in this field is light years away from the recommendations of the Warnock committee, with its acceptance of the creation of embryos for experiment and the use of surplus normal embryos for experiment. That is an illustration, coming from the quarter that it does, of the speed with which public debate on this matter has brought about a reconsideration on the part of the medical profession and particularly of those who are in the forefront of advances in fertility treatment.

The Government will find when they come to frame their legislation that it will need to be framed closely upon the lines that have already proved acceptable to an overwhelming majority of the House. The Warnock committee recommendations no longer offer a basis upon which tenable or defensible legislation can be founded. The Government will have to bring forward legislation on grounds which the House has already pioneered and explored. They will find in doing so that they are also in line not only with the bulk of opinion and sentiment outside the House but with the bulk of opinion and sentiment in the medical profession itself.

Mr. Ted Garrett (Wallsend): On a point of order, Mr. Deputy Speaker. Both sides of the House must be concerned about what I would consider, although I respect the views of the right hon. Member for South Down (Mr. Powell) and his friends, to be an abuse of parliamentary time. I think that I am known as a Member of Parliament who can honestly and truthfully say that in the 20 years I have been here I have never abused the use of parliamentary time. The motion before the House was rigidly adhered to in the first two speeches, but 20 Members of Parliament who have some known scientific and technological interest in a matter that is of great concern to the country have had their chance to speak delayed. I urge you, Mr. Deputy Speaker, to have a word with Mr. Speaker to see how we can end the serious abuses that are continuing to pile up day after day. It must end, in the interests of all Back Benchers. I am sorry that I have taken so much time.

Mr. J. Enoch Powell: Further to that point of order, Mr. Deputy Speaker. In advance I intimated to Mr. Speaker the subject on which I intended to intervene in the debate, in case he should see fit to warn me against doing so or say that it was unacceptable.

Mr. Deputy Speaker: I am obliged to the right hon. Gentleman, and he has answered the point. This is a wide debate on the Government's policy for science. Had there been an abuse of our procedures, I would have taken action.

11.32 am

Mr. Ian Lloyd (Havant): The hon. Member for Wallsend (Mr. Garrett) has taken away the first paragraph of what I was going to say. It was the point that the House rarely has opportunities to debate the thrust and organisation of the Government's science policy. It is my view and that of many other hon. Members that we should debate it more intensively and more often. Although the right hon. Member for South Down (Mr. Powell) is passionately concerned about the important issue on which he spoke with great authority, it is right that it should occupy a comparatively minor proportion of today's debate and not, as it could easily do, the whole of it.

The right hon. Member referred to the publication of an article in *Nature*. Some 70 years ago, give or take a few years, there appeared in one of the major scientific journals — I believe that it could have been *Nature*, although I am speaking from memory as I have not had a chance to verify this—a simple equation published by a man called Albert Einstein. It was $E = \frac{1}{2}MC_2$. At that time, about four or five physicists in the whole world appreciated the significance of that announcement. The anti-nuclear lobby could easily say, with the benefit of hindsight, what a good thing it would have been if the formula had disappeared from sight. It could be asked whether we could know what research was being done into nuclear power and nuclear weapons, or what research was likely to be done, for example, into nuclear magnetic resonance scanners, and the benefit of that to the human race. We did not know, and we could not know, and that is the answer to the right hon. Member for South Down.

Alfred North Whitehead, a considerable scientist, was asked about the scope of science and whether we would ever know it all. The argument then was that perhaps we were reaching the stage where the ultimate boundaries could be seen. He said that no, we would never know it all. It was like the branches of a great tree—it keeps on growing, but the space between the branches will always be greater than that occupied by the tree. That is why responsible rsearch, properly conducted, should know no man-imposed limits. That is the most fundamental thing that one can say about the history of science in the last three centuries, and I expect for the next three. That is why we must approach this matter with the greatest possible care. The right hon. Member has made my case in an entirely different context, and he will see why in a minute.

Some very interesting points were made by the hon. Member for Motherwell, South (Dr. Bray). He and I share a considerable and long-standing interest in science, and that of the Government in science, and we share many conclusions. His speech was profoundly interesting and is one that will have to be re-read to rediscover the interesting parts. We went wrong in one way, although I do not blame him for this. I know the pressures, under which we all are, in looking to see whether a case can be made for or against the failure of the Government in science. The hon. Gentleman referred to a document in the Library, which contains a catalogue of articles, the headings of which imply that things are not well. The House of Lords report in 1981 implied the same thing, and many other statements have said so as well.

Would it not be so much more constructive if, in this debate and in this House, we sought to focus our attention to discover what it is, under all Governments since the second world war, that has allowed this deterioration? If it can be proved to have continued under successive Administrations, what are the common factors? Can we isolate and identify them, and get some agreement about them? If we can, there is possibility, hope and scope for a constructive change, which I am sure my right hon. Friend the Secretary of State would be the first to accept

[Mr. Ian Lloyd]

and carry out. I hope that in the rest of the debate we shall go down that road, rather than down the sterile road of attempting to allocate immediate blame for the past 18 months, two or three years, or whatever.

This year's "Annual Review of Government-funded R and D", produced by the Cabinet Office, is a great improvement on that of last year. It is moving forward the general quality of discussion in these matters and is making more information available. This is welcome progress, and the Government are to be congratulated. We must hope that the progress will continue.

A number of issues are raised in the report which deserve some attention. The first is the old argument of pure versus applied science. Increasingly, I am impressed by the falsity of this antithesis. As I see it, curiosity, to which the right hon. Member for South Down referred somewhat disparagingly, and which can be called fundamental scientific interest, is a seamless robe. Our trouble is that our technological imagination, the grasp of scientific implications and potential, has been declining. I refer not to the absence of curiosity or of the fundamental spirit of scientific inquiry, but to the rather more difficult to define attribute of technological imagination which allows some people to say, immediately on seeing some scientific work, that it has implications and that we can use it or do something with it. We must encourage that quality.

It is sometimes argued that too much is spent on defence research and development. That proportion of expenditure is certainly high. However, as the Secretary-General of NATO reminded us only recently, if we do not maintain the highest standards of research and keep up on the critical frontiers, we may as well pack everything in and buy our weapons systems from those who do. We all know what has happened throughout history to those who have bought their weapons systems, and particularly to those who have bought them from their enemies.

I was struck by the coincidence that the hon. Member for Motherwell, South should have used the example of electron microscopes, as I had intended to comment on technological inflation. That inflation lies behind many of the resource allocation problems involved in scientific research. The electron microscope has not yet reached its limit. Next year's will cost about 10 times as much as this year's, and in a decade's time, the next electron microscope will probably cost about 10 times as much as the one now on the drawing board. That is an inescapable development. Such technological inflation is built into the very structure of advanced science, and we must accept it. But it nevertheless imposes a need to concentrate our research ever more skillfully on the areas in which we do best.

The need for an electron microscope was clearly foreseen. It is one of the most powerful tools of science, yet I believe that the best made are now to be found in Japan. I believe that they have been made in Japan for only the past 10 to 15 years. Why do we not seize such opportunities? Why is our technological imagination deficient, and how can we recreate it in the pattern of social attitudes about which we talk so much? What is to be done?

My next point takes me directly back to an aspect of the speech made by the right hon. Member for South Down. Where is Parliament's vision? Does the House review at length, and annually, the things that really matter? The answer is that in a way it does. For example, we review defence at length and publish a three-volume Blue Paper on it. We debate defence for three days, and that is only proper and correct. After all, where there is no defence, there is no civil state. We debate finance for weeks on end, which is only right and proper, and produce massive documents. We debate the organisation and distribution of social welfare, which is again a proper preoccupation of a parliamentary system. Attached to that is the familiar group of health, law, housing, transport, industry and education. Last, least and almost lost comes science.

We need an annual review of the sort published by the Cabinet Office, although it would need to be much more complete, covering the whole of civil science and not just that aspect funded by the Government. As I think my hon. Friend the Member for Hastings and Rye (Mr. Warren) pointed out, such things are done effectively in Japan. Indeed, I have seen how the Japanese do them. To some extent, that lies at the heart of their industrial and national success. But we are quite capable of learning lessons and of making even more interesting innovations at the appropriate stage. One of the most remarkable strengths of the Japanese, not least in technology, science and administrative matters, is that they do not suffer from the "not invented here" factor, whereas we do.

Is Parliament equipped to carry out the annual review of scientific policy that it should be undertaking? I believe that the answer is no. It is significant that we discover from the document that the state rightly spends £525 million, through its Government Departments, on supporting the formulation of policy. But what does the House spend on the examination of the formulation of policy? Select Committee expenditure probably amounts to about £2·5 million a year, and that is just about it. Consequently, we are desperately ill-equipped to pass judgment on the performance or proposals of the Government, where they are dependent upon or influenced by, scientific and technological practice. That takes me back to the case made by the right hon. Member for South Down. There are other examples such as nuclear power, acid rain, supersonic transport, the defence technology options, and the commercial implications of biotechnology — which is, incidentally, a much wider subject than that raised by the right hon. Gentleman. However, we do not have the apparatus.

The United States Congress recognised the problem some 20 years ago, in 1962, and discussed it at length over three or four years. In 1972 it set up an organisation known as the Office of Technology Assessment. I believe that that is what we need. Twenty-three Governments have since sent representatives to examine it in Washington, and I understand that several in Europe are now establishing their own OTAs. We need one, but what is it? It is an independent, separate arm of Congress. It serves both Houses and is controlled by a joint committee of six Senators and six Members of Congress. It is bipartisan, or non-political. It costs the United States $15 million per annum, which works out at about $500,000 per project, and employs a staff of 139.

Given our scale of resources, the 5 per cent. of the world's research and development that we do, and the significance of our science technology, we urgently need to establish a similar organisation in this Parliament which serves, and is controlled by, both Houses. It could be a "think tank" for the House of Commons and the House of Lords. Such an organisation could address fundamentally

the problems that have been presented to us by the right hon. Member for South Down in his Bill, and by the Warnock report. We need an independent assessment to be made by completely objective and impartial people, whose sole responsibility is not to the Government, to the right hon. Member for South Down or to anyone else, but to Parliament and to those who send us here. In that way, we can exercise a more intelligent, effective and discriminating judgment over such matters.

At the other end of the spectrum we have the new anti-fouling provisions, which are the subject of Government regulation. We know absolutely nothing about that matter. We are dependent on taking either the opinion of the Government Laboratory, which is no doubt valid, objective and honest, or that of the organisations which say that the material that we put on the surface of boats is safe and does not kill oysters. Which hon. Member can honestly say that he can make an independent judgment on that? I doubt whether even my right hon. Friend the Prime Minister — whom the hon. Member for Motherwell, South regrettably referred to as a second-class chemist — can say that. Incidentally, we do not need first-class chemists in Parliament, because they would be wasted. In any event, I do not think that they would come here.

Hon. Members should look at the reports which the OTA has produced on acid rain, on the commercial implications of biotechnology and, most recently, on the strategic defence initiative. They are so clear that they are useful to the legislator. They say that something can or cannot be scientifically proved, and they identify areas of doubt and certainty. They say that on the basis of such and such a scientific structure, the legislator has the following options: he can do this and it will cost that, or he should do nothing as there is not enough information to sustain any legislation. We lack such analyses in Westminster, and we will not discharge the duties of this or subsequent Parliaments unless we take action comparatively quickly.

Mr. Dalyell: Does the hon. Gentleman realise that the Nature Conservancy Council reports to Parliament, not to the Government? Therefore, we are entitled to go to the Nature Conservancy Council for independent opinions.

Mr. Lloyd: I was not aware of that. However, I do not think that it disqualifies my argument. We must strengthen input to the House of Commons.

I am glad that the Parliamentary and Scientific Committee has established a Sub-Committee which has agreed to examine the whole proposition and to make recommendations to the House. I have only one request of the Government, which I make earnestly because when I put this point to my right hon. Friend the Prime Minister during Question Time she was sceptical—perhaps it was a fast ball—and said that she did not feel that a case was made on the basis of my argument. If the Committee, on examining all these matters, recommends that we should equip Parliament with its own office of technology assessment, appropriate to our resources and the scale of our activities, will the Government give that a fair wind? It is important that we should have that facility.

11.51 am

Dame Judith Hart (Clydesdale): I am glad to follow the hon. Member for Havant (Mr. Lloyd) who has a wealth of knowledge and experience of these matters. He was somewhat reproachful of my hon. Friend the Member for Motherwell, South (Dr. Bray) and said that we should not be so conscious of party differences. There is a good deal in that, but there have been points in time when we could clearly see whether things were going well or going badly.

The hon. Gentleman will recall that the problem in the early 1950s was not that there were not enough scientists with enough money to do enough good work; it was that British private investment was not putting in the money to exploit what was being revealed to us. An example is microelectronics — the chip. The great complaint was that British industry was not prepared to use the knowledge being given to it by British scientists.

There was a period of considerable decline which led to the brain drain referred to by the Secretary of State because there were not enough posts, not enough money, not enough activity in science and not enough interest shown by Government. That then led to the expeditions to the United States and Canada in an attempt to bring back those who had gone there with the brain drain. The reason that the efforts to recapture those who had gone to work in the United States and Canada proved relatively successful was that they were needed in this country. Posts were not being lost through lack of money in the research councils. Posts in university research departments were not being cut because of lack of money. The posts existed and the people were needed. At that time we spoke of the white heat of the technological revolution. It did not last long enough.

I welcome the debate. I agree with other hon. Members that it is scandalous that we have not had a proper discussion about science policy for so long. Indeed, the subject has been left to the other place, whose debates make devastating reading. I shall not run into the hazard of quoting from the other place, Mr. Deputy Speaker, but it emerged clearly from those debates involving eminent scientists and scientific administrators that even their restrained language and admirable civility could not conceal their anger and distress about one simple point —that more money is needed, but it is not coming from the Government. That was the central theme of their remarks, and it is something on which we should concentrate today.

Of course, we can all make claims in various areas of Government expenditure that we should be exempted from cuts and the economies of Government—whether it be welfare, social services, housing, the National Health Service or overseas aid. Therefore, there is a certain duty upon us to ensure that if we seek more money for basic research—which is the general tenor of the debate—we must be ready to say where that should be found. We must also say why we wish that to be given a high priority.

The answer to the second question is evident. Basic research is the very foundation of future national success. We are at a time when we must look ahead and it will not be long before the oil runs out. We have been living on oil for the past seven or eight years. As it runs out, the fact that there has been such a desperate decline in our manufacturing industry and the lack of competitiveness in the new technologies of manufacturing industry will matter desperately.

Our manufacturing decline will continue apace unless we can change the momentum of what is happening in basic research and its application in industry. Again, basic research can actually help Governments to save a great deal of money. Let us consider an example from the

[Dame Judith Hart]

Medical Research Council. It is estimated that some 700,000 elderly and other people suffer from senile dementia. More money needs to be spent on research. But, my goodness, if we can cut down the number of people suffering from senile dementia surely the Secretary of State can get financial support from the Secretary of State for Social Services. It is obvious that money could be saved.

I accept that an additional £55 million has been made available and that the Secretary of State has contrived to put a little here and a little there, but the overall response of the Government has been and still is appalling.

Mr. Dalyell: I want to reinforce my right hon. Friend's point about senile dementia. A fortnight ago I visited the neuropathogens unit at Edinburgh university. Its most senior staff told me that they had to do the most simple tasks, which should have been done by school leavers, because they were so short of funds.

Dame Judith Hart: I am grateful to my hon. Friend for underlining that point.

I wish to quote from the 1984 report of the advisory board. I understand that the 1985 report has just arrived in the Library, and *The Guardian* has provided the opportunity to read a great deal of it. Indeed, I understand that the 1985 report pitches the case even more strongly than the 1984 report.

The 1984 report referred to the financial prospects in the longer term, having drawn attention to the points made by the Secretary of State in his opening remarks—the problems of international commitment related to exchange rates, the problem of cash limits for increased pay and superannuation commitments and so on. The report states:

"We draw attention to the cost increases discussed above because without continued additional funding they will inexorably reduce the resources available for research. We would urge the Government to reflect most carefully before resuming a decline that will seriously prejudice our national capacity not merely to sustain our historic role in the advance of scientific understanding but to develop the science-based industry upon which our future depends."

Those are very strong words.

Mention has been made of the Medical Research Council's last annual report, and the advisory board said: "the percentage of alpha-rated research grant applications which MRC was able to fund in 1983-84 . . . fell to 53 per cent." Again, that is a devastating point.

The foreword to the Medical Research Council report states:

"funds available to it for medical research have . . . fallen by £2 million. A further cause for concern is the plan to 'tax' the Council by substantial amounts in the next two years to provide a fund to aid restructuring in other Councils."

We know that the Medical Research Council has received a little from the £55 million. But the report states:

"Against this financial background, the Council has had to contend with an unprecedented demand for the support of first-rate research in the universities. In addition, there are first-rate opportunities to set up new teams in its own institutes and research units. However, it is now finding difficulty in maintaining even current commitments, and in order to balance income and expenditure in the current year, damaging cuts have been made to recurrent expenditure in all its existing units."

That was the matter mentioned by my hon. Friend the Member for Linlithgow (Mr. Dalyell), when he referred to the Edinburgh unit. The report goes on to say:

"The amount of extra money needed . . . is small",

but it is of desperate importance.

One of the absurdities is that in so many research councils and university departments concepts and ideas are crying out for money to be spent on them. There is no shortage of them; there is a desperate proliferation of ideas and further prospects in every area of science. On the one hand, finance has come from the direct science budget, and, on the other hand, it has come from grants to the University Grants Committee. The UGC has made all its anxieties clearly known about the cuts in its expenditure, but basic research has been squeezed at both ends.

I am afraid that research has been squeezed even more in another area, by the inexorable Government policy of privatisation. I take my figures from the Cabinet Office report. In British Gas, which is about to be privatised, 5·5 per cent. of its capital expenditure — a sum of £45 million — was spent on research in the last year for which figures are available. In British Telecom, which has been privatised, the figure is 12·8 per cent., amounting to £172 million. I am not sure what guarantees we have that that proportion of immensely valuable research and development work will be carried out by privatised companies, or for what purposes research and development money will be used. It is one thing to develop system X, as British Telecom did, but it is another to develop new types of Mickey Mouse consumer telephones. We have no guarantee that the privatisation of public sector industries will not lead to a diminution in that area of industry-funded research and development. Nor is it likely that research in the research councils and university departments will be rescued by the private sector.

The Secretary of State said that he would talk a little more about this, but he did not. He mentioned huge amounts being given by business. What are those huge amounts? Let us look again at the Cabinet Office report. Last year, the figure was £42 million. That is not a huge amount from British industry. Some United Kingdom companies, such as GEC, have large surpluses. If the Secretary of State was right that huge amounts were being given by British industry, and if even 1 per cent. of those surpluses were put into research and development, the financial prospects for basic research in the university and research councils would be transformed. But that is not so, and it is not likely to be so. One of my friends, who is a fellow of the Royal Society professor of theoretical physics, said that a group of industrialists told him:

"We pay our taxes: it's the role of government to pay for basic research."

I fear that that attitude is, sadly, endemic in British industry, and should not be so. No one can look to industry, in the present state of play, to rescue basic research from the neglect of Government.

In the other place, that matter has been described as a cause for serious anxiety. I believe that we must be blunt. A crisis is facing science and the scientists. I have claimed that it is one of the priority areas in which more money is needed. Therefore, if more money is needed, where is it to be found? I said that it was irresponsible not to suggest where money could be found. One could argue the case in the context of the general policies of the Labour party for expansion, reflation, growth and so on. I shall not do that. I shall argue within the context of this Government's policies. I shall argue in the context of dry, not wet, Conservative policies.

The Secretary of State referred in passing to defence expenditure. If the right hon. Gentleman is indeed arguing the toss with the Secretary of State for Defence, let me take

the House through the following figures. Again according to the Cabinet Office report, in 1985-86 total civil research and development is £2,033 million. In the same year total defence research and development is £2,077 million—more. In cost terms, taking an index of 100 for 1983-84 compared with 1985-86, we have the following figures. The figure for all civil departments is 109; for all research councils it is 100. Within that the figure for the Medical Research Council drops to 96. The figure for the UGC is 97; for Ministry of Defence development it is 105 and for Ministry of Defence research it is 108. Therefore, slightly more than half of research and development is within the province of the Secretary of State for Defence, and less than half — a declining proportion — is within civil research and development.

Mr. Laurie Pavitt (Brent, South): Does my right hon. Friend recall that a few years ago, when a former colleague of ours, Arthur Palmer, who represented Bristol, North-East, was chairman of the Select Committee, there were 174 research and development defence projects, which were outdated and thus continued by old momentum?

Dame Judith Hart: I was going to examine the problems of cutting down research and development in defence. I could argue in the context of Labour party policy and say that, as we shall no longer have nuclear weapons, we could cut out that research. However, I shall not do that. I shall argue in the context of this Government's policy. They want Trident. They are replacing British Polaris by American Trident. If they are to do that, they do not need the research and development that has been necessary to support a British-manufactured deterrent, so a large chunk goes out there.

As my hon. Friend suggests, an enormous amount could be saved on pure economy. I doubt whether the Rayner-type economy efficiency drive has been rigorously applied by the generals and admirals to everything in their little corners. I am certain that, say, 2 per cent. of defence expenditure could be saved simply by ruthlessly pruning things that are no longer needed, wholly irrelevant, outdated or being done inefficiently. I do not believe that that would cause a revolution in defence.

Let us consider another aspect. What will be the effect of the strategic defence initiative? There will be some spin-off from British participation in research on that, in optics, energy transmission and communictions, but it will be under United States control and will help American rather than British companies. It is also likely to distort the distribution of scientific resources.

Dr. M. S. Miller: Will my right hon. Friend give way?

Dame Judith Hart: In view of the time, I hope that my hon. Friend will forgive me if I do not.

The distribution of scientific resources will be distorted, increasing defence-oriented research at the expense of basic research by the research councils and the universities. One per cent. of defence research and development would be £20 million. Two per cent. would be £40 million. A 2 per cent. reduction in defence research and development would give an increase of more than 10 per cent. for the research councils or 5 per cent. for the research councils and 5 per cent. to the University Grants Committee for university-sponsored research. A 2 per cent. transfer from defence research and development to civil basic research in the next five years would not merely meet the minimum that the advisory board has laid down this week, which is the least that we are entitled to expect from the Government this year, but would completely transform the position and prospects of the research councils and of basic research in the universities.

I strongly urge the Secretary of State to take that on board in the coming public expenditure exercise and to fight his corner against the Secretary of State for Defence. He should also fight his corner a little more publicly. All those in the universities, the research councils, the scientific press and the community as a whole who share the deep concern that something is very wrong with the British approach to the development of opportunities for basic research could then make it clear to the Secretary of State that he has an enormous number of people on his side in fighting his corner in that way, and I think that he might be able to win his case.

12.12 pm

Mr. T. H. H. Skeet (Befordshire, North): The right hon. Member for Clydesdale (Dame J. Hart) made a most interesting point about the effect of privatisation on research and development. I understand that the Advisory Board for the Research Councils has set up a working party under the chairmanship of Professor Mathias to examine the funding of research by the private sector and to consider how it can be extended. That group is due to report in September 1985, but perhaps the Secretary of State will comment briefly on it today as it is extremely important.

The hon. Member for Motherwell, South (Dr. Bray) made the important point that this debate is being held on a Friday when fewer Members than usual are present in the House. I have examined the position in depth and studied the way in which scientific subjects have been raised in the House in the past year. We had a debate on acid rain. Three debates arose out of EEC documents on air pollution from industrial plants, a programme for industrial technology and information technology. There were two debates under the Consolidated Fund Bill on environmental pollution and the science policy formula. That is not good enough. Science is being brought in on a side wind.

The Select Committee on Education, Science and the Arts is considering the vital matter of the science budget and I understand that it will be reporting in mid-July. This major debate should have been deferred until that report was available, so that we could discuss the matter in depth.

Mr. Patrick Thompson: Does my hon. Friend agree that the importance of science is illlustrated by the fact that so many Members have attended this debate on a Friday and hope to participate in it?

Mr. Skeet: That is certainly true. The Government will have to take the matter much more seriously.

My hon. Friend the Member for Havant (Mr. Lloyd) referred to the Office of Technical Assessment, and I have invited him to make a presentation to the working party of the Parliamentary and Scientific Committee. I see some prospect of such an idea coming to fruition. The Government may take up the strategy—only they have the money to do so—or it may be funded by the Royal Society. Certainly the matter will have to be examined in considerable depth.

The Secretary of State has pointed out that there are several sources of Government funds for research and

[Mr. Skeet]

development — that which goes through the University Grants Committee and the research councils and the work that is commissioned by the Departments, especially the Ministry of Defence. The overview required for a general perspective is provided by two bodies — the Advisory Council for Applied Research and Development and the Advisory Board for the Research Councils, under Sir Henry Chilver and Sir David Phillips respectively. That seems a very complicated approach, and when there is a shortage of finance the system may come under considerable strain.

There is a surfeit of money in the United Kingdom and there is no shortage of ideas. Could not they join forces in the national interest? Simply the rate of return on investment in research is too low to be attractive compared with other ventures, hence the growth of capital-rich giants such as GEC, Shell and BP and, at the other end of the scale, Joseph Rothschild (Holdings), which prefer to keep their reserves inviolate. Further, Britain is not accustomed to commercialise innovation and to export the products of its intellectual wealth. The flotation of Abbey Life yesterday brought in about £2·6 billion, but when it comes to Government research we cannot find sufficient funds even to cover fully the alpha projects.

ACARD and the ABRC could provide the beacon light. Jointly and severally, they have provided some fine reports and I pay tribute to their initiative, but those reports simply lie around on the shelves in Whitehall and little has become of them. The most recent ACARD report was published in 1983. The concept of Commonwealth certainly got Britain moving, but the age of technology has scarcely stimulated a generation which regards it as somewhat vulgar and materialistic. Attitudes must change if the United Kingdom is not to be reduced to a European slum. Sir Robin Nicholson will have to stir the dormant ACARD and give the lead that the country so urgently needs.

In evidence to the Select Committee on 19 June 1984, Dr. Roberts of the ABRC said:

"I believe that we really ought to address what our objectives are, then what our strategy to achieve them is, then face up to tactical issues and organisational issues."

But all these aims remain to be achieved.

Let us consider what others are doing to achieve those objectives. Several references have been made to the Japanese. ACARD produced a very good document entitled "New Opportunities in Manufacturing: The Management of Technology." Annex B states:

"Japan began by importing and applying the best foreign technologies reinforced by a strong and consistent Government policy, implemented effectively by a single organisation, the Ministry of International Trade and Industry, (MITI), to support and pursue advanced manufacturing technology and to encourage its widespread practical implementation."

MITI was the organism that that country used. I shall make a few random quotations from the same document.

"Japan's acknowledged lead in robotics . . . MITI plans to spend £125 million in its own laboratories to conduct research into new types of material such as high performance ceramics, synthetic membranes for new osmotic techniques, electrically conductive polymeric materials, high performance engineering plastics . . . MITI provides the risk capital . . . MITI also seeks to provide infra-structures . . . The main purpose of Japanese universities is to provide graduates and personnel capable of applying advanced technology in industry . . . The vast majority of engineering graduates — more than 70,000 annually as against 7,000 in the UK".

I have quoted at random, but it is important to draw attantion to the fact that ACARD's ideas have not percolated through to my right hon. Friends the Prime Minister and the Secretary of State. Perhaps there is no fault in either case, but such ideas have not been implemented in the United Kingdom and it is apparent that we do not have that essential drive in science.

It is also worth considering what happens in Europe. The Federal Republic of Germany has a Ministry of Research and Technology. France has a similar Ministry and an expanding budget. It has been argued that science should be detached from education and transferred to the Department of Trade and Industry or to a separate Ministry. That would at last give it an identity and be in line with developments in Japan, the Federal Republic and France, all of which have achieved considerable success in the past decade.

Nobody welcomes central planning as opposed to devolved control, but the public may wish to ask, "What are the profitable lines of research that should be supported?" They should be given correct answers and the Government should show determination to proceed. The United Kingdom could gain from a simplified structure for funding the science budget. The several integral contributors are subject to a variety of problems. In an expenditure crisis, roads, houses and the science budget are among the first to be subject to abatement. The research councils have been persuaded that state resources will diminish. As recently as January, the ABRC reported: "we consider that a realistic and long term view should take account of the probability of a sustained decline in the volume of resources that can be brought from the science vote."

Including defence, Government research and development is expected to total £4·4 billion in 1985-86. That figure is only about 3 per cent. of total planned national expenditure, which is £131 billion. It should be remembered that health and social security absorb about £56·6 billion a year. As today's technology is the basis for tomorrow's prosperity, and one of the keys to solving the employment problem, it is surprising that, in the case of SERC, for instance, 20 to 30 per cent. of alpha projects cannot be taken up because of a shortage of funds. Something must be wrong. It is perfectly right that social security should be provided in full, but it does not create wealth. It is technology that creates wealth and provides jobs in consequence.

It can be argued that basic, strategic and applied research are part of the country's capital investment as opposed to income account, and should be significantly expanded and protected. North sea revenues, which are running at between £11 billion and £12 billion a year, could be subjected to an annual charge to build up the resources, equipment and intellectual wealth of the nation.

In his report to the ABRC, Sir Ronald Mason remarked on the dearth of strategic research being undertaken. If the United States, Japan, France, West Germany and the Soviet Union agree that that is the right line of approach, and if it is hinted that ACARD has considerable sympathy with that view, why is such little impact being made on the Treasury?

There are some anomalies which should be considered and removed. First, should salary increases, redundancy payments, superannuation and fluctuations in the exchange rate be paid for out of the scientific budget? Should it also be accountable for the restructuring costs? If such matters fall to the charge of the scientific budget,

there must be less money for science. Secondly, is the fiscal system appropriate, bearing in mind the nation's problems? Does it provide inducements to science? Thirdly, who should be responsible for the full cost of sophisticated equipment? The case of the electron microscope has been illustrated today. It is not enough to have a man in a laboratory — he must have suitable equipment to complete his project. Fourthly, should research councils constantly be exposed to the chill wind of Government Departments terminating work sent out on commission and be expected to bear the brunt of sustained losses?

Sir David Phillips, who is chairman of the ABRC and a resourceful man, observed in today's *Daily Telegraph*:

"The board is under the firm impression that we are losing our brighter scientists at an increasing rate and it was very distressing to find that other countries were beginning to capitalise on the investment in our education and our training."

We have produced more Nobel prize winners than any other country. The British are the people of innovation and of ideas. London is the financial centre of the world. It is surprising that we make such a poor result of our potential when it comes to treating the basic requirements of science.

12.28 pm

Mrs. Renée Short (Wolverhampton, North-East): It is a pleasure for me to speak following the hon. Member for Bedfordshire, North (Mr. Skeet), who has recently succeeded me as chairman of the Parliamentary and Scientific Committee. As he will be aware, when I was chairman, I was keen to see that the House had more contact with the presidents of the royal colleges of medicine so that we could inform ourselves about what they were doing in medical research.

It was a pleasure for us to welcome Lady Warnock, together with two other distinguished members of her committee, to address one of our well-attended meetings. In view of the extraordinary intervention of the right hon. Member for South Down (Mr. Powell), who is no longer in his place, it was a pity that he did not take the trouble to attend that meeting. He would have learned much about the painstaking work done by the Warnock committee and its members. He would then have been able to put to Lady Warnock the views that he expressed today although possibly he had not at that point been put up to the ideas that he expressed today.

Mr. Thurnham: Perhaps the hon. Lady will agree that we live in an imperfect world. The right hon. Member for South Down (Mr. Powell) criticised the Warnock committee for what he called an imperfect report. It was a report on an issue about which there are many imperfections, including the large number of handicapped children who are born into the world and whom he seemed completely to ignore in his disgraceful speech.

Mrs. Short: I agree with the hon. Gentleman, and the other aspect is that the right hon. Member for South Down, who is a campaigner against abortion law, should know that the alternative to failed contraception is an increase in the number of abortions. One does not know where he stands on these matters.

I am pleased, too, to be speaking following the hon. Member for Havant (Mr. Lloyd), with whom I have worked closely in the House on scientific matters. I endorse warmly his suggestion that there should be a joint committee of both Houses to overview the development and results of science policy.

Dr. M. S. Miller: Does my hon. Friend agree that, in addition, there should be an organisation designed to combat the anti-science attitude and atmosphere that has been engendered in Britain by people who have an axe to grind and who combine with various aspects of the mass media to inculcate into the public mind the conception that scientists are never to be trusted and should not be allowed to undertake activities even for the benefit of humanity?

Mrs. Short: I agree with that, as any sensible person must, and the suggestion of the hon. Member for Havant could provide a powerful organ to counter the type of anti-science policies and ideas to which my hon. Friend refers.

The debate has shown that hon. Members on both sides of the House have great concern over the present state of science in Britain. I believe that our problems stem in large measure from the way in which science is taught, particularly in secondary schools, where, because of the present lack of resources, the situation is serious. I regularly visit comprehensive schools in my constituency, when I am at pains to listen to science being taught. I find the standard and range of subjects meagre.

The HMI report says that there is a wide range of ability in some teaching groups, that science is frequently badly taught—I am sure that all hon. Members agree with that —and that we need more qualified graduate teachers of science; we have been saying that for many years. Can the Secretary of State say with hand on heart that every school has enough qualified teachers able to teach science? If not, no wonder he says that our performance has been disappointing.

A considerable responsibility rests on the right hon. Gentleman to see that we have adequately trained qualified science teachers in our schools, not just in comprehensive but in primary schools, too. He cannot expect our best science graduates to go into teaching in schools that are badly equipped and are in a constant state of upheaval, and where their career and income prospects are so poor. The right hon. Gentleman's meanness towards the teachers' legitimate salary claim is appalling, and the children are suffering because of the intransigence of the right hon. Gentleman and the Government.

The Secretary of State in the Green Paper points his finger in the wrong direction. He puts the blame on the universities in saying that they are not producing the graduates that industry needs. There are too many accountants and lawyers in the top jobs in industry. Science graduates have little chance of reaching the highest echelons of British industry, and that is largely the responsibility of industry rather than of the universities.

Many of our good graduates go to America. The brain drain across the Atlantic is worrying. Those graduates are highly valued in America. In the largest British public companies, less than about 5 per cent. of board members have any experience, qualification or knowledge of the technical matters in which their companies are interested. That is an appalling reflection on the present state of industrial management.

The boards are not competent to judge the capability of science graduates who may apply to them for posts. Consequently, they do not appoint them. They prefer lawyers and accountants. The banks and financial

[Mrs. Short]

institutions that control the investment policies of large companies are also badly fitted to judge anything but the companies' accounts, and cannot judge the technical ability and calibre of the people whom they appoint to manage those companies, or assess the prospects of the policy decisions that they undertake or initiate. That is where the difficulty with our industry lies today.

We must consider the problem of the quality of graduates. Few science or technology graduates can go straight into industry from university and make an impact. They must first obtain experience. There are two aspects in which our training and education differ unfavourably and consistently from those of our more successful competitors. First, we specialise far too early in our secondary schools, and, consequently, our science, technical and engineering students have a rather one-sided background with much less general education than their European counterparts to back them up in the tough world of business and the Civil Service.

Secondly, that early specialisation enables the universities to provide standardised three-year courses for most disciplines, excluding medicine, compared with the four-and-a-half to five-and-a-half-year courses in continental universities. In Holland, it takes seven years to qualify as an engineer. That gives the graduates a much better grounding, a broader outlook, greater flexibility and more maturity than our engineering graduates.

It is essential that we lengthen the period of study for science, technology and engineering. That costs money. There, we are up against a difficulty. The Green Paper mentioned the possibility of shortening courses, and the Government appear to be willing to accept the proposal contained on page 26 that two-year degree courses could become "highly coveted". I wonder why they think that they would be. They would be regarded as a waste of time and resources. Their holders would be regarded as poor substitutes for what is needed.

That suggestion appears to be a pale imitation of the French system of grandes ecoles where, in a number of colleges of higher education, short one or two-year high pressure courses are offered to people who pass a highly competitive examination, and where less than 1 per cent. of the students—I emphasise this—who have previously undergone a five-year preparatory course for the examination are admitted. Those are postgraduate courses. The students are 23 or 24 years of age when they take that examination. That is in stark contrast to our unprepared undergraduates who go to university at the age of 18.

The Secretary of State might do better to study more closely the Swiss and German university system which enables highly successful industrial organisations and companies to man their management teams and boards almost entirely with scientifically and technically qualified people, who know about science and technology and the developments in those subjects, and not with accountants and lawyers who know nothing about those matters.

Our polytechnics, which have great potential if they are treated properly—they are not being treated properly at present — rely on local authority funding. Under the policies of the Government, local authorities are being denied the means of providing sufficient resources to our polytechnics. It is dishonest of the Government to demand more output of technologists and scientists to match in number and quality the output of our competitors while, at the same time, they are purposely and consciously depriving polytechnics and universities of the resources that they need to fulfil the requirements that the Government and the country expect of them.

As to research policy, our universities and polytechnics have an excellent record of co-operation with industry in projecting and pursuing important research. They are less successful in co-operating with public sector institutions. Will the Secretary of State disclose how many qualified scientists there are, and their ranks, in the Civil Service staff that his Department employs to administer and adjudicate on applications for grants for research projects? I am sure that we would be surprised by his answer, which, if he cannot give it today, I hope he will give me as soon as possible.

Co-operation between universities and polytechnics and Government research organisations leaves much to be desired. That has happened because of the consistent downgrading by the Government of the staff and activities of our famous Government research establishments, which leads inevitably to the loss of many qualified staff to industry, to the consequent serious decline in morale and to the loss of resources. Where recruitment is contemplated and then approved by a Department, after much haggling, most of the qualified people, even after they have been appointed and offered the jobs that have been advertised, refuse to take up the posts, because promotion prospects in Government research establishments are so poor.

That is a serious development in Government science, of which the Department of the Environment is a prime example. Its scientists have played an important role in developing codes of practice for the construction industry, but unfortunately, under this Government, scientists employed by the Department are prevented from taking part, as they should, in international conferences at which their proposals are incorporated into the codes of practice of and are discussed by representatives of European countries and the science departments of European Governments. Britain cannot send its full complement of delegates because of the expense. Therefore, instead of four of five eminent scientists, who have been involved in developing the work, presenting their reports and attending the conferences to defend their position, only one person is allowed to attend. That is an untenable position, and I hope that the Government will reconsider it.

I hope that the Secretary of State will give us some information about this parlous position, and will let us know his proposals for creating a general improvement in the funding, and therefore the status, of science in Government.

12.44 pm

Mr. Robert Jackson (Wantage): I hope that the hon. Member for Wolverhampton, North-East (Mrs. Short) will forgive me if I do not follow her line of argument. I wish to concentrate on two matters which I believe are central to the debate. The first question is: are the Government spending enough on science? Secondly, is our spending as well directed as it should be?

There is no technically correct answer to the question of how much we should spend on research and development. I do not believe that the hon. Member for Motherwell, South (Dr. Bray) has found the magic formula when he says quite simply that it should be

doubled. In spite of the counter-example of Japan in the 1950s and 1960s, and that of newly industrialised countries today, it is widely believed—as my right hon. Friend the Secretary of State has said, there is good evidence for the belief—that there is a general long-term correlation between a nation's scientific prowess and its economic progress. But it is, unfortunately, impossible to establish specific correlations between research costs and economic benefits that might enable us to arrive at an economist's answer to our question. As this year's annual review of Government-funded research and development states in summing up its fourth chapter:

"The relationship between R & D expenditure and commercial success is not straightforward."

I shall return to that.

Therefore, in addressing ourselves to the question of how much to spend on science, we find ourselves driven back to two non-economic criteria. The first criterion is the historical comparison between our present efforts and the efforts that we have made in the past. The second is the comparison between our level of spending on science and that which is maintained by other comparable countries. The historical criterion is important, because it is the explicit basis of the Government's policy for the funding of science. The official guideline has been "level funding" since 1979. This concept has served as a steel breastplate for the Government over recent years against the Opposition, who were of course responsible for the level of funding in that year.

The crude figures appear to conform with the Government's doctrine. In terms of 1984 pounds, the Government spent £520 million in 1984 through the research councils, compared with £460 million in 1979. They spent £1,070 million in 1984 of R and D in civil departments, compared with £1,010 million in 1979. It is estimated that in 1984 £570 million was spent on university research, compared with an estimated £590 million in 1979.

But when we examine more closely the realities expressed by these figures, we are bound to conclude that "level funding" does not mean "level value". The rise in public sector salaries has been more rapid than that provided for in the Government's annual planning. There have been fluctuations in international subscriptions. There is the notorious "sophistication factor" in equipment costs, and also the implications of university cuts for research overheads. All these factors have played their part in bringing about a substantial reduction in the real purchasing power of the funds provided by the Government for science.

I believe that my right hon. Friend the Secretary of State understands this—hence his gallant and partially successful attempt to increase provision for science at the end of last year. However, I am not sure that some of his ministerial colleagues equally understand the scope and scale of these problems; otherwise, dare I say, the view would not have been taken last year that more money for science could be found only within the Vote of the Department of Education and Science.

I hope that the debate will contribute to a change of heart in these august quarters of the Government. Of course, nothing would help to concentrate the mind of the Government more wonderfully than the row that would break out in the House and abroad if there were any question of Britain following the wholly unacceptable course of withdrawal from CERN.

It is reasonable for the Government, in the absence of any economic logic on which to base a decision, to seek to allocate resources for science on historical criterion based on 1979 levels of funding. However, the application of that criterion should not be purely formal as it is at present. The Government should pay more regard to the real value of their science spending, which has quite simply not been kept level since 1979.

Mr. Dalyell: Does the hon. Gentleman agree that the Government should consider transferring responsibility for CERN financing to the Foreign Office Vote, as is done in other countries?

Mr. Jackson: That is a suggestion that should be examined, although it is important to ensure that decisions about scientific resource allocation enable all projects to be assessed on an equal basis.

There is another way of judging the sufficiency of our national scientific effort. That is by comparing our performance with that of other comparable countries. It is difficult to make such comparisons, as the recent dispute about relative spending on agricultural research has demonstrated, but I draw three conclusions from the international comparisons presented in the current annual review.

First, the proportion of the gross domestic product going to Government science in Britain is higher than in either West Germany or France. Secondly, in absolute terms Britain's Government-funded research and development compares well with that of France and West Germany. So far so good, but I am afraid that there is a major fly in the ointment, because the third point that stands out from international comparisons—it has been referred to previously in the debate—is the strikingly higher proportion of British Government research and development which is dedicated to defence science. It is worth recording the figures which are set out in the Government's own annual report.

In 1981 we spent $3,000 million on civil R and D, compared with $3,256 million on defence science. The comparable figures for France—a country with similar ambitions to our own—are $4,370 million on civil science and only $2,591 million on military science. For West Germany, most remarkably, the figures are $6,698 million on civil R and D and only $646 million on military science.

In the light of those figures I must add my voice to the long catalogue of those who over the years have complained about an imbalance which affects not only the allocation of financial resources, as the figures show, but the allocation of scarce scientific and technical manpower. In that respect I have no hesitation in associating myself with a recent speech by the right hon. Member for Birmingham, Sparkbrook (Mr. Hattersley), and with the basic thrust of what was said earlier today by the right hon. Member for Clydesdale (Dame J. Hart). But I hope that they will both forgive me if I observe that the position was just as bad during the period when their party was in office. I could apply the same sricture to the hon. Member for Stockton, South (Mr. Wrigglesworth), who has just appeared, three quarters of the way through the debate, and is the solitary representative of the alliance in the debate.

As the House knows, it is usually argued that the relatively high level of defence R and D spending in

[Mr. Jackson]

Britain reflects a national choice, with behind it—at least in the past—a national consensus, of a relatively ambitious set of defence missions: the choice, in a phrase, to be the smallest of the great powers rather than the biggest of the small. I confess that I am one of those who are sceptical about whether that ambition is still a sensible one for a country whose total GDP and comparative GDP per capita both now rank a long way below those of West Germany and Japan, some way below those of France, and only just ahead of those of Italy.

I do not think, however, that in order to make my case it is necessary for me to stray into the realm of high politics. I simply ask how far a heavy national military R and D effort is necessary to sustain an ambitious choice of defence missions. It is arguable that the indigenous research and procurement of weapons confers an extra margin of independence. My hon. Friend the Member for Havant (Mr. Lloyd) put great stress on that point. On the other hand, many countries have concluded that the purchase of that extra margin is not worth while.

Indeed, it would be interesting to know whether the Ministry of Defence, the Treasury, or perhaps the Foreign Office planning staff, have ever made a seious study of the cost benefit of the probably rather small increase in military and political freedom of manoeuvre which comes from national procurement as opposed to the purchase of weaponry "off the shelf". If that study were made, I suspect that it would yield some disconcerting conclusions.

There is a further set of disturbing questions to be asked about defence science. They concern the economic and industrial opportunity costs of our heavy concentration in that area. Some hon. Membes will have read the interesting and courageous statement on "Defence Expenditure and Employment" put out in 1983 by the Society of Civil and Public Servants. It may be that the studies which it cites exaggerate the negative correlations that it asserts between military spending and economic performance. We must also be tentative about those interesting studies which suggest that British arms exports, which yield at least some economic return, are dominated by types of weaponry which do not absorb great amounts of research and development funds. Between 1975 and 1979, for instance, aircraft and helicopters absorbed 55·4 per cent. of military R and D spending, but accounted for only 1·68 per cent. of exports.

However, we do not have to rely exclusively on these academic sources. I notice, for instance, that the Government's own annual report on R and D records that aerospace, a large part of whose output is for military purposes,

"is heavily supported by Government R and D funds . . . but does not have a particularly high gross value added per employee."

I notice also the Government's recent studies of skills shortages in information technology, which project a shortfall of 5,000 graduates by 1988. I ask myself what proportion of that shortfall can be accounted for by the huge and growing demand of the defence industries and of military R and D for information technology specialists. It may be that this manpower is most productively employed in these areas, but I doubt it.

As the House knows, the argument of last resort relates to the employment consequences of a change of policy. There are always problems of employment when industries require to be restructured and resources redirected. All I say is that in most other areas of the economy the Government have shown an admirable awareness of opportunity costs and a commendably resolute approach to "crowding out." The time has come to look at military R and D and the defence industries in the same spirit, and I hope that the annual report will continue to seek to deepen our understanding of the problem.

I urge the Government to think again about their policy for science. The central theme of much of their thinking, quite rightly, is to seek to improve the translation of scientific ideas into profitable business. I do not seek to criticise this emphasis, but I do not believe that it makes resources irrelevant — whether the total quantum of resources or the pattern of its distribution.

If we are to have "level value" as well as "level funding", there must be more money for Government civil science. At the same time, let us at last take hold of the nettle of our excessive national commitment to defence science.

12.58 pm

Dr. John Marek (Wrexham): I listened with interest to the hon. Member for Wantage (Mr. Jackson) and I agreed with 90 per cent. of his speech. He pointed out correctly that too much of our R and D effort at present was spent on defence—to the nation's cost, in that not enough R and D was finding its way into civil applications.

I am worried about the level of Government funding for science and for R and D. I am especially worried that in recent years there has been a move towards any R and D having to have an immediate or fairly immediate industrial spin-off or application. If that philosophy gains ground, very soon science will suffer catastrophically. It is already beginning to suffer, and the Government have to give it urgent attention. If it is allowed to go on for much longer, we shall not be able to put it right as quickly as we have been able to destroy it.

I am also worried about research council funding. The Government tell us that the science budget has not been cut in cash terms, but funds to the University Grants Committee have been cut, so much of the research done in universities has suffered. The Government may be right in saying that the science budget has not been cut in cash terms, but that does not represent the true position, as the hon. Member for Wantage has pointed out. I give a little credit to the Secretary of State because I think that he realises this, as his actions in getting extra money for the science budget showed. I hope that he will say that it is not enough, and that he should get much more because much more is needed because of the problems. For example, equipment has an increasing price over and above inflation. Several hon. Members, including my hon. Friend the Member for Motherwell, South (Dr. Bray), have referred to electron microscopes. I do not wish to pursue that line, although I have several good examples, because I think that the point has been made.

Some research develops into new sectors, which suddenly open up with the increasing pace of research and as a result demand much more money than would have been required if funding were simply on the basis of the rate of inflation. These arguments are well understood and have to be got across to everybody in the Cabinet, and not just to the Secretary of State for Education and Science.

High energy physics is a subject about which one cannot say whether its research will have an application in the short term, or even in the long term. That is not the argument. The argument is that, as a total, the research must be supported for various reasons, one of which is that some of it will have applications that will benefit mankind tremendously.

As other hon. Members have said, it is important that we do not withdraw from SERC. An enormous amount of money is being spent on it, but it is a joint European effort and I should be sad if a philistine Cabinet decided that we should no longer continue as members of that body.

The hon. Member for Wantage gave figures for the money being spent on research and development in defence rather than in the civil sector. However, he did not give the figures of what has happened to the science budget. Although the Government say that it has not been cut in real terms, it has. My figures come from *Nature* of 23 May this year. It talks about the first submission of the Advisory Board for the Research Councils to the Government, which the Secretary of State has placed in the Library. It talks about the amount of science funding made available by the Government over the past three or four years.

Part of the ABRC's difficulty, in this as in previous years, is that the Government appear to have kept the Prime Minister's promise in 1980 that the research budget would be protected. If one uses the retail price index as a measure of inflation, the science budget has increased by 6·4 per cent. since 1981-82. However, even allowing for the decline of the research councils' other income, mostly by way of research commissions from Government Departments amounting to roughly 7 per cent. on one sixth of the total science budget during the same period, the total income of the research councils has increased by roughly 4 per cent. Nobody would argue with those figures, but they do not show the true position.

Nature reports:

"The board says that this simple arithmetic is misleading partly because the retail price index is not a good measure of the increased cost of research. Rather, the board calculates that the real volume of research supported with the funds within its purview has declined by 5 per cent. over four years. Matters have been made worse . . . by the 8 per cent. reduction (in real terms) of the budget of the University Grants Committee."

I think that I have shown how misleading it is to say that the science budget has been protected. *Nature* says:

"The case is sustained by a harrowing account of the changes which have been brought about within the research council system in the past few years. The total staff of the five research councils has declined by a fifth, by 2,000."

Such a cut represents not a minor but a major change in the way in which research is done and funded in this country.

Mr. Maurice Shop, the chairman of the Committee of Vice-Chancellors and Principals, issued a press release on 21 May which states:

"The Government's policies on finance and student numbers are incompatible with the emphasis on excellence with which the Green Paper"—

on the development of higher education into the 1990s—

"is liberally larded and will undermine the chance of achieving such admirable aims as raising research standards and ensuring an adequate supply of scientists and engineers."

Such chairmen do not say things like that in press releases every two or three months. Indeed, I part company with Conservative Members on this point, because, although they have all regretted the lack of money going into science, they have sought to say that such shortages also occurred under the previous Administration. I admit that certain cuts were made under the Labour Government, but there is a difference in the emphasis placed, and in the amount of cuts that have had to be borne in the past three years. They go far beyond any cuts made in the past 30 years.

I do not believe that the chairmen of prestigious bodies such as the Committee of Vice-Chancellors and Principals would have made such statements in the 1950s or the 1960s, in 1973-74 or 1976-77 or in 1978, but they are doing so now, and that underlines the point that something has gone wrong with science policy over the past three or four years.

The most recent cuts to be applied to the Agricultural and Food Research Council amount to £10 million. Next year they will amount to £20 million. Those are enormous cuts. They have not been made as a result of any long or detailed study into what research should be done, how it should be done and whether it is necessary; they have been dictated by the Treasury. However, with all respect to the Treasury, it is not an expert on agricultural research, and it should not decide by how much research programmes are to be cut.

At present, ADAS costs the country about £122 million. By 1987, the Government intend to reduce that sum by £23·5 million. Indeed, £7 million is to be knocked off research and development. That is in addition to the 15 per cent. cuts of the past three years. Such cuts must be catastrophic for research.

The Welsh Affairs Committee took evidence on the Welsh plant breeding station on Wednesday 14 March 1984. I refer to House of Commons Paper 326. I asked those appearing before the Committee about the F1 hybrid programme at the Welsh plant breeding station and why it was being abandoned. I shall not quote the answer in full, but Dr. Jamieson, the assistant secretary of the AFRC, said in reply:

"There is no question that elements of that programme represent good science but, unfortunately, the position that the Council is in is that, with the budget reductions that we have sustained and are anticipating in the coming years, good science is having to stop at institutes throughout the United Kingdom."

Good science is being abandoned, yet that programme is the only one being carried out in western Europe, although there is something similar in east Germany. It is not being abandoned because of a planned, well-documented and detailed programme of what sort of science we should be doing; cuts have simply been put upon us and there is nothing we can do. We have to behave like a mad butcher in a butcher's shop and lash out in every direction—whatever the knife reaches is cut.

Mr. Dalyell: Six months ago, I saw something of the work on protosynthesis and related problems at the Aberystwyth station. I wish to echo all that my hon. Friend has said. The same problems are faced by the Scottish College of Agriculture, which wrote to me on 10 June.

Dr. Marek: I am grateful to my hon. Friend, who is quite right. I hope that even at this late stage those in the Government who know something about what will happen if science is decimated will ensure that their voices are heard. If there are to be cuts, they must be rational. There must be a consensus on what should be cut.

Of course, I do not want any cuts to be made. If we are to have the general level of funding that the Government

[Dr. Marek]

want, they should realise that, because of the increases in costs over and above inflation, there must be a little extra money for science.

The Government's claim rings hollow, but they have a chance to put it right. Cuts have fallen heavily on research. Indeed, whole research groups within departments and universities will stop. They will either be enticed to the United States or will be given jobs in different areas where their aptitudes and excellent skills will not be used to their full potential. A new brain drain is developing.

In 1979, research councils reported that all alpha-rated proposals were supported. Now, 25 per cent. fail to get that support and in some councils the figure is as high as 50 per cent. That is serious. However, I shall not labour the point other than to say that I hope that hon. Members will give it serious consideration and urge the Government to do something about it. We have built up our science tradition over the past two or three centuries. That tradition could be thrown away easily in a few years, and it would take a long time to get it back.

What must be done? We must reverse the cuts. All alpha-rated projects must be supported. We need to provide sufficient funding for science so that we do not receive letters like the one I received from the chairman of the CVCP. I could cite other examples, but time is short. We need to provide funds so that, by and large, people in responsible positions — those on various committees, the researchers in universities and so on— can say, "Times may not be as easy as in the 1950s or the 1960s, but we are not having to cut into good science".

Research and development cannot be left to industry alone. That would be a fatal flaw in any Government's policy. I should like to see the Government do more for research and development in the enabling technologies, information technologies, biotechnologies, engineering and manufacturing technologies. It is important to do that. For example, we could allow industrial companies to write off against tax all research and development carried out in previous years, and provide some incentive for companies to innovate. That should be done on the industrial side of research and development. Like my hon. Friend the Member for Motherwell, South, I should like to see research and development doubled in the next three or four years.

On the pure research side, we need to reverse all the cuts in the research councils, and accept what the Advisory Board for the Research Councils is requesting this year. That is the minimum that could be done. There is a place for contract research in universities. The university of Salford has managed to find a modus vivendi with its new financial discipline, but there is no place for pure research simply to be relegated to a philosophy that it can be carried out only if there is an industrial or immediate benefit or spin-off in the near future.

Therefore, I urge the Government to think carefully. Hon. Members on both sides of the House have expressed serious concern about the lack of finance for research. There is a special problem, and special finance must be provided. It is not a special case for a sectional interest in the country. That would be wrong. Hon. Members would misunderstand what I am saying if they thought that that was what I believed. If we do not get it right now, if we do not keep our tradition of pure research, and if we do not spend money on research and development as other countries do, the whole country and every succeeding generation will be affected.

1.16 pm

Mr. Robert Rhodes James (Cambridge): I am acutely aware of the shortage of time and the number of my hon. Friends and Opposition Members who wish to speak. I should like to say without any criticism of any individual that in the first two hours of the debate there were only three speakers, and this is meant to be a private Members' day. Surely we should have been given more opportunity to speak.

I regret the speech made by the right hon. Member for South Down, (Mr. Powell), not simply because much of the research—it is not experimentation, but research—is done in my constituency. It is not a constituency interest of mine, but a genuine opposition to his Bill. However, we debated that before, and today we are debating science.

I entirely agreed with the hon. Member for Wrexham (Dr. Marek) about CERN. I also agreed with my hon. Friend the Member for Wantage (Mr. Jackson), who made a fundamental and important point. I regret that the hon. Member for Motherwell, South (Dr. Bray) ruined an outstanding speech by personal offensiveness to my right hon. Friend the Secretary of State. We are all aging gurus, and what is wrong with that?

As the House knows, in the eight years that I have had the honour to represent Cambridge, I have emphasised beyond anything else the vital link between higher education, jobs and industry. On Wednesday, my right hon. Friend the Secretary of State and I gave the Churchill college prizes, which are given to graduates who go into business. That represents one small part of the encouragement that we give, and should give, to emphasise that link between higher education and what is called the real world.

I should like to ask one crucial question: what is the purpose of higher education and research? Let me give my answer. It is the pursuit of knowledge for its own sake. It is the love of learning for its own sake. In any institution of higher learning, the important thing is balance. When Prince Albert created the modern university of Cambridge, he did not just introduce the natural sciences. He also introduced the humanities — languages, history and classics. The importance of balance cannot be too heavily stressed. There is often confusion between science and technology, the latter being currently very fashionable, just as there is an absurd differentiation between pure and applied science.

The Green Paper states at the outset:

"The Government believes that it is vital for our higher education to contribute more effectively to the improvement of the performance of the economy."

That is a sentiment with which many of us would wholeheartedly agree. It continues:

"The Government is particularly concerned by the evidence that the societies of our competitors are producing, and plan in the future to produce, more qualified scientists, engineers, technologists and technicians than the United Kingdom."

One agrees with that, too, but the Government's reposnse has been to provide less rather than more. Having correctly defined how we are going wrong, the resolution is negative and the Green Paper is afflicted with a consistently negative and depressing yiew, when it should be positive.

I cite just one example. Hatfield polytechnic is doing virtually everything that the Government wish, and 70 per

cent. of its work and its students are in science, technology and engineering. It receives substantial contracts from British Aerospace, Plessey, the Ministry of Defence, the Home Office and various companies. Yet every year it is cut and cut again. The day before I visited the college, four members of the computer staff had resigned, not just because the salaries offered to them by industry were far greater, but because of a much deeper feeling that higher education no longer had the priority that it deserved.

My right hon. Friend the Secretary of State has done a great deal to help higher education and we are profoundly grateful to him for that. He is not just one of my oldest friends but one of the finest ever Secretaries of State for Education and Science. Nevertheless, I believe that we overlook not only the national but the international aspect of scientific research. Yesterday Cambridge university rightly gave an honorary degree to the founder and director of the United Nations institute in Trieste. That body has exactly 50 per cent. scientists from the developed world and 50 per cent. from the developing world in a highly successful attempt to recognise the international dimension. Our problems may be difficult, but compared with those of the developing world they appear insignificant.

I make one final comment which I hope will not be misinterpreted in any way. The Under-Secretary of State, my hon. Friend the Member for City of London and Westminster, South (Mr. Brooke), is one of the most deeply respected and liked Members of the House and we all feel for him acutely in his recent personal tragedy. In my view, however, there is a great deal to be said for status and I do not believe that the Minister in charge of higher education, and science should be an Under-Secretary of State. At the very least, he or she should be a Minister of State. That would at least make clear to the world, and especially to the world of higher education, the gravity with which the Governmet recognise the unique role of higher education, and especially of science.

1.24 pm

Mr. Ted Garrett (Wallsend): With one notable exception, the Secretary of State must have been impressed by the quality of today's debate. All hon. Members have put a great deal of thought into their speeches. The right hon. Gentleman should be heartened by the increase of knowledge of scientific matters in the House. There has been a steady increase of awareness since he and I first came to the House. Some of us recall science debates when it was difficult to get a quorum. Slowly and painfully we are moving in the right direction.

Scientific organisations have recently been more helpful in enabling hon. Members to understand their problems. The Secretary of State said that we were a science-based society. I wish that he had gone on to say that the vast majority of people have no idea how science and the benefits of it affect the quality of their lives.

I spent most of my industrial career in Imperial Chemical Industries plc, as have four other hon. Members who have spoken. We are lucky, in that we saw science, technology and the application of both to products which were used by mankind. The abysmal lack of knowledge about how science affects our lives is still prevalent.

The Secretary of State said that research feeds off itself. That is true but, unfortunately, in a freely competitive society there are inhibitions because of competition and the need for scientific secrecy. I am referring not to defence research, but to purely industrial research. There has been a regression in the amount of knowledge which is freely available, because of competitive pressures. Will the right hon. Gentleman see whether it is possible to share more scientific knowledge? I know that society is imperfect and that that might not be possible, but it is worth striving for.

It has been said that industrial innovation is Britain's life-blood. George Stephenson, Swan and Faraday were scientists and technologists and understood that their brains could be used. They faced little opposition compared with what their counterparts face today. Because we have industrial innovation, we have had restrictions on the development of industry, projects and commerce through the sheer weight and power of post-war Governments. We must make the public more aware of the benefits of scientific research and development.

Regrettably, we are still sterile in the way in which we apply the fruits of scientific research and development done in this country to overseas commercial markets. Indeed, we are lazy in that respect and often allow other countries to develop the fruits of much of that research.

Because of the shortage of time I shall not raise many of the subjects with which I should like to deal. I must, however, agree with those who have referred to the brain drain. One cannot blame scientists for leaving the country. If we had first-class degrees in science subjects, we might do likewise if we thought that we could secure good salaries and a better standard of living for our families.

Unfortunately, Britain has always adopted a low salary approach to those in science and technology. I fear that that attitude will continue, simply because our society does not recognise their skills. We admire wordsmiths, of whom there are many in the House, but we do not begin to understand the motivation of the scientists. Our education system is not geared to enhance that understanding, despite mammoth efforts that have been made to alter some of our teaching methods.

I am glad that this issue has been raised today. Indeed, we were lucky to obtain parliamentary time on a Friday for this subject. It has been a worthwhile exercise and I look forward to more parliamentary time being allocated to debates such as this, for only by this means can we begin properly to understand the issues involved. Many hon. Members can draw on their experiences to contribute to debates on science and allied matters.

1.32 pm

Mr. Robert Key (Salisbury): It is a relief after four hours of debate to discover that much has been left unsaid. There has been some wild talk in the debate about science being decimated. I shall follow the example of my hon. Friend the Member for Cambridge (Mr. Rhodes James) and be positive and specific, but not uncritical.

An enormous amount of research is done in Britain, and science is perceived by the electorate as an important priority. This pre-emptive strike by the Government on the Select Committee's report which will be published next month is an ingenious move, and hon. Members who have spoken today would be advised to read that report when it comes out.

I could not agree with my hon. Friend the Member for Wantage (Mr. Jackson), though I hope that all is peaceful in his home this weekend. I suspect that he has been depriving his wife, my Member of the European Parliament, of a large number of votes because of the

[Mr. Robert Key]

many thousands of defence workers in research and development establishments in my constituency and that of his wife.

The funding of science in Britain appears effectively to be determined by the whim of the Treasury rather than by Parliament or even by the Government. What the Treasury describes as "level funding" is, in the words of a distinguished scientist,

"an increase from the previous year by a percentage which is plucked out of the air, and which represents the wildest optimism in estimating the true rate of inflation."

Are the Government telling us that we can no longer maintain our place in the world scientific community and that the time has come for us to target our research on a narrow range of requirements, perhaps commercially led?

Of the amount spent on civil research and development, half is on basic research, and that adds to our fundamental scientific knowledge and contributes to the welfare of the whole economy. But cuts in university funding have fallen more heavily on research capacity than on teaching. There was a 20 per cent. reduction in departmental and laboratory expenditure by universities in the three years after 1981. I am not surprised by the experience of the hon. Member for Linlithgow (Mr. Dalyell) in Edinburgh recently.

Universities, which receive over 80 per cent. of their income from public funds, have not been slow to seek new sources of finance, but the Committee of Vice-Chancellors and Principals has said that only a small proportion of the 14 per cent. of university income which comes from research grants and contracts can be described as free money, without strings.

Science parks have been another welcome development under this Government. There are now over 40 of them, and more are appearing. Some are successful. Some are well known, but geographical proximity to universities does not always lead to intellectual proximity.

I said that I would be specific, so I must refer to some of the successes at the Porton Down centre for applied microbiology and research, which is administered by the public health laboratory service. A substantial proportion of its work has generated products and processes which are commercially exploitable, and importance has been attached to maximising CAMR's income generation potential.

The hon. Member for Linlithgow mentioned his anxiety about culture collections. Recent developments at Porton have included a new building for a national collection of animal cell cultures, funded by the Department of Trade and Industry. This will provide an internationally recognised patent deposition facility for tissue cultures, for which formal international recognition is being sought.

There are nine constituent laboratories at CAMR pursuing a great deal of important research — the microbial technology laboratory, the vaccine research and production laboratory, laboratories for pathogenic microbes, therapeutic products, experimental pathology, bacterial metabolism research and an experimental microbiology and safety reference library, the molecular genetics laboratory and the special pathogens reference laboratory and, of course, all the usual support services such as electron microscopy, computing and engineering facilities.

Recently, the public health laboratory service has entered into an agreement with Porton International Limited to handle the marketing and distribution of CAMR products and processes worldwide. Porton International has also undertaken to build a new fermentation plant on site at Porton. If that plant had been funded by the DHSS it would have cost the public sector an estimated £16 million. The jobs and the future of that part of the Porton establishment are secure and will grow.

New sources of finance are being sought all the time, and only last week my right hon. Friend the Minister for Overseas Development announced his new Overseas Development Administration special scholarship scheme —a partnership between the ODA and the universities— to provide 400 new university places for outstanding students from Commonwealth developing countries. The universities will have to find new money for that in partnership with or sponsorship by local industry and commercial interests within the community.

That is all well and good, but the country is not spending enough on its science budget. I urge the Government to reorder their priorities. I am critical because I want to strengthen the hand of my hon. Friend the Secretary of State in the Cabinet. He will have the support of both sides of the House if he seeks to search for more money from the Cabinet. It will not do to reply with the tired old jibe that there is no money with which to spend our way out of trouble. Even the meanest Poujadist would have to admit that occasionally one has to restock the shelves with new products before opening the shop.

I invite the House to read the words of Sir Peter Swinnerton-Dyer of the Royal Society and chairman of the UGC, who said in evidence to the Select Committee on Education, Science and Arts, of which I am a member, on 27 November:

"We are, in effect, in the Red Queen's world — in this country you have to run very fast to stay in the same place. The science budget has an additional snag beyond the difference between the Treasury's assessment of inflation and the truth, which is that by the conventions of accountancy, it has to carry an increasing amount of non-productive expenditure—pensions and all that sort of thing—and so the proportion of the science budget that is spent on producing science is slowly going down."

Sir Peter told the Committee the effect of this:

"We have moved from a system in which the amount of research which the universities could do was controlled by the supply of talent to a system in which it is controlled by the amount of money. More research could be done with the same brains if there were more money. Even level funding is not wholly adequate. Essentially, the proportion of good research which this country does is governed by the proportion of world expenditure on research which is spent in this country. Most other advanced countries are actively increasing in real terms the amount of money they are spending on scientific research— some of them by quite substantial percentages."

We are not. He continued:

"The proportion of the world's science that we do is steadily declining."

There is another side to this. I said earlier that cuts in university funding had fallen more heavily on research capacity than on teaching, and had fallen especially heavily on researchers on fixed-term contracts. We are talking about 10,000 researchers who completely lack career structures or even reasonable security. That has grave implications for the continued success of scientific and medical research in our universities. The people involved are graduates, often of post-doctoral level, who devote themselves full time to scientific and medical research. They are a highly motivated, industrious and

socially responsible group. They are employed on contracts which vary in duration from a few months to five years. Recent cuts in academic staffing in universities have resulted in an increased teaching load on the remaining staff, who have had less time for research and have become increasingly dependent upon contract research staff to pursue their research for them.

I ask the Government whether it is in the national interest to pursue the line with contract researchers. Is it sensible? Was it foreseen or planned, or did it just happen?

I should mention briefly Britain's threatened withdrawal from UNESCO. So far, the public debate—there has been precious little of it—has been long on emotion and short on facts or evidence. I have the honour to be a member of the United Kingdom national commission for UNESCO, which has given me the opportunity to look beyond some of the emotional arguments and to speak to scientists, who make up much of the national commission and who are worried about the lack of public interest in the proposal that we might withdraw from UNESCO. We should stop identifying that organisation with one individual and consider the effects of our withdrawal on the scientific community.

Mr. Dalyell: Not just public interest, but press interest is lacking. I thoroughly support the hon. Gentleman.

Mr. Key: I agree with the hon. Gentleman. Press interest is lacking, although I believe that some interest is now being shown. The timing is becoming crucial, because if the Government decide on the matter in the autumn they will have the entire summer in which to consider it, a period during which Parliament will not be sitting and will be in no position to advise them.

UNESCO is close to the heart of the Royal Society, which was closely associated with the discussions that led to its foundation in 1946. It was strongly in favour of including science in UNESCO's brief. Indeed, Sir Julian Huxley, the first director-general of UNESCO, strengthened that association from its early beginnings.

It is not generally known, but I am sure that the House would wish to know, that UNESCO has collaborated with many countries and their scientific communities, and with the unions and committees of the International Council of Scientific Unions. That collaboration has been especially beneficial, because it has created strong scientific leadership and much more voluntary work by scientists and non-governmental organisations. Many political problems have been overcome; for example, by ensuring the participation of the most appropriate scientists in projects—including scientists from Israel, South Africa and Taiwan—whatever their nationality. From the point of view of non-governmental organisations, with which the Royal Society has always been closely associated, the collaboration of UNESCO has provided benefits, including the involvement of Governments in scientific programmes, extending contacts in developing countries and providing educational and training activities in support of scientific projects.

Almost no financial case has been made by either side of the argument. That is not surprising, because it is difficult to obtain figures. The figures are such that the Government cannot claim that withdrawal would save money. Nor can the proponents claim that Britain is a net beneficiary. It is much more complicated than that. On its face, it seems simple. In the full two-year accounting period of 1982 and 1983, Britain contributed $17,565,912.

We "received" $38,081,700. This can be broken down in a number of ways. Of the money that we received during the two-year accounting period, United Kingdom nationals at UNESCO headquarters accounted for $19 million. United Kingdom nationals serving as UNESCO experts in the field received over $2 million. United Kingdom nationals serving as consultants received nearly $3 million. There were fellowships for study in the United Kingdom and equipment was procured in the United Kingdom. There were subcontracts with firms in the United Kingdom and fees were paid to the External Auditor, which is a British company. There were allocations to the United Kingdom under the participation programme. Meetings were held in the United Kingdom and insurance was bought in the United Kingdom. All these moneys amounted to the enormous total of $38,081,700.

Our contributions to UNESCO are more complicated, because we claim repayments under currency fluctuations. As the dollar and the pound have fluctuated, so the value of our contributions has changed. In 1984 we should have contributed $4,763,853, but we contributed only $386,664 because of currency fluctuations. There are other problems in calculating the financial benefits and disbenefits, because of staff numbers. It can be said that in the past we have been lucky enough to win on this wicket, but it cannot be said that this will continue, because of the effect of currency fluctuations.

There is the mighty issue of politicisation. The Royal Society said that it considered the Government to be entirely right in drawing attention to the shortcomings of UNESCO, especially those relating to management and undue politicisation. What form does this politicisation take? Do we know? Do we know what the relevant figures are? In subprogramme IV.2, subparagraph 4(b), we see that UNESCO internationally is spending on its total drug abuse prevention programme only $43,000. If we turn to subprogramme II.6, we find that, under

"Education and training activities for national liberation movements",

the granting of fellowships to students sponsored by African national liberation movements and students presented by the Palestine Liberation Organisation led to the allocation of $193,000. We find that the publication of African poems and other activities to be decided upon with those responsible for education in African national liberation movements with a view to helping them preserve cultural identity involved the allocation of $60,000, a sum considerably larger than that given to fund UNESCO's drug abuse prevention programme. Is this a correct ordering of proceedings within UNESCO?

The Royal Society has drawn my attention to another factor. If the United States withdraws from UNESCO, the organisation will be gravely impaired. The impairment will not be limited to a substantial reduction of funding and the withdrawal of United States staff. If United States funds are switched from UNESCO to other international scientific projects, including those of non-governmental organisations, considerable rivalry could be created. It could be that the action of the United States in withdrawing from UNESCO and the switching of its financial support will be, in a manner unbalanced by other countries, regarded widely as just the sort of politicisation which no

[Mr. Key]

one wishes to see in international scientific projects. That is a danger which may face the United Kingdom as well if we withdraw from UNESCO.

I ask that a great deal more attention be paid to the arguments about withdrawing from UNESCO. There should be much more public debate on the issue. The Government are faced with a major decision that will have a profound effect on Britain's scientific community.

1.49 pm

Mr. Ian Wrigglesworth (Stockton, South): I think that it is not an overstatement to say——

Mr. Dalyell: On a point of order, Mr. Deputy Speaker. Some of us—not only myself but my hon. Friend the Member for East Kilbride (Dr. Miller) and other hon. Members — have been sitting here since 9.30 am, and——

Mr. Deputy Speaker (Mr. Harold Walker): Order. Several hon. Members will be disappointed, but that is in part due to the length of earlier speeches, and I have no control over that.

Mr. Wrigglesworth: I was saying that it is not an overstatement to say, as one distinguished academic scientist did at the time of the controversy over the Prime Minister's honorary degree at Oxford, that

"this may be the last chance for any serious academic institution to stop the catastrophe that we face as a scientific and educational nation".

In that respect the debate is timely, for clearly the whole future of our research and development and our standing as a scientific nation are in doubt.

The Government's unwillingness adequately to fund scientific research and development could indeed sever the sinews of our economic strength which is so necessary to sustain our economy as the oil revenues begin to decline. Increasingly, industry is expected—this was reflected in the Secretary of State's speech at the beginning of the debate—to make good the lack of provision of funds for research when its resources are already being stretched by the Government who are asking industry to meet most of the cost of the expanded youth training scheme, and now to make additional contributions to private pension schemes in the wake of the abolition of the state earnings-related pension scheme.

In setting our science budget, the needs of industry are crucial, but they are not absolutely paramount. There must be a proper balance between the investment for society through producing better trained men and women scientists for industry and discoveries which can be exploited for producing new products or breaking into new markets. There is a need also to undertake the kind of pure research the benefits of which cannot be easily quantified.

It is certainly not clear that the Government have got the balance right. Under present academic policies, Galileo may well have been forced to confine his telescope experiments to spotting returning merchant ships rather than discovering the truth about the sun and the earth. We should not go down the road that some have suggested of making massive cuts in basic scientific research in favour of exploiting the inventions of others. That would be a retrograde step akin to winding up many basic manufacturing functions, such as building car engines—recently discussed in this Chamber — in favour of a strategy of assembling already manufactured kits.

Is there sufficient Government commitment and finance behind a policy of strengthening the connection between basic scientific research and industrial innovation? As other hon. Members have said, the value of basic science spending is not easy to quantify, but two statistics strike me particularly forcibly and are most disquieting.

Between 1973 and 1980, the number of publications and citations credited to British scientists fell by 9·9 per cent. compared with rises in West Germany of 3·1 per cent. and in Japan of 29·9 per cent. The number of alpha-rated projects for research funding fell from 85 per cent. in 1979 to less than three quarters of that in 1984. Those figures suggest that there has been a relative decline, at any rate in the recent past, and that is reflected by the Government's failure in reality to maintain their commitment to level funding, as hon. Members have said in the debate.

The projections in the Government's White Paper on public expenditure, taken together with an 8·2 per cent. real fall in spending on higher education since 1980, make the Government's commitment a very hollow one. Research budgets are affected by the general provision for higher education in terms of continued laboratory overheads, a failure to update and replace equipment, vacancies left unfilled, and increased teaching and administrative commitments which staff have to undertake at the expense of research time.

Between 1985-86 and 1987-88, the Government's latest expenditure plans show a reduction of £6·4 million, or 3 per cent. in real terms, in the science budget. In real terms there is an even bigger cut of about £10 million in the budgets of the five research councils and support for the fellowship of engineering. Those cuts, which have been rehearsed by other hon. Members, will have an enormous impact on Britain's capacity in those areas.

As I want to provide an opportunity for other hon. Members to speak, I shall curtail my comments on the scale of the cuts and go on to say that, at a time when the Japanese and American Governments, with other Western countries, are giving much higher priority to research and development, and when other commercial organisations are massively increasing their expenditure in those areas, it is a great pity that Britain cannot do the same.

As a matter of priority, therefore, in my view the Government should establish a new council for science policy combining the current Advisory Board for the Research Councils with the Advisory Council for Applied Research and Development — to be chaired, to ensure that it has the priority that should be accorded to it, by the Prime Minister. This body would guide, monitor and advise on the development of science policy.

There may also be a case for considering whether science should not be removed from the Department of Education and Science into the Department of Trade and Industry, with a Minister of science and technology responsible for these matters in that Department. In my view, that should be considered by the Government.

Resources for science should be expanded to restore the cuts in the real level of activity in our institutions, and expenditure could be determined by the new council that had been established.

The Government should encourage new collaborative ventures between universities and industry, and we also

need much greater collaboration with other European countries—for example, in the application of robotics in manufacturing industry following the recommendations of the working group on technology growth set up at the 1984 London Summit. Nothing has been done to act on that recommendation, and that, plus the other collaborative ventures, should be supported by the Government. I add my voice to those of other hon. Members in support of both the CERN nuclear reactor project and ESPRIT—the European strategic programme for research and development in information technology — which the Government have supported in the past.

I support the hon. Member for Wantage (Mr. Jackson), who spoke about the need to switch much more of our research and development from the military side of the budget to the civil side. Expenditure on military research and development masks the lack of investment in the civil side, and too many of our resources, especially in terms of manpower, are tied up in that area without an adequate spin-off to the rest of the community.

Our difficulty is that, yet again, we are discussing the problems of trying to run a Rolls-Royce system on a pedal-powered economy. This is not the occasion on which to stray down the road of determining what should be the right economic policy, but until the resources are available to the Government we shall not be able to spend anything like the money on research and development and on science that our major competitors in Germany, Japan and the United States are spending at the moment.

1.58 pm

Dr. Michael Clark (Rochford): I realise that I have very little time, which is a great shame, because I speak as a scientist and, as far as I have been able to determine, no scientist has spoken in the debate so far. I spent seven years at university studying science and I thought that I had a contribution to make to the debate, but unfortunately it appears that I shall not be able to do so.

I progressed to being a scientist in a very traditional way. I entered a local grammar school where I studied science. Then I went on to university and later to industry. When I look at the schools in my constituency and see their condition, I come to the reluctant conclusion that we shall not be able to produce good scientists in the future.

I refer to the school that I visited last week—King Edmund's school in Rochford — where demountable classrooms installed 19 years ago as a temporary measure still exist, where flat roofs leak, where ceilings remain broken, where floor tiles will not be replaced and where there is little concern about making the right provision for the children who attend the school. I ask my right hon. Friend how children can be expected to open their eyes wide to the wonders of science and to turn a blind eye to the conditions in which they have to learn.

Mr. Patrick Thompson: Does my hon. Friend agree that we are concerned not only to hear what he says but even more about the desperate shortage of physics and mathematics teachers in our schools and that we must address ourselves to those problems as well?

Dr. Clark: I agree with my hon. Friend, and I am delighted that another scientist has managed to scrape in just before the end of the debate. He is right, and it is not just a question of physics, a subject in which he is an expert, but chemistry, my subject, mathematics, and the subjects of some of the Labour Members who have spoken today. Unless we do something to ensure that education is attractive to scientists and methematicians, we can write off any contribution that the next generation of youngsters from school might make.

Science is vital to the country and it is amazing that science is tagged off as a small part of the Department of Education and Science. That Department has only three Ministers — the Secretary of State and two Under-Secretaries of State. They are busy enough looking after education. Therefore, I call for science to be given its right place and for there to be a separate Department for science within the Government.

2 pm

Mr. Frank Dobson (Holborn and St. Pancras): I apologise to those hon. Members who did not manage to speak, and I particularly sympathise with those who have sat through all the debate and not got in, unlike some who have got in although they have not been here all through.

I do not wish to spend a great deal of time dealing in detail with the points made by the right hon. Member for South Down (Mr. Powell). It is now getting to the stage where, every Friday, we debate embryos and one or two ancillary activities. There will be time to go through rebutting in detail all his points. However, nobody has yet claimed that research on human embryos to combat inherited disease is already under way.

Mr. Thurnham: Does the hon. Gentleman accept that no embryo has been kept alive in a test tube for longer than nine days and that the 14 days recommended by the Warnock committee is beyond any work that has been done?

Mr. Dobson: That is true. We should point out to the right hon. Member for South Down that people have been talking only about the prospects for research on human embryos that would counter, and we hope eliminate, a number of inherited diseases. The right hon. Gentleman needs to get things into a proper time scale. It was a long time ago that scientists first managed in vitro fertilisation. There was an enormously long time between that and the first successful impregnation of a woman who finally gave birth to a live child. If people had been asked in the mid-1960s whether worthwhile work could be done on in vitro fertilisation to combat infertility, the answer would have been the same as that which the right hon. Gentleman has been getting from those whom he has asked whether they are undertaking such research. The answer is that they are not, but that they are thinking about it or are drawing up programmes of research for such investigation on other animal embryos. That is the way they go about such things.

There is an element of illogicality in the right hon. Gentleman's position. He is saying that the Bill will not do any harm because there is no such research going on, and we cannot plead the possibility of such research in opposition to the Bill. At the same time, he pleads the threat of that research as the justification for his bill. He cannot have it all ways.

The right hon. Gentleman went on to speak as though he was, for the first time, disclosing the real reason—contraception — for people's concern about the inhibitions on research that might result from the Bill. However, there is nothing new about contraception. Most

[Mr. Dobson]

of the opponents of his Bill have publicly stated that they hope that the research into embryos will make it possible to come up with better, safer and more reasonable forms of contraception. He has not disclosed any deathly secret to an unsuspecting world. This has been talked about in Committee, as he should remember, and it has been talked about in a number of articles in learned journals and not so learned newspapers.

I agree that commercial pressures will be brought to bear—although I am not sure whether they are now—because we live in a commercial society. The way to combat commercial pressures is to recognise that they exist and to do something about them, rather than to abandon all the research. That would be like saying that because some companies may have made a lot of money out of penicillin, pencillin research should not have been pursued because of the commercial threat. However, I agree that we need to keep commercialism out of British medicine and research.

The Secretary of State's speech was almost as infinitely complacent as the recent speech of the Minister for Overseas Development. I know that a basic part of the Secretary of State's political philosophy is that the role of the Government should be extremely limited, and no one could claim that in general his actions are contrary to that belief. Indeed, he seems to have abandoned any responsibility for the fact that there is a brain drain. He said that it was rather sad that many highly intelligent big brains had gone abroad because they could do better, and could carry out better funded research there, but he does not seem to want to do anything about it. He is a bit like the prisoner in the dock who says, "It was not my fault, your Honour. I was just minding it for a friend." One would think that the right hon. Gentleman had no responsibility for positive policies to persuade people to stay in this country or to return to this country from abroad.

The hon. Member for Rochford (Dr. Clark) gave examples from his constituency. If we are to have a successful science policy, and if science is to be used successfully in our society, we must look not only at research but at developing a background that is sympathetic to science, to its application, and to a population who have scientific potential. But we are simply not producing enough people with scientific backgrounds——

Mr. Patrick Thompson: Does the hon. Gentleman agree that it will take us years to recover from the damage done to our educational system and, in particular, to the quality of science education, by the Labour party's headlong rush into comprehensive schooling?

Mr. Dobson: First, I do not accept that, and, secondly, there was a considerable burst of comprehensivisation when the Prime Minister was Secretary of State for Education and Science. The hon. Gentleman can chew what bones he likes out of that.

Damage has been done to our scientific potential in our schools. We need look no further than the latest report of Her Majesty's inspectorate of schools, which states:

"The main problem affecting equipment is the cost of replacing ageing capital items, particularly in the practical subjects, and providing sufficient new technological equipment . . . in about two-fifths of the lessons where the quality of the work was less than satisfactory the supply of books was considered to be inadequate."

The inspectorate gave the example of a school which said that its supply of textbooks was so inadequate that some pupils passed through the fifth form without ever being able to take a textbook home.

Of lessons in both primary and secondary schools that involved the use of equipment, the inspectorate said:

"nine-tenths of the lessons judged satisfactory had adequate supplies of appropriate equipment, while of those lessons assessed as less than satisfactory nearly two-fifths lacked such adequate provision . . . In secondary schools the most serious problem was the replacement of ageing, costly equipment in science".

Those are the facts of the education system for which the Secretary of State is responsible. They do not represent a sound basis on which to develop a scientifically based society. As the right hon. Gentleman well knows, there is concern about increasing the number of women scientists, but we can do that only if more girls begin to take science at school. Those authorities — especially the Inner London education authority — which are taking initiatives to recruit more girls into science, thereby making them more useful in a scientific society, are being inhibited by rate capping from taking such action.

Medical research has suffered seriously from various Government policies. Let us put the matter in perspective. The MRC's budget this year is about £120 million; a new frigate is to cost £170 million. I am not sure that the priorities are right. The Government talk about it as level funding. It might seem level, but the MRC funds have certain special features which are outstripping inflation, so it is far from level funding; indeed, its funding is going down.

That point was proved in a parliamentary answer from the Secretary of State as recently as 7 June. It showed that the MRC assesses projects and gives them an alpha rating if they are top notch and approved as high quality grant applications. In 1981-82, all approved long-term applications received funding. Of the approved short-term applications, 66 were not funded. In 1982-83, approved long-term applications not funded were two, while approved short-term applications not funded were 25. In 1983-84, 22 approved long-term applications — recognised as meritorious — were not funded, and no fewer than 199 approved short-term applications were not funded.

What suffers because of that? One example is important for the 25,000 families — not individuals — affected by the inherited eye disease retinitis pigmentosa. Previously, the MRC had granted £500,000 to Moorfields hospital and the Institute of Ophthalmology jointly for a five-year project — £100,000 a year. That ran out in April this year. It is to be replaced by a three-year grant totalling only £74,000. That measly amount of money, resulting from Government policies, must be compared with the £150,000 that the voluntary organisation, the British Retinitis Pigmentosa Society, is putting into research into the disease.

The Institute of Ophthalmology is one of 12 institutions in the British Post-Graduate Medical Federation. Of the others, the most famous is probably the Institute of Child Health at the Great Ormond street hospital. In 1979-80, those institutes received £9·1 million from the University Grants Committee. This year, in 1979-80 figures, they will receive only £6·3 million. In current prices, during the past six years they have lost £23·5 million for basic, vital research into child health neurology and so on.

The federation tells me that the institute can still obtain money for particular projects, but that their capacity to take them on is being severely undermined because the central core funding from the UGC is no longer available. They cannot run the projects, and that is totally absurd. Senior staff devote a great deal of time to raising money for projects instead of supervising research and carrying out clinical work in the associated hospitals. The institutes are faced with a flight abroad of top flight researchers. They are also faced with the break-up of basic skilled teams of technicians, without whom such institutes cannot prosper. They are also losing money for equipment from the UGC grant.

It is worth adding that those institutes also suffered severely as an accidental result of the Government's policy on overseas student fees. They are so renowned worldwide that they attracted large numbers of overseas students who did a great deal of work here, made a great contribution to those institutions' reputation and spread that reputation abroad, but they are now being turned away and sent to other places abroad.

In all, the Government's record on science policy at all levels is appalling, and it is nowhere more so than in medical research.

2.15 pm

Sir Keith Joseph *rose*——

Mr. Deputy Speaker: Does the Secretary of State have the leave of the House to speak again?

Hon. Members: Aye.

Sir Keith Joseph: I pay tribute to the large number of hon. Members who chose to come here today for the debate. On both sides of the House, there seems to be a universal recognition of the relevance of science to prosperity and the standard of living. The Advisory Board for the Reseach Councils has made a strong case in its advice to me, from which I quoted, and which was published yesterday. The Government and their predecessor have protected the science budget in gross terms, but it is true that a significant diversion of some of the budget has had to go to expenditure other than science research.

Dr. Michael Clark: Does my right hon. Friend agree that over the past 15 years Japan has been increasing its science budget by 17 per cent., West Germany by 14 per cent. and France and Russia by 8 per cent., while we have been increasing it by 3 per cent.? If that continues, by 1990 Japan will be spending 16 times as much on science research as we are.

Sir Keith Joseph: I was about to come to that point.

Several hon. Members, including the hon. Member for Motherwell, South (Dr. Bray), my hon. Friends the Members for Hastings and Rye (Mr. Warren), for Havant (Mr. Lloyd), for Rochford (Dr. Clark) and for Bedfordshire, North (Mr. Skeet), and the hon. Member for Wallsend (Mr. Garrett), spoke directly or indirectly of the economic background. We should recognise what lies behind what they were saying, and what the problem is for any Government. My hon. Friend the Member for Rochford has just emphasised that point. While our productivity remains so far below that of even our neighbours in north-west Europe, let alone America and Japan, our standard of living will be low compared with theirs, what it might be, and what we would like it to be. That goes for public services and social services.

Hon. Members can put the blame for our low productivity and resulting lack of competitiveness on any combination that they wish, on Governments of either or both parties, on management, trade unions or the culture of our times. But let them recognise that until productivity and, with it, competitiveness rise sharply, we shall be in danger of the sort of comparison to which my hon. Friend the Member for Rochford referred. While the proportion of our gross national product devoted to research is not far distant from, and, indeed, above that of some of our competitors, the fact is that many of our competitors' GNP is so much higher that the buying power of the proportion that they devote to research is beyond ours.

We have a real problem in this country. Hon. Members on both sides of the House spoke of the readiness of business to take advantage of scientiic invention. Indeed, that goes to the heart of our difficulty. The function of the entrepreneur has not been recognised enough as being crucial to our standard of living. The culture encouraged to some extent by the Labour party is much to blame for that. I welcome the change in its tone. Labour Members may recognise the importance of business today, but too often in the past they have treated business as if it were in some way discreditable and immoral.

Mr. Thurnham: Could not the Government be more entrepreneurial and put their money where their mouth is by making provision for more specialist teachers, not just to train more engineers and technologists but to ensure better information for the public, so many of whom have followed the ways of the right hon. Member for South Down (Mr. Powell) whose Bill would take us back to the middle ages?

Sir Keith Joseph: The Government do not have any money. We already try to put taxpayers' money to the best use, and this debate is a valuable help in that process. The right hon. Member for Clydeside (Dame J. Hart) asked the key question. We would all like more money for science, but where is it to come from? My hon. Friend the Member for Wantage (Mr. Jackson), in an excellent speech, and the hon. Member for Wrexham (Dr. Marek) asked the same question, and in this context several hon. Members raised the subject of expenditure on defence research and development.

Mr. Dalyell: The Government coughed up £430 million for an airport.

Sir Keith Joseph: I must emphasise that, of the approximately £2 billion classified as defence research and development, only about 15 per cent. goes to research. Opposition Members referred to the United States President's increase of civil research by 30 per cent., but they did not allow for inflation. That was the nominal increase. The increase in real terms was 15 per cent.

Dr. Bray *rose*——

Sir Keith Joseph: I shall not give way because I am right.

Dr. Bray: That is not true. Look at the figure for the universities and colleges.

Sir Keith Joseph: I do not have that. I am referring to general civil research.

[Sir Keith Joseph]

I am glad to say that my right hon. Friend the Secretary of State for Defence has in mind two schemes which would increase collaboration with academic institutions in strategic research. The introduction of those schemes is likely to increase MOD expenditure in higher education. I do not pretend for one moment that that will solve all our problems, but it is a move in the direction urged by hon. Members.

I note the various comments about the decision-making machinery in connection with science. I remind the House that Whitehall Departments co-operate effectively in a number of areas of scientific interest. The House will have noted that contributions were made by several different Whitehall Departments to the expenditure recently announced for the space agency and the switch to larger numbers of science, technology and engineering places in higher education.

My hon. Friend the Member for Cambridge (Mr. Rhodes James), in a powerful speech, laid strong emphasis on the need for more money for higher education generally, and I sympathise with the view that he expressed.

The right hon. Member for South Down (Mr. Powell) —I speak neutrally in terms of the merits of his Bill— told us of his correspondence with various leading figures in the relevant sphere of activity, and I do not contradict what he said. It will not surprise the right hon. Gentleman or the House to know, however, that if his Bill had been law some years ago those specialists could not have undertaken the work that they now carry out therapeutically. Moreover, if the right hon. Gentleman's Bill became law it might inhibit research which experts might wish to put to similar use in the future. I do not comment on the merits of the right hon. Gentleman's Bill but I was surprised that in making, as always, a very effective case he found it necessary to use the phraseology that he did and to refer to a profit-hungry conspiracy. I think that the right hon. Gentleman and I agree that the pursuit of profit within the law, subject to competition and any ethical code which is agreed to, is the driving force behind enterprise and prosperity.

I am also surprised that the right hon. Gentleman thought that his argument needed the denigration not of the judgments and conclusions but of the analysis in the Warnock report. I was further surprised that the right hon. Gentleman, who seldom descends to denigration, thought it right to attack the integrity, as I think he did, of the Medical Research Council and of the Royal College of Obstetricians and Gynaecologists.

My hon. Friends the Members for Salisbury (Mr. Key) and for Bedfordshire, North spoke of the Government's ingenuity in choosing today for the debate. It was not like that. It was essential that I grasped the chance for a debate on science when it was offered because there is no certainty of getting another date at any time.

The hon. Member for Wolverhampton, North-East (Mrs. Short), supported by my hon. Friend the Member for Rochford, rightly emphasised the difficulties of successive Governments in getting suitable teachers in some subjects, especially in the sciences. I ask them both to read carefully my letter of 21 May, copies of which I shall send them, which opened up new possibilities.

The hon. Member for Holborn and St. Pancras (Mr. Dobson) quoted selectively from the inspectors' annual report on the effects of public spending on education. Her Majesty's inspectorate said what he quoted, but it also emphasised that management decisions by several local education authorities meant that money was being wasted in secondary aspects of education, and was thus not available for key education spending in the classroom.

I accept the importance of scientific teaching and believe that, in the Associaion for Scientific Education, we are lucky to have a constructive and effective teaching group. What the Government are introducing by way of a new examination system, the transformation of the curriculum, the improvement of teacher education and the publication of HMI reports——

Mr. Patrick Thompson: Is my hon. Friend aware that, to date, there is only one candidate in the whole country applying to be admitted to a bachelor of education course in physics, compared with 1,454 applicants in physical education? Does he realise the magnitude of the problem that we have discussed this morning?

Sir Keith Joseph: I know only too sadly. I shall send my hon. Friend a copy of my 21 May letter so that he may see the new possibilities.

The hon. Member for Stockton, South (Mr. Wrigglesworth) based his judgment that all is not well with science on a familiar report which was based largely on citations. We live in a world that has been transformed from the days when we were pioneers in science—and we have to welcome this—there are many countries whose businesses and public services are aspiring to the heights of scientific excellence. We can no longer dominate as we once did when we were pioneers, so it is bound to follow that our record of citations, for example, will diminish.

The ABRC has invited the Royal Society to examine the state of science in Britain today. The Royal Society has accepted the remit and is about to undertake an inquiry into two broad parts of the world of science. When that report is published, taken with the report which the hon. Member for Stockton, South quoted, we shall be able to make a judgment about whether the quality of science in Britain has declined.

Meanwhile, I repeat that I am seriously worried by such evidence as there is of a loss of scientific skills. We do not know the extent to which some British scientists are returning to this country and the degree to which talented scientists from other countries are coming here. A report is pending, and that will tell us more——

It being half past Two o'clock, the motion for the adjournment of the House lapsed, without Question put.

Mr. Dalyell: On a point of order, Mr. Deputy Speaker. I wish it to be on the record that at least three Conservative Members and three Opposition Members stayed to the end of the debate, would have liked to speak and resent the implication that is often heaped on us that the House of Commons is not interested in science. That allegation at least, can be nailed by the attendance of hon. Members today and by the number who have wanted to take part in the debate.

Mr. Deputy Speaker: The hon. Member has made the point, but he will appreciate that it is not a point of order for me. It is not unusual for right hon. and hon. Members to suffer disappointment because there is not sufficient time for them to be called to speak.

BUSINESS OF THE HOUSE

Ordered,

That, at the sitting on Monday 17th June, the Motion relating to Airports Policy in the name of the Prime Minister may be proceeded with, though opposed, until Twelve o'clock.—*[Mr. Lennox-Boyd.]*

Immigration Controls

Motion made, and Question proposed, That this House do now adjourn.—*[Mr. Lennox-Boyd.]*

2.31 pm

Mr. Dave Nellist (Coventry, South-East): About 200 years ago—it was in 1729—the Irish clergyman and satirist Jonathan Swift put forward a novel solution to the economic problems of that country. He suggested that the poor should turn to baby farming and earn a living by selling their children as fresh meat to British landlords.

In the decades following the second world war, that, in one sense, became a widespread activity, not only in Ireland but in Africa, Asia and the Caribbean. The difference was that the human exports from those countries came here and elsewhere not as food but as labour power for the factories of Britain and Europe.

Tory Governments of the 1950s, with the active participation, for example, of the right hon. Member for South Down (Mr. Powell), who is not now in his place, encouraged immigration to provide cheap labour for British capitalism. Throughout the late 1960s and the 1970s, those black and Asian workers were seen as temporary tools for the employers and industrialists of the capitalist class.

As British capitalism declined from the boom of the early 1950s and the 1960s to the recessions and slumps of the 1970s and 1980s, Tory politicians and the media encouraged working people in this country, in particular the unemployed, the elderly and those in receipt of supplementary benefit, to see immigration as the cause of their increasing problems, with talk of floods of immigrants, of the market being swamped and of alien cultures. Notable among those indulging in such talk was the present Prime Minister, who said on the television programme "World in Action" on 30 January 1978:

> "People are really rather afraid that this country might be rather swamped by people with a different culture . . . if there is any fear that it might be swamped, people are going to react and be rather hostile to those coming in."

Such talk, and the continuing decline of capitalism, fuels the condition in which racism breeds, in which the number of racist attacks increase and in which neo-Nazi organisations can try to spread their poison. It has been reflected recently in the speeches and questions of Tory Back Benchers about the decision of the European Court of Human Rights and in the disgraceful refusal of the Home Secretary and the Government to help Tamil refugees from Sri Lanka seeking asylum in Britain.

Immigrants are not the cause of bad housing, declining living conditions or mass unemployment. In all those categories, black and Asian workers, particularly the young among them, suffer even more than white workers.

In the 1930s there were 3 million without work, yet there was hardly a black face to be seen. Then, as now, the capitalist system proved incapable of organising production in such a way as to provide for the basic requirements of the population and was responsible for mass unemployment and poverty.

In 18 out of the past 20 years, there has been a net outflow of people from this country. Since 1964, 937,000 more people have left this country than entered it. Yet unemployment, in reality, now stands at 5 million. The solution to mass unemployment lies in the unity of workers in opposition to the Government and capitalism.

[Mr. Dave Nellist]

I wish to stress the falsity of the numbers game and the tactics of the Foreign and Commonwealth Office which keep queues long on the Indian sub-continent by having too few entry clearance offices. In a debate two or three weeks ago, we tried to discuss with the Minister a secret document prepared for Ministers at the Home Office which showed that in two significant areas of dealing with immigration for settlement a system of queues operates to regulate the flow of immigrants. It states:

"in the Indian sub-continent (though not elsewhere) applicants have had to wait over two years for interviews. The number of Entry Clearance Officers in practice is the primary regulator of the number of husbands, wives, children and male fiances admitted from the sub-continent in any one year. Provided the queues do not become too long this form of administrative regulation can continue."

In India, Bangladesh and Pakistan there are approximately 17,800 wives, children and elderly dependants waiting for entry visas, according to Home Office estimates. To put that in perspective, if all were allowed to rejoin their husbands, fathers and families in the United Kingdom next week they would represent less than 3 per cent. of the United Kingdom's annual birth rate and still leave a net outflow in the year's migration statistics. If we were to spread such a number equally across all constituencies, the city of Coventry would take an extra 200 people. That would place no real burden on British society.

Time does not permit me to develop those points fully, but only to deal with the effect of the Government's attitude and the way that obstacles and difficulties are put in the way of ethnic minorities who want to visit, let alone stay with, members of their families. It causes long-term disruption to their lives and humiliation, because families are divided.

Legislation — some of it unfortunately passed by a Labour Government — upon which the present Tory Government have built and sharpened immigration laws is based on discrimination against black and Asian workers. The report of the Commission for Racial Equality on immigration control procedures showed that one in 140 blacks and Asians is refused entry to this country compared to one in 4,100 from the old Commonwealth — Australia, New Zealand, Canada and elsewhere. Someone coming from the Indian sub-continent is 30 times more likely to be refused entry than someone from the old Commonwealth. The report spoke of rules and procedures which

"appeared to operate in a climate of racism."

That is true unless one can run 100 m in less than 10 seconds, comes from South Africa and calls oneself Zola Budd. Then, of course, the editor of the *Daily Mail* and the Tory Government would be one's firm friends.

In over 50 cases with which I have dealt I have seen long waits for interviews stretching into years; methods of questioning which bear more relation to the Spanish inquisition than anything that would be expected of normal interviews; and assumptions that applicants are bogus. They must prove their innocence. Justice is turned on its head, in particular in relation to the notorious primary purpose rule on marriages.

I do not have time to deal with each of the Minister's refusals. I shall give an illustration of the primary purpose rule and the way that it is operated by the Home Office. One of the earliest cases with which I dealt was that of an Indian man seeking entry to Britain to marry. The Minister here today said that that marriage was bogus and refused that man the right to enter. The girl had a baby. I asked the Minister whether he was seriously telling me that a woman would have a baby simply to let someone into the country. Since his entry has again been refused, I must assume that that is what the Minister believes. The couple have had a second baby, and are still in exile in Copenhagen. I could repeat that story for dozens of cases in Coventry, for hundreds of cases in the west midlands and for thousands of cases nationally.

Last year, in the Indian sub-continent, 46 per cent. of husbands and male fiancés were refused entry clearance, 88 per cent. of them on primary purpose grounds. Today is our first opportunity to debate the decision of the European Court of Human Rights. The court held that the Tory Government had breached article 8 of the convention and practised sex discrimination. The Minister should say today, without qualification, that that discrimination will be eliminated by giving women in Britain the same rights as men have to be joined by their spouses. There should be no equality of misery or more tightening of the laws. The Government must not remove rights from men and place greater restrictions on the entry of wives. Those families have waited for years to be reunited. Children are growing up not knowing their fathers. What will the Minister tell them today?

Unfortunately, the primary purpose rule has its roots in legislation introduced in 1977 by the Labour Government. It was made explicit by the Tories in 1980, and was further tightened in 1983. We are often told that, under the system of British justice, a person accused is innocent until he is proved guilty. The procedures used in the implementation of immigration law tear that idea to shreds. It is for the person applying for entry clearance to prove his innocence, or to prove that his visit is genuine. In the case of someone wishing to settle with a husband or wife, he or she must prove that the primary purpose of the marriage is not to gain entry to Britain.

That is the most hypocritical and ridiculous criterion. Perhaps the Home Office and the Foreign and Commonwealth Office should develop a love detector to help immigration officers and entry clearance officers with their investigations. If we were to examine the motives behind the marriages of many Tory Members of Parliament, I am sure that the main one would be money. Equally, I am sure that the Government would not dream of banning marriages between Tory Members of Parliament and their spouses, or between wealthy people in general, on the basis that it would lead to an unfair distribution of wealth.

Mr. Tony Banks (Newham, North-West): Does my hon. Friend agree that the British establishment has largely maintained itself through arranged marriages?

Mr. Nellist: That could easily be proved historically. It happens from the royal family down to the present leadership of the Tory party.

The judgments and refusals under the primary purpose rule are even greater than the figures I gave earlier of wives, husbands and families waiting to join people in Britain. According to a written answer given on 29 April, the number of refusals of leave to enter the United Kingdom for husbands and male fiancés from the Indian sub-continent, based on the primary purpose rule, was 970

in 1983 and 1,120 in 1984. The lives of more than 2,000 people have been shattered by the decisions of the Tory Government.

The Government justify the immigration rules for husbands and male fiancés by saying that strictly controlled immigration is necessary, especially at a time of mass unemployment, for good community relations. That is completely bogus. In reality is is part of a conscious plan by the Government to divide, and therefore to rule, black and white workers in Britain. If working people are blaming one another for causing the worst conditions to be found in our capitalist society, for causing unemployment and for being responsible for unfit housing and declining living standards, the real culprits — the Government—get off scot free. Responsibility lies with the Government and the system which they represent.

I am a sponsor and supporter of the West Midlands Divided Families Campaign. The campaign, along with others in the north-west and the London area, demands that changes should be made to alleviate some of the worst aspects of the way in which immigration rules are imposed on families between Britain and the Indian sub-continent.

I shall conclude my remarks by stating some of the demands of the campaign. Some will require only administrative changes — for example, an end to all queues for entry clearance could be achieved by increasing the number of entry clearance officers in the high commissions in the Indian sub-continent. The campaign demands that all independently investigated cases be allowed entry clearance without delay on the basis of village visit reports. It urges that all family cases which have been refused should be allowed now, as independent village inquiries have shown consistently that in the cases refused the number of false applications has been negligible and that the suffering caused to families is unjustified.

The campaign urges that the implementation by the Home Office of the procedural recommendations as outlined by the CRE report should be started forthwith. It demands the establishment of British posts in Sylhet and Mirpur to save family expense and tiring journeys; the end of contacts between entry clearance officers and the Inland Revenue; the end to all investigations into non-applicant relatives, which are used to delay and refuse applications; the end of the use of age assessments of applicants and an amnesty for illegal entrants who have made Britain their home. I would add that compensation should be paid to those who have been deported by the Government.

The campaign demands that applicants should have a right to be accompanied by an independent person who is capable of monitoring interpretation when they attend entry clearance interviews.

I and other Labour Members have said persistently in recent months that tape-recording facilities should be allowed here, at ports of entry and at high commissions in the Indian sub-continent. I do not accept the statement made by the Under-Secretary of State for Foreign and Commonwealth Affairs when he concluded his visit to Pakistan and Bangladesh earlier this year. He said that the cost of providing official tape recordings of interviews of a proper standard would be disproportionate to the benefits. When an experiment was conducted in 1978, tape recording was ruled out by the Foreign and Commonwealth Office and by the Home Office because of problems of extraneous noise and the difficulties caused by operating with inadequate facilities. It was suggested that a recording of a suitable standard could be produced only by the use of sophisticated equipment in rooms which had been sound-proofed.

If those are the difficulties that have to be overcome before an interview can be recorded on tape, what are the problems of translation and understanding that already exist between entry clearance officers and those they interview? If the questions and answers could not be recorded properly on tape, I suggest that the present system does not allow for a proper understanding of questions, answers and translations.

In a letter to me dated 23 May the Under-Secretary of State for Foreign and Commonwealth Affairs stated that many people talk softly when they are in strange circumstances and it would be disturbing for them to be asked constantly to speak up. He told me that applicants might be put off by sophisticated recording equipment of the sort that would be needed to produce proper recordings and that much of the value of spontaneity of interviews would be lost. I suggest that it would not be lost to those being interviewed. If people are put off, as it were, by the presence of strange equipment, they are even more put off by the harassment that they suffer by the nature of the interviews that take place, which involve the examination of family trees, age assessments and questions on many other issues. This is the process that confronts those who are trying to join their families.

The west midlands campaign wants interviews to be tape recorded so that the recording can back up accounts of what questions were asked and what answers were given. It demands that documents should be accepted in accordance with civil law and that the burden of proving them insufficient should lie with the immigration authorities. It demands that adjudicators of immigration appeals must be appointed by the Lord Chancellor's office and should include those with legal experience and members of the ethnic minority communities. It demands also that legal aid should be available for all immigration appeals.

The campaign wants various legal changes to be made. It says that the burden of proof should be lifted from the applicant and placed on the Home Office so that it has to disprove a relationship. That is a demand which I have supported in my earlier remarks. It demands that appellants should be present at their own appeals; that no children under 18 at the time of first application should be disqualified from future applications; the abolition of the requirement that men settled after 1973 should be able to support and accommodate wives and children; the abolition of all fees for entry clearance; and the provision under the immigration rules of the same right of family reunion to all residents in Britain as is presently accorded to EEC nationals.

I support every one of the reforms that the west midlands campaign for divided families has put forward, but I have to say to the House—and, more importantly, to those working people outside this Chamber — that the real need is to abolish the racist immigration laws and controls. For that we need a new Government. We need to end the system which supports and allows the conditions which breed racism and enables racist ideas to develop.

A warning needs to be given in the House. While unemployment, particularly among young people and school leavers, is allowed—in fact, designed—to rocket under the Tory Government's economic policies, there will be those in the National Front, the British Movement

[Mr. Nellist]

and other neo-Nazi organisations who will turn to young white school leavers and give them the simple equation, "If we were to get rid of 3 million black people in Britain there would be 3 million jobs for those registered as unemployed."

We have seen the effects of the attempts at recruitment by the neo-Nazi organisations at football clubs not only here but on the continent of Europe. We have seen it in the events of the past month at football matches. This House, the Labour party, and anyone concerned with ending the conditions which breed racism and ending the effects of those conditions, and the immigration controls used by the Tory Government, must explain to young people that there is only one solution. Capitalism, with all its attendant problems of unemployment, bad housing and poor living conditions, has to be abolished. The roots of racism lie in those economic conditions. Socialism must be built in Britain so that all the millions of people, whether black or white, whatever their cultural or religious differences, can live in a harmonious society, free from the conditions that capitalism has imposed, and free from all the racist smears put forward by neo-Nazi organisations and, unfortunately, echoed by hon. Members in this Chamber. It must all be confined where it belongs—in the dustbin of history.

2.52 pm

The Minister of State, Home Office (Mr. David Waddington): Immigration is an emotive subject. There are always those who are willing to exploit people's fears that an insufficiently tough control will imperil their jobs and the jobs of their children. There are also plenty of people on the extreme Left who see concern about the control among the ethnic minority communities as a splendid opportunity to stir up trouble and create division and conflict in a society the destruction of which they are presumably anxious to hasten.

The House will draw is own conclusions from the diatribe about capitalism with which the hon. Member for Coventry, South-East (Mr. Nellist) opened his speech. I do not think that there are many people in Britain who have failed to notice that black people are not queuing to get into Socialist countries such as the Soviet Union. Black people are queuing in their anxiety to get to the West, to get to countries where prosperity has been created and is still being created under the capitalist system. The hon. Gentleman was talking sheer nonsense when he connected his absurd attack on capitalism with immigration control, a subject which deserves serious and not frivolous debate of the type in which he indulged.

The hon. Gentleman's complete ignorance of the whole subject was, incidentally, fully demonstrated by what he said about Zola Budd. I should have thought that everyone in Britain now knows perfectly well that Zola Budd was admitted to Britain and was entitled to come here as the minor daughter of a British citizen father. No power on earth — certainly no power given to any British Government—could have prevented her from coming. We should not display such ignorance and try to confuse her application for naturalisation, which is an entirely different matter, with the question of her right to come here.

The hon. Gentleman was also talking nonsense when he spoke about our "racist" immigration laws. If he had troubled to read the immigration rules he would know that they are applied to all, regardless of race. He would also know that the first effective immigration rule orders immigration officers to carry out their duties without regard to race. He spoke about the number of people refused at our ports of entry and said that more people were refused from some countries than from others. I should have thought that it was patently obvious that more people would try to come here from countries where there was chaos, economic depression and so on than, for instance, from Australia, New Zealand or the United States of America.

It behoves us to discuss these matters calmly and with a bit of common sense, knowing the mischief that can be wrought by intemperance and a complete distortion of the facts such as that indulged in by the hon. Gentleman.

No western Government operate or could operate without immigration control. No doubt many Socialist countries could, because their problem is not to keep people out but to keep them in. But countries in the West, where there is prosperity, have all found it impossible to operate without an immigration control, and without dashing the hopes of many people and telling them that they cannot live in the country to which they wish to come, however much they may want to do so.

I notice from the Order Paper that the title of the hon. Gentleman's debate is "Family reunion", and it should be said at this stage that we, like our predecessors, have recognised that there must be provision in the rules for people already here to be joined by their families. Over the past 10 years, that policy has resulted in the admission of about one third of a million wives and children of men settled here. If the hon. Gentleman took just a moment to read the immigration rules and learned something about immigration control, he would discover that our system of immigration control was biased in favour of the admission of families and that, as a result over the past 10 years we had seen the admission of no fewer than one third of a million wives and children.

The hon. Gentleman complained about the process of entry clearance in the Indian sub-continent. He likes to dissociate himself from the actions of the previous Labour Government, but it is right to remind him that now our effective staff in Bangladesh dealing with entry clearance is greater than the effective staff when the Labour Government were in office. What is more, people do not have to wait as long in the Indian sub-continent for their applications for entry clearance to be heard as they did under that Labour Government.

The hon. Gentleman complained about the refusal of family applications. He must be living in a little world of his own if he does not know that a great deal of fraud has been involved in applications in the Indian sub-continent over the years and that entry clearance officers have always had a difficult job separating truth from fiction. Obviously the entry clearance officers have to judge whether a person is telling the truth, and it is difficult to see how it would be possible to do without a system dependent initially on a judgment made by an individual officer.

However, the decision does not just depend on an individual officer. There is a sophisticated appeals system. Anyone who is aggrieved by the decision of the entry clearance officer can go before an adjudicator, and often he also has the right to go on from the adjudicator to the immigration appeals tribunal.

The hon. Gentleman has made his point about the tape recording of entry clearance interviews. I have not come across very many cases where on appeal there is much dispute about what the applicant and his or her witness said at the original interview. Far more often matters turn on the significance of what admittedly was said. I do not think that this issue can be as important as it is cracked up to be.

Mr. Nellist *rose*——

Mr. Waddington: I am sorry; I cannot give way to the hon. Gentleman, He left me very little time in which to reply. In any event, tape recording in the Indian sub-continent is not a matter for me.

I remind the hon. Gentleman that the judgment of the European Court does not amount to a sweeping condemnation of the Government's immigration policies. On the contrary, the court accepted that the 1980 rules had the completely legitimate aim of controlling primary immigration and protecting the domestic labour market. The court rejected the allegation that there had been degrading treatment, and it also rejected the allegation that there had been discrimination on grounds of race. It also said that there had been no violation of article 8 which protects the right to family life and said that there was no general obligation on a country to allow a couple to settle in that country even though one of them was a national of it. The only violation which the court found was one of sex discrimination, because the rules made it easier for women to join men than for men to join women.

We have already made it clear that we shall abide by the court's decision and make rule changes to bring ourselves into compliance. But there is no question of our allowing our general policy of firm immigration control to be undermined. The hon. Gentleman will have to wait to hear precisely what we intend to do. He will not expect me today to describe to him the detailed——

The Question having been proposed after half-past Two o'clock and the debate having continued for half an hour, MR. DEPUTY SPEAKER *adjourned the House, without Question put, pursuant to the Standing Order.*

Adjourned at one minute past Three o'clock.

Written Answers to Questions

Monday 3 June 1985

CHURCH COMMISSIONERS

Parliamentary Questions

Mr. Peter Bruinvels asked the right hon. Member for Wokingham, as representing the Church Commissioners, how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Sir William van Straubenzee: No priority written questions have received holding replies.

Mr. Peter Bruinvels asked the right hon. Member for Wokingham, as representing the Church Commissioners, how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break down these figures into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Sir William van Straubenzee: The total number of parliamentary questions asked during the last three complete Sessions, and the current Session (up to May 1985) are, with the classifications requested, as follows:

Session	*Questions*			
	Oral	*Priority written*	*Ordinary written*	*Total*
November 1981-October 1982	5	11	5	21
November 1982-May 1983	9	7	1	17
June 1983-October 1984	21	14	14	49
November 1984-May 1985	14	3	6	23
Totals	49	35	26	110

Note—The figures relate to questions tabled for answer by the Attorney-General but do not include questions withdrawn or transferred.

* The numbers given are the numbers of oral questions tabled whether or not they were reached. They do not include supplementaries.

† Where a written or a priority written question was initially given a holding reply and later a substantive reply, this has been counted as a single question and answer.

ATTORNEY-GENERAL

Parliamentary Questions

Mr. Peter Bruinvels asked the Attorney-General how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

The Attorney-General: I and the Solicitor-General gave six holding replies to priority written questions tabled for answer by me in Session 1983-84 and four holding replies to such questions during the current Session (to May 1985). This is 4·6 per cent. and 4·7 per cent. respectively of the total number of priority written questions tabled for answer by me in those sessions.

Mr. Peter Bruinvels asked the Attorney-General how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

The Attorney-General: The information requested is shown in the following chart.

Parliamentary questions answered by the Attorney-General or the Solicitor-General
(Information based on Departmental records)

	Session 1981-82	*Session 1982-83*	*Session 1983-84*	*Current Session (to 24 May)*
Oral*	55	31	75	39
Priority written†	71	54	130	85
Ordinary written†	169	109	216	96

TGWU (Ballot Rigging)

Mr. Soames asked the Attorney-General if the Director of Public Prosecutions (1) will delay any decision on whether or not to take proceedings in the case of allegations of ballot rigging in the Transport and General Workers Union in Bristol, until after voting has finished in the second ballot for general secretary;

(2) if he has yet received the report of the inquiry into allegations of ballot rigging in the Transport and General Workers Union in Bristol, being conducted by the chief constable of Avon and Somerset constabulary.

The Attorney-General: The Director of Public Prosecutions has not as yet received the final police report into these allegations. That report will be considered by the director when it is received in the usual way.

TRANSPORT

Irradiated Fuel

19. **Mr. Tony Banks** asked the Secretary of State for Transport if he is satisfied with safety standards for the transport of irradiated fuel.

Mrs. Chalker: The regulations governing the safe transport of irradiated nuclear fuel are based on the stringent standards of the International Atomic Energy Agency. During the 20 years that this material has been transported in this country, there has not been a recorded incident involving death or injury.

M62 (Service Stations)

Mr. Harrison asked the Secretary of State for Transport on what date his officials last carried out an annual inspection of each service station between Hull and Liverpool on the M62; and what was the conclusion of their inspection of the telecommunications systems at that time.

Mr. Ridley: The motorway service areas on the M62 were inspected on the dates given in the following table:

Motorway service area	*Date*
Burtonwood	19 April 1985
Birch	10 April 1984
Hartshead Moor	9 July 1984

The Ferrybridge service area was inspected prior to opening on 2 April 1985. At all sites the telecommunications systems were found to be satisfactory.

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Transport how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Ridley: The information is as follows:

	1983-84 Session	*1984-85 Session to date*
Holding replies	52	26
Percentage of total	4·76	4·10

In most cases where a holding reply is given it is because the detailed information requested is not readily available and would take longer to assemble than the time allowed.

Mr. Peter Bruinvels asked the Secretary of State for Transport how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Ridley: The information requested is as follows:

	Oral	*Priority written*	*Written*	*Total*
1981-82	382	448	559	1,389
1982-83	234	384	445	1,063
1983-84	497	1,091	1,032	2,620
1984-85*	332	637	571	1,540

*7 November 1984—31 May 1985.
Source: Departmental records.

British Rail (Southern Region)

Sir David Price asked the Secretary of State for Transport what is his policy towards the scale and speed of stock replacement on the Southern Region of British Rail, especially in respect of carriages; and if he will make a statement.

Mr. David Mitchell: Responsibility for drawing up proposals for the replacement of traction and rolling stock anywhere on the rail network lies with the British Railways Board. Any investment proposal that requires our approval will receive our support if it is consistent with the financial and business objectives we have set the board and offers a sound prospect of improving the finacial position of the railway.

French Government (Cabotage Rights)

Sir David Price asked the Secretary of State for Transport what representations he intends to make to the French Government about their continued denial of cabotage rights to British registered ships in spite of the recommendations of the Euro pean Commission; and if he will make a statement.

Mr. David Mitchell: The European Commission has put to the Council a proposal for a regulation which would, among other things, require all member states to open up their cabotage trades to carriers from other member states. Both when the Council discusses this proposal, and in my bilateral contacts with French colleagues, I shall be stressing the importance which this Government attach to the adoption of such a policy.

Road Safety

Mr. Sheerman asked the Secretary of State for Transport if any arrangements have been made to set up a national scheme for the introduction of traffic clubs for pre-school children, with the aim of encouraging the early development of road safety skills; and if he will make a statement.

Mrs. Chalker: I am actively working on possibilities and will make a statement as soon as possible.

Roads (Safety Fencing)

Mr. Steen asked the Secretary of State for Transport what his aim is in updating existing criteria relating to the provision of safety fencing on dual carriageways and motorways.

Mrs. Chalker: To ensure that decisions on the provision of safety fences are based on up-to-date information.

Trunk Roads (London)

Mr. Tony Banks asked the Secretary of State for Transport, pursuant to the reply on 5 April, *Official Report*, column 58, about the proposed trunking of 65 miles of road in London, what is the area referred to in the answer.

Mrs. Chalker: The London area.

Local Government Reform

Mr. Tony Banks asked the Secretary of State for Transport how many civil servants in his Department and at what grades are currently engaged on work associated with the abolition of the Greater London council and the metropolitan county councils; and what is the total cost.

Mrs. Chalker [*pursuant to the reply*, 20 May 1985, c. *283*]: On 21 May the number of staff working on abolition of the GLC/MCCS in my Department was as follows:

Grade	Estimated full-time equivalents
Grade 3	0·7
Grade 4	0·7
Grade 5	2·3
Grade 6	2·1
Principal	6·7
PPTO	4·1
Statistician	0·9
Senior executive officer	1·0
Higher executive officer/HEOD	4·2
Executive officer/administration trainee	5·3
PTO1	3·2
PTO2/PTO3	2·1
Clerical officer/assistant	4·9
Senior personal secretary	0·9
Personal secretary	3·0
Total	*42

* Does not sum owing to rounding.

The cost, including accommodation, of employing these staff for a whole year would be approximately £1·14 million (1985 prices).

PRIME MINISTER

Alzheimer's Disease Society

Mr. Alfred Morris asked the Prime Minister what representations she has received from the Alzheimer's Disease Society; what reply she is sending; if there is any action she will be taking; and if she will make a statement.

The Prime Minister: The society wrote to me on 13 May seeking increased financial support from the Government. I have replied offering discussions with officials on how its developing work might best be funded in the future.

Nurses (Pay)

Mr. Alex Carlile asked the Prime Minister if she will meet the general secretary of the Royal College of Nursing to discuss the report of the review body on nurses pay.

The Prime Minister: I have at present no plans to do so.

Prime Minister of Grenada

Mr. Parry asked the Prime Minister if she will make a statement on her recent meeting with the Prime Minister of Grenada.

The Prime Minister: The Prime Minister of Grenada, the Hon. Herbert Blaize, visited London as the guest of Her Majesty's Government from 18 to 25 May. This was Mr. Blaize's first visit to Britain since taking office following elections in Grenada in December 1984. We discussed a number of matters of mutual interest and, in particular, measures aimed at improving the economic and social well-being of the people of Grenada.

Lindop Report

Mr. Fisher asked the Prime Minister whether she will publish a full list of all sources of potential Government data on identifiable individual members of the public updating the information in appendix 6 of tables 1 and 2 of the Lindop report.

The Prime Minister: Tables 1 and 2 of appendix 6 of the Lindop report do not contain information about the sources of personal data held by Government Departments. Such information is not available centrally and could not be obtained with disproportionate expense. Once the registration provisions of the Data Protection Act 1984 come into effect, however, individual Government Departments will be required to register the personal data which they hold and to describe the sources of their data in the register established under section 4 of the Act which will be available for public inspection.

Milk Quotas

Mr. Nicholson asked the Prime Minister if she will take steps to resolve the conflict of interest between dairy farmers in Northern Ireland and the rest of the United Kingdom in the matter of distribution of quotas.

The Prime Minister: I recognise that there is a problem about allocation of quota to certain categories of producers in Northern Ireland and Ministers are continuing to address this question.

Mr. Molyneaux asked the Prime Minister when she expects to be in a position to give a considered reply to the letter dated 3 May from the right hon. Member for Lagan Valley, about milk quota equalisation arrangements.

The Prime Minister: I have written to the right hon. Gentleman today.

NHS Hospitals (Private Management)

Mr. Dobson asked the Prime Minister, further to her answer of 20 May, *Official Report* column *276*, to the hon. Member for Holborn and St. Pancras, whether it is Government policy that review body terms and conditions would apply to doctors and nurses working in any National Health Service hospitals which might be managed by private companies.

The Prime Minister: The pay of nurses and doctors employed in the National Health Service is subject to the recommendations of the review bodies, and their national terms and conditions of service are determined by my right hon. Friend the Secretary of State for Social Services following negotiations with the professions concerned. We have no plans to change this and no changes in management arrangements for any NHS hospital could affect the position.

THE ARTS

Parliamentary Questions,

Mr. Peter Bruinvels asked the Parliamentary Under-Secretary of State answering in respect of the Arts (1) how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply;

(2) how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Waldegrave: Prior to the 1983-84 Session, the Office of Arts and Libraries was part of the Department of Education and Science. Questions were then tabled to the Secretary of State and cannot be separately identified without disproportionate cost. Since June 1983 the figures are as follows:

	Oral	*Priority Written*	*Written*
1983-84	108	180	70
1984-85 (up to Whit Recess)	54	34	33

In 1983-84 38 priority written questions, or 21 per cent., initially received holding replies. Of these, 30 received substantive replies within one week of the holding reply and the remaining eight within two weeks. In 1984-85, up to the Whit Recess, 10 holding replies have been entered representing 29 per cent. Of these, five received substantive replies within a further week, two within two weeks and the remaining three, within three weeks.

Source: Departmental statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) The oral count includes only those oral questions actually reached, plus supplementaries counted as separate questions and

(b) the written count includes Orals not reached, Writtens, Priority Writtens and holding replies all counted as separate Questions.

The overall POLIS count will therefore exceed the departmental count.

Arts Sponsorship

Mr. Freud asked the Parliamentary Under-Secretary of State answering in respect of the Arts if he will publish in the *Official Report* the number of applications received to date *(a)* under the pound for pound and *(b)* under the 33 per cent. business sponsorship incentive schemes; what percentage of the applications have been awarded less than the amount requested; what is the average time of processing; how much of the £1 million Office of Arts and Libraries contribution remains in the current financial year; and if he will make a statement.

Mr. Waldegrave: The information is as follows:

Number of applications received

	October 1984 to March 1985	*April 1985 to May 1985*	*Total*
1 to 3	74	18	92
1 to 1	—	36	36
Combined	—	23	23
Total	74	77	151

*Percentage of applications awarded less then initially requested**

	Number awarded less	*Percentage of applications per cent.*
October 1984 to March 1985	8	11
April 1985 to May 1985	7	9

* Variations from the sponsorship amount initially submitted reduced the award values in these cases.

Notes:

Most applications are considered and decided within a time-scale of eight weeks.

After allowing for commitments already entered into, £0·5 million is now available for new awards in the remainder of the present financial year.

CIVIL SERVICE

Management Consultants

Mr. Mates asked the Minister for the Civil Service if he will list the contracts, with the subject of assignment, awarded to management consultancy firms by the Management and Personnel Office in 1984, with the name of the consultants concerned.

Mr. Hayhoe: The contracts awarded to management consultancy firms during the calendar year 1984 are as listed.

Consultancy firm	*Contract*
Coopers and Lybrand Associates	A study of management-staff communications in the Civil Service
Diane Bailey Associates	Open learning material project on staff reporting and appraisal
Industrial Training Services Ltd.	Measuring Training Activity
Interlogos Ltd.	Pilot follow-up of science and technology recruitment
Latchkey Ltd.	Media aspects of open learning project on staff reporting and appraisal
OD (Management Consultancy) Ltd.	Review of incentive schemes in the Crown Suppliers organisation

Parliamentary Questions

Mr. Peter Bruinvels asked the Minister for the Civil Service (1) how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply;

(2) how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Hayhoe: The information requested is contained in the following table:

	Oral	*Priority written*	*Written*
1981-82	32	21	33
1982-83	31	14	32
1983-84	58	39	27
1984-85*	28	21	43

* Up to Whit Recess.

In 1983-84, no holding replies were given to any priority written questions. In 1984-85, up to the Whit Recess, two holding replies representing 10 per cent. were entered, and were followed by substantive answers within one week.

Source:

Departmental statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) the oral count includes only those oral questions actually reached,

plus supplementaries counted as separate questions, and

(b) the written count includes orals not reached, writtens priority writtens and holding replies all counted as separate questions.

The overal POLIS count will therefore exceed the departmental count.

Unions (Meetings)

Mr. Parry asked the Minister for the Civil Service when he last met representatives of the Civil Service unions; and what matters were discussed.

Mr. Hayhoe: On 30 April, when my right hon. Friend the Secretary of State for Employment discussed the question of arbitration with the general secretaries of four Civil Service unions in relation to their 1985 pay claims.

OVERSEAS DEVELOPMENT

Nicaragua

Mr. Foulkes asked the Secretary of State for Foreign and Commonwealth Affairs what disciplinary action has been taken against any staff in connection with the transmission of information about policy on aid to Nicaragua to hon. Members of Parliament.

Mr. Raison: Following internal inquiries about the unauthorised release to the press of classified Government papers, a probationary clerical officer in the Overseas Development Administration has been suspended without pay pending a decision on the case.

El Salvador

Mr. Corbyn asked the Secretary of State for Foreign and Commonwealth Affairs what aid Her Majesty's Government are giving to the Government of El Salvador for the financial year 1985-86.

Mr. Raison: British development aid to El Salvador in 1985-86 will consist of about two scholarships in the United Kingdom under technical co-operation, and expenditure on emergency supplies from the grant of £100,000 agreed in 1984.

Overseas Students

Mr. Key asked the Secretary of State for Foreign and Commonwealth Affairs what new proposals he has to help more overseas students from developing countries to study in Britain.

Mr. Raison: I propose to set up a new scheme called the Overseas Development Administration shared scholarship scheme (ODASSS). Up to 450 scholarships over five years will be available (up to 50 in the first year and up to 100 a year thereafter). It will be jointly funded by my Department and by those universities and polytechnics which wish to participate. Awards will be open to students from developing Commonwealth countries.

The first awards will be in academic year 1986-87 and I shall seek the appropriate financial provision in due course. The awards will be for those of excellent academic calibre who do not qualify for assistance under existing Government support schemes and who are unable to finance the cost themselves.

The scheme has been drawn up after informal discussions with organisations and individuals concerned with overseas students and higher education in Britain. My Department will be having further detailed discussions with these organisations before the scheme comes into operation.

SOLICITOR-GENERAL FOR SCOTLAND

Parliamentary Questions

Mr. Peter Bruinvels asked the Solicitor-General for Scotland how many of what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

The Solicitor-General for Scotland: The information requested is given in the table.

No of Questions set down for priority written answer where a holding reply was given initially

Session	*Number*	*Percentage*
1983-84	Nil	Nil
1984-85 (as at 24 May 1985)	4	18·2

Mr. Peter Bruinvels asked the Solicitor-General for Scotland how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

The Solicitor-General for Scotland: During the last three complete Sessions and the current Session to date, according to the departmental statistics I have answered 385 parliamentary questions. The breakdown of these questions into oral, priority written and ordinary written is given in the table.

Session	*Oral questions*	*Priority written questions*	*Ordinary written questions*	*Total*
1981-82	57	3	18	78
1982-83	63	5	14	82
1983-84	74	32	41	147
1984-84 (as at 24 May 1985)	45	22	11	78

PUBLIC ACCOUNTS COMMISSION

Parliamentary Questions

Mr. Peter Bruinvels asked the right hon. Member for Taunton, as representing the Public Accounts Commission, how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Sir Edward du Cann: None of the questions tabled for answer by me has received a holding reply.

Mr. Peter Bruinvels asked the right hon. Member for Taunton as representing the Public Accounts Commission, how many parliamentary questions have been answered by him in the last Session, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Sir Edward du Cann: In the last Session I answered six questions, of which one was tabled as an oral question, and five as priority written questions. In the current Session I have answered three questions; one oral and two priority written.

TRADE AND INDUSTRY

Regional Preferential Assistance

Mrs. Clwyd asked the Secretary of State for Trade and Industry if he will update the figures for expenditure on regional preferential assistance given in the answer on 17 January 1984, *Official Report*, column *160-61*, to 1985 and at constant prices.

Mr. Norman Lamont: The expenditure figures provided in the answer on 17 January 1984 have been extended to 1984-85 and put on to a constant 1984-85 price basis in the table that follows.

Expenditure at 1984-85 prices

£ million

Region	*1974-75*	*1975-76*	*1976-77*	*1977-78*	*1978-79*	*1979-80*	*1980-81*	*1981-82*	*1982-83*	*1983-84*	*1984-85*
Northern	392·0	474·2	536·2	303·7	287·1	227·5	189·7	208·0	175·8	134·6	122·2
North West	286·0	274·3	233·2	130·8	159·2	133·4	170·3	186·3	135·1	107·0	100·5
Yorkshire and Humberside	51·4	59·0	68·1	61·2	67·6	49·4	67·7	72·9	58·4	37·5	42·1
East Midlands	15·4	7·7	6·3	5·4	7·7	6·5	5·8	10·1	15·0	16·6	10·2
South West	44·0	29·0	26·2	17·1	17·1	16·5	14·9	17·5	17·9	12·6	13·2
Scotland	441·2	637·8	473·1	268·0	266·6	181·5	237·1	259·6	409·3	234·7	181·1
Wales	232·3	257·4	253·4	176·7	190·9	160·5	221·5	233·8	200·5	119·8	140·7
Great Britain	1,462·5	1,739·3	1,596·5	971·6	1,090·2	798·8	915·5	1,006·7	1,011·9	664·7	610·0
Northern Ireland	n/a	n/a	192·3	174·1	203·8	175·9	176·6	127·6	161·3	120·5	134·9

Notes:

Expenditure on a 1984-85 price basis for each year is calculated by applying the appropriate deflator to expenditure at current prices.

Since the Answer on 17 January 1984 there have been minor improvement in the availability of data which now enable the figures for the Northern and north west regions to be given on a standard region basis for the years 1981-82 and 1982-83.

1. All figures are gross and include payments to nationalised industries.
2. Includes west midlands for earlier years.
3. For some years the Great Britain expenditure includes items which cannot be broken down to the regional level.
4. Northern Ireland has a different range of financial incentives available but the figures have been restricted to aids similar to the main forms of regional preferential assistance.
5. Figures for 1984-85 are provisional estimates.

The items included in the expenditure are regional development grants and regional seléctive assistance under the Industrial Development Act 1982, and expenditure on land and factories in the assisted areas by the English Industrial Estates Corporation and the Scottish and Welsh development agencies. Regional employment premium (discontinued in January 1977) has been included for the early years.

Pirate Radio

Mr. Rathbone

asked the Secretary of State for Trade and Industry what actions he is taking to eliminate extra-territorial pirate radio broadcasting.

Mr. Butcher: The unauthorised broadcasting stations currently operating outside United Kingdom territorial waters in the North sea are based on Panamanian register vessels. Their operation contravenes International Radio Regulation 2665 which prohibits the establishment of broadcasting stations outside national territories and Recommendation No. 9 of the World Administrative Radio conference 1979 which calls on Administrations to prevent their operations.

My Department has written to the International Telecommunication Union (ITU) about the stations' unauthorised operations. We and the ITU have been in contact with the Panamanian Administration. Since the stations' offices are reportedly based in the United States of America, my officials have also written to and had discussions with members of the United States Administration, drawing their attention to obligations of ITU members and seeking their assistance to remove the stations. At a recent Commission of the European Post and Telecommunications (CEPT) meeting in Italy, we sought the co-operation of all other European Administrations to remove the stations. We shall continue to pursue the matter at the next CEPT meeting to be held in France in June.

The Marine &c. Broadcasting (Offences) Act 1967 makes it an offence for anyone in the United Kingdom to supply or promote the stations and for a British national to engage in the stations' operations. When my Department receives information of possible offences it is immediately passed to the Office of the Director of Public Prosecutions, who usually asks for a police investigation before deciding whether to institute proceedings under the Act.

These unauthorised stations interfere with the radio communications of the North sea oil and gas industry and jam frequencies which should be allocated to legitimate radio stations. I am determined, within the resources availavble and the constraints of our jurisdiction, to take all possible action to prevent their continued operation.

EC Tourism Council

Mr. Gregory asked the Secretary of State for Trade and Industry if he will make a statement on the European Community Tourism Council held on 23 May.

Mr. Norman Lamont: There was no Tourism Council on 23 May, 1985.

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Trade and Industry how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Butcher: The information is as follows:

Parliamentary sessions

	1983-84		*1984—24 May 1985*	
	Number	*Per cent.*	*Number*	*Per cent.*
Number of priority written questions	1,263	—	746	—
Number receiving holding reply	73	6	129	17

Source: Departmental statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) the oral count includes only those oral questions actually reached, plus supplementaries counted as separate questions, and

(b) the written count includes Orals not reached, Writtens, Priority Writtens and holding replies all as separate questions.

The overall POLIS count will therefore exceed the departmental count.

Mr. Peter Bruinvels asked the Secretary of State for Trade and Industry how many Parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Butcher: The information is as follows:

Parliamentary Sessions

	*1981-82**	*1982-83**	*1983-84*	*1985—24 May 1985*
Total number of Parliamentary questions answered†	3,170	2,216	3,248	1,657
Comprising of:				
Oral	664	476	518	345
Priority written	1,148	819	1,263	766
Written	1,358	921	1,467	546

* These figures are the combined figures of the Departments of Trade and Industry, which were amalgamated at the start of the 1983-84 Parliamentary Session.

† Questions set down in the Order Paper.

Source: Departmental statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) the oral count includes only those oral questions actually reached, plus supplementaries counted as separate questions, and

(b) the written count includes orals not reached, writtens, priority writtens and holding replies all counted as separate questions.

The overall POLIS count will therefore exceed the departmental count.

Pesticides

Mr. Campbell-Savours asked the Secretary of State for Trade and Industry whether the quantity of exports of pesticides by product is recorded and available for publication.

Mr. Fletcher: Limited information on pesticides is published under SITC/R2 Group 591 in the United Kingdom Overseas* Trade Statistics. Information on exports of pesticides by product is not collected.

Manchester Steel Company Ltd

Mr. Litherland asked the Secretary of State for Trade and Industry if he will refer to the Monopolies and Mergers Commission the recent takeover of Manchester Steel Co. Ltd. by Allied Steel and Wire.

Mr. Fletcher: My right hon. Friend will announce his decision as soon as practicable. However, his powers in this case are limited because the steel products concerned are covered by the Treaty of Paris, which gives the European Commission competence on economic and competition issues.

Imports and Exports

Mr. Ralph Howell asked the Secretary of State for Trade and Industry if he will show *(a)* total imports and *(b)* total exports of (i) cereals and cereal preparations, (ii) all agricultural products, (iii) all other imports and exports, (iv) motor vehicles, (v) electrical goods, (vi) steel and (vii) coal for 1979 and 1984; and if he will, in each case, show the difference between *(a)* and *(b)* in actual and percentage terms.

Mr. Channon: The information is as follows:

Value £ million

	1979				**1984*			
	(a) imports (cif)	*(b) exports (fob)*	*Crude balance £ million*	*as per cent. of (a)*	*(a) imports (cif)*	*(b) exports (fob)*	*Crude balance £ million*	*as per cent. of (a)*
(i) Cereals and cereal preparations	668	264	−404	60	629	993	+364	58
(ii) Agricultural products	6,264	1,814	−4,450	71	8,592	3,260	−5,332	62
(iii) Other	42,160	40,988	−1,172	3	70,113	67,252	−2,862	4
of which:								
(iv) Motor vehicles	2,997	1,519	−1,479	49	4,357	1,485	−2,872	66
(v) Electrical goods	3,643	3,633	−9	0	9,988	7,331	−2,657	27
(vi) Steel	998	1,080	+83	8	1,244	1,288	+44	3
(vii) Coal	136	62	−74	54	493	72	−421	85

Sources: The following SITC/R2 data in the United Kingdom Overseas Trade Statistics; (i) Division 04, (ii) Sections 0 & 4 and Division 22, (iv) Groups 781, 782, 783 and Sub-group 784.1, (v) Divisions 75, 76, 77 and Group 716, (vi) Groups 672-675, Sub-groups 678.2, .3, .4 and 799.3, and Items 676.01 (part), .02 (part), 679.42, and 791.99 (part), (vii) Sub-groups 322.1 and 322.2.

Notes: (i) Crude balance is United Kingdom exports (fob) less United Kingdom imports (cif).
(ii) 0 signifies a value of less than 0·5.
(iii) *1984 figures are provisional.

Riding Helmets

Mr. Greenway asked the Secretary of State for Trade and Industry what response he has had from manufacturers of riding helmets following his circular letter about adherence to British Standard 6473; and if he will make a statement.

Mr. Fletcher: We have not yet received replies from all manufacturers contacted and the replies so far do not state clear intentions on future compliance with BS 6473. Officials from the Department will be meeting representatives from the trade shortly to discuss the matter. I shall make a statement following that meeting.

Philippines

Mr. Gerald Howarth asked the Secretary of State for Trade and Industry (1) what was the balance of trade between the United Kingdom and the Philippines to the nearest date that is available and for the previous five years;

(2) if he will list the major United Kingdom export categories in volume and value of trade with the Philippines and vice versa for each of the last five years for which figures are available.

Mr. Channon: Information relating to value only is available, and is as follows:

Table A

Value £m

	Crude balance
1980	−13
1981	−20
1982	−29
1983	−58
1984*	−108
Jan.-April 1985	−41

* 1984 figures are provisional.

Notes:
(i) Information on volume is not available.
(ii) * 1984 figures are provisional.
(iii) O signifies trade of less than £500,000.
(iv) due to rounding the sum of figures in the tables may not correspond exactly to totals given.
(v) crude balance is calculated as UK exports (fob) less UK imports (cif).

Washing Machines and Tumble Driers

Mr. Sheerman asked the Secretary of State for Trade and Industry what representations he has received concerning inducements from Italian state and local authorities to manufacturers of washing machines and tumble driers; and if he will make a statement.

Mr. Butcher: I have received no representations in the past two years about state aids to Italian manufacturers of washing machines and tumble driers. I would be pleased to consider any evidence of unauthorised subsidies contrary to the Treaty of Rome.

Mr. Sheerman asked the Secretary of State for Trade and Industry (1) what is the estimated share of the British market for washing machines and tumble driers enjoyed by the main British-based producers;

(2) if he will list the share of the British market in washing machines and tumble driers taken by Italian imports for each year since 1975;

(3) if he will list the British-made share of the British market for *(a)* washing machines and *(b)* tumble driers for each year since 1975;

(4) if he will list the percentage of the British market in *(a)* washing machines and *(b)* tumble driers supplied: (i) by British manufacturers and (ii) by Italian manufacturers.

Mr. Butcher: Information on market shares of washing machines is given in the table. Information on market shares of tumble driers is not available as sales by United Kingdom manufacturers are not separately identified.

Share of United Kingdom washing machine market taken by:
(Per cent)

	Manufactures in the United Kingdom	*Imports from Italy*

HOME DEPARTMENT

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for the Home Department how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Brittan: The information is as follows:

	Session 1983-84	*Session* 1984-85*
Total number of priority written questions tabled	1,733	900
Number initially given a holding reply	110	65
Expressed as a percentage of total	6·35	6·56

*To 24 May 1985.

Mr. Peter Bruinvels asked the Secretary of State for the Home Department how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Brittan: The information according to Departmental records is as follows:

	Session 1981-82	*Session 1982-83*	*Session 1983-84*	*Session* 1984-85*
Oral†	318	229	511	409
Priority written	879	562	1,733	990
Written	1,098	885	1,817	1,076
Total	2,295	1,676	4,061	2,475

*To 24 May 1985.

†Not necessarily reached during Question time. Holding and pursuant replies are counted as separate answers.

Crime Statistics (Manchester)

Mr. Kaufman asked the Secretary of State for the Home Department if he will provide a breakdown of divisional crime statistics for the city of Manchester by offence, recorded and detected, for each year from 1975.

Mr. Mellor: Information about offences recorded and cleared-up by police forces other than the Metropolitan police is available centrally by police force area only. Statistics of offences recorded by each police force are published annually in "Criminal Statistics, England and Wales" (table 2.4 of the volume for 1983, Cmnd. 9349). Corresponding information for 1984 was published in table 6 of Home Office Statistical Bulletin 6/85 on 12 March 1985.

The number of notifiable offences recorded by Greater Manchester police which were cleared up in each of the years 1975-84 is given in the following table. The number of offences cleared up may be affected by variations in police recording practices. Offences cleared up in one year may include offences initially recorded in previous years.

Number of offences cleared up

	Number
1975	70,700
1976	69,600
1977	71,900
1978	69,200
1979	72,800
1980*	76,300
1981*	85,600
1982*	92,700
1983*	85,500
1984*	69,000

*Figures for 1980 onwards may not be directly comparable with those for previous years because of changes to improve the recording of multiple, continuous and repeated offences.

Mr. Kaufman asked the Secretary of State for the Home Department how many convictions there were for damage to municipal property in the city of Manchester in each year since 1975.

Mr. Mellor: Information collected centrally does not distinguish damage to municipal property from other offences of criminal damage.

Police (Injury Statistics)

Mr. Peter Bruinvels asked the Secretary of State for the Home Department if he will call for reports from each chief constable to show the number of police officers who were injured during the course of their duties in 1984 and 1985 to date; and if he will make a statement.

Mr. Giles Shaw: No. This information could be provided only at disproportionate cost and we are not convinced that its value would justify the resources necessary to collect it.

Prisons

Mr. Peter Bruinvels asked the Secretary of State for the Home Department how often each of Her Majesty's prisons is inspected.

Mr. Mellor: Her Majesty's Chief Inspector of Prisons and his staff carry out a programme of 14 full inspections and about 50 shorter visits (some of which are unannounced) each year.

Prison Governors

Mr. Peter Bruinvels asked the Secretary of State for the Home Department what is the average length of service for a prison governor; and if he will make a statement.

Mr. Mellor: The average period that prison governors have been in the Prison Service is as follows:

Governor class I—24 years 1 month
Governor class II—21 years 7 months
Governor class III—17 years 11 months
Governor class IV—13 years 11 months

Police Vehicles (Computers)

Mr. Corbyn asked the Secretary of State for the Home Department what research is being currently undertaken by the Home Office scientific research and development branch into the possible use of computers in police vehicles.

Mr. Giles Shaw: The Home Office scientific research and development branch is not currently undertaking research into the possible use of computers in police vehicles but a study of the cost-effectiveness of mobile data terminals is expected to start during the next 12 months.

Transport and General Workers Union

Mr. Soames asked the Secretary of State for the Home Department if he has asked the chief constable of Somerset and Avon constabulary to delay the submission of his report on allegations of ballot rigging in the Transport and General Workers Union in Bristol, until after voting has finished in the second ballot for general secretary.

Mr. Giles Shaw: No.

Water Cannon

Mr. Dubs asked the Secretary of State for the Home Department what injuries have been sustained by people participating in tests of water cannon by British police; and in what circumstances.

Mr. Giles Shaw: I understand that in 1982 a police cadet suffered an eye injury during evaluation of a mark 4 water cannon borrowed from the Federal German authorities. He made a full recovery. No other injuries have been reported.

Mr. Dubs asked the Secretary of State for the Home Department what representations he has received concerning the possible use of water cannon by British police.

Mr. Giles Shaw: Since 1 January 1984 my right hon. and learned Friend has received about 40 letters from members of the public about the use by the police of water cannon in situations of public disorder; 11 hon. Members have written to him.

Mr. Dubs asked the Secretary of State for the Home Department (1) what tests of water cannon have been carried out by British police forces; whether there are plans for future tests; and what conclusions have been drawn about the possible use of water cannon by British police;

(2) what makes of water cannon have been tested for possible use by British police forces.

Mr. Giles Shaw: In 1982, two Daimler Benz mark 4 water cannon were borrowed for six months from the Federal German authorities for examination by Home Office scientists and the police. Two prototype British vehicles, built in this country under contracts awarded by the Department, are held by the Metropolitan police for evaluation. Tests to establish their suitability for public order use have not yet been completed.

National Reporting Centre

Mr. D. E. Thomas asked the Secretary of State for the Home Department what national exercises requiring co-ordination of police activity would require the reopening of the national reporting centre.

Mr. Giles Shaw: The national reporting centre comes into operation when it is necessary for it to co-ordinate responses to requests for assistance from chief officers of police. The centre has not been opened for the purpose of national training exercises.

Remanded Persons

Mr. Fisher asked the Secretary of State for the Home Department how many people were on remand in each of the last 10 years.

Mr. Mellor: The available information is on the number of persons proceeded against in 1978 to 1983 who were remanded and is published annually in "Criminal Statistics, England and Wales" (tables 8.4, 8.7 and 8.9 of the volume, for 1983, Cmnd. 9349).

Mr. Fisher asked the Secretary of State for the Home Department how many people remanded in custody were subsequently found to be innocent by the courts in each of the last 10 years.

Mr. Mellor: Information on the number of untried persons who were received into prison department establishments and subsequently found not guilty or not proceeded against is published annually in "Prison Statistics, England and Wales" (table 2.4 of the latest volume for 1983, Cmnd. 9363). Information on the

outcome of proceedings for those remanded in custody is published annually in "Criminal Statistics, England and Wales" (tables 8.6 and 8.11 of the latest volume for 1983, Cmnd. 9349).

Mercenaries (Recruitment)

Mr. Corbyn asked the Secretary of State for the Home Department if he will introduce measures to prevent the recruiting of mercenaries in Britain to fight against the Government of Nicaragua.

Mr. Mellor: We have no present plans for legislation relating to mercenaries. The United Kingdom is playing a full part in the United Nations ad hoc committee on the drafting of an international convention against the recruitment, use, financing and training of mercenaries.

Reading Prison

Mr. Peter Bruinvels asked the Secretary of State for the Home Department if he is satisfied with security and staffing levels at Reading prison.

Mr. Mellor: We are not aware of any major weaknesses in security at Reading prison, but recent press allegations about drug trafficking and misuse are being investigated. My right hon. and learned Friend has recently announced an increase in the number of prison officers to be recruited. This is intended to ease staffing problems at local prisons such as Reading.

Road Safety (Westminster)

Mr. Peter Bruinvels asked the Secretary of State for the Home Department if he will call for a report from the Commissioner of Police of the Metropolis as to the road safety aspects of the unmarked crossing between St. Stephen's entrance and St. Margaret's churchyard.

Mr. Giles Shaw: I am informed that the Commissioner of Police of the Metropolis takes the view that, provided normal care is exercised both vehicular and pedestrian traffic should at all times be able to negotiate the crossing safely. A police officer takes up a position at the crossing for about eight to 10 minutes when a Division is called in order to halt traffic for hon. Members proceeding to the House.

Immigration Control Procedures

Mr. Cohen asked the Secretary of State for the Home Department whether the two questions which the Minister of State, the hon. and learned Member for Ribble Valley (Mr. Waddington), referred to on 23 May, *Official Report*, column 1172, as appropriate for immigration officers to ask in cases which may subsequently lead to the implementation of the primary purpose rule will be asked in every case; and if he will give examples of answers to these questions which will result in *(a)* acceptance and *(b)* rejection.

Mr. Waddington: Entry clearance officers will adopt the position set out in the Divisional court's judgment in Vinod Bhatia. They will ask appropriate questions about the relevance of the sponsor's residence here to the purpose of the marriage. As the determination of the immigration appeal tribunal in the same case stated, if the applicant states flatly he would not consider marrying the girl if it meant living in his own country, this will usually be fairly conclusive in determining the primary purpose was to obtain admission.

Murder Statistics

Mrs. Renée Short asked the Secretary of State for the Home Department how many people have been convicted of murder since 1955 after ending the life of a close relative or friend in seriously ill health; and if he will list the range of sentences which were imposed for these offences.

Mr. Mellor: The information requested is not readily available and could be obtained only at disproportionate cost. The available information is published annually in "Criminal Statistics, England and Wales", in tables 4.4 and 4.8 of the volume for 1983 (Cmnd. 9349).

Terrorism

Mr. Stephen Ross asked the Secretary of State for the Home Department how many persons detained under the Prevention of Terrorism (Temporary Provisions) Acts in each of the police areas of metropolitan London, Dumfries and Galloway and Merseyside have been charged with offences under the Acts or under other Acts, separately, between 11 November 1974 and 31 December 1984.

Mr. Brittan [*pursuant to his reply*, 24 may 1985, c. *573-574*]: The available information for the Metropolitan police district, Merseyside, and Dumfries and Galloway on persons detained under the Prevention of Terrorism Acts and subsequently charged relates only to the period from 1 January 1979 and is given in the table.

Detentions under the prevention of terrorism acts, and subsequent charges

	1 January 1979—31 December 1984		
	Detained	*Charged under Prevention of Terrorism Acts*	*Charged under other Acts*
Metropolitan police district	471	13	44
Merseyside	433	17	11
Dumfries and Galloway	589	36	6
	1,493	66	61

ENERGY

Energy Efficiency

5. **Mr. Hayward** asked the Secretary of State for Energy what part voluntary insulation groups have to play in his energy efficiency drive.

Mr. David Hunt: Voluntary sector insulation projects play an important and growing part in my right hon. Friend's energy efficiency strategy. They provide a direct injection of energy efficiency into a section of the population which would not otherwise be able to achieve this improvement.

Coal Industry

7. **Mr. Douglas** asked the Secretary of State for Energy if he will make a statement on the current level of output and employment in the British coalfields.

Mr. Peter Walker: I am encouraged by the levels of production attained since the end of the strike, although damage to coal faces has had a lasting effect. Between the beginning of March and 4 May, over 2,000 miners took voluntary redundancy, reducing the number of men on colliery books to approximately 169,000.

Gas Flaring

17. **Mr. Maclennan** asked the Secretary of State for Energy what steps he is taking further to reduce the level of gas flaring in offshore oil fields; and if he will make a statement.

Mr. Buchanan-Smith: I will continue to maintain tight control.

Management Consultants

Mr. Mates asked the Secretary of State for Energy if he will list the contracts, with the subject of assignment, awarded to management consultancy firms by his Department in 1984, with the name of the consultants concerned.

Mr. Peter Walker: My Department awarded one contract to Armitage Norton Consultants in 1984. It was asked to assess the markets for the energy efficiency industry, the factors inhibiting its growth, and its potential for development.

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Energy how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Peter Walker: During the Session 1983-84 only two priority written questions were initially answered with a holding reply. This represents less than ½ per cent. of the total number of priority written questions tabled to me during this period. No holding replies have been given during the current Session.

Mr. Peter Bruinvels asked the Secretary of State for Energy how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Peter Walker: Departmental statistics on parliamentary questions are not available before the 1982-83 Session and could be provided only at disproportionate cost.

The information requested from the 1982-83 Session onwards is as follows:

	Numbers			
	Priority written questions	*Ordinary written questions*	*Questions tabled for oral answer*	*Total*
1982-83 Session	184	177	286	647
1983-84 Session	472	458	433	1,363
1984-85 Session (up to and including Friday 24 May)	256	245	235	736

Source:
Departmental statistics. The number for ordinary written questions does not include questions tabled for oral answer which were not reached.

Nuclear Safeguards Assignments

Mr. D. E. Thomas asked the Secretary of State for Energy whether he raised the matter of nuclear safeguards assignments in the context of the forthcoming non-proliferation treaty review conference during his recent visit to the United States of America.

Mr. Goodlad: No.

EDUCATION AND SCIENCE

Students

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science what is the number of students in *(a)* universities and *(b)* maintained sector advanced education, expressed as full-time equivalents.

Mr. Brooke: In 1983-84 the provisional total full-time equivalent student load in universities in Great Britain (excluding the Open University) was 304,800. The total full-time equivalent number of students in public sector higher education in Great Britain was 333,300. These two measures are not directly comparable because of differences in ways of converting part-time students into full-time equivalents.

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science what is the number of overseas students in *(a)* universities, *(b)* maintained sector advanced education and *(c)* non-advanced further education, for each of the last 10 years.

Mr. Brooke: The information is as follows:

Students from abroad: Great Britain

	(Thousands)									
	1974	*1975*	*1976*	*1977*	*1978*	*1979*	*1980*	*1981*	*1982*	*1983*
Universities	27·8	31·2	33·7	35·2	36·5	34·9	33·2	31·8	30·9	32·2

* Excluding the Open University.
† Estimated.

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science what is the age participation index for students in full-time advanced further education in each country in the European Community.

Mr. Brooke: The information in the form requested is not available. Comparisons of participation indices in higher education between countries are influenced by the structure of higher edcuation in each country, in particular by the age of entry and the length of course. In some EC countries students enter higher education later than in the United Kingdom and take longer to qualify.

A meaningful comparison can be obtained by showing new entrants of all ages to higher education as a percentage of the age group within a "typical age range". The Organisation for Economic Co-operation and Development has published statistics on this basis.

The new entrant figures for the United Kingdom exclude students from abroad and also any known to have obtained already a higher qualification, such as postgraduates, graduates entering PGCE courses or teachers on in-service training. It is not known whether other countries have limited their data in this way; certainly for Italy and the Netherlands, all first-year students are the basis.

The following table shows the latest data available.

*New entrants to higher education as a percentage of the relevant age group**

Country	*Year*	*All higher education per cent.*	*Non-university† only per cent.*
France‡	1982	29·0	8·1
Germany	1982	21·2	6·3
Netherlands‖	1982	26·0	16·7
Belgium ¶		. .	. .
Denmark	1980	32·7	18·2
Spain	1980	28·3	10·6
Italy‖	1981	25·1	•. .
Luxembourg■		. .	. .
Ireland		. .	. .
Greece		. .	. .
United Kingdom*	1983	26·7	17·5

. . Not available.
* Average of age groups normally corresponding to entry to higher education.
† Defined by each country based on their own classification of higher education, and therefore not fully comparable.
‡ Excludes new entrants to the "Grandes Ecoles". Data on non-university type education refer to UIT (University Institute of Technology) and higher technicians only.
‖ First-year students.
¶ In 1981 the percentage for universities only was 12·9.
• Minimal; in 1976, 4 per cent. of first-year students entered non-university higher education.
■ Higher education students mainly study outside Luxembourg.
* Includes part-time students. Excludes students from abroad, and also any known to have obtained already a higher qualification, such as postgraduates. Excludes private sector and entrants to nursing diploma courses.

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science (1) how many postgraduate students there are in universities, broken down into numbers of home and overseas students; and what are the equivalent figures for each of the last 10 years;

(2) how many postgraduate students there are in maintained sector advanced education, broken down into the numbers of home and overseas students; and what are the equivalent figures for each of the last 10 years.

Mr. Brooke: The information is as follows:

Postgraduates: Great Britain (000s)

	Universities			Public sector higher education		
	Home		Overseas	Home		Overseas
	Part-time	Full-time	Full-time	Part-time	Full-time	Full-time
1974-75	21·0	31·8	16·0	*	*	*
1975-76	21·5	32·6	17·2	*	*	*
1976-77	22·5	32·3	18·0	8·4	11·0	1·1
1977-78	23·4	30·8	18·1	9·3	9·8	1·2
1978-79	24·3	30·6	17·7	11·6	9·8	1·5
1979-80	25·9	30·2	17·5	11·6	11·6	1·4
1980-81	27·4	31·1	16·5	12·3	12·1	1·4
1981-82	28·2	30·8	16·1	13·3	12·1	1·4
1982-83	28·3	29·5	15·9	13·8	10·5	1·3
1983-84	29·0	30·6	16·9	14·0	10·8	1·3

* Not available.

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science what is the comparable unit cost in universities and maintained sector advanced education for each year since 1978-79 in cash terms and in cost terms at 1984-85 prices.

Mr. Brooke: Average unit costs for the different sectors of higher education are not readily comparable because of the different mix of subjects in each sector and the different financial years in which they operate. A paper on funding comparisons across the sectors of higher education was published in May 1985 entitled "Higher Education: Comparisons of Funding Across Sectors." It covers the financial years 1980-81 to 1986-87. No similar analysis is available for earlier years. Copies of the paper are in the Library and I am sending one to the hon. Member.

Universities

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science if he will publish in the *Official Report* the equivalent of tables 3.10.5 and 3.10.4 in the Public Expenditure White Paper (Cmnd. 9428) for universities only.

Mr. Brooke: Following are the tables requested:

University participation indices (GB)

Percentages

	Age participation index (API)	Qualified participation index (QPI)	Young mature entry index (YMEI)	Older mature participation index (OMPI)
1980-81	7·5	50·7	2·6	0·052
1981-82	7·4	48·1	2·3	0·051
1982-83	6·9	43·7	1·9	0·048
1983-84	6·6	40·6	1·8	0·048
1984-85 (provisional)	6·9	41·9	n/a	n/a

University home student numbers (GB)

	Actual			Provisional
	1981-82	1982-83	1983-84	†1984-85
Full-time and sandwich				
Undergraduates (000s)	238	235	229	226
Of which; admissions (000s)	75	72	70	71
Postgraduates (000s)	31	29	31	31
Age participation index (per cent.)	7·4	6·9	6·6	6·9
Part-time				
Total (000s)*	33	34	35	Not available

* Excluding the Open University.

† The figures quoted for 1984-85 are early estimates of actual student numbers. They should not therefore be compared with the projections in Cmnd. 9428 of students numbers in 1984-85 for higher education as a whole.

No projections for university numbers are shown. As recorded in Cmnd. 9524 (para 3.8) the Government have asked the advisory bodies to consider the optimum distribution of students between sectors in the medium and longer terms.

Mr. Andrew F. Bennett asked the Secretary of State for Education and Science how many university applicants there were in each year since 1978-79; and how many candidates were finally accepted in each of those years.

Mr. Brooke: The information is as follows:

Applicants and acceptances through the Universities' Central Council on admissions scheme for universities in the United Kingdom

	Applicants	Acceptances
1978	157,506	80,530
1979	166,362	82,398
1980	168,354	84,695

	Applicants	Acceptances
1981	167,096	80,341
1982	171,496	77,752
1983	172,738	74,860
1984	173,674	77,431

"International Years" (Funding)

Mr. Squire asked the Secretary of State for Education and Science what funding his Department has given in each year since 1979 to *(a)* international year of the child, *(b)* international year of the disabled and *(c)* international youth year.

Mr. Dunn: The information in cash terms is as follows:

International Year of the Child (1979):

	£
1979-80	13,120
1980-81	1,880

International Year of the Disabled (1981):
The Department has made none; the Government's main financial contribution has been channelled through the Department of Health and Social Security.
International Youth Year (1985):
Grant aid to the International Youth Year National Co-ordinating Committee for England.

	£
1982-83	1,350
1983-84	25,000
1984-85	107,500
1985-86	115,000

Grants for various projects being undertaken by youth organisations—£26,000.

In addition, the Department has supported and pursued a range of more general initiatives, projects and developments related to each of these international years.

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Education and Science how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Sir Keith Joseph: The information requested is as follows:

Session	Number	Percentage
1983-84	18*	2·4
1984-85†	29	6

* Best estimate based on the information readily available.
† Up to and including 24 May.

Mr. Peter Bruinvels asked the Secretary of State for Education and Science how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Sir Keith Joseph: The information requested is as follows:

Parliamentary Questions

Session	Oral	Priority Written	Ordinary Written	Total
1981-82*	456	596	518	1,570
1982-83*	328	370	322	1,020
1983-84	603	750	779	2,132
1984-85†	343	483	437	1,263

* In the Sessions 1981-82 and 1982-83 the Office of Arts and Libraries (OAL) was part of the Department of Education and Science. Parliamentary questions on the arts were tabled to the Secretary of State for Education and Science and are therefore included in the figures for these Sessions. The OAL transferred to the Cabinet Office in June 1983 at the beginning of the 1983-84 Session.
† Up to and including 24 May.
Source: Departmental Statistics.

Barley Yellow Dwarf Virus

Mr. Campbell-Savours asked the Secretary of State for Education and Science at which Agricultural and Food Research Council research station work is being undertaken on barley varieties' resistance to barley yellow dwarf virus; and what proposals he has for the future of such research.

Mr. Brooke: I understand from the Agricultural and Food Research Council that work on the breeding of spring and winter barley varieties resistant to barley yellow dwarf virus is currently being undertaken at the Plant Breeding Institute and the Scottish Crop Research Institute with an input from the Welsh Plant Breeding Station which identify sources of disease resistance. Continuation of this commissioned research will be determined in the light of advice from the Priorities Board on Research and Development in Agriculture and Food about the allocation of available resources.

Further work on the characterisation, epidemiology and control of cereal viruses, including barley yellow dwarf virus, is being carried out at the Long Aston research station and Rothamsted experimental station. Work on these programmes will be continued for the foreseeable future.

Teachers (Salary Dispute)

Mr. Barry Jones asked the Secretary of State for Education and Science when he proposes to answer the letter of the hon. Member for Alyn and Deeside (Mr. Jones) written in February 1985 concerning the teachers' salary dispute; and if he will make a statement.

Sir Keith Joseph: A reply has been sent today.

Higher Education (Expenditure)

Mr. Fisher asked the Secretary of State for Education and Science whether he will express expenditure on higher education as a percentage of gross national product in each of the last 10 years for which statistics are available.

Mr. Brooke: It is more realistic to express such expenditure as a percentage of the gross domestic product. The following figures have been calculated accordingly.

*Expenditure on higher education as percentage of GDP**

	percentage
1974-75	0·9
1975-76	1·0

	percentage
1976-77	1·1
1977-78	1·0
1978-79	1·0
1979-80	1·0
1980-81	1·1
1981-82	1·0
1982-83	1·1
1983-84	1·0

* Expenditure figures are based on universities in Great Britain, while those for the public sector are based on England only. The GDP is calculated on a United Kingdom basis.

Mr. Fisher asked the Secretary of State for Education and Science whether he will express expenditure on higher education as a percentage of total public sector education expenditure in each of the last 10 years for which statistics are available.

Mr. Brooke: The information requested is as follows:

England:
Expenditure on higher education as percentage of total public education expenditure

	Percentage
1974-75	17·9
1975-76	19·1
1976-77	22·6
1977-78	22·7
1978-79	22·8
1979-80	23·7
1980-81	24·1
1981-82	23·9
1982-83	24·4
1983-84	24·2

Degree Courses

Mr. Fisher asked the Secretary of State for Education and Science what percentage of 15-year-olds in secondary school have proceeded to a first degree course in the United Kingdom in each of the last 10 years for which statistics are available.

Mr. Brooke: Information is not readily available in the form requested. The Department's usual way of monitoring participation in higher education is the age participation index. This is defined as the number of full-time and sandwich home initial entrants to higher education aged under 21 expressed as a percentage of the average population of 18 and 19-year-olds. Initial entrants are those entering a higher education course for the first time and exclude those entering a second such course.

The index for Great Britain since 1974, with later years based on the most recent information, is as follows:

	Percentage
1974	12·2
1975	12·3
1976	12·4
1977	12·3
1978	12·3
1979	12·5
1980	12·7
1981	13·5
1982	13·5
1983	13·3
1984	*13·7

Note: Entrants to initial teacher training courses with less than two A-levels are excluded.
* Provisional.

ENVIRONMENT

Crown Suppliers

Mr. Tony Banks asked the Secretary of State for the Environment if he will provide details of the £7,744,018 expenditure in 1984-85 by the Crown Suppliers on its vehicle fleet in respect of *(a)* expenditure on cars, *(b)* expenditure on other vehicles, *(c)* departmental allocations, *(d)* purchasing and disposal arrangements, *(e)* numbers of vehicles in each taxation class and *(f)* the percentage of British-made vehicles in each taxation class.

Sir George Young: A breakdown of the £7,744,018 expenditure in 1984-85 by The Crown Suppliers on its self-drive fleet and the other information requested is as follows:

(a) Approximately £2,865,000 related to cars.
(b) Approximately £4,879,000 to other vehicles.
(c) Fourty-seven vehicles are operated by the Crown Suppliers, 2,197 are hired to PSA and 922 to other Government Departments and to other public sector bodies, which for commercial reasons are not detailed.
(d) Vehicles are purchased under the rules of Government procurement, by tender, using central contracts. Vehicles are disposed of by auction when they have completed the useful economic 'life', defined in the case of cars as 5½ years or 55,000 miles, and in the case of other vehicles in relation to their use.
(e) Records of vehicles by taxation class are not maintained.
(f) Records are not maintained by taxation classes but the percentage of vehicles obtained from British manufacturers in the total fleet is 99 per cent.

Council Houses

Mr. Tom Cox asked the Secretary of State for the Environment what information he has as to the number of council houses being built in each of the 32 London boroughs.

Sir George Young: The numbers of dwellings which the London boroughs and the Greater London council had reported as being under construction for them at the end of 1984, appear in table 1*(a)* of "Local Housing Statistics" No. 73: a copy is in the Library. Subsequently, Hounslow and Newham have reported, respectively, 123 and 474 dwellings under construction at that time.

Urban Programme

Mr. Cohen asked the Secretary of State for the Environment what account was taken on allocating funds for the urban programme *(a)* nationally and *(b)* in Waltham Forest in each year since 1979 of (i) inflation, (ii) the increase in the number of self-help groups and voluntary organisations, (iii) the consequences of the rise in the number of the unemployed and (iv) restrictions on local authority spending; and if he will make a statement.

Sir George Young: Resources for the urban programme have risen from £93 million in 1978-79 to £338 million in 1985-86. Funding for voluntary sector projects in 1984-85 is estimated to account for £70 million of UP expenditure. No automatic allowance is made for changes in inflation or unemployment, although residential unemployment rates are taken into account in the policy of concentrating resources in the most needy areas. The urban programme is not intended to offset or undermine the Government's call for economies in local authorities'

overall spending. In common with other undesignated authorities, the resources available to Waltham Forest depend on the quality of bids submitted for traditional urban programme funding.

Multiple Occupation

Mr. Knox asked the Secretary of State for the Environment if he will state the total number of control orders made on houses in multiple occupation by local housing authorities in England and Wales during the most recent year for which statistics are available; and if he will list the local housing authorities concerned.

Sir George Young: The information requested is not collected by my Department but the Environmental health report for 1982, which is the most recent one published by the Institution of environmental health officers, indicates that 17 control orders were made that year.

Mr. Knox asked the Secretary of State for the Environment if he will list the local housing authorities in England and Wales which operate registration schemes for houses in multiple occupation under the Housing Act 1961 to 1969.

Sir George Young: The local authorities in whose areas registration schemes for houses in multiple occupation have been confirmed are as follows:

Informatory schemes
Birmingham city council
Bournemouth borough council
Cardiff city council
Crawley borough city council
Croydon London borough council
Gloucester borough council
Kingston upon Hull city council
Leeds city council
Liverpool city council
Middlesbrough borough council
Mole Valley borough council
Trafford borough council
Reigate and Banstead borough council

Regulatory schemes
Exeter city council

Combined schemes
Bradford city council
Brent London borough council
Bristol city council
Cambridge city council
Camden London borough council
Doncaster borough council
Enfield London borough council
Greenwich London borough council
Hackney London borough council
Islington London borough council
Kirklees district council
Lambeth London borough council
Lancaster city council
Leicester city council
Lewisham London borough council
Manchester city council
Milton Keynes borough council
Newcastle upon Lyme borough council
Newcastle upon Tyne city council
Newham London borough council
Norwich city council
Oldham borough council
Portsmouth city council
Redbridge London borough council
Rotherham borough council
Salford city council
Sandwell borough council
Scunthorpe borough council
Sheffield city council
South Tyneside borough council
Southwark London borough council
Stoke on Trent city council
Swansea city council
Tower Hamlets London borough council
Walsall borough council
Wycombe district council
Wyre borough council

Mr. Knox asked the Secretary of State for the Environment if he will make a statement on the progress of his research project on houses in multiple occupation and in particular *(a)* when he intends to make available the findings of the postal survey of local housing authorities in England and Wales in connection with the project and *(b)* when he will be able to complete the project and report on its conclusions.

Sir George Young: The research project is in three parts: a postal survey of all local authorities in England and Wales; a pilot physical and social survey in three local authority areas involving some 50 houses in multiple occupation; and a full physical and social survey in about 40 local authority areas of at least 500 properties. Reports on the postal and pilot surveys are due to be submitted to my Department shortly. I hope to announce a summary of the results during the autumn and to publish a detailed account before the end of the year. The full survey has not yet started; it will not be completed until the summer of 1986 and publication of the results will not be possible until the winter of 1986-87.

Mr. Knox asked the Secretary of State for the Environment what are the implications of his proposals "Home Improvement — A New Approach" for the improvement of conditions in houses in multiple occupation.

Sir George Young: The Green Paper includes several specific proposals for improving the conditions of houses in multiple occupation (HMOs). It suggests a new system of mandatory grants for installing basic amenities and providing means of escape from fire and fixed fire precautions. Other improvements and repairs would attract equity sharing loans.

Local Government Reform

Mr. Deakins asked the Secretary of State for the Environment how the additional sums available for voluntary organisations in the event of abolition of the Greater London council and metropolitan counties will be disbursed; and if any part of such sums will be made available for voluntary organisations in the London borough of Waltham Forest.

Sir George Young: We will make proposals in a consultation paper shortly. The scheme will apply to the London borough of Waltham Forest.

Mr. Tony Banks asked the Secretary of State for the Environment how many civil servants in his Department and at what grades are currently engaged on work associated with the abolition of the Greater London council and the metropolitan county councils; and what is the total cost.

Mr. Waldegrave: The latest available information, which relates to 1 March, was set out in my right hon. Friend's answer to the hon. Member on 4 April at columns *762-3*.

Mr. Tony Banks asked the Secretary of State for the Environment what will be the legatee responsibilities of the London residuary body.

Mr. Kenneth Baker: I refer the hon. Member to clause 60 of the Local Government Bill as sent to the House of Lords on 29 March 1985, and to section 2·27 of the Yellow Book issued in July 1984.

Mr. Tony Banks asked the Secretary of State for the Environment what is the latest date the London residuary body will be expected to notify successor authorities of its proposed charges and levy.

Mr. Kenneth Baker: Clause 72 of the Local Government Bill requires each residuary body to issue its levy demand to the rating authorities not less than twenty-one days before the beginning of the financial year to which the levy relates. I would, however, expect each residuary body to notify successor authorities of its proposed charges and levies well before that date.

Mr. Tony Banks asked the Secretary of State for the Environment what finance functions will need to be carried out by the London residuary body acting on behalf of other successor authorities.

Mr. Kenneth Baker: These will be matters for the successor authorities and the London residuary body to decide.

Mr. Tony Banks asked the Secretary of State for the Environment (1) what is the total cost of the consultants' studies of the proposed residuary bodies;

(2) what firms of consultants were considered for the study of the proposed residuary bodies.

Mr. Kenneth Baker: I have nothing to add to the reply given to the hon. Member on 22 May 1985 at columns *437* and *438*.

Mr. Tony Banks asked the Secretary of State for the Environment what were the considerations taken into account in deciding to employ consultants to appraise the proposed residuary bodies.

Mr. Kenneth Baker: Economy, efficiency, and effectiveness.

Mr. Tony Banks asked the Secretary of State for the Environment what finance functions would need to be continued without any intervening break by the London residuary body if the Greater London council were to be abolished.

Mr. Kenneth Baker: Those in support of responsibilities conferred on the London residuary body under part VII of the Local Government Bill—in particular clause 56 (debt), clause 57 (compensation), clauses 58 and 59 (pensions), clause 60 (residual property, liabilities, etc.), and clause 61 (preparation of final accounts)—together with such other tasks as it may assume on behalf of successor bodies.

Mr. Tony Banks asked the Secretary of State for the Environment (1) how the cost of the consultants' studies on the proposed residuary bodies will be allocated to successor authorities;

(2) how the cost of providing support to the proposed residuary bodies until their formal establishment is to be allocated to successor authorities.

Mr. Kenneth Baker: These costs will be borne by my Department. They will not be allocated to successor authorities.

Mr. Tony Banks asked the Secretary of State for the Environment (1) when he expects to announce the arrangements for the delegation of his powers to nominate tenants to former Greater London council housing, in the event of the Greater London council being abolished;

(2) when he intends to make an order conferring on the Secretary of State nomination rights to former Greater London council dwellings in the event of the Greater London council being abolished.

Sir George Young: My right hon. Friend expects to make an announcement on these matters later in the year.

Mr. Tony Banks asked the Secretary of State for the Environment what is the latest date before 31 March 1986 by which staff of the Greater London council and metropolitan county councils will be advised that their services are not required by successor authorities.

Mr. Kenneth Baker: GLC and MCC staff still in those councils' employment immediately before the abolition day will be left redundant, unless either they have been designated in an order under clause 51 of the Local Government Bill; or they have received an offer of new employment to which clause 53 would apply.

All successor authorities are under a duty by virtue of clause 54 to decide what staff they will require and to make timely offers of employment. They will also be expected to notify staff designated for transfer to them under a clause 51 order. The residuary bodies will also be required to take early steps to assess their staffing needs and inform those staff whose services they will require.

Mr. Tony Banks asked the Secretary of State for the Environment what progress has been made in the initial calculation of grant-related expenditure assessments and targets for the London residuary body.

Mr. Kenneth Baker: The residuary bodies will not have grant related expenditure assessments or targets.

Mr. Tony Banks asked the Secretary of State for the Environment at what date the boroughs will receive notification of that part of their expenditure target which will be in respect of the expenditure of the London residuary body; and how he will calculate and apportion the targets in respect of the London residuary body.

Mr. Kenneth Baker: No decisions have yet been taken on the future of targets after 1986-87.

Mr. Tony Banks asked the Secretary of State for the Environment (1) what arrangements he intends to make to provide the Inner London education authority with computer-based information on the condition and maintenance of its buildings after the abolition of the Greater London council on 1 April 1986;

(2) what are his plans for the future of the current analysis and dissemination of data relating to London traffic accidents carried out jointly and co-operatively by the Metropolitan police and the Greater London council computing service for the London boroughs;

(3) what are the comparative costs associated with providing computing services to the successor bodies after the abolition of the Greater London council; and if he will make a statement;

(4) what level of savings on the use of information technology he expects to accrue to London's ratepayers after the abolition of the Greater London council on 1 April 1986;

(5) what arrangements he intends to make for the Greater London council's welfare benefits computer project after the abolition of the Greater London council on 1 April 1986;

(6) what arrangements he intends to make to provide the London Fire Brigade with mainframe computer facilities after the abolition of the Greater London council on 1 April 1986;

(7) if he will make a statement on the future application of information technology across the range of London's public services after the abolition of the Greater London council; and if he will make a statement;

(8) what progress he is making with measures to ensure the maintenance of computer services currently provided by the Greater London council; and if he will make a statement;

(9) what progress he is making towards ensuring that successor bodies are adequately provided with computing facilities, following the abolition of the Greater London council;

(10) whether he has any plans for providing computing services for the Inner London education authority and the other residuary bodies following the proposed abolition of the Greater London council;

(11) what he intends to do with the computing facilities maintained by the Greater London council; and if he will make a statement.

Mr. Kenneth Baker: I refer the hon. Member to the reply which my hon. Friend gave him on 23 May 1985 at column *505*. The residuary body will be able to provide computer facilities to ILEA and where there is a demand for this to other successors on a recharging basis until permanent arrangements can be made for the dispositon of computer facilities.

Mr. Tony Banks asked the Secretary of State for the Environment (1) if he intends to take reserve powers to ensure that all residuary bodies will be able to advise successor authorities on their grant-related expenditure allocation of all the necessary charges and levies that need to be included in successor authorities' 1986-87 budgets;

(2) how the expenditure of the proposed residuary bodies which will count as expenditure by successor authorities will be identified; and what is the timescale involved.

Mr. Kenneth Baker: Residuary bodies will charge the successor authorities for the services they render to them. Net expenditure by the residuary bodies not otherwise covered will be met by the residuary bodies' levies, which will be subject to the same timetable as precepts by upper tier authorities. I have no intention to take the reserve powers the hon. Member proposes.

Mr. Tony Banks asked the Secretary of State for the Environment what arrangements he intends to make to replace the information technology training facilities provided at present by the Greater London council after the abolition of the Greater London council on 1 April 1986

Mr. Kenneth Baker: It will be for successor authorities to decide whether or not they wish to continue to provide these facilities after abolition, and in what form.

Radioactive Waste

Mr. Cartwright asked the Secretary of State for the Environment if he will estimate the volume of radioactive waste likely to arise as a result of decommissioning a civil Magnox and advanced gas-cooled nuclear reactor power station.

Mr. Waldegrave: The CEGB has estimated that decommissioning a typical 500 MW(e) Magnox reactor will give rise to about 14,000 m^3 of low-level waste at the stage of dismantling plant external to the reactor biological shield and about a further 13,000 m^3 of low-level waste and 7,500 m^3 of intermediate-level waste in subsequent dismantling of the biological shield and remaining plant (stage 3).

The corresponding figures for a typical 1,300 MW(e) AGR are 4,500m^3 of low-level waste at the earlier of these stages, and 5,200m^3 of low-level waste and 6,500m^3 of intermediate level waste at the later stage.

Mr. Cartwright asked the Secretary of State for the Environment if he will list the approximate volumes of radioactive waste currently stored at each of the civil nuclear installations in the country, including the reprocessing plant at Sellafield.

Mr. Waldegrave: The general practice is to dispose of low-level wastes as they arise. Approximate volumes of stocks of other wastes in January 1985 are given as follows for each nuclear installation. These figures are based on information of stocks in January 1984 and estimates of arisings during 1984 which have been agreed between my Department and NIREX:

	M^3	
BNFL		
Sellafield	27,500	Intermediate-level waste
	1,165	High-level liquids
Springfields	1,360	Uranic residues
Capenhurst	660	Uranic residues
CEGB Stations: Stocks of intermediate-level wastes		
Berkeley	1,400	
Bradwell	320	
Dungeness	320	
Hartlepool	20	
Heysham	20	
Hinkley Point	900	
Oldbury	260	
Sizewell	230	
Trawsfynydd	370	
Wylfa	25	
SSEB Stations		
Hunterston	1,760	
Torness	Zero	
UKAEA Sites		
Dounreay	780	High-level liquids
	450	Miscellaneous solid intermediate level wastes
Harwell	80	Intermediate-level wastes
Winfrith	320	Intermediate-level wastes

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for the Environment how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Patrick Jenkin: The information is as follows:

	Session	
	1983-84	*1984-85 (to date)*
Total number of priority written questions answered	2,166	1,220
Number of holding replies issued	66	92
Number of holding replies issued, as a percentage of the total number of questions answered	3·04	7·54

Source: Departmental Statistics.

It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures in that on POLIS:

(a) the oral count includes only those oral questions actually reached plus supplementaries counted as separate questions and

(b) the written count includes orals not reached, writtens, priority writtens and holding replies all counted as separate questions.

The overall POLIS count will therefore exceed the departmental count.

Mr. Peter Bruinvels asked the Secretary of State for the Environment how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions respectively; and if he will make a statement.

Mr. Patrick Jenkin: The information requested is as follows:

	Session			
	1981-82	*1982-83*	*1983-84*	*1984-85 (to date)*
Oral questions	398	314	673	297
Priority written questions	1,063	609	1,986	1,220
Ordinary written questions	1,050	755	1,915	937
Total	2,511	1,678	4,574	2,454

Source: Departmental Statistics.

It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures in that on POLIS:

(a) the oral count includes only those oral questions actually reached plus supplementaries counted as separate questions and

(b) the written count includes orals not reached, writtens, priority writtens and holding replies all counted as separate questions.

The overall POLIS count will therefore exceed the departmental count.

Housing Defects Act

Mr. Rooker asked the Secretary of State for the Environment if he will list the local authorities which responded to his circular 9/85 inviting bids for additional allocations in respect of the Housing Defects Act by 31 May.

Mr. Gow: The following local authorities have responded in the terms set out in the circular:

North
- Blyth Valley borough council
- Gateshead metropolitan borough council
- Newcastle upon Tyne city council
- North Tyneside metropolitan borough council
- Sedgefield district council

North West
- Hyndburn borough council
- Lancaster city council
- Preston borough council
- South Ribble borough council
- Trafford borough council
- Wigan borough council

Yorkshire and Humberside
- Barnsley metropolitan borough council
- Boothferry district council
- Bradford metropolitan borough council
- Calderdale metropolitan borough council
- Doncaster metropolitan borough council

Grimsby borough council
Hull district council
Leeds city council
Wakefield metropolitan borough council
York city council

East
Chiltern district council
East Herts district council
Epping Forest district council
Hertsmere district council
Huntingdonshire district council
Luton borough council
North Hertfordshire district council
Norwich city council
St. Albans city council
South Bedfordshire district council
Southend on Sea borough council
Stevenage borough council
Tendring district council
Three Rivers district council
Thurrock borough council

South East
Basingstoke and Deane borough council
Cherwell district council
Eastbourne borough council
Eastleigh borough council
Hart borough council
Reigate and Banstead borough council
Rochester upon Medway borough council
Southampton city council
Wokingham district council

South West
Bristol city council
Caradon district council
Carrick district council
Christchurch borough council
Exeter city council
Gloucester city council
Kennet district council
Kingswood district council
North Cornwall district council
North Wiltshire district council
Plymouth city council
Restormel district council
South Hams district council
South Somerset district council
Stroud district council
Taunton Dean district council
Teignbridge district council
Tewkesbury borough council
Torbay borough council
Wansdyke district council
West Dorset district council
West Somerset district council
West Wiltshire district council
Weymouth and Portland borough council

Greater London
Ealing borough council
Harrow borough council
Havering borough council
Redbridge borough council
Waltham Forest borough council

West Midlands
Birmingham city council
Cannock district council
Dudley metropolitan borough council
East Staffordshire district council
Hereford city council
Nuneaton and Bedworth borough council
Redditch borough council
Sandwell metropolitan borough council
Shrewsbury and Atcham borough council
Stafford borough council
Staffordshire Morlands district council
Stoke on Trent city council
Wolverhampton metropolitan borough council
Wychavon district council
Wyre Forest district council

East Midlands
Chesterfield borough council
Gedling borough council
Kettering borough council
Newark and Sherwood district council
Northampton borough council
North East Derbyshire district council
North Kesteven district council
Rushcliffe borough council

ILEA (Adult Education)

Mr. Corbyn asked the Secretary of State for the Environment whether the grant-related expenditure assessment for the Inner London education authority takes into account vital adult education provision.

Mr. Kenneth Baker: Yes.

Public Sector Housing

Mr. Dubs asked the Secretary of State for the Environment how many public sector housing starts he anticipates in 1985; and what was the comparable figure for 1979.

Sir George Young: The 1979 figure appeared in table 2 of the Department's housing statistics press notice released on 7 May: a copy is available in the Library. My Department has made no estimate for 1985.

Home Renovation Grants

Mr. Tony Banks asked the Secretary of State for the Environment if he will publish the full results of the distribution of grants inquiry into home renovation grants before the end of the consultation period on "Home Improvement—A New Approach" (Cmnd. 9513).

Sir George Young: It will not be possible to publish the full results of the English distribution of grant inquiry before 9 July but we plan to publish them in the autumn. However, annex 1 to the Green Paper has already set out the main findings is some detail.

Royal Parks

Mr. Tony Banks asked the Secretary of State for the Environment if he will list in regard to royal parks *(a)* their number, location and acreage, *(b)* the expenditure incurred by the Government in the financial year 1984-85 on the maintenance, repair and improvement of each park, *(c)* any income received in the financial year 1984-85 for each park and *(d)* the names and addresses of any consultants or agencies involved in work affecting each park, giving brief descriptions of jobs involved and details of the terms of reference, date of completion and any fees due to be paid beyond the current financial year.

Mr. Macfarlane: There are nine royal parks. The information requested is as follows:

Park	Acres	Hectares	Works/Supplies Expenditure 1984-85 £	Income 1984-85 (estimated) £
Central Parks			2,906,889	396,100
Hyde	343	139		
St. James's	86	35		
Green	52	21		
Kensington Gardens	285	116		
Regent's (including Primrose Hill)	400	162	1,897,176	158,035
Hampton Court and Bushy Parks	1,748	708	1,418,606	210,170
Richmond	2,359	955	745,676	93,514
Greenwich	195	79	787,742	30,267
Not specific to individual parks	—	—	487,176	114,200
TOTAL	5,468	2,215	8,243,265	1,002,286

Consultants currently engaged in work affecting parks (excluding design consultancies let by the Property Services Agency) are as follows:

1. Land Use Consultants, 731 Fulham Road, SW6.
Historical Survey, Greenwich Park, report due late 1985.

2. Land Use Consultants
Preparation of exhibition material in respect of Fountain Garden at Hampton Court. Completion expected summer 1985.

3. Consortium of Inbucon Ltd, 197 Knightsbridge, SW7 and Land Use Consultants Study of standards of maintenance, their resource implications, and options for future maintenace of royal parks. Feasibility report based principally on study of Regent's Park due Autumn 1985.

No fees will be incurred on 1 and 2 in 1986-87. Further expenditure on 3 depends on the outcome of the feasibility study.

Royal Festival Hall

Mr. Tony Banks asked the Secretary of State for the Environment what are the reasons for the delays in giving consents for the following concerts at the Royal Festival Hall: John Williams on 18 May 1986, Bach Choir on 29 May 1986, City of London and Brompton Choral Society Choirs on 8 June 1986, Murray Perahia on 23 May 1986, RAF Anniversary Concert on 11 April 1986, Youth Makes Music on 17 April 1986, Philharmonia Orchestra on 21 April 1986 and the Royal Philharmonic Society on 16 April 1986 and 14 May 1986.

Mr. Waldegrave: Consent under sections 8 and 9 of the Local Government (Interim Provisions) Act 1984 has been given for the holding of concerts at the Royal Festival Hall on numerous dates including 16, 17 and 21 April 1986, 14, 18, and 29 May 1986 and 8 June 1986.

I am not aware of any outstanding application for consent for concerts to be held on these dates, nor on 11 April or 23 May 1986.

Elderly Persons (Dwellings)

Mr. Fisher asked the Secretary of State for the Environment how many *(a)* single storey and *(b)* flat dwellings for the elderly have been completed in each of the last 10 years for which statistics are available.

Sir George Young: This information is not collected centrally.

Endangered Species

Dr. David Clark asked the Secretary of State for the Environment if he will list the decisions taken by the committee meeting under the European Community convention on international trade in endangered species regulations; and what formal or informal agreements have been reached by the committee on any other matters.

Mr. Waldegrave: As with other committees of this nature, the committee's proceedings are confidential. Any regulations, directives or decisions on the implementation within the European Community of the convention on international trade in endangered species are published in the *Official Journal* of the European Communities. I refer the hon. Member in particular to the editions of the *Journal* dated 31 December 1982, 7 December 1983, 28 December 1983, 3 March 1984, 6 March 1984, 7 March 1984 and 26 May 1984.

Homes Insulation

Mr. Speller asked the Secretary of State for the Environment which English councils have applied for sums additional to their initial allocation under the homes insulation grant scheme; and what proportion of the reserve has now been allocated.

Sir George Young: To date the following local authorities have applied for additional allocations from the homes insulation scheme reserve:

Northern
Langbaurgh
Middlesbrough
Stockton-on-Tees*

Yorkshire and Humberside
Beverley*
Cleethorpes
Scarborough
Sheffield*
Calderdale*
Kirklees*

East Midlands
Amber Valley
Erewash*
Blaby
Melton*
North Kesteven
Corby
Wellingborough
Ashfield
Broxtowe
Nottingham

Eastern
South Bedfordshire
Chiltern
South Bucks
Basildon
Castle Point
Harlow
Southend-on-Sea
Tendring
Broxbourne
Dacorum
St. Albans*
Stevenage
Welwyn Hatfield
Breckland
Norwich
Babergh*
Forest Heath
Ipswich*
St. Edmundsbury*
Waveney

Greater London
Bromley
Ealing
Lambeth*
Redbridge*

South East
Bracknell
Windsor and Maidenhead
Rother
Wealden
Basingstoke and Deane
Eastleigh
Fareham
New Forest
Winchester
Medina
Ashford
Canterbury
Dover*
Gillingham*
Maidstone
Sevenoaks
Tunbridge Wells
Vale of White Horse
West Oxfordshire*
Elmbridge
Guildford

Warwick
Coventry*
Dudley

North West
Fylde*
Hyndburn
Rossendale*
Wyre*

* These authorities have applications still under consideration or have been invited to reapply when it is clearer that their existing allocations will soon be exhausted.

Some 22 per cent. of the reserve has been allocated.

Departmental Staff

Mr. Tony Banks asked the Secretary of State for the Environment in respect of grants given by the voluntary services unit of his Departments, if he will list (i) the unit's current organisational structure, complement of posts, staff in post and grading of posts of staff employed on assessing, monitoring and advising on these grants, (ii) the value of grants approved for 1985-86 and (iii) details of the name, address, type and purpose of the organisation and the amount granted, for each grant made in the financial year 1984-85.

Mr. Kenneth Baker: My Department does not have a voluntary services unit. Staff administering direct grants to voluntary organisations work in a number of policy directorates and their work is usually combined with other responsibilities. All grant awards for 1985-86 have not yet been decided. In 1984-85 the Department awarded direct grants to voluntary bodies, excluding housing associations, under the following programmes.

Organisation	*Amount (£)*
1. *Special grants programme 1984-85*	
Advisory Committee on the Education of Romany and other Travellers	11,460
Advisory Committee on Pollution of the Sea	2,500
Association of Community Technical Aid Centres	12,000
British Association of Social Settlements and Action Centres: Innovatory Urban Projects Booklet	9,200
British Trust for Conservation Volunteers	100,000
Byways and Bridleways Trust	4,000
Cathedral Camps	10,000
Centre for Social Enterprise	15,000
Child Accident Prevention Trust: Child Accidents and the Built Environment	4,650
Civic Trust: Urban Initiative Project	19,000
Community Links	5,500
Community Regeneration	18,118
Community Service Volunteers: Watts Labor Community Action Committtee	20,000
Conservation Foundation	25,000
Conservation Trust	8,250
Council for Environmental Conservation	32,600
Council for Environmental Education—Youth Unit	4,000
Council for National Parks	7,620
Directory of Social Change	9,850
East Anglian Gypsy Council	936
Ecological Parks Trust	14,200
European Centre for Urban Regeneration: Urban Regeneration Directory	10,000
Federation of Resource Centres	600
Friends of the Earth Trust	15,000

Organisation	Amount (£)
Free Form Arts Trust	20,000
Gingerbread: Housing Officer	9,270
Help the Aged and Shelter: Care and Repair	14,000
Horticultural Therapy: Garden Advisory Project	15,475
Inter-Action: i. Country Wings	20,810
ii. Neighbourhood use of Buildings and Space	21,410
International Waterfowl Research Bureau	2,000
Kennet and Avon Canal Trust	5,000
Law Centres Federation: Inner City Development Officer	18,000
Macclesfield Groundwork Trust: Voluntary Sector Data Base Project	5,100
NACRO: Neighbourhood Remedial Action Project	32,500
National Association for Environmental Education	7,500
National Advisory Unit for Community Transport	17,523
National Council for Voluntary Organisations:	
i. Ethnic Minorities: Training Unit	30,782
ii. Neighbourhood Energy Action Urban Initiatives Project	5,150
iii. Secondment to BIC	15,233
iv. Urban Unit	56,280
National Federation of City Farms	12,800
National Gypsy Council	13,330
New World Business Services: Ethnic Minority Training Project	2,500
North East Civic Trust	7,000
Northern Region TCPA: Community Technical Aid Centre	32,573
North West Civic Trust	24,500
North West Civic Trust—Vacant Buildings Information Service	16,462
North West Pollution Control Advisory Service (Campus)	10,000
Open Spaces Society	4,500
Pennine Heritage	23,000
Planning Aid Unit (TCPA)	15,000
Policy Studies Institute: Local Authorities Race Relations Information Exchange	10,000
RIBA: Architectural Workshops	23,000
RIBA: Community Projects	46,000
Romany Guild	6,990
Royal Society for Nature Conservation	41,135
Royal Society for the Protection of Birds: Urban Schools Officers	7,950
Rural Preservation Association	11,536
Shelter National Housing Aid Trust: Mobile Homes Unit	6,250
Somerset Small Industries Group	8,000
Sports Aid Trust:	
i. Employment of Book-keeper	4,500
ii. Employment of a Fund Raiser	8,000
Streetwork: Council for Urban Studies Centres	14,185
Town & Country Planning Association:	
i. Conway Project (Birkenhead)	12,033
ii. Lightmoor Project (Telford)	8,500
iii. Management Grant	25,000
Tree Council	13,000
UK Sports Association for People with Mental Handicap	19,750
URBED: Re-use of Industrial Buildings Service	26,250
Volunteer Centre:	
i. Inner City Volunteer Bureaux	11,775
ii. Printing of Conference Report	800
Wildfowl Trust	2,600
Wildlife Link	8,000
William Temple Foundation	8,500
World Wildlife Fund: Youth Education Work	18,000
Young Peoples Trust for Endangered Species	21,900
2. *Housing (Homeless Persons) Act 1977*	
SHAC—The London Housing Aid Centre	124,000
Shelter National Housing Aid Trust	44,984
Housing Advice Switchboard	49,500
CHAR—Campaign for the Single Homeless	28,000
National Association of Voluntary Hostels	19,000
National Cyrenians	26,000
National Association for the Care and Resettlement of Offenders	11,420
First Key	12,000
UJIMA Housing Association	1,280
Empty Property Unit	15,500
Tyneside Housing Aid Centre	12,300
3. *Keep Britain tidy group*	510,000
4. *Council for Environmental Education*	42,000
5. *Amenity Societies and the civic trust*	
Civic Trust	55,000
Council for British Archaeology	3,250
Ancient Monuments Society	6,500
The Georgian Group	6,500
The Society for the Protection of Ancient Buildings	6,500
The Victorian Society	6,500

Mr. Tony Banks asked the Secretary of State for the Environment, in respect of the traditional urban aid programme and the inner city partnership schemes, if he will list (i) his Department's current organisational structure, complement of posts, staff in post and grading of posts of staff employed on assessing, monitoring and advising on these grants, (ii) the value of grants approved for 1984-85 and (iii) details of the name, address, type and purpose of the organisation and the amount granted for each grant made in the financial year 1984-85.

Mr. Kenneth Baker: The structure and staffing of inner cities division 2 and the urban policy sections of the Department's regional offices which deal with these matters were published in the management information system for Ministers 5 (MINIS 5). A copy was placed in the Library of the House. Since then the detailed administration of the traditional urban programme has passed to the regional offices. The latest estimate of outturn for expenditure in 1984-85 by partnerships is £128 million, and £46·5 million for the traditional urban programme. Specific grant is paid on all expenditure at the rate of 75 per cent. Several thousand projects receive support and the details are not readily available in the form requested.

Rent Acts

Mr. Tony Banks asked the Secretary of State for the Environment when he expects to be in a position to announce the outcome of his Department's review of the Rent Acts.

Sir George Young: I refer the hon. Member to the answer which my hon. Friend the Minister for Housing and Construction gave to my hon. Friend the Member for Southampton, Itchen (Mr. Chope) on 13 March at column *144*.

Surplus Land

Mr. Tony Banks asked the Secretary of State for the Environment how much, in percentage terms, of Government-owned surplus land is being managed or disposed of by in-house resources, such as the Property Services Agency, and how much by the private sector.

Sir George Young: PSA appoints private sector agents to handle all significant open market disposals of civil and MOD surplus properties for which it is responsible.

Most private treaty sales for example to other public bodies or former owners are dealt with in-house in conjunction with the district valuer. No figures are available of the percentage of the total these represent.

Until disposal is effected, day to day management is carried out by PSA, in-house.

Housing Stock

Mr. Litherland asked the Secretary of State for the Environment what steps are being taken to prevent those vulnerable parts of the national housing stock from further deterioration and ultimate demolition.

Sir George Young: The Government's policies are designed to safeguard the condition of the housing stock, and to give priority to those houses in the worst condition. The Green Paper "Home Improvement — A New Approach" (Cmnd. 9513) includes new proposals for improving private sector housing, including the suggestion that mandatory grants should be extended so that they are available to deal with unfit houses wherever renovation is appropriate and the owner meets the proposed eligibility test.

Mr. Litherland asked the Secretary of State for the Environment what steps are being taken by Her Majesty's Government to prevent the construction of low capital cost housing with high maintenance costs.

Sir George Young: Those who commission and design housing are responsible for striking a reasonable balance between capital and maintenance costs. To inform them about unnecessary costs which arise from defective design and construction, my Department has set up a housing defects prevention unit at the building research establishment. With the advice of the local authority associations, the unit has issued more than 60 defect action sheets over the last three years.

Control of Pollution Regulations

Dr. David Clark asked the Secretary of State for the Environment when he expects to announce Her Majesty's Government's response to the report of the joint review committee on the effectiveness of the Control of Pollution (Special Waste) Regulations 1980.

Mr. Waldegrave: Not yet. As indicated when publication of the report was announced on 2 May at column *185*, my right hon. Friend wants to give others concerned an opportunity to express views on the report before reaching final decisions.

Dr. David Clark asked the Secretary of State for the Environment if he will seek a meeting with representatives of waste disposal authorities before announcing Her Majesty's Government's decision on the report of the joint review committee on the Control of Pollution Regulations 1980.

Mr. Waldegrave: If the local authority associations would like a meeting to discuss the outcome of the review, I will be glad to arrange it.

Small Firms (Planning Controls)

Dr. David Clark asked the Secretary of State for the Environment if he will consult the local authority associations before issuing any circular on planning controls on small firms which he announced on 22 April.

Mr. Macfarlane: I see no need for consultation.

Asbestos (Faslane)

Dr. Godman asked the Secretary of State for the Environment what contingency plans there are to deal with the possibility of a spillage of the asbestos-contaminated materials being taken from Faslane to Greenock during their transportation by barge across the Clyde estuary.

Sir George Young: The Health and Safety Executive and the Property Services Agency are satisfied that the contractor's proposed method of transporting the material across the Clyde estuary is such that no contingency plans are necessary to guard against the possibility of spillage during the voyage.

Dr. Godman asked the Secretary of State for the Environment what training has been given to the workers who will be handling asbestos-contaminated materials from Faslane.

Sir George Young: The contractor's workers handling contaminated material at Faslane were given a special training course to ensure that they were fully conversant with relevant legislation and the approved working arrangements. Once the waste has been properly sealed on site it may be regarded as a clean cargo and the Clyde port authority has confirmed that it does not consider any special training is required for its workers who will handle it at Greenock.

Dr. Godman asked the Secretary of State for the Environment whether the contractor engaged to carry out the removal of the asbestos-contaminated materials from Faslane is a member of the Asbestos Removal Contractors Association.

Sir George Young: No. Membership is voluntary and not all firms belong. The important point is that the selected contractor has been granted a licence by the Health and Safety Executive to remove asbestos and is additionally required by the PSA to employ a subcontractor specialising in asbestos removal to advise on and supervise his methods of operation.

Mr. Tom Clarke asked the Secretary of State for the Environment, further to his reply to the hon. Member for Greenock and Port Glasgow (Dr. Godman) on 13 May, *Official Report*, column *26*, what public bodies were consulted about the transportation of asbestos contaminated material from Faslane; what form the consultation took; and how they responded.

Sir George Young [*pursuant to his reply*, 23 May 1985, c. *506*]: There have been regular consultations with the Health and Safety Executive (HSE) who gave formal approval on 26 April to a document setting out the method by which the removal of the lightly contaminated material would be effected (the "method statement"). In addition, the following public bodies were consulted either by the Property Services Agency (PSA) of my Department or by its contractor, and their responses were as shown:

DUMBARTON DISTRICT COUNCIL

The contractor sent his proposed method statement to the council on 2 April. There was a meeting on 26 April with the contractor, MOD and PSA under the chairmanship of the environmental health officer. Factual questions on the method statement were answered. PSA offered the environmental health officer site access with the HSE and also offered to make available to the council the results of dust level monitoring on the site.

STRATHCLYDE REGIONAL COUNCIL

PSA officials met officers of the council's Department of Roads on 5 March. The department of roads confirmed that it had no objection in a letter dated 6 March. Further information, including the method statement, was sent by letter on 24 April. Subsequent correspondence took up detailed points from the Department of Roads.

INVERCLYDE DISTRICT COUNCIL

The contractor met the environmental health officer of this council on 18 April and a copy of the method statement was sent on 19 April. A site visit was offered to the environmental health officer. There was a written request to PSA for clarification of the extent of site contamination and this was replied to on 15 May. A member of the council wrote to PSA on 8 May suggesting that there had been a lack of consultation: a reply sent on 17 May informed him of the consultations that had taken place.

CLYDE PORT AUTHORITY

The contrator met with the authority on 9 April to discuss arrangements for the transit of the material, and subsequent telephone calls clarified handling and monitoring arrangements. The method statement was sent on 18 April and the authority has been satisfied with the arrangements.

MONKLANDS DISTRICT COUNCIL

The contractor mentioned his interest in tendering for the Faslane work to this council's environmental health officials at a regular meeting on 7 November 1984. No objection was raised. His method statement was sent on 22 April and was discussed at a meeting on 29 April. A further meeting took place with the council and also with Glenboig community council on 22 May both of whom have expressed concern about the use of the Glenboig licensed tip for the deposit of this material.

STRATHCLYDE POLICE

A police representative was present at the meeting with the Strathclyde regional council's department of roads on 5 March. The police were sent copies of the transport and emergency arrangements sections of the method statement and they have since arranged a contact point with the contractor.

CLYDEBANK DISTRICT COUNCIL
GLASGOW DISTRICT COUNCIL
RENFREW DISTRICT COUNCIL
STRATHKELVIN DISTRICT COUNCIL

These local authorities were each sent copies of the transport and emergency arrangements sections of the method statement, copies of the HSE letter of formal approval and copies of route maps on 8 May.

Greater London Enterprise Board

Mr. Dobson asked the Secretary of State for the Environment if he will make a statement on the financing of the Greater London Enterprise Board in 1985-86 and subsequent years.

Mr. Kenneth Baker: The Greater London Enterprise Board is a private company, limited by guarantee, whose financing is primarily a matter for the board itself.

On 27 February 1985 my right hon. Friend gave consent to the GLC under section 7 of the Local Government (Interim Provisions) Act 1984 for a grant to the board of £4·896 million under section 137 of the Local Government Act 1972. My right hon. Friend has made it clear to the GLC that in considering whether he should consent to further proposals for further section 137 funding for this private company he will wish to take account of the extent to which liabilities will survive the proposed abolition of the GLC, and be satisfied that adequate arrangements exist for ensuring that GLEB will be properly accountable to London ratepayers for the very large sums of public money it receives.

Perry Oaks Sludge Works

Mr. Tim Smith asked the Secretary of State for the Environment if he will make it his policy to call in for his decision any proposal for planning permission for the relocation of Perry Oaks sludge works.

Mr. Macfarlane: I will consider the case for calling in any application relating to such a proposal when the occasion arises.

STOLport (Royal Docks)

Mr. Spearing asked the Secretary of State for the Environment to which planning authority detailed applications will be made for planning permission required for further plans for the STOLport in the royal docks; and what period will be allowed for consultation with elected statutory authorities, individuals and community groups.

Sir George Young: Any applications for detailed planning permission will be made to the London Docklands Development Corporation as the development control authority for the area. It will be for the corporation to decide what consultations to invite, and the length of any consultation period (which, under the terms of the corporation's code of practice, will be not less than 14 days).

Mr. Spearing asked the Secretary of State for the Environment what measures of sound insulation will be undertaken for properties adjacent to the proposed STOLport in the royal docks; to what standards they will conform; and who will be responsible for their installation and payment of their cost.

Sir George Young: The conditions imposed on the outline planning permission include a requirement that the developer shall, prior to operations commencing, provide a perimeter fence and noise barriers of such types and in such positions as may be approved by the local planning authority (the London Docklands Development Corporation). Details are a matter for it as development control authority and it would be inappropriate for my right hon. Friend to comment further at this time.

Mr. Spearing asked the Secretary of State for the Environment what types of existing or projected airplanes he expects to come within the criteria of noise and performance limits which he has established for the STOLport in the royal docks; and which types of aircraft he envisages will use it when first opened.

Sir George Young: The De Haviland DASH-7 and the De Haviland DHC-6 come within the noise criteria set for the STOLport. Evidence given at the inquiry suggested that, at that time, there were no other obvious aeroplanes that would comply with these criteria. My right hon. Friend cannot speculate on any future types of aeroplane that could come within the terms of the noise condition or the types of aeroplane that will use the STOLport when first opened.

Council Tenants (London)

Mr. Tony Banks asked the Secretary of State for the Environment what progress he is making towards establishing a Londonwide computing network capable of running the London area mobility scheme for council tenants.

Mr. Gow: I refer the hon. Member to the reply given to him by my hon. Friend the Parliamentary Under-Secretary of State on 16 May 1985 at column *196*. The terms of reference for the working party include consideration of the future arrangements for cumputing needs of the mobility schemes.

London Docklands

Mr. Tony Banks asked the Secretary of State for the Environment (1) if he will ensure that once the figure of owner-occupation within the London Docklands Development Corporation area reaches the average for Inner London, as noted in the London Docklands Development Corporation 1984 corporate plan, the remaining new housing in docklands will be predominantly constructed for rent;

(2) what is the current percentage of owner-occupied housing in the London Docklands Development Corporation area on the basis of *(a)* housing completions, *(b)* housing completions and new starts and *(c)* housing completions, starts and schemes with planning permission, respectively.

Sir George Young: I will answer these questions shortly.

Mr. Tony Banks asked the Secretary of State for the Environment what steps the London Docklands Development Corporation is taking to monitor or collect information on land values within its area, both on London Docklands Development Corporation-owned land and on non-London Docklands Development Corporation-owned land; and whether this information will be made available to the public on request.

Sir George Young: The LDDC monitors and collects information on land values realised on disposal of its own sites, but details of these transactions between LDDC and third parties must remain commercially confidential. The LDDC also receives opinions and advice from the local district valuers on the state of the land market in the urban development area, the details of which are also confidential.

Departmental Computer Facilities

Mr. Tony Banks asked the Secretary of State for the Environment if he will list all computer installations, hardware and peripherals in his Department, indicating for each its location, make, type, configuration, operating system, systems software, age and planned life.

Sir George Young: I will answer this question shortly.

Local Government Expenditure

Mr. Tony Banks asked the Secretary of State for the Environment (1) if he will list all those applications under sections 7, 8 and 9 of the Local Government (Interim Provisions) Act which were outstanding on 25 April and the date on which the applications had been received;

(2) if he will list each consent applied for under section 7 of the Local Government (Interim Provisions) Act by the Greater London council and each of the metropolitan county councils and give the date the application was made, together, where appropriate, with the date on which consent was granted.

Mr. Waldegrave [*pursuant to his reply*, 29 April 1985, c. *32*]: These details have been placed in the Library.

Management Consultancy Contracts

Mr. Mates asked the Secretary of State for the Environment if he will list the contracts, with the subject of assignment, awarded to management consultancy firms by his Department in 1984, with the name of the consultants concerned.

Sir George Young [*pursuant to the reply*, 7 May 1985, c. *299*]: In the financial year 1984-85 the following firms were awarded management consultancy contracts by the Department (including PSA):

Consultancy Firm and Subject of Contract

DOE (Central)

Laurence Gould Consultants Ltd. — Review of the financial guidelines of the Wildlife and Countryside Act 1981.

Arther Anderson and Co. — Study of recovered planning appeals.

Coopers Lybrand and Associates. — Review of National Heritage memorial fund.

Coopers Lybrand and Associates. — Ad hoc advice on an internal review of the work and staffing levels of the Department (MINIS-Management Information System for Ministers).

Touche Ross and Co. — Review of the management and expenditure information system (MAXIS).

Communications Audit. — Review of information dissemination.

Scicon Ltd.—Computerisation of wildlife licensing.

Inbucon & Land Use Consultants.—Royal parks study.

PSA,

Ove Arup.—Advice on provision of civil engineering services.

Deloitte, Haskins and Sells. — Advice on improvements to financial management and control procedures within PSA.

Deloitte, Haskins and Sells. — London region — line management performance project.

BIS Applied Systems Ltd, — Advice on establishing an organisation for information technology management within the PSA.

BIS Applied Systems Ltd. — Survey and advice on the procurement, installation and bringing into service of telephone exchanges within PSA's Telecoms strategy.

Performance Systems Inc.—Capacity planning assignment

The Crown Suppliers

Coopers Lybrand and Associates.—Advice on development of computer strategy.

Sugden Consultancy Services. — Advice and training on procurement and distribution.

Atkins Planning. — Advice and assistance with project management and control.

Woodlands

Mr. Ron Davies asked the Secretary of State for the Environment if he will estimate for England, Scotland and Wales respectively, the percentages of total woodland and the areas represented by *(a)* ancient semi-natural woodlands, *(b)* ancient woodland sites, *(c)* recent semi-natural and *(d)* other broadleaved woodlands.

Mr. Waldegrave [*pursuant to his reply*, 23 May 1985, c. 507]: There is no comprehensive estimate of various classifications of woodland, pending completion of inventories by the Nature Conservancy Council. But a

census in 1980 by the Forestry Commission of areas of broadleaved woodlands over 0·25 hectares in extent indicates that there are in total about 547,000 hectares in England, 69,000 hectares in Wales and 136,000 hectares in Scotland.

Mr. Ron Davies asked the Secretary of State for the Environment what estimates he has to the percentages of broadleaved woodland in England, Scotland and Wales, respectively, which are contained within sites of special scientific interest.

Mr. Waldegrave [*pursuant to his reply*, 23 May 1985, c. *123*]: The Nature Conservancy Council has provided the following rough estimates of the percentages of the total area of broadleaved woodlands that are within sites of special scientific interest: England 8 per cent., Wales 7 per cent., Scotland 22 per cent.

EMPLOYMENT

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Employment how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Peter Bottomley: The available information from Departmental records is as follows:

	**1983-84 (from 14 May 1984)*	*1984-85 (to-date)*
Total number of priority written questions	364	702
Number of holding replies given to priority written questions	45	75
Holding replies as percentage of total	12	11

* Information for the whole of the 1983-84 Session is not available except at disproportionate cost.

Mr. Peter Bruinvels asked the Secretary of State for Employment how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Peter Bottomley: The available information from Departmental statistics is as follows:

	**1981-82*	*1982-83*	*1983-84*	*1984-85 (to date)*
Oral	372	357	716	452
Priority Written	2,007	711	1,328	702
Ordinary Written		502	1,281	667
Total	2,379	1,570	3,325	1,821

* Information for the 1981-82 Session comes from statistics held by the House of Commons Library, which are on a slightly different basis. They do not distinguish between priority and ordinary written questions, and for oral questions include only those actually reached orally plus supplementaries, rather than all those tabled for oral reply.

Wood Preservatives

Mr. Campbell-Savours asked the Secretary of State for Employment if, pursuant to the answer of 14 February, *Official Report*, column 250, he will list in the *Official Report* the products used as wood preservatives currently known to the Health and Safety Executive to contain lindane, tributyl tin oxide, or both.

Mr. Peter Bottomley: I shall reply to the hon. Member as soon as possible.

Pesticide Poisoning

Mr. Campbell-Savours asked the Secretary of State for Employment, pursuant to the answer of 12 February, *Official Report*, column 136, whether he will publish in the *Official Report* such information as he has about the number of incidents of pesticide poisoning resulting from use in wood treatment investigated by the Health and Safety Executive in the last five years; and if he will make a statement.

Mr. Peter Bottomley: The numbers of incidents of pesticide poisoning resulting from use in wood treatment investigated by Her Majesty's agricultural inspectorate for the last five years are as follows:

Year	*Number of incidents*
1980	1
1981	1
1982	1
1983	0
1984	0

Pesticides Incidents Information

Mr. Campbell-Savours asked the Secretary of State for Employment whether the Health and Safety Executive are taking steps to reorganise the national collection of pesticides incidents information; and whether he will circulate to regional offices of the Health and Safety Executive agricultural inspectorate the "First Incident" report by Friends of the Earth, copies of which have been sent to him.

Mr. Peter Bottomley: There are no plans to reorganise the national collection of information on pesticide incidents. Copies of the "First Incident" report by the Friends of the Earth have been circulated to the regional offices of Her Majesty's agricultural inspectorate.

"Your Health"

Mr. Campbell-Savours asked the Secretary of State for Employment what steps are being taken to include consideration of the health of the general public, as well as that of those involved in agriculture, in Her Majesty's agricultural inspectorate's next national safety campaign, "Your Health".

Mr. Peter Bottomley: Her Majesty's agricultural inspectorate's "Your Health" safety campaign deals with the interests of the general public in respect of pesticides application and disposal.

Youth Training

Mr. Wainwright asked the Secretary of State for Employment, at the most recent count, how many youth

training mode A schemes had trainees amounting to less than 75 per cent. capacity; and whether he will make a statement.

Mr. Peter Morrison: I regret the information is not available in the form requested. However, it is estimated that at the end of the 1984-85 year, in March 1985, around 70 per cent. of approved mode A places were occupied nationally. The level of occupancy of mode A schemes in 1984-85 was good, peaking at 80 per cent. nationally in October 1984. One hundred per cent. occupancy is difficult to attain given that young people may enter or leave at any time and that it is necessary to provide a range of provision to satisfy young people's training needs.

Mrs. Renée Short asked the Secretary of State for Employment what information he has about the drop-out rate from the youth training scheme; and if he will make a statement.

Mr. Peter Morrison: Information about how long young people stay on the youth training scheme and what they do on leaving is available from records held by the Manpower Services Commission and from the commission's regular survey of young people who leave the scheme.

The most recent information relates to those who left the scheme between July and September 1984, and is set out as follows:

Time spent on Scheme

Percentage

	Weeks					
	0-13	*14-26*	*27-39*	*40-47*	*48-52*	*All leavers*
In full-time work with same employer	5	11	20	25	40	31
In full-time work with different employer	30	31	30	38	26	28
On full-time course at college/training centre	8	6	5	4	3	4
Back at school	3	1	—	—	—	1
On another Youth Training Scheme	23	10	2	1	1	5
Doing something else	3	3	3	3	3	3
Unemployed	28	39	39	29	26	28
Percentage of all respondents	15	5	6	8	67	100

This shows that those young people who stay longer on the scheme are more likely to get a job.

Sexual Discrimination

Mr. Corbyn asked the Secretary of State for Employment what is the policy of Her Majesty's Government with regard to discrimination in employment upon the basis of sexual orientation.

Mr. Alan Clark: The Government deplore all unfair discrimination and we have recently brought into operation the Equal Opportunities Commission's code of practice giving extensive guidance to supplement the Sex Discrimination Act.

Trade Union Act 1984 (Section 17(F))

Mr. Soames asked the Secretary of State for Employment if he will seek to amend section 17(F) of the Trad Union Act 1984 to include candidates for general secretaries of trade unions.

Mr. Peter Bottomley: Part I of the Trade Union Act 1984 requires that every voting member of a union's governing body must be elected by secret ballot at least every five years. General secretaries who have this voting right will be covered by the provisions of the Act when they come into force on 1 October. It would be premature to seek to amend the legislation before it has taken effect.

Careers Service

Mr. Corbyn asked the Secretary of State for Employment: (1) what proportion of school leavers failed to register with the careers service within a reasonable period from the end of the last three school terms for which records are available;

(2) what proportion of school leavers registered with the careers service failed to attend within three months of the end of the last three school terms for which records are available.

Mr. Peter Morrison: The information requested is not available.

Miners (Retraining)

Mr. Sheerman asked the Secretary of State for Employment (1) if he will list the skillcentres that have been invited to assist in retraining miners, indicating whether the centre is one being considered for closure;

(2) which skillcentres in mining areas have not been offered opportunities to help retrain miners, listing annexes separately from main centres; and which of these are being considered for closure.

Mr. Peter Morrison: The contract between the National Coal Board and the skillcentre training agency does not specify which centres will be used to retrain those mineworkers who choose to take voluntary redundancy and who opt to be retrained. The contract was made in the knowledge that the agency was proposing to streamline its network and the National Coal Board was satisfied that the remaining skillcentres would be properly located and equipped to do the job.

Accidents (Reporting)

Mr. Flannery asked the Secretary of State for Employment if he intends to take any new action to ensure that arrangements for reporting accidents are implemented as soon as possible.

Mr. Peter Bottomley: As stated in my reply of 22 May 1985 at column *420*, the Health and Safety Commission is considering proposals for new regulations to replace the

Notification of Accidents and Dangerous Occurrences Regulations (NADOR) 1980. These would serve as a basis for a comprehensive long term information system. The intention is to have such a system in operation as soon as possible.

Labour Statistics

Mr. John Fraser asked the Secretary of State for Employment what information he has as to the levels of male and female unemployment in inner city partnership areas; and how these figures compare with unemployment in Britain as a whole.

Mr. Alan Clark [*pursuant to his reply*, 7 May 1985, c. *354-5*]: following is the available information which is in the Library. That table shows unemployment in the inner city partnership areas as at 11 April 1985, together with the corresponding figures for Great Britain.

Unemployed claimants—Inner City Partnership Areas—11 April 1985

	Male	*Female*
Hackney	14,622	5,616
Islington	11,649	4,719
Lambeth special area	17,531	6,912
Lambeth area of need (included in special area)	13,641	5,258
London Docklands Development Corporation area	3,552	1,171
Manchester and Salford special area		
Manchester section	19,804	6,158
Salford section	6,022	1,630
Liverpool special area	26,250	9,264
Newcastle and Gateshead partnership area		
Gateshead section	11,718	3,929
Newcastle section	10,018	3,340
Birmingham special area	39,644	18,832
Birmingham Core area (included in special area)	31,531	10,185
Great Britain	2,181,668	968,489

Mr. Skinner asked the Secretary of State for Employment how many *(a)* men and *(b)* women are classified as part-time workers at the latest available date.

Mr. Alan Clark [*pursuant to his reply*, 24 May 1985, c. *605*]: In September 1981, the latest date for which the employees in employment series provides a comprehensive split between full and part-time employees, there were 718,000 male and 3,781,000 female employees in employment in Great Britain who worked part-time. For more recent dates the series provides analyses of part-time employees for females only. In December 1984, the latest date for which such information is available, the number of female employees in employment working part-time was estimated as 4,282,000.

The labour force survey provides information on a different basis. The 1984 survey estimates that, in the spring of 1984, there were 583,000 males and 4,272,000 females in employment who regarded themselves as working part-time.

HOUSE OF COMMONS

Parliamentary Questions

Mr. Peter Bruinvels asked the Lord Privy Seal how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Biffen: The information requested is as follows:

Session 1983-84: 4 (approximately 4 per cent.)
Current Session (to date): 3 (approximately 3 per cent.)

Mr. Peter Bruinvels asked the hon. Member for Berwick-upon-Tweed, as representing the House of Commons Commission, how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Beith: The information requested is as follows:

1983-84: None
1984-85 (to date): 1

Mr. Peter Bruinvels asked the Lord Privy Seal how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Biffen: The information requested is as follows:

	Oral	*Priority Written*	*Written*
1981-82*	36	40	54
1982-83*	27	22	42
1983-84	50	70	86
1984-85 (to date)	31	96	42

* For the Sessions marked thus, the incumbent of my job was the Lord President of the Council, as opposed to the Lord Privy Seal.

Source: Departmental Statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) the oral count includes only those oral questions actually reached, plus supplementaries counted as separate questions, and

(b) the written count includes, orals not reached, writtens, priority writtens and holding replies all counted as separate questions.

The overall POLIS count will therefore exceed the departmental count.

Mr. Peter Bruinvels asked the hon. Member for Berwick-upon-Tweed, as representing the House of Commons Commission, how many parliamentary questions have been answered by him in each of the last three complete Sessions, and the current Session to date; if he will break down these figures into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Beith: The information requested is as follows:

	Oral	*Priority Written*	*Written*
1981-82	6	7	18
1982-83	4	1	8
1983-84	7	10	22
1984-85 (to date)	1	13	9

DEFENCE

Dog Training

Mr. Lester asked the Secretary of State for Defence when, and at what cost, the dog training school at RAF Newton was constructed.

Mr. Lee: The dog training section of the RAF police school moved to RAF Newton in 1975. The school was able to make use of a number of existing buildings. Apart from some minor works services, a little under £0·5 million. At 1975 prices was spent on the construction of accommodation for the dog section.

Mr. Lester asked the Secretary of State for Defence if a decision has yet been made to amalgamate the Army and RAF dog training schools at Melton Mowbray or at RAF Newton.

Mr. Lee: No.

Mr. Lester asked the Secretary of State for Defence what area of land is calculated to be needed to provide effectively for an amalgamated dog training unit without causing environmental problems for residents.

Mr. Lee: It is estimated that 985 acres of land are required for an amalgamated dog training school. This figure includes 400 acres needed to train dogs in long-range windscenting. No environmental problems are anticipated.

Chemical Weapons

Mr. Canavan asked the Secretary of State for Defence what discussions have taken place between Her Majesty's Government and the Government of the United States of America about the storage of chemical weapons in the United Kingdom; what decisions transpired as a result; and what are the reasons for those decisions.

Mr. Stanley: I refer the hon. Member to the reply I gave to my hon. Friend the Member for Bexleyheath (Mr. Townsend) on 26 March at columns *180-181*.

Military Training

Mr. Maclean asked the Secretary of State for Defence what consultations with local people take place before he acquires land for military training purposes.

Mr. Lee: The Ministry of Defence follows the procedure laid down in the Department of the Environment's circular 18/84, a copy of which is in the Library.

Mr. Maclean asked the Secretary of State for Defence (1) if he will list by name, location, type of use and acreage, all Army dry training areas in Great Britain;

(2) what is the acreage and locality of all land acquired and disposed of for Army dry training areas for each of the last 10 years.

Mr. Lee: This information could be provided only at disproportionate cost.

Mr. Maclean asked the Secretary of State for Defence what is his policy for the present and future uses of land for dry training purposes.

Mr. Lee: There is a continuing and increasing need to use land for dry training purposes in order to undertake military training for which there is no requirement to fire live ammunition.

Mr. Maclean asked the Secretary of State for Defence what is the name, locality and acreage of land currently used by his Department for dry training which forms part of an area of outstanding natural beauty.

Mr. Lee: This information could only be provided at disproportionate cost.

Mr. Maclean asked the Secretary of State for Defence what is the number of occasions in the last 20 years when land formerly used for dry training underwent a change of use and was used for live firing.

Mr. Lee: Records are not held in a form which would allow this question to be answered.

Mr. Maclean asked the Secretary of State for Defence what is his policy for the minimum size of ground suitable for any dry training areas.

Mr. Lee: There is no minimum size: it depends on the location and the particular training use made of it.

Parliamentary Questions

Mr. Peter Bruinvels asked the Secretary of State for Defence how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply.

Mr. Heseltine: Over 1,000 questions have been set down on the Order Paper for priority written answer by me in each of the Sessions referred to by my hon. Friend. Because of the number of questions involved and the way in which departmental records are maintained, I regret that this information could only be provided at disproportionate effort and cost.

Mr. Peter Bruinvels asked the Secretary of State for Defence how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Heseltine: The information requested, which has been compiled from Departmental statistics, is as follows:

Session	*Total No. Questions*	**Oral*	*†Priority Written*	*†Ordinary Written*
1984-85 (to 24 May 1985)	1,852	326	1,024	502
1983-84	2,278	365	1,267	646
1982-83	1,430	306	749	375
1981-82	1,630	360	715	555

* Includes questions which, although tabled for oral answer, received a written reply.

† Includes questions originally tabled to other Departments which were subsequently transferred to the Ministry of Defence.

HMS Otter (Refit)

Dr. Godman asked the Secretary of State for Defence when the refit of HMS Otter will be completed.

Mr. Lee: The refit of HMS Otter started in December 1984 and is planned to take about two years.

Tucano and PC-9 Aircraft

Mr. McNamara asked the Secretary of State for Defence (1) pursuant to his answer of 22 May, *Offical Report*, column 426, what was the total acquisition cost of the Shorts Tucano;

(2) pursuant to his answer of 22 May, *Official Report*, column 426, what was the total acquisition cost of the British Aerospace PC-9 as specified in British Aerospace's final bid.

Mr. Butler: Following normal practice, the total acquisition costs of these aircraft cannot be disclosed without breaking commercial confidentiality.

SP-70 Howitzer

Mr. McNamara asked the Secretary of State for Defence when the SP-70 howitzer will enter service with the British Army.

Mr. Butler: In the early 1990s.

Mr. McNamara asked the Secretary of State for Defence how many SP-70 howitzers will be ordered by the British Army.

Mr. Butler: Development of SP-70 by the United Kingdom, Germany and Italy is not yet complete and no firm production orders have been placed. It is not our practice to provide details of potential orders of defence equipment.

Mark 19 Grenade Launcher

Mr. McNamara asked the Secretary of State for Defence whether the United States Air Force intends to install the Mark 19 automatic grenade launcher at Molesworth common.

Mr. Lee: It is too early to say.

Mr. McNamara asked the Secretary of State for Defence if he will make a statement concerning the installation of the Mark 19 automatic grenade launcher at Greenham common;

(2) if he will outline the kind of threat which necessitates the use by United Kingdom forces of 15 Mark 19 automatic grenade launchers;

(3) whether other American bases in the United Kingdom will be equipped with the Mark 19 automatic grenade launcher.

Mr. Lee: I will answer shortly.

Central America (British Service Men)

Mr. Corbyn asked the Secretary of State for Defence whether there are any British service men serving in El Salvador, Nicaragua, Guatemala or Honduras at the present time.

Mr. Lee: No members of the armed forces are serving in these countries in an official capacity. However, 13 service personnel are currently participating in the Operation Raleigh expedition to Honduras under the terms given in my reply to the hon. Member for Kingston upon Hull, North (Mr. McNamara) on 30 April 1984 at column *18*.

RAF Caerwent, Gwent

Mr. D. E. Thomas asked the Secretary of State for Defence if he will make a statement on the function of the United States Army's facilities at RAF Caerwent, Gwent, and the total expenditure by Britain on RAF Caerwent since 1979, either independently or through common funded North Atlantic Treaty Organisation programmes;

(2) whether United States Army artillery ammunition is stored at RAF Caerwent.

Mr. Lee: RAF Caerwent is a United States Army munitions storage facility. For security reasons, we do not provide details of equipment and weapons stored at defence establishments. On expenditure by Britain, I have nothing to add to the answer I gave on 20 May at column *366* to the hon. Member for Sheffield, Heeley (Mr. Michie).

Secretary of State (Official Car)

Mr. Canavan asked the Secretary of State for Defence what make of vehicle is his official car; and what is the reason for that choice.

Mr. Heseltine: My official car is a Jaguar saloon from the Government car service. It was chosen to meet the requirements of my official duties.

RAF (Trainer Aircraft)

Mr. McNamara asked the Secretary of State for Defence, pursuant to the answer to the hon. Member for Beverley (Sir P. Wall) on 23 May, *Official Report*, column *501*, about the new trainer aircraft for the Royal Air Force, if he will investigate the circumstances in which a misunderstanding arose between his Department and British Aerospace; and if he will make a statement.

Mr. Butler: As I explained in my reply of 23 May 1985 to my hon. Friend the Member for Beverley (Sir P. Wall) at column *501*, the matter has been fully discussed between my Department and British Aerospace and is now regarded as closed by both sides. There is therefore no need for any further investigation.

Greenham Common

Mr. McNamara asked the Secretary of State for Defence for what reasons units of the United States army are engaged in protecting the perimeter of Greenham common.

Mr. Lee: United States Army personnel have not been deployed to protect the perimeter at RAF Greenham common.

Trinitrotoluene

Mr. Ashdown asked the Secretary of State for Defence if he will estimate the proportion of trinitrotoluene used by or in use with the British services, either directly or in ammunition filling, that is of Warsaw pact manufacture or origin.

Mr. Butler: We have not procured any trinitrotoluene (TNT) directly from Warsaw pact sources.

Most of the TNT used by, or in use with, the British services is procured through subcontracts from our prime contractors. The only known instance of a prime contractor incorporating TNT from a Warsaw pact source is the recent order for 11,000 25 pdr shells for training purposes placed with the Belgian firm of PRB. The TNT in that order constitutes very much less than 1 per cent. of that used by or in use with the British services.

NATIONAL FINANCE

EC Budget

Mr. Deakins asked the Chancellor of the Exchequer why the EEC 1985 draft budget shows a 17 per cent. reduction in non-common agricultural policy expenditure; what are the main programmes so affected; and if he will make a statement.

Mr. Ian Stewart: The 1985 draft budget as established by the Budget Council on 23 April shows a 12 per cent. reduction in non-common agricultural policy expenditure compared with the 1984 Budget. Comparisons are distorted by the fact that the 1984 budget contained provision for United Kingdom rebates to be paid through expenditure programmes as opposed to the system of revenue abatements that applies for 1985 and future years.

The figures are as follows:

	mecu
1984 budget (including supplementary budget)	
Total expenditure	27,249
of which CAP expenditure	19,120
Non-CAP expenditure	8,129
1985 draft budget	
Total expenditure	27,930
of which CAP expenditure	20,751
Non-CAP expenditure	7,179

Afforestation Schemes

Mr. Home Robertson asked the Chancellor of the Exchequer what representations he has received advocating the introduction of measures to ensure that afforestation schemes which benefit from tax reliefs under schedule D are in the environmental and economic interests of the public.

Mr. Moore: I have seen the reply which my right hon. Friend the Prime Minister gave my hon. Friend the Member for Stirling (Mr. Forsyth) on 21 May at column *858*. As I explained in my reply to the hon. Member for Copeland (Dr. Cunningham) on 9 May at columns *477-8*, the tax treatment of forestry owners is determined under the appropriate tax law. This does not distinguish between planting schemes on environmental, social or other grounds. I have not received any other representations but would refer the hon. Member to what my hon. Friend the Parliamentary Under-Secretary of State for Scotland said to him on 15 May at columns *312-13*.

Mr. Home Robertson asked the Chancellor of the Exchequer if he will estimate the amount of tax revenue forgone by granting reliefs for afforestation schemes under tax schedule D in the last year for which figures are available.

Mr. Moore: The tax revenue forgone is of the order of £10 million a year.

Budget Council

Mr. Jackson asked the Chancellor of the Exchequer whether he will make a statement about the Budget Council on 22 May.

Mr. Ian Stewart: I represented the United Kingdom at this Council in Brussels.

The Council reaffirmed that the maximum rate provisions for non-obligatory expenditure commitments and payments should be respected, and that the inter-Governmental agreement for additional payment of 1982 mecu should not be reopened.

The Council met a delegation from the European Parliament led by its President, M. Pflimlin, to exchange views on its proposed amendments and modifications to the 1985 draft budget.

The Council accepted all of the Parliament's amendments which it had earlier agreed at the Second Reading of the rejected draft 1985 budget in November 1984. It increased provision for Community food aid payments by 89 mecu. A further 50 mecu was added to the commitment appropriations for integrated Mediterranean programmes proposed at the Council on 23 April; the 50 mecu were offset by reductions in other commitment appropriations. Finally, supplementary revenue of 232 mecu was incorporated into the budget; 36 mecu of this was matched by food aid expenditure, and the balance by including in the budget part of the outstanding deficit arising from 1984.

Parliamentary Questions

Mr. Peter Bruinvels asked the Chancellor of the Exchequer (1) how many and what percentage of the questions set down on the Order Paper for priority written answer by him in *(a)* Session 1983-84 and *(b)* the current Session to date have initially received a holding reply;

(2) how many parliamentary questions have been answered by Ministers in his Department in each of the last three complete Sessions, and the current Session to date; if he will break these figures down into questions tabled as oral questions, priority written questions and ordinary written questions, respectively; and if he will make a statement.

Mr. Hayhoe: The information requested is contained in the following table:

	Oral	*Priority Written*	*Written*
1981-82	418	583	840
1982-83	320	455	736
1983-84	557	1,171	1,242
1984-85*	488	644	751

* Up to Whit Recess.

In 1983-84, 610 priority written questions or 52 per cent. initially received holding replies. Of these, 557 received substantive replies within one week of the holding reply, 46 within two weeks and seven within three weeks.

In 1984-85, up to the Whit Recess, the corresponding figures are 287 or 45 per cent., 214, 66 and 7 respectively.

Departmental statistics. It should be noted that the count produced by the POLIS system in the House Library will differ from the above figures, in that on POLIS:

(a) the oral count includes only those oral questions actually reached, plus supplementaries counted as separate questions, and

(b) the written count includes orals not reached, writtens, priority writtens and holding replies all counted as separate questions.
